Your comment upon the above extract of the speech is as follows:—

Sir Harry Parkes here forgot to be just. That no rapid development of national wealth and resources is possible in a country where foreign intercourse and commerce are subject to such restrictions and impediments as exist in Japan, is a proposition which cannot be gainsaid.

Your article then, in a series of interrogatories, goes into the why and the wherefore of your allegation quoted immediately above. But what I want to know is—where to look for "privileges" in China to foreigners which do not exist in Japan. Of course, the "privileges" referred to by His Excellency are commercial "privileges." This being taken for granted, I can only say that, after many years of close observation of the commercial status of foreigners in the two countries, I fail to perceive the greater "privileges" accorded by the Chinese Government. It may be said of the two countries, that China is large and rich—Japan small and poor by comparison; and the condition of the foreign merchants and commerce in a great measure is a reflection of the comparative state of the two countries. China affords foreigners residence and traffic at Treaty Ports—Japan does the same. China, like Japan, has a Custom House and an *ad valorem* import duty, and the duty on exports and imports in both countries shows no "privilege" on one side or the other. But, if I am right in my conjecture, when Sir Harry Parkes spoke of "privileges" in China, he referred to the fact that foreigners in Japan cannot go into the interior to trade. Well, what is the condition of affairs in China with regard to this matter direct trade in the interior? In 1876 it was agreed, in that extraordinary document known as the Chefoo Convention, that four Chinese ports should be opened to trade in the following year, namely, Ichang, Wuhu, Wenchow, and Pakhoi, and that a British Consular officer should be permitted to reside at Chung-kiang to report upon the facilities of that place with a view

to its being made an open port for the province of Zechuen if sufficient inducement offered on a future day. The opening of these ports was the outcome of pressure brought to bear on Sir Thomas Wade by British merchants, who averred that these places were peculiarly suited as depôts for the distribution of imports, and that the transit pass system, which according to treaty was supposed to be so clearly defined, was absolutely a dead letter in the neighbourhood of the existing Treaty Ports, on account of the charges being suddenly and arbitrarily doubled and trebled by the provincial authorities, over whom there seemed to be no control, and from whose decisions there was no appeal. It was stated by sanguine persons that the new ports would become great centres of trade, and that the *lekin* certificate system having failed to work well at any single place at which it had been attempted, would flourish at the four new ports for the reason that there was a profitable *nei-ti* (inland) trade to be done from these points, valuable products existing for collection and export and British manufactures being held in high repute. Moreover the Chefoo Convention contained provisions intended to put an end to the tricks of rapacious officials, whose barefaced *lekin* barrier charges had squeezed the last cent of profit out of the unfortunate foreigner whose energy and enterprise had induced him to embark in an attempt to traffic with the interior on the transit pass system. The four new ports have been open now six years, and with what result? This: that at the four ports there are not, in the total, four merchants, the foreigners resident there being British Consular officials, missionaries, and the staff of the Chinese Imperial Maritime Customs. And this condition of affairs is not for want of enterprise on the part of the British merchant. Over and over again have attempts been made to establish an inland trade, but the indomitable energy displayed has met with a steady and persistent check by greedy mandarins, who know that, so long as they keep foreigners away from the interior, so long will the profits of the trade carried on go into the pouches of their own nationals, who will submit to squeezing to the extent that foreign methods of conducting business will not admit of.

As I can find no "privilege" to foreigners granted by the Chinese Government, and not by the Japanese, but this leave to traffic in the interior—which, being a dead letter, becomes practically, through the serious losses that have occurred worse than entire exclusion—I am yet afraid that, I have not hit the right nail, and that it will take some one wiser than I am to discover the meaning of Sir Harry Parkes' expression when, referring to trade privileges in Japan enjoyed by foreigners, he described them as "inferior to those which have been granted in the country" to which he is about to proceed.

Yours, &c., SAN-TAU.
Yokohama, August 29th, 1883.

NOTIFICATION NO. 55 OF THE FINANCE DEPARTMENT.

The following Notification has been issued by the Minister of Finance, under date August 29th, 1883:—

TO THE NATIONAL BANKS.

You are hereby notified that the value of the various Public Bonds deposited by you with the Government as security has been determined on the scale subjoined. Application for redemption

of the whole or part of such security on the tariff mentioned should be made before the 31st of October next. Banks desirous of leaving their deposits as they are at present should give the Bank of Japan notice to that effect, before the same date.

TRANSLATIONS FROM NATIVE JOURNALS.

HALF-YEARLY REPORT OF THE BANK OF JAPAN.

(Translated from the *Official Gazette*.)

The following is the report of the business transacted in the Bank during the first half of the 16th year of Meiji (1883), from January to June:—

GENERAL MEETING OF SHAREHOLDERS.

On the 17th of February in the 16th year of Meiji, a regular general meeting of shareholders was held at the head office, Mr. Yoshihara Shigetoshi in the Chair. That gentleman submitted the report of the general working of the Bank for the second half of the preceding year to Mr. Kato, Vice-Secretary of the Finance Department, who represents the Minister of Finance, and to the shareholders.

According to Article 50 of the regulations for the conduct of public business, the election of new directors was proceeded with, and resulted in the election of Messrs. Koyasu Shun, Kitaoka Mombei, Morimura Ichitaro; and Konishi Shinyemon, who was delegated to the branch at Osaka.

BUSINESS.

On the 25th of January, the Minister of Finance granted a Charter, conferring upon the Bank the privilege of receiving fixed deposits from the Finance Department. Accordingly, the Bank forwarded a letter of acceptance.

The report of matters to be discussed at the first general meeting of the shareholders was submitted to the Minister of Finance for his approval; and the requisite permission granted on the 24th of January. This was notified to every shareholder.

On the 17th of January application was made to the Minister of Finance, asking that the Bank should be allowed to communicate with all the offices of the Finance Department to obtain information concerning the statistics of commodities and financial affairs, and that two copies of all the notifications to be issued by the Department should be granted to the Bank. Permission granted on the 12th of February.

On the 26th of January an agreement was entered into with the Nippon Railway Company, according to which the receiving of funds, arising from the sale of shares and payment of interest on the subsidy were entrusted to the Bank. The first, second, third, and thirty-third, National Banks and Mitsui Bank were made agencies of the Bank. Beside the above banks, seventy-two agencies have been established in the provinces.

On the 27th of January the Minister of Finance sent a memorandum to the Bank, stating that the exchange business for the national treasury should gradually be entrusted of the Bank.

On the same day, the Minister of Finance again issued instructions to the Bank to the effect that as the exchange business of the National Treasury will be handed over to the Bank as other contracts with various national banks expire, the necessary arrangements must be made beforehand.

With a view to the expansion of the circulation of commercial documents it was decided to issue promissory notes and bills of exchange to be used in transactions between the Government factories and the people and to discount them. Application was made to the Minister of Finance on the 1st of February and permission was granted on the 14th of March, when operations were instantly commenced.

On the 14th of March, the National Banks sent an application to the Finance Department, asking that any sums of money due by them to the Treasury should be made payable by cheques issued by the Bank. On the 22nd of the month, the Head of the Accountant's Bureau sent an intimation to the Bank, that, as payment of revenue might be made in all kinds of bills issued by the Bank of Japan, a facsimile of the stamps to be affixed to such bills should be presented to the Bureau. Bills of the same kind were to be issued by the branch at Osaka, under the same system.

The inaugural ceremony of the Bank took place on the 26th of April, when the chief officers of the Finance Department were present.

On the 27th of April the Minister of Finance, according to Article 30 of the Charter, issued an order that the Treasury money should be put under the care of the Bank. A letter of acceptance was returned.

On the 28th of April the Minister of Finance approved the appointment of Ida Sen as adviser to the Bank, and on the 4th of May appointed him Chief of the Treasury Bureau.

On the 30th of April the Treasury Bureau was attached to the Bank, next to the Compilation Bureau in rank. The Ministers of Finance sanctioned the rules for the conduct of business in the Treasury Bureau on the 4th of May.

On the 4th of May the Minister of Finance issued instructions as to the method wherewith to receive revenue in various localities after July of this year.

On the 11th of May the Minister of Finance issued an order to the Bank to conclude the redemption of bank-notes within the prescribed time according to article 112 of the Banking regulations. A letter of acknowledgment was, accordingly, sent.

On the 16th of May the rules for the management of funds belonging to the Treasury were presented to the Minister of Finance for his approval. Sanction was granted on the 29th of May.

On the same day a draft of the agreement between the Bank and the National Banks for appointing them agents to deal with the Treasury money was presented to the Minister of Finance and sanctioned by him.

On the 18th of May the agreement with regard to the correspondence to be entered into between the Bank and other banks was drawn up and submitted for the consideration of the Minister of Finance, who was asked, at the same time, for permission to report such alterations and additions as had been made in the agreement. Sanction was granted on the 29th of May.

On the 21st of May the Minister of Finance was asked whether or no the Bank should take over, on receipt of sufficient explanation as to the financial working of the banks, the whole of their reserve funds at once, instead of by two instalments.

Reply was made on the 29th of May, leaving the matter to the discretion of the Bank.

On the 29th of May the Minister of Finance issued written instructions to the Bank to arrange the payment of ready coin for gold and silver bars imported by Japanese and foreigners into the Mint at Osaka for coinage. A letter of acknowledgment was accordingly sent.

On the 1st of June an order was issued, under cover dated 28th May, to the effect that twenty-eight agencies for the management of Treasury money should be established in Tokiyo. The description of securities to be deposited with the Bank by such agencies, was forwarded to the Minister of Finance together with a draft of agreement to be made between the Bank and the said agencies. On the 12th of June, approval was given, and instructions were issued to the effect that no agreement with any agency in the prefecture of Shiga should be entered into until further notice. Agreements were concluded with twenty-six agencies on the 28th of June.

On the 12th of June an application was made to the Minister of Finance, asking that the reserve funds of the National Banks, which are to be received in two instalments this year in the branch of the Bank at Osaka, and 2½ per cent of profit of the National Banks, to be hereafter deposited yearly with the Bank, shall be paid by draft at the branch of the Accountant's Bureau at Osaka. Permission was granted on the 13th of June.

On the 7th of June a draft of agreement to be made between the Bank and the National Banks, according to Article 19 of the regulations for redemption of paper currency, was made and submitted for the approval of the Minister of Finance. Permission was granted on the 12th of June, and the agreement was concluded on the 28th of June.

On the 11th of June an alteration in Article 90 of the present regulations of the Bank was proposed and carried. It received the sanction of the Minister of Finance on the 14th of June.

On the 14th of June, the Minister of Finance issued instructions to establish agencies in Sakai and Yatsuwo under the jurisdiction of Osaka-fu, and to commence business on the 1st of July. The agreement was made and agencies were established.

On the 16th of June the Minister of Finance issued a notice that the reserve funds and 2½ per cent. profit of the National Banks should be paid into the Bank and its branch at Osaka.

On the 20th of June, application was made to the Minister of Finance to provide police escort for Treasury money in transit from place to place. Permission was granted on the 27th of the same month.

The First and Third National Banks have made arrangements to have temporary deposits lodged with the Bank.

The second instalment of yen 300,000 of subscription to the share of the Bank, was payable from the 15th of May, to the 30th of the same month. During the period, yen 999,800 were paid up in Tokiyo and Osaka, the deficiency, yen 200, being caused by the failure of Mr. Kobayashi Shosaku of Takamiya-mura, Inugami-gori, in the prefecture of Shiga, to pay a part of his subscription for twenty shares.

Business at the Head Office was commenced on the 10th of October, and at the Branch at Osaka on the 18th of December.

The inaugural ceremony in Tokiyo took place on the 28th of April, in the presence of H.E. Matsukata, Minister of Finance, Mr. Kato, Chief of the Banking Bureau, and others; whilst that of the

branch took place on the 28th of June. Mr. Yoshihara Shigetoshi, President, and Messrs. Yasuda Zenzaburo (director) and Kitaoka Mombei (adviser) were deputed thither from Tokiyo. H.E. Matsukata happened to be staying in Osaka on the occasion and presided at the ceremony.

SUMMARY.

To state briefly the conditions of business for the period under review:—All affairs have been gradually pushed toward adjustment since business was commenced in October. The most important events of the year were placing the Treasury money under the management of the Bank; payment of ready coin for bars of gold and silver; the proposed redemption of paper currency; placing of the subscription to the Nippon Railway Company under the Bank's care; and the establishment of correspondence between the Bank and over twenty National Banks. During the period business was chiefly confined to receiving deposits, discounting bills and the purchase of public loan bonds.

The Bank carried on business for one hundred and forty-nine days, exclusive of holidays, and the following tables show the accounts of the Bank:—

THE TSURUGA RAILWAY.

(Translated from the *Bukka Shimpō*.)

The railway constructed between Tsuruga and Nagahama has a branch line to Sekigahara. The length of these two lines is together forty-one miles. Although a tunnel at Yanagase, midway between Tsuruga and Nagahama, has not yet been completed, it is generally believed, that on the whole, the work which has taken only a little more than ten months since it was first commenced, is of a most satisfactory character, and that it is the best piece of work of the kind hitherto constructed in the Empire. When the trains arrive at Nagoya, passengers and merchandise to be conveyed to Otsu are taken in the steamships on service on the Lake Biwa. These vessels are provided by the great Lake Steamship Company, organized by Mr. Fujita Denzaburo, of Osaka, and a few others, who have obtained permission to take charge of transportation across the Lake under special contract with the Railway Bureau. The traject to Otsu takes three hours. Then travellers and cargo take trains running between Kiyoto, Osaka, and Kobe—a distance of fifty-eight miles. It will be seen that should the present work be completed, the railway begins in Yechizen, and traversing Mino, joins the lines in Omi, Yamashiro, and Settsu, so that Hokkaido may be commercially connected with these provinces. As the plan is evidently a good one the people appear to expect prompt success in the construction of the Yanagase tunnel. It is quite reasonable that the editor of the *Nichi Nichi Shimbun* should regard the railway between Tsuruga and Nagoya as conducive to changes in the general condition of the people. If this line is opened for traffic, merchandise from Uzen, Ugo, Hokurokudo, must necessarily be stored at Tsuruga, whence it will be transported to Nagahama or to Kobe or Osaka through Otsu by train and across Lake Biwa by steamer. Transport can thus be easy throughout Sanriku, Tokai, Goki, and Nankai. It will no longer be necessary to follow a round-about route through Shimonoseki or across the isthmus of Mimmaya as heretofore. Great facilities for traffic must ensue.

Such is the general outlook with regard to the construction of a railway from Tsuruga. Of all the conveniences to be afforded the most remarkable lies in the opening of a pathway for commercial communication with Hokkaido. The railway between Tsuruga and Nagahama should never fail to afford due facilities. Otherwise it would be useless to construct the line. Now, as far as actual facts are concerned, the conveniences referred to have no existence, and the anticipations of the public will not fructify, as we will endeavor to prove. What merchandise occupies the most prominent position among the products of Hokkaido? Obviously none other than manure. Where is that most needed in the interior? Clearly in the counties in Goki, Sanyodo, and Nankaido. Awa and Sanuki alone require an abundant supply. Now manure must be shipped in the northern island and landed at Tsuruga whence it will be conveyed to Nagahama by train. At Nagahama it is shipped and thence transported to Otsu, where it must again be removed to a traif, and taken to Osaka or Kobe for transportation to the localities to which it is consigned; namely, Awa and Sanuki. Not only are time and labor thus wasted in constant loading and discharging, but also the cost of the merchandise is proportionately increased; for

the total of carriage reaches a considerable sum, while the freight is liable to deteriorate through such processes of transportation. Hence arises great inconvenience to commerce. If the conveyance of the products of the Hokkaido can only be effected by the usual methods, and if there be no other means available, we must necessarily resort to the several lines of railway already mentioned. But this is not the case. The products of Hokkaido may be carried by sea direct to the localities where they are in demand, or at least to adjacent ports, economising labor and reducing freight. The marine distance of some ports of the northern island from Tsuruga is not at all considerable, being 436 miles from Nemuro; while Shimonoseki and Kobe are distant 691 miles and 829 miles respectively from Hakodate; 1,006 miles and 792 miles from Otaru, and 981 miles and 945 miles from Nemuro. A vessel steaming at the rate of ten knots per hour can go between Tsuruga and these northern ports in about forty-three, fifty-two, and seventy-two, hours respectively; while it will take for a voyage to Shimonoseki about sixty-nine, a hundred, and ninety-eight, hours respectively, and to Kobe about eighty-two, seventy-nine, and ninety-four, hours respectively. It is true that transport by rail from Tsuruga to Kobe should take only eight or nine hours, including the time of the passage of steamships across Lake Biwa. This, added to the time necessary for the voyage from Hokkaido to Tsuruga, will hardly exceed fifty-two, or sixty-one, or eighty-one hours. But as some extra time must be allowed for shipping and discharging cargo; and as some time must reasonably be allowed for difference in the arrival or departure of trains, we may logically assume that in point of time there can be no great difference between the two systems of transport. This argument is not only applicable to manure from Hokkaido, but also to any other productions which are to be conveyed to Saikaido, Nankaido, and Sanyodo. It is plain that of the two systems in question, one must be far better than the other. And we maintain that the public view is an erroneous one.

From the foregoing statements it will be seen that the Tsuruga line is not only useful for the transport of the productions of Hokkaido to the provinces of Omi and Yamashiro, but also is available for the conveyance of passengers as well as merchandise to be supplied to Kiyoto, Osaka, Kaga, Noto, Yetchiu, and Yechizen. But these passengers and merchandise are generally transported from Tsuruga in small steamers along the coast of Hokurokudo, and since such traffic has to be suspended from the beginning of winter to the next spring, the railway authorities must follow a similar system. Thus we see that the line offers very limited facilities, as the trains can ply only for a short space of time each year. Is it then justifiable to say that the Tsuruga railway should not be constructed? Certainly not. Yet the line must be extended east and west so as to connect with other lines. It is absolutely necessary for the present either to extend the Sekigahara line to Yokkaichi through Ogaki and Kuwana, or to contrive to transport merchandise to Kuwana and Yokkaichi by small steamboats down the river Ibi, limiting the proposed extension to Ozaki. Should either of these two plans be adopted, Hokkaido can not only establish commercial relations with the Tokaido, where manure is most needed, especially in Owari, Mikawa, and Ise, but communication also becomes practicable between the centre of the Tokaido and Goki, or the Five Provinces—Yamashiro, Yamato, Kawachi, Idzumi,

and Settsu. Unless extensions are to be made for the augmentation of facilities in such a manner as we have just suggested, the usefulness of the proposed railway can hardly be recognized. Yet it appears that the projectors hesitate to adopt our scheme, saying, "Why should it be necessary to extend the Sekigahara line?" A mere glance at an ordinary map will show that the distance between Ogaki and Sekigahara does not exceed seven miles and a half, but that the road is of the worst description. From Ogaki to Kuwana are twenty-five miles, with the river Ibi intervening; When the water is low, it is impossible to cross the river in ferry-boats, while the pathway along the bank is almost impracticable even for jinrikisha. In fact, we may say that there is really no road between the two places. In these conditions the Government has conceived the utility of a railway between Ogaki and Sekigahara. But we have not heard of any such extension being proposed. Do the authorities intend to dredge the River Ibi and provide numerous small steamers with a view to facilitate communication between Kuwana and Yokkaichi? If so, the people must congratulate themselves upon enjoying a great convenience. Suppose, for instance, that a man who intends to go to Kiyoto starts from Yokohama in a steamer at six o'clock in the afternoon. He arrives at Yokkaichi at 6 p.m. next day, and after passing a few minutes there is taken to Ogaki in a small steamer plying on the River Ibi, arriving early on the morning of the third day. If he takes the first train running to Kiyoto, he will be in that city at noon. Such a short trip, however, can only be accomplished by availing oneself of river steamboats. Should there be none such, an undertaking as the extension of the Sekigahara line to Ogaki is not likely to increase the facilities of traffic. According to the statements of the *Nichi Nichi Shimbun*, it seems probable that the River Ibi, being shallow, can be of no great use unless it is dredged; that although the dredging may be effected with considerable expense, the transportation of merchandise direct to Yokkaichi by small steamships on the river is likely to be attended with disaster; and that therefore the goods must be transhipped to seaworthy vessels, with considerable inconvenience. From this we gather that the idea of resorting to the stream must be relinquished, and that steps must be taken to extend the Ogaki line direct to Kuwana and Yokkaichi.

We are already informed that the authorities have resolved to carry the Sekigahara line to Ogaki, but nothing has transpired as to when it is to be extended to Kuwana and Yokkaichi. There should be no difficulty in extending the line to Sekigahara, if the steamship service is not to be established on the River Ibi, and a railway is not to be constructed to communicate with Kuwana and Yokkaichi. The Sekigahara line may have no immediate effect upon travellers from the eastern and western provinces; and these in their turn appear to regard the scheme as unserviceable to them. They say that those who wish to visit Yokkaichi, or Kiyoto, or Osaka, may start from Yokohama one evening and arrive at Yokkaichi on the afternoon of the ensuing day. Here they pass a night and take *jinrikishas* to Otsu on the next morning—that is, on the third day. Thence the train will carry them to Kiyoto or Osaka in a very short time. It is not at all necessary to resort to the Ogaki line unless one has some particular business thereon. For this reason, unless the Sekigahara line is to be extended to Ogaki so as to communicate with Yokkaichi by a railway or by the river, the facilities for transport can hardly be augmented. Advancing a step further, we would say that the line referred to can by no means perform its legitimate functions, and therefore cannot promote the interest of our commonwealth. I maintain that the Tsuruga line is destined to produce great results. It is worthy of notice that the port of Tsuruga lies in the western extremity of Yechizen and is surrounded by mountains except at its entrance to the North-west. The harbour can perform no other service than to receive the productions of Hokkaido, and the railway, which is to be constructed may facilitate communication with Omi and Yechizen, but not with other provinces. If all circumstances are taken into consideration, it will be very easy to perceive how the proposed line may be made most serviceable to our purposes.

SPECIAL COURT, TOKIO.

TUESDAY, AUGUST 21ST, 1883.

Before Mr. Justice TAMANO, and Messrs. HAYASHI, KAWADA, and NAGAOKA, Assessors.

THE PROSECUTION OF THE FUKUSHIMA SUSPECTS.

The Court opened at 8.15 a.m., when Judge Tamano directed the accused to reply to the arguments of the Prosecutor in their respective order.

Prisoner No. 1, Hanaka, went over the same ground as previously, namely, that the Prosecutor's contention is too vague and only based upon a presumption, consequently the accused are placed in a false and dangerous position. He said that he suspected the Prosecutor was a relative or intimate friend of Mr. Mishima, the Governor of Fukushima, on account of the extraordinary exertions he had made to defend the Governor against the charges made against him by the accused. (This speech created great excitement in Court.)

Mr. Yamada, Counsel for Hanaka, confined himself to saying that the arguments of the Prosecution were so vague that he could not understand their object.

The Prosecutor replied that counsel's contention was not in order, and that he had failed to adduce facts to counterweigh the arguments of the Prosecution.

Prisoner No. 2, Hiroshima, remarked that the report of the examinations at the Fukushima Police Court is valueless, as the confession was extorted from him by threats.

Mr. Nakashima, Counsel for Hiroshima, insisted that intentions are not punishable, until after they have been carried out. The accused had resorted to peaceful measures to effect a political reform, therefore the actions of the accused do not come within the scope of insurrection.

Prisoner No. 3, Tamano, denounced the argument of the Prosecutor as being vague and unsatisfactory. He said it demanded no refutation.

Mr. Oi, Counsel for the prisoner, said that the word "government" in the expression "bureaucratic government," which occurs in the first article of the Covenant is a common noun and does not define any particular government. It means all bureaucratic governments. If it were accompanied by such words as "of Japan," it would refer to the existing government of the land. The evidence of the Fukushima police is valueless, because the confessions were extorted by threats. The accused wished to effect a political reform by peaceful means, which cannot be called insurrection. The words *niyu tem-paku* indicate the recourse to peaceful measures. The accused are not guilty and must be acquitted.

The Court rose at 11.50 a.m.

WEDNESDAY, AUGUST 22ND 1883.

The Court opened at 8.30 a.m., when Judge Tamano directed Mr. Hoshi to speak on behalf of prisoner No. 4, Kona, who had himself said that he had nothing further to say.

Mr. Hoshi briefly addressed the Bench, taking the same ground as before—namely, that the accused had combined to carry out the programme of political reform by peaceful measures, and the force of public opinion. The learned Counsel insisted that, as the covenant had been cancelled, there was no ground for the prosecution.

Prisoner No. 5, Aizawa, was next directed to speak. He replied that he had nothing to say.

Mr. Kitata, Counsel for Aizawa, contended that the report of the prisoner's examination at Fukushima and Wakamatsu, was a tissue of deceit and cruelty, and, consequently, of no legal value. He said that, if the accused's action had come within the scope of *yobi* (preparation) to raise an insurrection, some evidence must be forthcoming such as the purchase of arms and munition. In view of the want of any such evidence the accusation was groundless.

Prisoner No. 6, Sawata, spoke at some length, protesting that he was not guilty.

Mr. Uyeki, Counsel for this prisoner, adopted a line of argument similar to that adopted by Mr. Hoshi.

Mr. Yamada then (with permission of the Court) resumed his unfinished argument. His speech was only a repetition of the arguments of the other Counsel.

The Court rose at 11.30 a.m.

THURSDAY, AUGUST 23RD.

On the opening of the Court, the Prosecutor said:—The contention of the accused and their Counsel is nothing but a repetition of the same thing over and over again. Not only is it troublesome to deal *seriatim* with each of their arguments, it would be useless. We prefer to deal with them at once and together. The gist of the defence is this: that the accused combined to improve the administration by force of public opinion. But in our opinion, this plea is mere invention, because the accused signed the covenant with their blood, which is a most substantial proof that their aim was something more than peaceful political reform. The action of the accused comes within the scope of *yobi* (preparation), although no arms were procured; for they secretly combined in a plot against the Government. In short, their scheme was in the earliest stage of hatching; and, unfortunately for the conspirators, that was discovered. The action of the prisoners, therefore, was illegal.

The Court here announced that the trial would be suspended for two days.

The Court rose at 11.30 a.m.

MONDAY, AUGUST 27TH.

The Court opened at 8.30 a.m., when, as usual, Judge Tamano intimated to the accused that they might speak if they wished to do so.

The prisoners and their Counsel reiterated their former statements, which are of no interest to reproduce.

The Court rose at 11.40 a.m.

TUESDAY, AUGUST 28TH, 1883.

The Court opened at 8.50 a.m., when Judge Tamano directed prisoner No. 6, Sawata, to speak. The Prisoner had nothing to say.

Mr. Uyeki, Counsel for this prisoner, then addressed the Court. He said that his learned colleagues had left little for him to say. He would, however, venture to impress upon the Bench that the words "overthrow the government," in the original covenant, had been cancelled, and that substantial proof had been adduced to that effect. The case against the accused was childish. Had they really proposed to raise an insurrection they would not have subscribed to a covenant which was to involve them in their present difficulties. They drafted it on mere impulse. Nothing whatever had been adduced to prove any actual culpability on their part. One of the most notable features of the progress made by the nation since the Restoration was the promise of the illustrious reigning Sovereign that a National Assembly should be established. The people were already in full enjoyment of peace and prosperity. Why then should the accused conspire to overthrow the Government? The Court must be convinced that the prisoners were so enthusiastic as to be all but fanatics; and that their enthusiasm had found vent in this covenant. He hoped that the Court would take this into serious consideration.

The Court addressing the prisoners, directly, asked if they had anything more to say.

Hanaka said that he had only been a temporary resident in Fukushima. His place of registration was Tokijo.

Sawata said that it was by accident he had first written the words "overthrow the government" instead of "improve the administrative system."

Mr. Justice Tamano announced that the trial was now closed, and asked the Public Prosecutor to say what penalties he desired to be imposed upon the accused.

The prosecuting Counsel, in reply, insisted that it was evident that the accused had been guilty of conspiracy to raise an insurrection, and therefore were amenable to punishment under Articles 125, 121, and 68 of the Penal Code. Thus, Article 125 says:—"If there have been only levies or enrolment of bands, supplying of arms, munitions of war or provisions, or other acts preliminary to the offences before mentioned, the penalties borne by article 121 shall be diminished by one degree. If there

have been only a conspiracy formed, not followed by preliminary acts, the penalty shall be diminished two degrees." Article 121 runs:—"All individuals guilty of having taken part in a civil war, in an insurrection or an armed sedition, having for its object either to overturn the Government of the country or to take away from the Imperial authorities any part whatsoever of the territory of Japan or its dependencies, or to diminish the rights and prerogatives of the Emperor in the Government of the country, shall, according to the nature of their participation, be punished as follows: 1.—with the penalty of death; those who have been the instigators of the crime and those who have been the ringleaders. 2.—With transportation for life, or, in circumstances less serious, with temporary transportation; those who have held command or exercised authority. 3.—With major or minor imprisonment; those who have furnished arms, munitions of war, money and provisions, and those who have held ordinary positions. 4.—With minor imprisonment for a period of from two to five years; those who, without exercising any function, have participated in insurrection or have been employed in different services, less important, during the insurrection." Article 68 says:—"Political criminal penalties are lowered or raised in the following order:—1.—Death. 2.—Penal servitude for life. 3.—Penal servitude for a time. 4.—Major imprisonment. 5.—Minor imprisonment." The prosecutor contended that, although the prisoners had not carried their plot into execution, yet they should be banished for a period of from twelve to fifteen years.

The presiding Judge asked the prisoners if they had anything to say in reply to this demand on the part of the prosecution.

Hanaka said that he would be glad to be convicted in such circumstances; but he had been told that there was nothing to prove guilt on the part of himself and his associates.

The other prisoners and their Counsel each protested against the infliction of such a sentence as that proposed by the Prosecution.

At 10.30 a.m. the Court rose. Judgment reserved.

HANDICAPPING AT LAWN TENNIS.

The following letter on the above subject appears in *The Field* of July 7th:—

In a letter which I wrote to *The Field* immediately after last year's championship, I promised a further letter on handicapping. Just about that time, however, it became apparent that the All-England system of handicapping was not popular; and it was further shown by D. J. A. Eveleigh and others in *The Field* that all systems then in vogue were faulty. It was decided to reconsider the matter of handicapping, whereupon I postponed my remarks.

It was eventually settled that the popular system, which admits the giving of half odds, and which ignores bisques given in diminution of other odds (e.g., 15 for a bisque), should be adhered to, subject to a correction which I shall presently explain. The system is fully described in "The Regulations for the Management of Lawn Tennis Prize-Meetings, 1883" (Field Office, 346, Strand). I have now had some experience as to how the amended system works. In my opinion it is highly satisfactory. I will proceed to examine its principles and some of its details.

In order to obtain a workable handicap on this system, it was necessary first to determine how many bisques in a set are equivalent to the odds of 15, i.e., one stroke given at the commencement of each game of a set. A bisque, I presume your readers know, is one stroke which may be claimed by the receiver of the odds of a bisque, at any time during a set. The question to be answered was this:—Would you rather give your adversary 15, or five or six or more bisques? It is clear that, as a set must consist of at least six games, the odds of 15 must be worth at least a stroke; but they are not therefore worth six bisques; a bisque is more valuable than a stroke, as the player who receives bisques can take them when he likes during the game; so, if he scores 40 or advantage in any game, he can win that game to a certainty

by taking his bisque. If he receives a stroke, it may be that he would have won the game without the odds, so that portion of the odds is comparatively useless to him. It is gone; whereas, had it been given in the form of a bisque, he could have reserved it.

The average number of games in a set (without advantage games) is between eight and nine; so fifteen must be worth less than nine bisques. "Taking one consideration with another," the conclusion arrived at was that 15 is worth between five and six bisques where advantage sets are not played. With advantage sets (which must be played in handicap matches on this system because of the half-odds, e.g., half-15 or half-30) the value of the odds of 15 approaches more nearly to six bisques. And as six (being an even number) is more convenient to deal with in apportioning bisques and half-odds than five (an odd number), it was finally resolved that 15 should be taken as equivalent to six bisques, and half-15 as equivalent to three bisques. Odds for a bisque (i.e., one or more bisques given to the better player in diminution of other odds) is a form of odds not in favour with the public; so, under the present system, they are entirely dispensed with, the competitors now being handicapped in classes by the committee appointed for the purpose as shown below:—

CLASS O (SCRATCH).

Class.

1 receives 1 bisque.
2 receives 1 bisque.
3 receives half-15.
4 receives half-15 and 1 bisque.
5 receives half-15 and 2 bisques.
6 receives 15.
7 receives 15 and 1 bisque.

Class.

8 receives 15 and 2 bisques.
9 receives half-30.
10 receives half-30 and 1 bisque.
11 receives half-30 and 2 bisques.
12 receives 30.
13 receives 30 and 1 bisque.
14 receives 30 and 2 bisques.

It was not considered advisable to carry the classes beyond 14; as, when half-30 is given, one mistake on the part of the giver of odds in the 40 games, loses him the game. His play is therefore cramped all through; he dare not go for a brilliant stroke, but must confine himself to very safe and cautious tactics. His being restricted to this style of game would, of course, disturb the handicap. When the best player entered can give the worst more than thirty and two bisques, owed odds are introduced. I shall advert to these presently.

One advantage of the mode of handicapping shown in the above table is its great simplicity. The competitors are classed, and they meet at the differences between their respective odds. Thus, if a player in Class 2 is drawn against a player in Class 7, he gives 15 and a bisque less than two bisques, i.e., these players meet at half-15 and two bisques. Fifteen being regarded as equivalent to six bisques, a simple subtraction sum handicaps any two players at once (e.g., Class 2 v. Class 7, odds in bisques are $7-2=5$, and 5 bisques= $\frac{1}{2}$ of 15 and 2 bisques).

If this were all, the scheme would be next to perfect. But it so happens that when players, other in Class O (scratch) and in Class 1, meet players in lower classes, the mere subtraction of the difference between the class odds does not invariably give the worse player his full proportion of odds.

The reason is this:—After the subtraction is made, the better player starts at love. If players in, say classes 6 and 12, started each game at 15—30, each player would get his true proportion of odds by mere subtraction. But they start at love—15. Hence a longer game has to be played; and in a longer game the better player has more chances of exercising his skill, consequently he ought to give more odds. It may be asked why not let classes 6 and 12 start at 15—30? The answer is that it is generally disliked, and that it makes some of the matches too short. Endurance is one of the elements in a hard match of the best of five sets, starting at love—all in each game. If two players in class 12 were drawn together, and began each game at 30—all, they would only play about half a match, and would not have their due share of fatigue. This may affect not only the match between these two, but the next match played by the winner.

It has therefore been found advisable to introduce differential odds, i.e., to add something to the difference between the respective odds, as obtained by mere subtraction, in certain cases. What this difference ought to be can be calculated mathematically. It has been calculated by your correspondent "D. J." Fractions of a bisque sometimes occur; and, when this is so, the nearest whole

number has been taken. The result of the calculations appears in the subjoined table:—

| | | RECEIVING. | | | | | | | | | | | | | |
|---------|--------|------------|---|---|---|---|---|---|---|---|----|----|----|----|----|
| GIVING. | CLASS. | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 |
| | | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 |
| 1 | 1 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 2 | 2 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 3 | 3 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 4 | 4 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 5 | 5 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 6 | 6 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 7 | 7 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 8 | 8 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 9 | 9 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 10 | 10 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 11 | 11 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 12 | 12 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 13 | 13 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |
| 14 | 14 | • | • | • | • | • | • | • | • | • | • | • | • | • | • |

The figures 1 and 2 in the table show the number of bisques to be added to the difference between the respective odds. For example:—Suppose a player in Class 3 is drawn against a player in Class 9. The difference between the respective odds is six bisques, that is 15. Now, by running the eye along the third horizontal band of the table (to which the thick-faced figure 3 is prefixed), until we come to the perpendicular column, above which stands the thick-faced figure 9, we find that Class 9 has to receive one differential bisque from Class 3. Hence, Class 3 has to give Class 9, 15 and a bisque.

It remains to consider what is to be done, in case the best player entered is handicapped to give more than 30 and two bisques to the worst. The plan recommended is to put the best player in a class above scratch—that is, that he should owe certain odds, not being bisques.

Owe half-15 is one stroke owed at the beginning of the first and of every subsequent alternate game of a set. That is, the first stroke won by the owner of odds in the first, third, etc., games causes his score in those games to be love. Owe fifteen is one stroke owed at the beginning of every game. Here the first stroke won by the owner of odds in each game causes his score to be love. Owe half-30 is two strokes owed at the beginning of the first game, one stroke at the beginning of the second game, and soon alternately throughout the set.

It will be observed that, when half odds are received, they are given in the second, fourth, &c., games, and that when half odds are owed, they are paid in the first, third, &c., games. The reason once pointed out, the absurdity of any other arrangement becomes manifest. Suppose a player has to owe half-30 and to give half-30, according to the present arrangement he has to owe 30 and give 15 in the first game; to owe 15 and give 30 in the second game. If the owing of the larger half of the strokes were not alternated with the giving the larger half of the strokes, the giver of odds in the first game would owe 15 and give 15; in the second game he would owe 30 and give 30. It is extremely probable that he would win all the 15 games with case; so the set would virtually be his as soon as his adversary made a sufficient number of mistakes to lose a 30 game.

The provision that the owner of odds shall not owe bisques is made to prevent the cancelling of bisques owed and bisques received. It is not a point of great moment, and could not always be carried out in practice if more than one player owed odds, and the players owing odds were not separated by three bisques or by a multiple of three bisques. The provision that bisques are not to be owed only occurs in a note, and it is more of a recommendation than a regulation. I should like to see the note reworded to the effect that owed odds should not be expressed in bisques if it can be avoided. Thus: if only one player owes odds, and he is handicapped to give half-15 and a bisque to the next best player, the owing of bisques could be avoided by making the odds owe half-15 and give a bisque putting the next best player in Class 1, and having no scratch class. I am aware

that owe half-15 and give a bisque is not so much odds as give half-15 and a bisque. If the handicappers are of opinion that owed odds do not sufficiently separate these two competitors, another bisque can be given, and the odds would be owe half-15 and give two bisques. In this case there would be no scratch class and no Class 1. But as it is advisable to handicap all the classes with relation to the scratch man, the handicappers should add an imaginary scratch man to the list of competitors, and remove him when the handicap is made.

Owed odds, it can be shown by calculation, do not require any differential adjustment. Hence, if there is more than one player in classes above scratch, and they are in different classes, they meet at the difference of their respective odds.

It is not considered advisable to make a class above scratch unless the odds to be given by the best player to the player in the lowest class exceed 30, or unless the difference between the best player entered and the next best is half-15 or more. In the latter case the institution of a class above scratch is left to the discretion of the handicapping committee.

In the practical working of this scheme the best plan is to fix on the best player and to put him at scratch. Then to search for the second best player, and to handicap him with reference to the scratch man. Next to search for the worst player and similarly to handicap him. If it now appears that the conditions exist, under which it is advisable to have a class above scratch, put the second best player at scratch, and handicap all players in lower classes with reference to him. The owe player will simply have to owe the scratch man and all the other players what he is handicapped to owe, in addition to the odds he would have to give if he were in class O (scratch); and so on, if there is more than one player in a class above scratch.

The reason advantage sets must be played in handicap matches on this system, throughout the ties, is that players receiving half odds, or players giving half owe odds (e.g., receiving or owing half-15 or half-30) would be at a disadvantage if a set were determined by one game at the score of five games all.

In four-handed handicaps the players should be classed individually, as for single handicaps; but the handicapper should bear in mind that players are not necessarily of the same strength in four-handed as in single games. Hence, if they take a single-handed handicap as a basis, they may have to modify their classification of some of the players for four-handed matches.

The strength of any pair is ascertained by dividing by two their united odds from scratch as expressed in bisques. Thus, a player in Class 1 is partner with a player in Class 5. Their united odds in bisques are $1+5=6$; consequently their strength as a pair is $6 \div 2=3$. They together are in Class 3, and they would receive half fifteen from two scratch players playing as partners.

If the addition of the odds of any pair results in an odd number of bisques, a bisque has to be added before dividing by two.

The pairs will then meet at the difference of their respective odds, as thus ascertained, with the addition of differential odds, if required, as already explained in the case of single-handed handicap matches.

For example:—Players in Class O and Class 1 (call them A. and B.) are partners against players in Class 3 and Class 4 (call them C. and D.). The united odds of A. and B. in bisques are $0+1=1$. This being an odd number, a bisque is added; the united odds of A. and B. with a bisque added= 2 , which divided by $2=1$. A. and B., partners, are therefore in Class 1. Similarly, the united odds of C. and D. are $3+4=7$. Add a bisque and divide by two; C. and D. partners, are in Class 4. The difference between Class 1 and Class 4 is three bisques= $\frac{1}{2}$ of 15. There are no differential odds. Therefore, AB. have to give CD. half-15.

Again:—C. (Class 3) and E. (Class 7) are drawn against F. (Class 4) and G. (Class 12). The united odds of CE., partners, are $3+7=10$, divided by two, CE., are in Class 5. The united odds of FG., partners, are $4+12=16$; divided by two, FG. are in Class 8. The difference between Class 5 and Class 8 is three bisques= $\frac{1}{2}$ of 15. By referring to the table of differential odds, it will be seen that Class 5 has to give Class 8 one bisque in addition to the difference between their respective odds. Consequently, CE. meet FG. in a four-handed match at the odds of half-15 and a bisque.

For Shanghai, Kobe, and Nagasaki... per M. B. Co. Wednesday, Sept. 8th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.40, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 m., and 2.00 and 4.00 p.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, AUGUST 24TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokyō, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—represents velocity of wind.
The barometer is reduced to the freezing point and to the level of the sea.
† Direction of Wind. ‡ Weather.
* Rain in inches. † Maximum velocity of wind 9.6 miles per hour on Sunday at 4 a.m.
The highest reading of the barometer for the week was 30.036 inches on Saturday at 6 a.m., and the lowest was 29.864 inches on Wednesday at 3 p.m.
The highest temperature for the week was 88.3 on Friday, and the lowest was 63.4 on Wednesday. The maximum and minimum for the corresponding week of last year were 85.5 and 66.2 respectively.
The total amount of rain for the week was 8.00 inches, against .779 inches for the corresponding week of last year.

LATEST SHIPPING.

FREIGHTS.

Since our last report the berth for New York, via Suez Canal, is filled by the steamship *Oxfordshire* advertised for dispatch on or about the 1st September. The *Galley of Lorne*, to follow for the same port, left Kobe on the 30th ultimo, but in all probability will return to complete her loading. For San Francisco the *St. David* was dispatched on the 30th ultimo. The barks *Wandering Minstrel* and *Furness Abbey* left on the 28th and 29th respectively, the former chartered for Amoy with a cargo of wheat, and the latter in ballast for Hongkong. The German bark *Galveston*, also in ballast, departed for Nagasaki on the 27th ultimo. From New York the British steamer *Strathleven* arrived here on the 30th ultimo with kerosene oil and general cargo.

ARRIVALS.

Kworio Maru, Japanese steamer, 482, G. Withers, 25th August.—Yokkaichi, General.—Mitsubishi M. S. S. Co.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 26th August,—Kobe, 24th August, Mails and General.—Mitsui Bishi M. S.S. Co.

Oceanic, British steamer, 3,700, Davison, 27th August,—Hongkong 20th August, Mails and General.—O. & O. S.S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 28th August,—Yokkaichi 27th August, General.—Mitsui Bishi M. S.S. Co.

Zambesi, British steamer, 1,540, L. H. Moule, 28th August,—Hongkong, 18th August via Nagasaki and Kobe, General.—P. & O. S. N. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 28th August,—Yokkaichi, General.—Mitsui Bishi M. S.S. Co.

Fuso Kan, Japanese ironclad, 12 guns, 1,340, Inouye, 28th August,—Yokosuka August 28th.

Hiogo Maru, Japanese steamer, 806, R. N. Walker, 28th August,—Hakodate 26th August, via Oginohama General.—Mitsui Bishi M. S.S. Co.

Tsuruga Maru, Japanese steamer, 850, Dithlefsen, 29th August,—Kobe 27th August, General.—Mitsui Bishi M. S.S. Co.

Kworio Maru, Japanese steamer, 481, G. Withers, 29th August,—Yokkaichi, General.—Mitsui Bishi M. S.S. Co.

Yechigo Maru, Japanese steamer, 751, E. Jones, 29th August,—Hakodate 27th August, General.—Kiyodo Unyu Kwaisha.

Nagoya Maru, Japanese steamer, 1,015, Wilson Walker, 30th August,—Shanghai and ports, Mails and General.—Mitsui Bishi M. S.S. Co.

Strathleven, British steamer, 1,588, C. W. Pearson, 30th August,—New York 25th June, Oil and General.—Adamson, Bell & Co.

Godavery, French steamer, 1,049, Du Temple, 31st August,—Hongkong 25th August, Mails and General.—Messageries Maritimes Co.

Taganoura Maru, Japanese steamer, 610, Matsumoto Matsugoro, 1st August,—Yokkaichi 30th August, General.—Mitsui Bishi M. S.S. Co.

DEPARTURES.

Essex, American gun-vessel, 6 guns, 190 men, 1,200, Captain A. H. McCormack, 25th August,—Kobe.

Genkai Maru, Japanese steamer, 1,084, G. W. Connor, 25th August,—Shanghai and ports, Mails and General.—Mitsui Bishi M. S.S. Co.

Akitushima Maru, Japanese steamer, 1,149, Frahm, 26th August,—Kobe, General.—Mitsui Bishi M. S.S. Co.

City of Rio de Janeiro, American steamer, 3,584, W. B. Seabury, 26th August,—Hongkong, Mails and General.—P. M. S.S. Co.

Kworio Maru, Japanese steamer, 776, G. Withers, 26th August,—Yokkaichi, General.—Mitsui Bishi M. S.S. Co.

Niigata Maru, Japanese steamer, 1,096, Hubbard, 26th August,—Hakodate via Oginohama, Mails and General.—Mitsui Bishi M. S.S. Co.

Tanais, French steamer, 1,750, Vaquier, 26th August,—Hongkong, Mails and General.—Messageries Maritimes Co.

Toyoshima Maru, Japanese steamer, 946, Thomas, 26th August,—Hakodate, and northern ports General.—Mitsui Bishi M. S.S. Co.

Galveston, German bark, 619, Stunkel, 27th August,—Nagasaki, Ballast.—Boyes & Co.

Minerva, German brig, 319, Duhme, 27th August,—Amoy, Wheat.—Soon Hoo & Co.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 28th August,—Kobe, Mails and General.—Mitsui Bishi M. S.S. Co.

Wandering Minstrel, British bark, 363, Seivewright, 28th August,—Amoy, Wheat.—Chinese.

Furness Abbey, American bark, 1,040, G. T. Marcy, 29th August,—Hongkong, Ballast.—R. Isaacs.

Tokio Maru, Japanese steamer, 1,146, R. Swain, 23rd August,—Shanghai and ports, Mails and General.—Mitsui Bishi M. S.S. Co.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain A. F. Christensen, reports leaving Kobe on the 24th August, at 6.40 a.m. with light easterly winds to Rock Island; thence to port north-easterly winds and rain with thunder and lightning. Arrived in port on the 26th August, at 6.30 a.m.

The British steamer *Oceanic*, Captain Davison, reports leaving Hongkong on the 20th August, at 3.18 p.m. with fine weather and light easterly winds to the northern end of Formosa; on the afternoon of the 22nd, strong gale from northward and falling barometer; on the morning of the 23rd fresh gale from northward and barometer still falling—evidently typhoon to the eastward of us—working engines as slowly as possible to allow centre of typhoon to pass to the northward of us; at 5.30 p.m. barometer 28.804, wind veering round by west to S.S.W., drove ship in full speed; at 6 p.m. barometer rising, and at 8 p.m. barometer 29.100, blowing strong gale from S.S.W.; at midnight moderate gale from southward and fine weather, barometer 29.702: on the morning of the 25th passed Kuro-sima; thence to port light easterly winds and fine weather. Arrived at Yokohama on the 27th August, at 9.12 a.m.

The Japanese steamer *Taganoura Maru*, Captain Matsumoto, reports leaving Yokkaichi on the 27th August, at 6 a.m. with light variable winds to Rock Island; thence to port moderate winds.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker reports leaving Hakodate on the 26th August, at 5 a.m. with light northerly breeze fine weather throughout the passage.

The Japanese steamer *Tsuruga Maru*, Captain Dithlefsen, reports leaving Kobe on the 27th August, at 6 p.m. with fine weather throughout the entire passage; between Cape Sima and Omisaki on the 28th, at 5.20 p.m. passed the steamship *Wakanoura Maru* steering W.S.W., and at 6.05 p.m. on the same day passed a full-rigged brig—flying German flag—steering W.S.W. Arrived at Yokohama on the 29th August, at 9.45 a.m.

The Japanese steamer *Taganoura Maru*, Captain Matsumoto, reports leaving Yokkaichi on the 30th August, at 7 p.m. with light breeze throughout the passage.

MEN-OF-WAR.

Fuso Kan, Japanese ironclad, 12 guns, 1,340, Inouye, 28th August,—Yokosuka 28th August.

Kongo Kan, Japanese corvette, 13 guns, 1,341, Captain Aiura, 22nd May.—Yokosuka.

Richmond, American flagship, 14 guns, 300 men, 2,700, Captain J. S. Skerrett, U.S.N., 9th July,—Nagasaki 5th July.

LATEST COMMERCIAL.

IMPORTS.

We have had a very quiet week, transactions in both Yarns and Shirtings being confined to trifling sales at about previous prices, and in other Goods there has been but little doing. There has been rather more enquiry for Metals at low prices.

COTTON YARNS.

| | PER PICUL. |
|----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium- | \$25.00 to 28.50 |
| Nos. 16 to 24, Good to Best - | 29.25 to 30.50 |
| Bombay, No. 20, Good to Best - | 25.50 to 28.25 |
| Nos. 28 to 32, Common to Medium- | 31.25 to 32.00 |

| Nos. 38 to 42 | 35.00 to 37.25 |

COTTON PIECE GOODS.

| | PER PIECE. |
|----------------------------------------------|----------------|
| Grey Shirtings—3½ lb, 38½ to 39 inches | 1.70 to 2.15 |
| Grey Shirtings—9½ lb, 38½ to 45 inches | 1.87½ to 2.40 |
| T. Cloth—7 lb, 24 yards, 32 inches | 1.42½ to 1.52½ |
| Indigo Shirting—12 yards, 44 inches | 1.55 to 1.70 |
| Prints—Assorted, 24 yards, 30 inches | 1.10 to 2.40 |
| Cotton—Italians and Sateens Black, 32 inches | 0.07 to 0.09 |
| Turkey Reds—2 to 2½ lb, 24 yards, 30 inches | PER PICUL. |
| Turkey Reds—2½ to 2½ lb, 24 yards, 30 inches | 1.15 to 1.35 |
| Turkey Reds—3½ lb, 24 yards, 30 inches | 1.35 to 1.65 |
| Velvets—Black, 35 yards, 22 inches | 5.90 to 6.70 |
| Victoria Lawns, 12 yards, 42-3 inches | 0.70 to 0.75 |
| Taffetas, 12 yards, 43 inches | 1.90 to 3.10 |

WOOLLENS.

| | |
|--------------------------------------------------|----------------|
| Plain Orleans, 40-42 yards, 32 inches | \$3.30 to 5.25 |
| Figured Orleans, 29-31 yards, 31 inches | 3.25 to 4.00 |
| Italian Cloth, 30 yards, 32 inches | 0.18 to 0.28 |
| Mousseline de Laine—Crape, 24 yards, 31 inches | 0.15½ to 0.16 |
| Mousseline de Laine—Itajime, 24 yards, 31 inches | 0.18½ to 0.26 |
| Mousseline de Laine—Vuzen, 24 yards, 31 inches | 0.30 to 0.37½ |
| Cloths—Pilots, 54 @ 56 inches | 0.30 to 0.40 |
| Cloths—Presidents, 54 @ 56 inches | 0.40 to 0.50 |
| Cloths—Union, 54 @ 56 inches | 0.30 to 0.55 |
| Blankets—Scarlet and Green, 6 to 5½ lb, per lb | 0.35 to 0.41 |

IRON.

| | PER PICUL. |
|-------------------------------|----------------|
| Flat Bars, ½ inch | \$2.50 to 2.90 |
| Flat Bars, 1 inch | 2.80 to 3.00 |
| Round and square up to ½ inch | 2.80 to 3.00 |
| Nailrod, assorted | 2.25 to 2.50 |
| Nailrod, small size | 2.25 to 3.10 |

KEROSENE.

Sales during the past week amount to 12,000 sound and 3,800 damaged cases. Deliveries have been 35,000 cases. The Stock of sold and unsold Oil in first hands now amounts to about 750,000 cases, including the cargoes per *Antelope* and steamship *Strathleven* lately arrived. The Market is weak at quotations.

| | PER CASE. |
|--------|-----------|
| Devos | \$1.62 |
| Comet | 1.60 |
| Stella | 1.52 |

SUGAR.

Quotations remain unaltered, and no transactions worth recording have taken place during the interval. At the numerous sales at auction of the damaged article, reported as having taken place at the end of last week, the prices realized exceed the general expectation.

| | PER PICUL. |
|----------------|----------------|
| White, No. 1 - | \$7.50 to 8.00 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa | 4.35 to 4.47 |

EXPORTS.

SILK.

During the early part of the week a good business was done, but during the last two or three days there has been less doing. Buyers have apparently been busy inspecting and shipping their previous purchases. Settlements since the 25th August may be set down as 500 piculs; in

some cases at advanced rates. Export to date (not including the P. & O. steamer *Zambesi* sailing to-day) is 4,386 bales against 4,375 bales to same date last year.

Hanks.—These have been in fair demand, and prices for all but the best are higher. At the close, however, things are not quite so strong and with an easier money market, sellers may perhaps be less difficult to deal with.

Filatures have been taken for the *Oceanic* at about previous rates. Native shipments by this steamer were again large. For Europe little is doing.

Re-reels have been dealt in for the United States on basis of \$610 for Five Girl (Maibash), a rather medium parcel going forward at this price.

Kakedas still taken rather freely at former rates, but the demand from the Continent hangs fire for this class.

Hamatsuki.—These are freely taken at a slight advance on last quotations, presumably to supply the deficiency in coarse Silks from North China.

QUOTATIONS.

| | |
|---------------------------------|--------------|
| Hanks—No. 1½ | \$320 to 330 |
| Hanks—No. 2 (Shinshu) | 515 to 525 |
| Hanks—No. 2 (Maibash) | 510 to 520 |
| Hanks—No. 2½ | 495 to 505 |
| Hanks—No. 3 | 470 to 480 |
| Hanks—No. 3½ | 430 to 450 |
| Filatures—Extra | 650 to 665 |
| Filatures—No. 1, 10/11 deniers | 640 to 650 |
| Filatures—No. 1, 14/16 deniers | 630 to 640 |
| Filatures—No. 1½, 14/17 deniers | 610 to 620 |
| Filatures—No. 2, 10/15 deniers | 600 to 620 |
| Filatures—No. 2, 14/18 deniers | 600 to 610 |
| Filatures—No. 3, 14/20 deniers | 570 to 580 |
| Re-reels—No. 1, 14/16 deniers | 610 to 620 |
| Re-reels—No. 1½, 14/17 deniers | 600 to 610 |
| Re-reels—No. 2, 14/18 deniers | 580 to 590 |
| Re-reels—No. 3, 14/20 deniers | 560 to 570 |
| Kakedas—Extra | 625 to 635 |
| Kakedas—No. 1 | 600 to 610 |
| Kakedas—No. 2 | 530 to 570 |
| Kakedas—No. 3 | 470 to 480 |
| Hamatsuki—No. 1, 2 | 470 to 480 |
| Hamatsuki—No. 3, 4 | 450 to 460 |

TEA.

The demand has continued on a fair scale. Settlements amounting to about 1,600 piculs, the bulk consisting of grades below Fine. Teas from \$12 to \$19 have attracted the most attention and a few sales of Fine upwards are reported at \$27 to \$30. Arrivals continue steady. Prices remain nominally unchanged. Settlements to date at Yokohama are 122,414 piculs, against 129,402 piculs at the same period in 1882. Settlements here and at Kobe are 194,924 piculs, against 205,752 piculs at the corresponding date last year.

QUOTATIONS.

| | |
|-------------|--------------|
| Common | \$10 & under |
| Good Common | 12 to 13 |
| Medium | 14 to 16 |
| Good Medium | 17 to 19 |
| Fine | 21 to 24 |
| Finest | Nominal |
| Choice | |
| Choicest | |

EXCHANGE.

There has been a moderate amount of Private Paper settled at slightly higher rates than those ruling at the date of our last report. Quotations are steady as follows:—

| | |
|-----------------------------------------|------|
| Sterling—Bank Bills on demand | 3/7½ |
| Sterling—Bank 4 months' sight | 3/8 |
| Sterling—Private 4 months' sight | 3/8½ |
| Sterling—Private 6 months' sight | 3/8½ |
| On Paris—Bank sight | 4/63 |
| On Paris—Private 6 months' sight | 4/73 |
| On Hongkong—Bank sight | 72½ |
| On Hongkong—Private 10 days' sight | 72½ |
| On Shanghai—Bank sight | 72½ |
| On Shanghai—Private 10 days' sight | 73½ |
| On New York—Bank Bills on demand | 88½ |
| On New York—Private 30 days' sight | 89½ |
| On San Francisco—Bank Bills on demand | 88½ |
| On San Francisco—Private 30 days' sight | 89½ |

KINSATSU QUOTATIONS.

The following table shows the rate of the day and the fluctuation during the past week:—

| | |
|-------------------------|------|
| Monday, August 27th | 117 |
| Tuesday, August 28th | 115 |
| Wednesday, August 29th | 116 |
| Thursday, August 30th | 116 |
| Friday, August 31st | 118 |
| Saturday, September 1st | 118½ |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,

23c, Forston Street, London, N.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co., Corbet Court, London, E.C.

May 1st, 1883.

FOR SALE.

FOR SALE, Volumes No. 1 and 2 of the "China Review," bound in Half Calf, and in good condition.

Apply to the *Japan Mail* Office.

Yokohama, May 2nd, 1883.

NOTICE.

THE "JAPAN DAILY MAIL" is now the largest newspaper published in Japan. The paper is issued every morning and immediately delivered in the Settlement and Bluff. A new rate of charges for Advertisements has been devised on a very moderate scale, and the Paper has a good and increasing circulation.

The "JAPAN DAILY MAIL" is the principal Morning Paper published in Yokohama in the English language, and is delivered at places of Business during Office Hours on the day of publication. Advertisers will therefore see that the "JAPAN DAILY MAIL" offers unusual facilities for public announcements.

OFFICE, 72, MAIN STREET, YOKOHAMA.
Yokohama, 1st May, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 8TH, 1883.

BIRTH.

On the 2nd inst., at No. 39, Yokohama, the wife of Dr. T. H. TRIPLER, M.D., of a Daughter.

MARRIAGE.

On the 5th instant, at H.B.M.'s Consulate, Yokohama, afterward at Christ Church, by the Rev. E. Champneys Irvine, M.A., CATHERINE, second daughter of Geo. Booth, of Yokohama, to ARTHUR HEARNE, of Yokohama.

WEEKLY NOTES.

THE infant Princess Shige expired on Friday afternoon at the age of two years. The Princess had been ailing for some time, and her disease finally took the character of water on the brain. It would seem that death was expected on Thursday night, for from 9 p.m. to 11 p.m. carriages were unceasingly arriving and departing at the Shita-ya Palace, in accordance with the Japanese custom which requires that all those related to the dying person should be present at the last moment. The nation will deeply commiserate with His Majesty the Emperor, who within the space of a few years is called on to mourn the

death of a third child. The little Princess Masu is also said to be suffering from the same malady as that which has just carried off her half sister. This mortality among the Imperial children is not, perhaps, to be regarded with much surprise. According to common report, all the details of their infant life are governed by a ceremony too exacting to be consistent with the healthy ease that nature prescribes. The idea that the children of an Emperor must be nurtured differently from those of any other human being will doubtless soon go to swell the number of discarded Japanese prejudices, and when that happy result is attained, the nation will less often have to mourn events so sad as that of last Friday.

It is reported from Shanghai that there has been concluded between Japan and Korea a tariff convention on a basis of 5 per cent. *ad valorem*, and that the document has been forwarded to Japan for ratification. The public will do well to receive this statement with extreme caution. We are not ourselves in a position to say anything definite on the subject, but many considerations render it unlikely that the news is accurate. The Shanghai journals have commented on it at some length, the gist of their views being that it will have the effect of ousting China from the monopoly she had hoped to secure of Korea's foreign trade, and that it will at once enable the Western Powers to obtain favourable terms from the Government at Seoul. The latter prediction seems reasonable, but the former looks somewhat hasty. The tariff arrangements that exist between China and Korea are not distinctly known. They are only inferred from the fact that goods entering the peninsula over-land are subject to a duty of 5 per cent. It is known, however, that the regulations bearing upon this point partake less of the nature of a convention between two Sovereign Powers than of a mandatory decree issued by a suzerain to his dependent. Such being the case, it is within China's competence to alter the terms of the regulations at will, nor can her supposed designs of monopoly be effectually defeated by anything short of absolute free trade for all. That she entertains any designs of the sort, however, we do not quite believe. The probability is that, but for the conditions under which Japan's trade with Korea were conducted, China would long ago have arranged with her tributary a tariff more consistent with what she desires to obtain for herself hereafter. *Mutatis mutandis* the same may be said of Japan; and, as for Korea, she could be "happy with either were t'other dear

charmer away." The probable upshot of these international jealousies will be to place Korea's foreign commerce on a basis favorable to all her treaty friends. Meanwhile, among the many curious things that have been written on the subject, we may note as most curious the assertion of a Shanghai journal that Japan has forced a five per cent tariff on Korea—in other words that Japan, possessing and exercising the right of importing goods free of duty into Korea, has forced the latter to levy a fine of five per cent. upon those goods in future. This would be a new chapter in the history of international diplomacy.

On the 5th instant there was tried in the United States Consular Court a case which upsets most of the generally accepted theories as to the scope of foreign jurisdiction in Japan. Mr. Daniel McCarthy, a seaman of the U.S.S. *Monocacy*, was brought up on a charge of sleeping in the street and being drunk and incapable. The accused did not deny the drunkenness or incapacity, but pleaded that when he was first arrested on the Bluff, he was not interfering with any one. As incapable men seldom do interfere seriously with their neighbours, this part of his story sounded reasonable enough. He went on, however, to explain that on his way from the Bluff Station under escort, about ten policemen set upon him and beat him with their clubs. Why this savage assault in force was organized he could not attempt to explain, but he was very positive that the constables had hammered him and jumped upon his back. Finally, when he asked to see the American Consul, the officials at the station consulted together, and then, "fired him out of the gate." The effect of his projection was to drive him again to the gin shop, where he had, "he thought" two drinks, after which he appears to have mounted a jinrikisha and driven off. The next episode in his career was his meeting with the Deputy Marshal of the U.S. Consular Court, whose testimony was that "the man was bleeding from his ears, and that his face was clotted with blood." Whether McCarthy received these injuries after or before he left the station, could not be distinctly ascertained. It seems strange that he should have taken two drinks with his head in such a condition, but sailors' tastes are a little unaccountable. The strangest part of the business, however, was the trial. The man was not punished. The Consul-General thought that an admonition would meet the ends of justice, and McCarthy was accordingly discharged. Here, one might naturally suppose the business would

have ended, so far as the jurisdiction of the U.S. Court was concerned. But no. The Consul-General announced his intention of investigating the affair further as to the beating the prisoner had received, and with that object he requested that the two policemen who had escorted the man from the Bluff Station to the Settlement should be sent up for examination. This step would have been intelligible enough had the evidence of the police been required in connection with the complaint against McCarthy. But McCarthy had been finally disposed of, and if any charge was to be preferred against the police, the Japanese authorities alone were competent to investigate it. In what capacity the United States' Consul undertook to examine these Japanese policemen we are at a loss to comprehend. He did examine them, however—for, incredible as it may seem, the Inspector of Police allowed them to attend at the Consular Court for that purpose. Their evidence did not elucidate matters much. There had been no trouble with McCarthy, they said, on the way down from the Bluff, and when they left him at the station in the Settlement he was not bleeding or injured in any way. If, then, he was beaten by the police at all, it must have been while he was in the station, whereas his own statement was that the assault was committed on the way from the Bluff. At the station his suffering amounted to being "fired out of the gate." Obviously there is a strange discrepancy somewhere. The only thing certain is that the United States Consulate has now assumed the role of investigating charges against Japanese in his own Court. It is a bold step, and the Consul-General is to be congratulated on its success. We trust, at all events, that he will be able to elucidate the question of the beating, for if the police have been guilty of any such brutality they deserve to be severely dealt with. It is impossible to conceive any conjuncture which would justify constables in subjecting a drunken man to such maltreatment as McCarthy seems to have suffered. It may be taken for granted that the instinct of foreign sailors is to resist arrest by Japanese police to the utmost of their ability. The police, on the other hand, are, for the most part, physically weaker than the sailors, and where the numbers on both sides are pretty nearly equal, recourse to clubs, however deplorable, is not unnatural. But in the case under consideration we have a man who, according to the evidence of the police themselves, was "drunk and incapable." If he was struck over the head with clubs while in that condition, the act is absolutely inexcusable. Having regard to the grave discrepancies displayed by the testimony, it would obviously be most unjust to admit the truth of the charge against the police, but in the interests of the public it is vitally important that the affair should be thoroughly investigated. The technical blunder that has been made at the outset, though unfortunate, is a mere bagatelle. In their own interests, as well as those of justice, the Japanese Authorities ought to determine the exact truth of the occurrence in such a way that no shadow of

doubt can continue to obscure public vision, and we sincerely trust that Consul-General Van Buren will spare no pains to bring about that result.

An important official correspondence is said to be passing. The Prefect of Kanagawa, on behalf of some of his nationals, is reported to have addressed the Board of Consuls asking that Japanese be allowed to rent land and tenements within the foreign settlement of Yokohama. The President of the Board of Consuls here has communicated with the Doyen of the Foreign Representatives (H.E. Mr. Bingham) in Tokiyo, reporting favourably on the proposition, or rather expressing willingness to consider individual applications for the privilege, but suggesting a certain reciprocity, to wit, that requests preferred by respectable foreigners to occupy houses and land in the Japanese portion of Yokohama, on the usual conditions, shall be impartially entertained by the Kencho authorities. We regard these proposals as a step which is highly to be commended. Everything tending to break down the barriers that separate foreigners and Japanese deserves hearty support. More than a year ago, when discussing the question of municipal reform, we advocated the abolition of the Foreign Settlement altogether, and pointed out the expediency of allowing foreigners and Japanese to live anywhere they pleased within the limits of Yokohama. There can be no doubt that our isolated position becomes every year more invidious in Japanese eyes, even as it is daily growing more irksome to ourselves. From a financial point of view, too, the proposed measure offers decided advantages. It would have the effect of largely increasing the value of the land in the Foreign Settlement, a consideration not to be despised in these bad times. Probably the reciprocal privilege would not at first be largely availed of by foreigners, but if Japanese are induced to live among us, we may fairly hope that many of the prejudices which now arise from mutual ignorance and seclusion will be gradually broken down.

The ravages of the rice insect, of which we heard so much in the beginning of the season, appear to have been chiefly felt in Takatsu and Hokkaido. The Agricultural Bureau has instituted precautions against the spread of the pest. Another species of insect is reported as having destroyed thirty-eight thousand trees in Hakodate. The mere statement that such and such a number of trees have suffered does not convey much information in this country, as everything from a sapling to a patriarch of the forest is counted a tree. Nevertheless, what with insects and conflagrations, the forests in the north of Japan have had a rough time this year.

From the provinces reports are gradually arriving of the injuries caused by the typhoon of last month. The vernacular press still exhibits a great lack of enterprise in its method of collecting news from the interior. This is very palpably shown in the present instance, as the

impression conveyed to a casual reader of the Tokiyo journals is that these islands have been visited by quite a series of violent storms, whereas the fact is that the typhoon which swept over Japan from the 17th to the 20th ultimo has been cropping up time after time in the reports sent in from various localities. The loss caused does not appear to have been serious. Kagoshima suffered most, several houses and plantations having been severely damaged in that province. The full force of the gale appears to have been felt at Pusan, in Korea, on the 17th instant. Twenty-eight junks were wrecked and buildings of all descriptions considerably injured. In Fukushima the typhoon seems to have assumed the form of an exceptionally violent hail-storm, some of the hail-stones being reported as an inch in diameter.

NOTES.

At half-past two on Saturday afternoon last the minute bell of Christ Church told the Settlement that the funeral of Lieutenant Noyes, whose sad death we have already had to record, was taking place. At 3 p.m. the military escort was received at the gate by the Rev. F. Champneys Irvine, M.A., who read the opening sentences of the Burial Service, commencing with the words, "I am the Resurrection and the Life." As the body was borne into the Church, Mr. Jno. T. Griffin extemporized solemn music suitable for the occasion, and a sacred song called "The Passing Bell," by Berthold Tours, was beautifully sung by Mrs. Center, at the request of Lieut. Noyes' brother officers. The Rev. Mr. Crawford then delivered an address, and the coffin was carried from the Church to the solemn strains of the "Dead March in Saul." After the chanting of the "Domine Refugium," one of the most ancient of all sacred dirges, the noble monologue of Paul upon the defeat of death was read. At this point the well-known hymn, "Nearer, my God, to Thee" was sung by the assembled congregation, many of whom had known and loved the deceased. The prayers of hope and comfort with which the service concludes were then said, vibrating through hearts deeply touched by a sudden and terrible loss. On reaching the American Naval Hospital the military salute was fired over the body of the departed, which will be sent home embalmed to his sorrowing relatives.

In the *Japan Mail* (Daily and Weekly) of the 23rd of June last appeared an interesting article, kindly communicated, on the official reception in Korea of the American Envoy Extraordinary and Minister Plenipotentiary General L. H. Foote in the beginning of May. A New York journal received here by last mail contains an account of the same event and its surroundings, identical in purport but slightly more ample in detail. Among other trifles, accessories to the important part of the narrative, we learn that the reception-hall is rectangular in shape, open at the front, and with screens at the other three sides. The floor was covered with fine Korean

straw mats and Brussels carpet. Everything was simple, there being no attempt at decoration. The Queen was not present at the reception; but the correspondent says:—"I have no doubt she and other Court ladies were behind the screens, interested and curious spectators of the unwonted scene, as their presence was indicated by the rustling of garments and by unmistakable eyes appearing at small peep-holes through the screens." He adds that the ladies of Corea do not appear in public. When they venture out they are borne in closed sedan chairs, and rarely meet gentlemen who are not relatives.

The letter concludes with a description of Sôul, which, being from the pen of an eyewitness with exceptional and most recent facilities of forming an impartial comparative estimate of the condition of the capital, we append as follows:—

Sôul is surrounded by a high wall, which has four gates facing the cardinal points of the compass. The wall appears to be in a state of decay in many places and sadly in need of repairs. Wide streets crossing at right angles lead to the gates, and from the former leads a bewildering network of dirty streets or alleys, scarcely more than wide enough to permit the passage of sedan chairs. The houses are, as a rule, small structures of mud and stone, with roughly thatched straw roofs, dirt floors, and two or three small doors and windows. Some of the houses of the better class of people are substantially built, and have smooth hard-wood and stone floors, tiled roofs, and doors, windows, and partitions of strong white paper pasted over a light, but substantial and neat framework of wood, something upon the Japanese style, but stronger. The absence of fine temples and of conspicuous buildings of any kind is noticeable. The shops are small and insignificant, and the wares displayed for sale are generally cheap and of inferior quality. None of the finer and more valuable articles for the manufacture of which Japan and China are celebrated, such as silk, porcelain, &c., were exhibited for sale, nor was there any display indicative of the refinement in taste and art reached by Corea's nearest neighbors. The population of Sôul is estimated at figures ranging from 250,000 to 500,000. Of this number some 5,000, more or less, are said to be officials, who live in comparative ease and comfort; the remainder are poor, and struggle along as best they may, living upon scanty means in their wretched hovels. Small ponies and fine-looking cattle appear to be abundant, and are used as beasts of burden, except such of the former as are used by the gentry for riding purposes. Since the rebellion last summer, both China and Japan have maintained a force of soldiers at Sôul. The former country has at present some 1,200 troops there, and the latter about 500, as a safeguard against a sudden and unexpected outbreak of turbulent spirits who are opposed to foreigners. At present everything is quiet and no trouble is apprehended, but none was expected last summer. The rising was sudden, and directed alike against the Japanese and wealthy Coreans. No regular steam communication has yet been established with this part of Corea, but a monthly line of steamers will be put on in a short time. Steamers arrive from Japan and China occasionally, chartered for special purposes, and return with such cargoes as may be ready for shipment.

The *Choya Shimbun* publishes an interesting and very realistic article deprecating early marriages among Japanese. It is rather, or more than rather, Malthusian, but its moral is obvious and to the point. "Early marriages are the curse of States."

FATALISM. says Mr. Vienot of the *Saigon Indépendant*, appears to have taken full possession of the Tonquinese immediately after Commandant Badens' first successful operation. An additional cause of the French complete victory, we are happy to read, is to be found in the

moderation of the expeditionary force. The populations, protected by the lines of the invading army, were religiously exempted from the pillage and exaction to which those in the neighborhood of the Black Flags were exposed. Hence the country people found it better to be for, rather than against, the invaders. It is added that a feeling in favor of these latter had so far spread that a number of mandarins, even of high rank, had informed the Commissioner of the Republic that they were willing to retain their posts in the service of France.

The writer inclines to disbelieve this notion. He admits that the mandarins who swore fidelity to the deceased monarch, and who have not yet done the same by his successor, may with Oriental casuistry, which is in no respect inferior in quality to that of the Jesuits, consider themselves relieved from all previous engagements. So many high native officials have committed suicide sooner than survive a French achievement, that it appears difficult to admit an accentuated change of sentiment on the part of the high functionaries in favor of those whom they have hitherto regarded as their bitterest foes. Meanwhile, it is much to be desired that such a reaction should take place; and the Commissioner of the Republic would do well to make his best efforts to that end, and establish as promptly as possible the reign of permanent order under popular institutions.

We subjoin a translation of Dr. Harmand's (French Commissioner's) proclamation to the Tonquinese previous to the bombardment of Hué. It differs little from such documents usually addressed by an invading European power to an Asiatic or other barely civilized State which the invader proposes to conquer; but it is remarkable in that it offers to retain in their posts Annamite magistrates and officials, who will submit to French authority. It is headed "Tonquin," apparently without date, and addressed in Chinese Characters "to the People, Merchants, Literates, and Mandarins of Tonquin." This arrangement is eminently Republican. The document runs as follows:—

France is a great and powerful realm, whose name is feared and respected throughout the whole world. Possessed of forces that cannot be resisted, she is able without compromising her glory, without doing shame to her greatness, to show herself patient and generous. For these reasons she has employed toward Annam all possible methods of conciliation, and has put up with much ill-treatment. But everything has a limit; and the day of forbearance has passed. France has determined to show here as elsewhere that treaties with her are serious matters, and that, while she herself respects them, she intends that they shall be respected. Your territory has been ravaged for a long time by bands of brigands and ruffians that are a disgrace to all nations, and that no people could recognize as belonging to it. We are going to drive them out and deliver you from them, making them pay dearly the price of their crimes. We are going to restore in your midst that peace which gives birth to riches, and to take measures in order that it shall no more be troubled. Our desire is that each one of you shall peacefully enjoy the fruits of his labor. It is in no way our intention to conquer your country. France proposes only that the mandarins who rule you shall be just and upright men. We also intend that the taxes which you pay shall be employed to ameliorate the condition of your country, to augment the general well-being, to ensure the security

of persons and trade, which must be free in the interior of all your provinces. We will, therefore, leave in the exercise of their functions all those mandarins who will accept the new state of affairs, and furnish sufficient guarantee of their loyalty. We will protect them and give them occasion to rejoice at our presence. But as for others, who cherish in their hearts bad designs against us, we will hunt them down without pity; and if they venture to trouble us we will search for them even in the citadel of Hué, which will fall into the hands of our sailors and soldiers as easily as other fortresses have done. The fate reserved for them is enough to make one shudder. Fear not for the respect due to your customs and your creeds! Justice will be the same for all. Have confidence in us! France will no more abandon you; and you shall soon see Tonquin recover its ancient prosperity. Respect this!

A STORY reaches us of a most impudent scheme—unfortunately not altogether unsuccessful—to obtain money under false pretences, which was carried out in Yokohama the other day. A foreigner possessed of tolerably respectable appearance and address went the round of the principal club-houses and hotels in the Settlement and presented at each a copy of a telegram which he asserted he had just received from a scientific friend who resided in a town midway between Kobe and this port. The so-called telegram stated that a furious typhoon was raging at the place named, causing immense destruction to property and also considerable loss of life, and proceeded to say that the centre of the storm would pass over Yokohama within a few hours; the concoction winding up with a remark to the effect that the people of Yokohama had better prepare for the visitation. The person who distributed the telegram protested that his object in doing so was purely philanthropic, but his story invariably concluded with a hint that the club or hotel, as the case was, might think the information worth the amount which had been paid for the transmission of the telegram. This hint, we are sorry to know, was in some instances only too liberally responded to, and the clever rascal who conceived the idea has the satisfaction not only of having caused a good deal of alarm in the minds of some impressionable individuals, but of having been amply recompensed for his trouble. We hear, however, that there is some prospect of his receiving his dues in a very decided manner at the hands of the law, and we certainly wish him joy of the deserts he has so richly merited.

REVERTING to the oft-discussed and much disputed subject of the population of China, a correspondent of the *N.-C. Daily News* takes that paper to task for estimating the number of the inhabitants of the Middle Kingdom at 200,000,000 to 250,000,000 only, and speaking of the "immense exaggeration," with which an article in the *New York Sun* opens. The writer in the American paper calculates that the populations throughout China reaches a cypher of from three hundred million to four hundred million. "A.E.M.," the critic of the Shanghai newspaper, remarks that we are "hardly in a position to dogmatise as to the population" of the vast empire. He adds that a recent German estimate gives 456,000,000; another authority ventures on 240,000,000. Famine and pestilence, and

the great Rebellion 20 years ago undoubtedly reduced the population to a very large extent; but as the *N.-C. Daily News* itself admits "the wasted provinces are becoming populous again." The "area of *China Proper* is more than twelve times the area of Great Britain, and twelve times the population of Great Britain would give 423,000,000 or thereabout. The average population per square mile in *China Proper* is given as 236 in the "Statesman's Year Book, 1881," and this would give a total of 362,248,908. If therefore we take into account, as of course we are bound to do, the population of *China's* dependencies as well, the estimate of the *New York Sun* may after all prove to be not a very immense exaggeration."

The Editor of our North China contemporary holds to his opinion, in support of which he argues temperately as follows:—An estimate of the probable population of *China proper* is likely to be more correct if formed on the observation of recent travellers rather than on what the correspondent evidently considers authorities. Mr. Colquhoun, writing of Kwantung and Kwangsi, mentions the sparseness of the population and the slight evidences of recovery from the depopulation caused by the Taiping Rebellion which is apparent in the provinces; and the *N.-C. Daily News'* own correspondent's letters on his journey through Shanai and Shensi are to the same effect as regards the districts through which he has passed. In fact there is not a writer speaking from his own knowledge, recently acquired, who does not make the same remark. These things, with other evidence, have led many to the conviction that the population of *China* now is very much less than any official or authoritative statements have ever made it appear. The real fact about it cannot be ascertained. One must weigh such evidence as may be offered from trustworthy sources, and so try to arrive at something near the truth. The Editor points out to "A.E.M." that among the dependencies of *China*, which, he says, "we are bound to take into account," is *Corea*, the inhabitants of which have never been reckoned as *Chinese*. The same can be said of *Thibet*, another dependency. The statements of the population of *China* which are given in the "Statesman's Year Book," are such as are obtained from *Chinese* official sources; a portion of them were published a few years ago in the Customs Returns and correspond generally with the figures in the Year Book. How little dependence is to be placed on "authorities," may be seen in the fact that there is a difference of 14 millions between the population of *Szechuen* as given in the "Year Book" and in the "Encyclopædia Britannica." Regarding the figures quoted in the "Year Book," in the edition of 1882, the Editor says that they appear to be excessive, and that the great probability is that the present population of *China* does not exceed 300 millions.

SOME time since Secretary Chandler of the U.S. Navy Board issued an order which was, to

say the least, ungallant, through no doubt he imagined it called for by the exigencies of the service. Certainly it has been subject of regret in society in those ports where American men-of-war make any lengthened stay. Briefly, it intimates a disapproval on the part of the government at Washington of the custom of American Naval officers having the company of their better halves on foreign service. But there is, if we may believe a San Francisco journal, at least one lady concerned who does not intend to be separated from her husband by the famous mandate. She writes:—"No one but God or my husband has a right to separate me from my husband when there is a chance of our being together. I have followed him 18,000 miles in the last year, and I shall follow him 18,000 more if he is willing, in spite of Secretary Chandler or any one else." This is true female heroism, all the more heroic if it should lead to her consort's loss, or resignation, of his commission.

THE *Mainichi Shimbun* professes to have received intelligence from *Korea* to the effect that the King of that country has "banished Min Yong-ik, leader of the pro-Japanese party, to the province of Koshu, and has degraded Min Thai-ho, leader of the pro-Chinese party, to an office subordinate" to that which he had so far held. The reason assigned by our Japanese contemporary for these removals, is "to settle the differences between *China* and *Japan*." The expression is vague; but the idea ascribed to his Korean Majesty is a most felicitous one. Supposing, nevertheless, that any soreness does exist, as unhappily there is little reason to doubt (though it hardly arises from friction in the Korean matter), it is not likely to be assuaged by impartial ill-treatment of the kind alleged to have been prescribed by the Peninsular potentate.

THE *Nichi Nichi Shimbun* remarks that the number of foundlings in *Tokio* is on the increase. At present the poor of the capital and this district alike suffer grievously from lack of employment, owing to depression of business. The inevitable results are making themselves felt. It is to be hoped that an abundant harvest and cheap food may relieve the population from immediate want, and avert the imminence of a distressful winter.

STANLEY seems determined to become King of Congo. If successful he will furnish history with a new precedent—that of an ex-reporter on a throne. It is said that all men are capable of distinguishing themselves if fortune only consents to put them in a fitting place at an opportune moment with adequate resources. Stanley's resources are furnished by an association of geographers. These grave scientists may have had other intentions in supplying the enterprising journalist with funds, but they can scarcely complain if he adds another kingdom to the map of the world whether by violence or research. He is said to be a very violent individual, disposed to treat the negroes of the Upper Congo

like savage beasts, and persuaded that his "Zanzibarians" with repeating rifles are the most trustworthy agents he can employ. These are precisely the qualities that suit his position. His business is to make treaties, and he does it. He has already signed two with the dusky monarchs of the Congo banks. The part played by the monarchs is simple. Having forgotten how to write they scratch the margin of the parchment with their nails. Then the thing is done. The sovereignty of the "*Comité d'études du Haut-Congo*"—in other words, of Stanley—is recognized. The treaties are in French. They are countersigned by Stanley's lieutenant, Walk, and one of them, concluded with King Jonga of Selo, confers on the ex-reporter rights of trade and travel together with the right of exacting forced labour from the natives, in return for which concessions the ex-reporter promises to confer, in perpetuity, on the King of Selo and his descendants—two pieces of cloth. It will probably be necessary at some future date to pound these dusky signatories or their subjects into a fitting appreciation of treaty obligations. Their first impressions of civilized honour when they begin to comprehend the nature of the obligations they have assumed are not unlikely to be a trifle crude.

ONE of the most original statistical freaks of ancient or modern times was that of taking a census of all the barn-door fowl in France. The result is that there are at present in the Republic 45 millions of these bipeds, representing a total value of 25 million dollars. Hens are in the majority, of course. They number 34 millions, and hatch 100 millions of chickens every year, of which ten millions die as chicks, ten millions are preserved for breeding purposes, and 30 millions are eaten, their consumers paying from 26 to 27 million dollars for the luxury. Further, it is ascertained that the 34 million hens lay 90 eggs each per annum, and that these three thousand and sixty million eggs are worth forty million dollars. Thus the good people of France consume from sixty to seventy million dollars worth of eggs and chickens every year.

THE telegraphic news in this issue, giving the total returns of mortality through cholera in Egypt is not surprising, as it was generally suspected that the daily death-rate given at various places was not complete so far as the numbers went. It is to be hoped that the worst period of the epidemic is over, and that the sanitary measures now understood to be in perfect working order will have the effect of reducing the great mortality as given in our telegrams. September, in Egypt, however, is a hot and sickly month.

MESSRS. MORF & Co. on Wednesday evening, at half-past five o'clock, made trial, of a hand-fire engine for the sale of which they are agents. The machine is the patent of E. G. Baldrup of Chemnitz, and by its lightness and narrowness is admirably adapted for use in small streets such as many of those in this country. It requires only three

men to mount and dismount the apparatus, and can be made ready in 21 seconds. It appears a handy and compact as well as powerful engine. Under the charge of Mr. Feyerabend, and in the presence of the superintendent and members of the Fire Brigades, it was run out yesterday to the well opposite Messrs. Morf & Co.'s premises at No. 176, and swiftly brought into action. The handles were manned and a fine jet of water was thrown to a distance of fifty feet. In a few minutes the machine was thrown out of gear and returned to the yard.

THE telegraph announces another European disturbance. It must be serious, as martial-law has been proclaimed in the district where it has occurred, Croatia to wit. The origin of the evil is evidently the traditional hatred of the Croat and the Magyar. Croatia is a province of Southern Austria between the River Drave and the Adriatic. With the sister province of Slavonia it contains about 1,200,000 inhabitants. The Vienna authorities will, of course, succeed in suppressing the rising; but it may cost them considerably in blood and money as the Croats are a valiant and a sturdy race. The trouble is only a national one, and is not likely to disturb the peace of the continent, although diplomatists always shiver when they hear of outbreaks in the region of the petty principalities.

MIN THAI-HO, a prominent officer of the Korean Government, is said to have lately forwarded a lengthy memorial to his Monarch, urging the necessity of expelling Japanese from the peninsula. The purport of the petition is that the financial crisis, from which the Government of Korea grievously suffers at present, necessitates the suspension of all intercourse with foreign countries; and that the Japanese, having been the first to introduce aliens to the peninsula, should be expelled as a preliminary measure. Yet, as the memorialist considers this impossible to be effected by force, owing to the inferiority of Korea in the matter of warlike readiness, he suggests the engagement of a number of magicians, who, he believes, would be able to defeat all the armies and navies of Japan and all other foreign countries. The memorial concludes by stating that, if the plan recommended be not adopted, Korea will perish from pecuniary embarrassment.

EVERYBODY has read of the traveller who found himself in a country where men used to take themselves to pieces whenever it suited their convenience, handing their teeth to their valets to be cleaned or their stomachs to a waiter to be filled with viands. Bizarre as the idea seems, it finds a not very distant echo in the doings of modern doctors, who think no more of washing out a man's gastric regions than of cauterizing his tonsils. The process is very simple. A communication is opened with the digestive organs *via* the mouth, and water is poured in and out of the stomach until the liquid emerges perfectly clear. Pantagruel's device for getting

"Messer Gaster" put in trim was to swallow a pill with a few charmen in it. The parody does not appear as extravagant now as it seemed twenty years ago. As for the benefits of stomach-washing, we find them variously stated; some physicians holding that the process can produce only temporary results, while others accredit it with power to effect radical cures in cases of chronic gastritis. Who knows but that the day may not be far distant when beside every man's sponge, soap, tooth-brush, and odonto, there will be found an œsophagic pump destined to perform a regular function at the matutinal toilette? Public attention has been specially directed to this subject by the bulletins of the Comte de Chambord's physicians, who not only washed out the royal exile's gastric regions, but also devised an instrument by means of which they could examine the interior of his stomach at will. The instrument consisted, it is said, of a rigid tube having three channels, one of which contained two wires. The projecting ends of these wires formed a loop enclosed in crystal at the lower end of the tube, while the two other channels served for passing backwards and forwards a stream of water to keep the instrument cool. This gastroscope being introduced into the patient's stomach, an electric current was transmitted through the wires, and the loop becoming incandescent, enabled the physicians to examine the stomach thoroughly. Possibly the science of medicine may become a science after all.

CHOLERA is raging around Swatow, whither it has spread from a large fishing village in the neighbourhood. It is spreading inland. In Swatow the victims range from ten to twenty *per diem*. The mortality has been comparatively severe among sailors. The Chinese ashore are much alarmed in various towns, the killing of animals for food has been forbidden, and shops have been closed for short periods as a sort of penance. In some villages a quarantine has been established and approach forbidden from infected places. In one large town, where there has been a mortality of between one and two hundred, the disease is said to have been brought from Swatow by one who had nursed a cholera patient and returned home bringing a quantity of infected garments. An Ampo man has found out the real cause of the pestilence and propounds a certain method of shortening its duration. He says the year in itself is a most unlucky one. The way to get rid of it is to shorten it. He suggests that this miserable year, therefore, be terminated with the eighth Chinese moon, and that the New Year begin four months earlier than usual. Probably the fact that the cool weather sets in about the time he mentions may be for something in his vaticinations.

WE published on Wednesday a letter from Mr. F. Crosby, in reference to the note which appeared in our columns of the previous day exposing what we believed to be an attempt to obtain money by means of a scheme which had nothing but its originality to recommend it.

We were glad to receive Mr. Crosby's disclaimer of the motives imputed to him. From enquiries we took the precaution to make, however, we are assured that there was no typhoon in Boshu on Sunday, or on any other day, and that the news of the destruction of dwellings mentioned in Mr. Crosby's telegram were received with astonishment in the chief town of that province. We would recommend Mr. Crosby and, if necessary, the Japanese gentleman he refers to, as much in their own interest as in that of other people, to permit the public to form their own weather forecasts on the basis of the reports furnished by the Meteorological Office and published in these columns.

THE *Bombay Gazette* contains a statement which is worth the attention of cholera experts. The fumes of burning sulphur are said to have the effect of killing cholera-germs. "It is on record that by freely burning sulphur in the houses or streets of Indian villages, the spread of cholera has been promptly stopped, and, we believe, it is pretty well established that within a certain area around gas-works cases of cholera never occur, the sulphuric fumes being fatal to the germs of that disease. All that is necessary is to light a number of small fires throughout the area to be protected, and throw handfuls of sulphur from time to time on the hot embers."

THE *Daily News* learns that the people at the Kiangnan Arsenal have lately been very busy in preparing and sending all kinds of munitions of war to Canton. Torpedoes form a large portion of these, and one of the Foochow squadron of despatch-boats was being loaded chiefly with them last week. Troops are also being despatched to Canton in considerable numbers. The *Tak-sin* which left lately took some, and the *Fu-yew* will embark more at Woosung; besides arms and ammunition.

THE *Hochi Shimbun* mentions that Mr. Kim-ok-kyun, who visited Japan last year in the suite of the Korean Envoy, has recently returned to Tokiyo. It is said that he is commissioned by his Government to ask for aid from Japan in a scheme of reclaiming the island of Matsushima, lying in the waters of the peninsula, Korea being without the funds and methods necessary for the work. The island is said to be well stocked with game and wild beasts; and to be mountainous and thickly wooded with splendid timber. The idea of colonising it is supposed to have been suggested to the Korean authorities by Europeans.

HUE, the capital of Annam, whose capture seems to have cost the French so little effort, has hitherto been regarded as a place shrouded in mystery. Access to it has been almost impossible. Neither Garnier, Dupuis, Harmand, nor even Dutreuil de Rhins who was in the service of the Tu-duc, was able to examine the place thoroughly. From twenty-five to thirty foreigners, French or Spanish, visited the city during the past half century, but though some of them were

admitted into the citadel and received by the King, all were carefully prevented from conducting any investigations on their own account. One European only has ventured to describe it as an eye-witness—the son of M. Chaigneau, a French officer who served in the army of Gia-long at the beginning of the present century. According to this gentleman's account, Hué consists of two distinct parts—the city proper and the *faubourgs*. The former stands in the middle of a square island, separated from the latter on three sides by a river and on the fourth by a canal. It is defended by a fortified *enceinte*, six kilometres in circumference, constructed by French engineers after the system of Vauban, and having six large gates which are kept open from six in the morning till nine in the evening. Within this *enceinte* reside all the Government officials. With the exception of a few mandarins no private persons live there, and no trade of any sort is carried on, beyond the sale of tea and provisions to the troops or to the servants of the mandarins. Inside the outer *enceinte* is the citadel, similarly but less solidly fortified, and having eight, instead of six, gates. Between the citadel and the outer *enceinte* is the aristocratic quarter, with wide and perfectly straight streets bordered by palaces and handsome mansions. The six offices of the Ministry are in this quarter, as well as the Library, the Mandarins' College, the Courts of Justice, the Observatory, and numerous arsenals and barracks. Ingress to the citadel is strictly forbidden to every one who is not a member of the Court or the Government. Women, on the other hand, of all classes, are admitted, provided only that they are well dressed. All persons of the male sex who have the right of entry, are obliged to display upon their bosoms a little plate of gold, silver, ivory, or ebony, showing on one side the grade, on the other, the title of the bearer. On entering the second *enceinte* by the principal gate, one finds oneself in front of the palace of the Council of State, standing amid a host of other edifices all of an official character. Behind these buildings is a wall of brick, which traverses the citadel throughout, separating it completely into two parts. This wall, which encloses the royal palaces and harem, has three gates; that in the centre being in the form of a pagoda, gilt and adorned with beautiful carvings. It is required of every one who passes before this gate to bow his head in token of respect for the august personages that dwell beyond it. We have followed M. Chaigneau in speaking of palaces and mansions, but the fact is that the houses in Hué, however grand their designation, are little more than huts. They are scarcely high enough to admit a sufficiency of daylight, and the walls by which they are nearly all surrounded have the effect of hiding everything but the roofs. The King's palace is gay with many coloured tiles; he has two treasuries—one for gold, the other for silver—and a museum of curiosities. According to M. Dutreuil de Rhins, the population of the town does not exceed 30,000; that of the *faubourgs* is about 60,000. The ramparts are in a semi-

ruinous condition, and some of the ditches nearly filled up. There are about 330 guns in position—not 1,500, as we have lately been told—but the majority of them are of an obsolete pattern. It is obvious that the bombardment of such a place must entail firing upon the houses of peaceable citizens, and we shall not be surprised to learn that the conflagrations which are reported to have been produced by the French cannonade were confined chiefly to the *faubourgs*. As a set off to this, perhaps inevitable, cruelty, it is pleasant to learn that the invading army has abstained from the excesses which generally disgrace such campaigns.

If the Opportunists succeed in carrying the Bill which they have submitted to the Senate, French politicians will be furnished with a precedent that will add little to the dignity of party warfare. The plain object of the Bill, by whatever obscurities it is surrounded, is to get rid of a number of magistrates who, rightly or wrongly, are suspected of lacking sympathy for the Republic. In France magistrates are appointed by the executive—a system which ought not to have survived the birth of the Republic, but which seems to have been left unassailed simply because of the difficulties attending its reform. It has been judged easier and more expeditious to get rid of the obnoxious officials at one coup and to replace them by others more agreeable to the fancies of their nominators. But the Opportunists in proposing this measure seem to forget the old proverb:—*pater legem quam fecisti*. They have been five years in power and their term of office cannot be indefinitely prolonged. Some day or other their opponents will have an innings, and unless human nature changes between this and then, reprisals are pretty sure to be the order of the day. Thus, the French Republic will ultimately be disfigured by the same "spoils" system which prevails in America, and the world will begin to think that this is a characteristic feature of republics in general. It is not a commendable feature. Of all the body politic the magistracy ought to be farthest removed from the influence of party discord. That other officials should be subject to the caprice of those in power is bad enough, but incomparably more fatal is the abuse of submitting to every political oscillation those to whose immediate care are entrusted the life, liberty, and fortunes of the people.

THE *Official* recently published two tables which have created quite a sensation in financial circles, and especially on the Bourse, in France. The first showed that on comparing the estimated and actual amounts of the national revenue during the first six months of the current year, the former exceeded the latter by 28½ million francs; that second, that while France imported, during the same period, goods to the value of 1,172 million francs, she exported only 326 millions worth. One would imagine that at this time of day the latter fact ought not to give Frenchmen much uneasiness, but the former is more disquieting. The sequel of 1871 seems to have

inspired French financiers with such large ideas as to the elasticity of their country's resources that anything like economy has come to be regarded as a vulgar superfluity.

In the *Japan Daily Mail* of the 16th August appeared an account from *The Times* of the First Half-yearly Meeting of the British North Borneo Company, held at the Cannon Street Hotel on the 27th of June, 1883. We have now received the official report of the meeting, together with a report by Governor Treacher from 1st July to 31st December, 1882, on the general condition and resources of the territory. Evidently affairs are in an embryonic state, but the prospects of the colony are bright. We observe that the Board of Directors have recognized the principle of free-trade, having abolished an import duty at first imposed on ordinary articles of import. The revenue is derived from land-sales, quit-rents, opium-farm, sundry royalties, Government shares in some enterprises, house-tax, sale of copper coinage, and an import duty on articles of luxury such as beer, wines, spirits, and tobacco. There are already three thousand Chinese colonists: the European population is only about fifty. While North Borneo is not likely to prove the El Dorado which it was first believed to be, it has considerable resources, rather vegetable and animal than mineral. The Governor regrets that the prospecting so energetically undertaken by the late Mr. F. Hutton and Mr. Beveridge has not at present had any practical result. Specimens of native copper, and of copper pyrites have been discovered, but not in workable quantities. The same may be said as regards coal and mineral oil. Some specimens were obtained near Tamborukan which Mr. A. H. Everett, who had just returned from Sarawak, stated to exactly resemble in outward appearance and character the silver ore now successfully worked by the Borneo Company in that State. Specimens have been forwarded to London, but no report on them has yet been received. The natives persistently report gold on the East coast in the neighbourhood of the Segama river, and up the Kinabatangan river, and near Silam. Mr. Hutton was engaged in prospecting on the Sagama when a fatal accident befell him. The average annual rainfall appears to be from 128 to 130 inches: the mean temperature from 77 to 81 degrees Fahr., with lowest reading about 68 degrees, highest 95. One of Mr. Treacher's sections looks like a plagiarism from the famous chapter on "Snakes in Iceland." The present author's heading, "XII.—FORTS AND ARMAMENTS," is followed by these few brief words:—"There are no forts in the territory. Six brass howitzers, 12-pounders, are mounted at Kudat, 3 at Elopura, and 3 at Gaya for saluting purposes."

ONE of those scenes for which the French Parliament, more than most similar institutions, has acquired a not very enviable fame, occurred only the other day on the subject of the proposed increase of the national pension granted to the world renowned chemist and analyst, Pasteur, from fr.

12,000 to fr. 25,000. The augmentation was voted after an unseemly opposition on the part of Mr. Raspail, son of the eminent chemist of that name. The deputy intemperately claimed that his father had opened by his study of "parasites" a path upon which Pasteur had entered. Unhappily this exhibition of bad taste met with the support of other members, as though a legislative chamber were the place for the discussion of jealous comparisons. Raspail did certainly indicate, not a path to follow, but a forest to explore, and if Pasteur struck a rich tract which he has ever since been exploiting with marvellous assiduity and success, the fact that he had a precursor to a certain extent does not surely militate against his claim to his nation's, or the world's, practical gratitude. Mr. Raspail might go further and claim for his father the meed of praise earned by other scientists working in the same large region.

Has Mr. Raspail, for instance, any claim upon the discoveries of a Brazilian physician, Dr. Domingos Freize, who has published the result of some investigations into the existence and nature of yellow fever germs, which are an important contribution to medical knowledge? This gentleman has recognized in the blood of yellow fever patients a characteristic parasite, to which he gives the name of *Zanthogenicus*. It appears as minute points, or "cells with grayish or fringed margins, and bright, transparent centres," and occasionally as "granulations aggregated in a yellowish matter." Experiments tried upon rabbits and guinea-pigs resulted in the death of those animals in a short time after they had been inoculated with the germs, and upon examination their blood was found to be swarming with the parasites. But the most remarkable discovery was made by enclosing a guinea-pig in a box, into which had been put a quantity of earth from the grave of a person who had died of the fever. The animal soon died, and the microscope revealed the presence of the *Zanthogenicus* in its veins. From this experiment Dr. Freize deduces the conclusion that cemeteries are breeding-places of the terrible disease, and that cremation is the only proper disposition of the bodies of its victims. Surely this is Dr. Freize's discovery—not Mr. Raspail's.

STATISTICS recently published in England show that the value of the British Mercantile Marine in the United Kingdom alone is 200 millions sterling. The estimate is reached thus:—On the 1st of July, 1882, the number of English ships registered at Lloyd's was 14,685, with an aggregate tonnage of 10,497,766 tons. Valuing the steamers at £18 per ton, and the sailing vessels at £12, a total of 160 millions sterling is obtained. Ten millions are added for ships constructed in 1882-83, and thirty millions for ships not registered at Lloyd's. If the vessels sailing under the English flag but engaged wholly in colonial waters be included, the grand total amounts to 250 millions sterling, and as the net earnings of these vessels are estimated at 6 per cent, it follows that the revenue of the

nation is benefited to the extent of 15 millions annually by the mercantile marine. It is worthy of note that the number of English ships built wholly of steel or iron is now 784, with a total tonnage of one million tons. The use of steel is constantly increasing. In 1879 the number of steel ships was only 3 per cent of the metal fleet; in 1880, it was 7 per cent; in 1881, 10 per cent, and it now amounts to 20 per cent.

AN Indian paper, not unnaturally, looks North for an impulse to recent French Colonial enterprise. India has long been taught on which side to look for danger of all descriptions; and her alarm, as probably is the case of the exponent of this new theory, is sometimes vague but not always ill-founded. However, the idea is ingenious if not correct, and has not, so far as our reading goes, yet found expression in any English journal. The *Indian Mirror*, at the conclusion of an article, writes:—

But there is yet another side to the picture presented by the present *imbroglio*, and that is the sudden fury which has possessed the French Government for conquest wherever it can find a pretext, as though the people had not learnt from their past history that they are utterly unfit for colonisation, and when it is found that this fury has drawn the Republic into coming into the neighbourhood of Jersey, claiming some inconsiderable islets in its vicinity, one is inclined to think that here also are straws that show the direction of a wind not importing peace and quietness in respect of French relations with England. This leads to the enquiry, what can it all mean? We were told, the other day, that Russian diplomacy had failed with President Grévy; but is that telling to be believed, or the reverse? We incline to think the latter. In the German, Austrian, and Italian alliance, France, no doubt, sees danger to herself. She cannot count on England to help her; she, therefore, turns to Russia, and Russia looks to her for help against England. So be it. But we know that the "best-laid schemes of mice and men go agley," and so we may expect all these unholy alliances of the continental nations to end in the discomfiture of the plotters who have been so far allowed by an inscrutable Providence to be the disturbers of the peace of the world; but we may be sure that the cup of iniquity has only to overflow the brim, when the boiling lava may be expected to destroy those who have helped to fill the cup. As we find in the physical world and volcanic parts of the globe, subterranean fires break out into eruptions, so in the European continental world the elements of discord, strife, and rapacity that underlie their moral, or rather immoral, action, develop into eruptions that destroy those who, sowing the whirlwind, must perforce reap the storm.

AN extraordinary issue of the *Official Gazette* yesterday announces the death of the Princess Shige, which took place on the evening of the previous day. The usual notification with regard to closing of theatres, &c., for three days has been issued by the Council of State, and officials of the rank of *Chokunin* will repair to the Palace during the next three days to make calls of condolence.

AN interesting exposition of the condition of the agricultural population of India was given by Mr. John Bright at a recent meeting of the East India Association. The object of the meeting was to consider the expediency of establishing an agricultural banking system under which the needy ryots or peasants might be supplied with capital at a reasonable rate of interest. Mr. Bright said that the question to be considered was one of the greatest moment. Eighty out of every hundred of the whole population of India,

he said, were engaged more or less directly in agriculture. Out of every hundred persons connected with agriculture, only about twenty, it appears, are in a condition to carry on their operations as farmers without assistance from bankers or other persons who lend. About 30 per cent. of the agricultural population are so hopelessly poor that it is almost impossible for them to borrow, or borrowing, to be ever able to repay; while about 50 per cent. are in such a condition that it might be judicious under certain circumstances to lend them assisting capital with a fair chance that it would in a reasonable time be repaid. The question was whether anything could be done to assist the fifty out of one hundred to whom loans might be made with reasonable safety. The fact that 80 per cent. of the agricultural population are compelled to borrow is in itself, the speaker said, an astounding fact, but it is also true that those who succeed in borrowing from the native bankers of the district are obliged to pay rates of interest ranging from 12 to 35 per cent. Capital employed in agriculture in any country, Mr. Bright thought, must be absolutely unprofitable to the cultivator obliged to pay such enormous rates of interest. Considerations such as these rendered apparent the need of a change, and one interesting feature of the case was that the bankers who lent money at the extreme rates mentioned were sensible that it would be an advantage to them to have the rate of interest made lower and the security made better. They were even willing to contribute to a large extent to funds which should enable some banking system to be established which should give this great relief to the cultivating population of India.

THE Monthly Report of the Silk Association of America for July gives the following particulars:—Import of Silk Manufactures at the port of New York during that month:—1879, \$2,232,824; 1880, \$3,181,358; 1881, \$2,691,088; 1882, \$3,281,498; 1883, \$4,112,209. During the month of July, 1883, the statistics of Silk manufactures in New York were as follows:—Entered for consumption \$2,837,739; entered for warehouse \$1,274,470; total value landed in New York \$4,112,209; withdrawn from warehouse \$2,419,057; value placed on market \$5,256,796. The imports of the raw material into the ports of New York and San Francisco for the same period were:—Raw Silk, 1,008 bales, value \$669,522; Waste Silk and Pierced Cocoons, 83 packages, value \$37,535.

THE preparations for the forthcoming Exhibition at Calcutta are going on apace. Owing to the large demands which have been made for space, it has been found that the accommodation provided by the Museum and the annexes built contiguous to it are utterly inadequate. It has therefore been decided to provide extra space for British and Colonial and Continental exhibits near to Chowringhee. The Indian section and the machinery annexes will occupy the Maidan. The jewels of the Native

Princes and Rajahs, for the safe custody of which some twenty of Milner's safes have been ordered from England, will, according to present arrangements, be exhibited in the new Economic Museum. The buildings on the Maidan, which are being rapidly pushed forward under the supervision of Mr. Mills, C.E., of the Public Works Department, will be connected with the museum and the annexes by means of a bridge. Hydraulic lifts and other machinery requiring water power will be placed near a large tank, which is conveniently situated in the immediate neighbourhood. The machinery in motion will occupy a shed covering an area of some 20,000 square yards. A large ornamented building covering an area of 10,000 square feet has been ordered out from England, and no fear, it is stated, need be felt as to the "great building" being completed in time for the opening of the exhibition.

ONE of the leading trade journals of New York remarks that, as an indication of the drift of sentiment which is going on in a section once devotedly attached to protectionist ideas it is interesting to note the attitude of the *Boston Herald*, the leading journal of New England, toward the present tariff, and the scheme of distribution which the Pennsylvania protectionists are anxious to engraft upon it. In a late issue the journal referred to declares that the surplus which the Pennsylvania men propose to distribute arises from the perpetuation of the war tariff, and that 75 per cent. of the taxes imposed by that tariff are collected upon the necessities and comforts of the people and upon the essentials of manufactures. In support of its position the *Herald* prints a table prepared by the *Chicago Times* before the question of a distribution arose, showing that 71 per cent. of the revenue is paid by such articles as breadstuffs, chemicals, etc., cotton manufactures, earthenware and China, flax, grass, hemp, iron, steel, leather and manufactures thereof, potatoes, salt, sugar and molasses, tin, and wood and manufactures thereof, and raw and manufactured wool, all which, says the *Herald*, are among the classes of articles which "may fairly be classed as necessities." Certain articles which cannot be classed as luxuries are omitted from the above enumeration, and would go to increase the percentage. In view of these facts the *Herald* asks:—How do the people relish the proposition to perpetuate such a system of taxation, yielding \$300,000,000 of unnecessary revenue to become the sport and spoil of politicians in order that favored interests and monopolies may continue to enjoy "protection."

REFERRING to a telegram published in another column, we noted the fact of the interviews between Bismarck and Kaloky, remarking that the "object of their meeting did not transpire." The American papers received by the *City of Tokio* contain the following telegram from Vienna, dated August 4th, which fully explains the matter:—"A prominent journal announces that an interview is about to take place between

Count Kaloky, the Austro-Hungarian Minister of Foreign Affairs, and Prince Bismarck, for the purpose of deciding as to the prolongation of the treaty of alliance between Germany and Austro-Hungary."

THE *Choya Shimbun* says that a Tokiyo resident, named Shimidzu, has been fined ten yen for making purchases with counterfeit notes, knowing full well that the tokens were forgeries. His punishment, according to the *Choya*, was only a fine of ten yen!

A LARGE robbery of opium has been effected on board the P. & O. S. N. Co.'s steamer *Ancona*, in Shanghai, one hundred and sixty three balls of the drug being missed. The Customs officers searched the vessel, and discovered thirteen balls of opium between the side and the skin of the ship near to the bunk of one of the crew, who was immediately arrested.

MR. ROBERT BISHOP, formerly Registrar of H.B.M. Court in Japan, died recently in London.

THE *Tokiyo Trade Journal* says that increased accommodation for the storage of kerosene is being provided by the construction of new warehouses at Ishikawa.

ACCORDING to a Calcutta paper, the good people of Bangalore are complaining of diseased fish. "Worm-fish" is daily imported into the market, and whoever eats it is sure to get ill. Doctors are called into requisition to examine the fish coming into the market. Perhaps a useful hint may be conveyed here to the inspectors of Japanese markets, whence fish are sometimes sold, retail and wholesale, quite unfit for food.

THE *Allgemeine Zeitung* has been publishing a series of articles, entitled "India for the Indians" on the questions raised by the Ilbert Bill. The present race distinctions, which the Bill proposed to remove, are, the writer says, "an outrage and humiliation on the highest Native officials, and a dark blot on the administration." The writer goes on to say—"neither birth nor race, white nor brown skin, but personal capacity should be the touchstone." The *Allgemeine Zeitung* adds, "that the genuine John Bull has not the smallest scruple to being judged by a Maori, but will not suffer an Indian Mahomedan or a Hindu to" judge him.

BEER consumption, says the *Lancet*, in the hospitals of Paris seems to have increased to such an extent that the beverage had become a very serious charge upon the budget. Without warning, the medical staff found the supply suddenly cut off by the order of M. Quentin, the Director-General of the Assistance Publique. He, like many officials in other countries, assumed a knowledge that he did not possess, for he stated in his circular that beer was neither a food nor a medicine. Beer is now only to be got for patients by means of extraordinary

prescriptions from the medical officers under the surveillance of the central administration. Looking at the havoc done by typhoid fever in Paris, and believing in the water-carriage of this disease, the *Lancet* concludes, that the reason is very apparent why beer came into such general use that the Director-General thought fit to style its enormous use an abuse.

IN this age of adulteration even comparatively primitive Spain has not escaped. One Spanish magistrate has hit upon a highly original mode of dealing with this evil. His proclamation runs thus:—"All articles in the shape of wines, groceries, and provisions which, upon examination and analysis, are proved injurious to health will be confiscated forthwith, and distributed to the different charitable institutions." That man deserves to be promoted; but a diet adulterated throughout! Cast-iron patients could not stand it.

MESSES. MASKELYNE AND COOKE are trading upon the latest development of conjuring. Mr. Maskelyne has introduced an automatic thought-reader which attracts quite as much curiosity as Mr. Bishop himself. A bank-note is handed up from the audience to Mr. Maskelyne, who reads the number folds the note up, and conceals it. After about two minutes the hands of the automaton chalks up the number on the black-board. As Maskelyne does not approach the figure, and remains in full view of the audience, this trick must be pronounced one of the cleverest ever performed.

THE sinking of the ground on the Island of Ischia, says the *Alla*, is matched by the disappearance of Red Fish Lake, on the summit of the Sawtooth range of mountains in the Wood River region, Idaho. This lake had an area of several miles and was filled with fish. If the Idaho papers are not practising a deception, this lake has disappeared through a huge fissure which opened in its bed. The exact date of the occurrence of this marvellous phenomenon is unknown, as no one lived in the vicinity. All that is known about the matter is that the bed of the lake split and the waters were gulped down.

FOR several months it has been known that the remarkable object which has been visible on the surface of Jupiter for several years has been growing fainter, and late observers announce that it is now scarcely perceptible. The spot, which is nearly 30,000 miles long, and more than 8,000 wide, has not changed materially in size, but its red color has faded until the "great red spot" has become almost indistinguishable from the surrounding parts of the planet. From its permanency of form and size it is evident that this spot cannot be a cloud floating in Jupiter's atmosphere, although it drifts like a cloud across the planet's disc. Various theories have been suggested to account for the phenomenon, but none of them appear quite satisfactory.

THE KOREAN TARIFF.

A SHANGHAI Journal, which in a certain sense may be said to have distinguished itself by the attention it has bestowed on Korean affairs, assures us that, on the 25th of July, the Government of Seoul concluded with the Japanese Minister Resident a Convention embracing the establishment of trade regulations and a tariff on a basis of five per cent. *ad valorem*. The documents containing these conditions are said to have been forwarded to Japan for ratification on the 26th of the same month, and we are further told that the new tariff will come into force one hundred days after the conclusion of the Convention, that is to say, early in November. Our Shanghai contemporary attributes this liberality on Korea's part to the fact that she was "unbacked by any foreign power in making the negotiations," and hampered by her own failure to stipulate for any duties in drawing up the treaty of 1876 with Japan. The former reason is too obscure to discuss, and of the latter we may say at once that it has no foundation. Korea is well assured that in arranging a scale of duties with the Government of Japan, her title to consideration is in no way prejudiced by the silence of the original treaty upon this point. She is well assured that by this country no sort of restriction will be imposed upon her other than the obligation of treating all her foreign friends with equal liberality or illiberality, as the case may be. Whatever views Japan may hold on the subject of every independent nation's right to regulate its own tariff, it would obviously be madness on her part to consent to conditions which would virtually exclude her from all participation in Korea's foreign trade. That, however, would be the inevitable result if to China alone were accorded the privilege of supplying the peninsula with imported goods under a five per cent. tariff.

It is difficult to discuss these points with any assurance, seeing that the outer world is quite ignorant of the commercial position which Korea really occupies towards China. Judging from the only document that has come to light—LI HUNG-CHANG'S Trade Regulations of last year—the former is nothing more than an outlying province of the latter, and the King of KOREA ranks no higher than a Chinese Viceroy. If this be so, China is in a position to choose between two alternatives. She can either arrange Korea's tariff on whatever basis—within certain limits—seems most convenient as a precedent for future negotiations on her own behalf; or, by securing for herself

better terms than those accorded to others, she may seek to monopolize the whole of Korea's foreign trade, whatever it may be worth. Apart, however, from the collusion and finesse essential to the prosecution of the latter course, its success demands a very singular willingness to connive at their own disadvantage on the part of Korea's present and prospective treaty friends. That willingness Japan, at all events, does not find herself disposed to display, and it seems a reasonable hypothesis that, had not England and Germany withheld their consent to the ratifications of last year's treaties, China might have been compelled, ere now, to show her hand unequivocally, and Korea's foreign commerce would have been inaugurated on terms equally favorable to all.

We need scarcely say that these remarks are not in any sense intended to reflect invidiously upon China's action towards her tributary. It is her duty to give precedence to her own interests, and she doubtless believes that they are best consulted by an equivocal line of conduct. Where the commercial policy of each is equally self-seeking, recrimination is forbidden to all alike. Of Japan, too, it would be absurd to deny that her treatment of Korea shows something of a Short-and-Codlin disposition. She may recognise—ostensibly she does recognise—that circumstances alter cases, and that to demand from the Korea of 1883 a continuance of the privileges she obtained from the Korea of 1876, would be to follow the very lines which have led to her own dilemma. But the influence of these abstract considerations is probably supplemented by a desire to stand well with Korea; or, in plainer language, to inspire Korea with greater confidence in the sincerity of Japanese, than of Chinese, friendship. This is too natural to be doubtful, and, for the rest, may be dismissed as a point of no practical consequence.

To return then to the reported terms of the new tariff. It will be plain, from what we have said, that LI HUNG-CHANG'S Trade Regulations represent the limit of the concessions Japan can justly claim from Korea, while the SHUFELDT Treaty embodies the limits of the concessions she may be disposed to grant her. If our Shanghai contemporary's version be correct, the former limit has been at once attained, and in that event we may assume that Korea, having avowedly failed to obtain any better terms from China, has been constrained to adopt LI HUNG-CHANG'S Regulations as a basis of negotiations. But, on the other hand, it is known that Japan had officially

declared her willingness to conclude with Korea a tariff convention modelled on the proposals submitted by herself at the recent conferences on treaty revision. Her offer was, of course, conditional upon China's submission to similar terms, so that, however the negotiations have resulted, China, not Japan, is finally answerable for their issue.

We desire to emphasize this point, because in the journal to which we have referred above, the following comments occur:—

The provisional treaties with England and Germany, and the ratified treaty with the United States, allowed the Koreans to levy ten per cent. on articles of luxury. The Japanese, on the other hand, paid no duties at all. The general tariff has now been arranged at five per cent. *ad valorem*, or the same rate as is agreed on in the existing treaties between the Western Powers and China and Japan. As the treaties fixing this rate were imposed on China and Japan by the Western Powers by force, it is evident that it cannot be considered excessive. There was some fear that China and Japan would agree to Korea's levying a heavier duty than this, in order to use their consent as a lever when their own treaties with Western Powers came to be revised: fortunately Japan having now forced Korea to accept this moderate scale, cannot in the future with any grace demand a higher scale herself from the western powers.

These remarks seem strangely superficial. It is most unjust to say that Japan "has forced Korea to accept" a moderate scale of duties when, as a matter of fact, Japan offered Korea a very much higher scale. If the latter was unable to take advantage of the offer, she has only to thank China, whose refusal to modify the privileges arbitrarily assumed by herself places her tributary at a serious disadvantage *vis-à-vis* all other negotiators. No honest parallel can be drawn between Korea's case and Japan's. What the latter complains of is a combination of Powers to deprive her of any voice in the regulation of her own tariff: what the former has to contend against, is the reluctance of her so-called suzerain to recognise her treaty-making independence. International quixotism is a quality not yet proved to exist, and while international justice forbids, though it does not prevent, the extortion from a weaker power of privileges which would never be demanded of an equal, it does not require any country to place itself wittingly at a disadvantage as regards its neighbours.

More untenable, if possible, is the conclusion that "Japan cannot in the future with any grace demand a higher scale herself from the Western Powers." It is thoroughly consistent with the one-sided principles underlying Occidental policy in the Orient to require of Japan an obedience to precedent which we ourselves never accord. With what grace, it may be asked, did Great Britain combine with other Powers to "impose by force on China and Japan"—we quote our

Shanghai contemporary's words—tariff rates which her own colonies peremptorily decline to accept? With what grace did all those Powers, themselves virtually practising protection, combine to impose by force upon China and Japan tariff rates which fall little short of free trade? If grace has anything to do with this business, Western states had better begin by displaying it themselves. Firmly as we believe in the theoretical advantages of free trade, we cannot forget that it has but one practical disciple in the universe, whereas all nations are disciples of the faith that mutual justice and fair-dealing are synonyms for mutual happiness and prosperity.

THE PROPOSED "KANA" REFORM.

COMMENTING recently on the subject of *Kana* reform, we expressed unqualified approval of the programme announced by the *Kana no Tomo*, a society of gentlemen whose object is to substitute the forty-eight syllables of the Japanese *Kana* for the cumbrous and virtually innumerable ideographs of the Chinese language. We said then that the friends of the movement assert what is virtually an axiom, and that, were their scheme accomplished, "an impediment which has for centuries obstructed the dissemination of knowledge among the lower orders of the people would be swept away for ever." Against these propositions a correspondent, writing over the signature "Common Sense," enters a strong protest. He even undertakes to show that the "friends of the *Kana* are, in reality, the worst enemies of Japanese education, and that the adoption of the *Kana* (supposing such a thing possible) would mean the instant paralysis of every branch of thought and even of business."

Certainly it would be difficult to conceive a more thorough antagonism of opinion than that displayed by our correspondent's thesis and our own. Any attempt to reconcile the two seems almost hopeless. Yet we are by no means persuaded that the last word has been said on this subject, and its importance is so vast that no excuse appears necessary for resuming its discussion.

The gist of the arguments advanced by "Common Sense" is this:—that to discard the Chinese ideographs and substitute for them the forty-eight syllables of the *Kana* would be to expunge from the language a vast body of words whose gradual addition has converted it from "a poor and barbarous dialect capable only of expressing the simplest facts and emotions, into a

tongue where, in most branches of knowledge, every shade of idea evolved by the genius of China and Europe has its own and appropriate symbol."

Now we unequivocally admit that if this were really the result of the reform advocated by the *Kana no Tomo*, the question would be finally disposed of. But we assert, with equal confidence, that no such result is necessary. Whether or no it is contemplated, we are not in a position to determine. There may be in Japan, as there have been and are among ourselves, men whose conservatism is outraged by every fresh addition their language receives from a foreign source. But with such puerile pedants we have nothing to do. The function of a language is to express thought. The greater the fidelity of the expression, the better the performance of the function. If ancient or modern tongues, wherever and whenever used, supply any form of speech that can be appropriated to facilitate the phrasing of new-born ideas, to reject that form because it is foreign would be about as rational as if Englishmen were to close their halls to all music composed beyond the limits of the British empire, or their cellars to all wines not manufactured in the United Kingdom. If the associates of the *Kana no Tomo* propose to themselves any such senseless scheme as the elimination of Chinese derivatives simultaneously with Chinese ideographs, they deserve ridicule—not sympathy.

But the question at issue does not deal with the hypothetical and supplementary designs of the "Friends of the *Kana*"—among whom, we may observe *en passant*, are included many names of scholastic and social distinction. What we are asked to believe is that without the aid of ideographs all the Chinese derivatives now used in Japan would become practically unemployable. It is not necessary to discuss the incidental vagaries of the new Society, if any such there be. Our correspondent disposes of all these corollaries when he tells us that by exchanging their present mixed system for an exclusive use of the *Kana*, the Japanese "would be made, as it were, languageless—unable to express in writing any but elementary ideas."

Here at once we find ourselves on the horns of a dilemma. The written and spoken languages of Japan differ only in syntactical forms. With exceptions so rare as to be unworthy of note, both are made up of precisely the same words. Now our correspondent's proposition is that without ideographs the use of Chinese derivatives would be impossible. That is

to say—the sounds alone of Chinese derivatives do not convey their meaning sufficiently to render them employable: the aid of the eye must be invoked through the medium of ideographs. But if so, what becomes of the spoken language? Is the aid of the eye invoked there also? Do Japanese, as they converse with one another, using all the while innumerable words of Chinese origin, trace a series of ideographs with their fingers in the air? We have never seen them do so, nor in conversing with them, have we ever discovered any necessity for such an expedient. Of late years an excessive and somewhat pedantic recourse to Chinese sources of speech has become fashionable, but it has not involved any corresponding recourse to air-written ideographs. The spoken language of to-day, laden as it is with words of foreign origin to the almost total exclusion of the pure *Yamato Kotoba*, remains a terse, comprehensible, and expressive tongue. The sounds of which it is composed suffice to achieve all the essential functions of speech. Surely we are not required to believe that those sounds would be less intelligible when rendered by the *Kana* syllabary in writing than they are when rendered by the same syllabary in speaking? Our correspondent, indeed, is not unconscious of this dilemma. He explains that "in speaking the listener can be guided by the circumstances attending the conversation, by the frequent iterations everywhere characteristic of spoken speech, and, as a last resort, by the possibility of asking for an explanation." But it will surely be admitted that the context of a written expression is at least as good a guide as the circumstances attending a conversation; while as for iterations and explanations, we have yet to learn that in Japanese dialogue they are specially necessitated by ambiguity of sounds.

With regard to these homonyms, which our correspondent finds such a stumbling block, we cannot but think that he greatly overrates their importance. He tells us that their number is "enormous," but neither our own researches nor those of any Japanese scholar to whom we have referred justify the epithet. Indeed, it is doubtful whether accurate comparison of the English and Japanese languages, so far as this feature is concerned, would leave any considerable margin in the former's favour. On the other hand, in point of facilities for distinguishing homonyms, the advantage is unquestionably on the side of the Roman alphabet, and we readily admit that if it were a question of "fitting the

Japanese language with a new system of writing," there need be little perplexity in choosing between Western letters and Eastern syllabaries. But there is no question of "a new system." The "alarming sacrifice" which our correspondent condemns, consists simply in abolishing the compulsory use of a multitude of cumbrous and confusing ideographs, and substituting for them a small and compendious collection of simple syllables, with which the whole nation is already familiar and which have been employed for centuries to express their sounds. Our correspondent must be very well aware that large numbers of Japanese books and newspapers are published at present in mixed characters (*i.e.* ideographs and *Kana*), and that by the majority of their readers little if any reference is made to the ideographs of the text. The *Kana* suffices to convey the meaning easily and thoroughly. Granted that the occurrence of homonyms involves difficulties, we fail to see how any argument based upon that fact can be made to extend beyond the homonyms themselves. They are a finite quantity, and even if the *Kana* reform necessitated their total elimination, or the conservation of the ideographs that express them, the bulk, nay almost the whole, of the Chinese derivatives now in use could still be rendered by the new system, and the corresponding relief to the brains of the nation would be enormous.

Our correspondent thinks that the arguments of the *Kana no Tomo* have made us "more than friendly to them." We do not deny it, but unless we are much mistaken, these homonyms have inspired "Common Sense" himself with at least an equal affection for their ideographic representatives. Surely he plays the rôle of an advocate, not a judge. He says that with *Kana* alone the very names of all the sciences, of all books, newspapers, Government Offices, in fact of all things excepting such as are quite primary, become an unintelligible chaos." For what reason? Does he mean to assert that the names of Government Offices and sciences are an "unintelligible chaos" to every Japanese who is unable to express them ideographically? He might just as well maintain that such words as astronomy, geology, hydrography, and so forth are "unintelligible chaos" to every Englishman who cannot write down their Greek roots in Grecian letters. We do not know the name of even one Government Office or one science to which our correspon-

dent's remark is fairly applicable. Among the titles of books, indeed, he may find some arguments in his favour, but we are willing to leave him in undisturbed possession of that resource.

Frankly, of all the pleas advanced by "Common Sense" on behalf of these unwieldy ideographs, one only seems to deserve serious consideration. "The *Kana*," he says, "has been given a thousand year's trial and has failed;" and the reason of that failure, he tells us, is that "under the circumstances it is less practical than the Chinese system, cumbrous even as the latter may be deemed." He loses sight, here, of a vitally important point. The phonetic and ideographic systems have *not* been on trial for a thousand years. The supremacy of the latter was all the time asserted by conditions entirely distinct from its intrinsic merits as an orthography. The relations in which Japan stood to China; the fact that she derived from the latter her sciences, her arts, her philosophies, her principal religion, her literature, nay we may almost say, her language, naturally placed the Chinese characters on a pinnacle where they were entirely secured against the competition of a vulgar syllabary. To be educated was to be a Chinese scholar. Learning had no other aim; erudition, no other definition. But all this is changed now. The Chinese language has become a mere auxiliary. Its only use, as our correspondent himself admits, is to supply a vocabulary for the various sciences which Western civilization has brought Japan and which are definitively accepted by the Japanese as comprising all useful knowledge. Let Chinese be relegated, then, to the rank of an auxiliary. Let its study take the same place in Japanese schools as that occupied by foreign languages in our own at present. Thus, while still preserving "a common medium of intercourse with China," and a source from which terms to express new ideas may be derived, the people of Japan will be relieved of a burden which virtually handicaps them out of the intellectual race of their time. It would fare still better with them, no doubt, if they adopted the Roman alphabet instead of the *Kana*. That, however, would be too sweeping a reform to look for immediately. It will come in time, let us hope; but for the moment we are content to be "more than friendly" to the *Kana* scheme.

THE "CHA-NO-YU."

JAPAN'S condition just at present seems to illustrate the old theory that public opinion passes through cycles of action and reaction, Conservatism and Radicalism, always coming back to the old love when the new proves too capricious or too exacting. For a season her rate of progress was almost giddily rapid. People saw that she must pause to take breath sooner or later, and that when she did pause—when she allowed herself leisure to look back along the path she had travelled—some of the familiar scenes left behind would recover their old attractions. And so it has fallen out. After throwing everything overboard that the ship might be lighter and the speed greater, she is beginning to turn back and gather up some of the jetsam. In one direction this retrogressive movement—if we have any right to use such a term—is specially marked. The curious and beautiful philosophy of the *Cha-no-Yu* has reclaimed its devotees, and seems once more to exercise almost as wide an influence as in the days of SEN NO RIKIU, KOBORI MASAKADZ, or FUNAI DEWA and his dainty Duchess, SEIRAKUIN. It will perhaps look like "wisdom after the event" to say that this result was never wholly unlikely. Willing converts as the Japanese have shown themselves, to the principles of Western civilization, their household habits have remained, for the most part, entirely unaltered by contact with our social systems. True, that contact has been of a very partial nature. The bulk of the nation could scarcely have been conscious of the influence exercised by one or two communities of foreigners living in virtual ostracism within the narrow limits of isolated settlements. But after all, everything must have a beginning. Had the manners and customs of our daily life presented any permanently attractive feature to the people of this country, it cannot be doubted that their approval would have found much wider expression than is discernible to-day. It is true that, in many instances, the Japanese have discarded *geta* for boots and *kami-shimo* for swallow-tails, but the advantages of this election being of a concrete nature as well as of immediate attainment, were much more likely to appeal to the popular sentiment than the abstract benefits of sitting on chairs rather than on the floor, or eating with knives and forks instead of chopsticks. At all events, whatever be the cause, it is certain that even among those Japanese whose intercourse with foreigners has been

most intimate, and whose eagerness to follow foreign example in other directions has been most marked, the fashions of domestic life have undergone little if any change. In this respect the simplicity of old customs has preserved their popularity, and if houses of foreign construction have here and there taken the place of less enduring and more uncomfortable Japanese edifices, it may be safely asserted that in ninety-nine cases out of a hundred their inmates are as faithful as ever to the fashions of half a century ago. We do not venture to assert that they have not chosen the better part. Upon that point there will be many differences of opinion, and our present purpose is not to discuss it. We only desire to point out that the survival of Japanese domestic civilization could not fail ultimately to bring about a revival, in part at any rate, of the social subtleties which had been thrust aside for the moment by contact with more vigorous and seemingly more practical systems. Among those subtleties, the *Cha-no-Yu* occupies a prominent place. Seven or eight years ago it seemed to have been finally relegated to the limbo of forgotten fancies, and whatever homage its observances still received at the hands of stubborn old conservatives was at best a furtive, shame-faced sort of affair. Yet the *Cha-no-Yu* is essentially the household expression of that artistic refinement which, more than anything else, has won for Japan the sympathy and esteem of Western nations. It is even more than this. It is the embodiment of a system of ethics not less admirable than the atmosphere of graceful æstheticism in which its disciples endeavour to live. To see it gradually lose its place in the nation's regard was a matter of sincere regret to those who believe that the genius of every people has some distinctive features worthy of preservation. We do not deny that its observances are in many respects ill suited to the scrambling haste of modern existence. Men who are perpetually in pursuit of moments cannot afford to spend hours and days over the study of a complicated manual exercise of tea drinking and tea brewing. But even if the *Cha-no-Yu* were a mere science of ceremonies—which it is not—we doubt whether to condemn its frivolities is a proceeding entirely warranted by Occidental superiority. As devices for fruitlessly squandering time, some of our own social habits take precedence of any ceremonial conceived by the most deliberate dilettante of the tea-drinking school. In the whole range of Oriental conventionalities there is nothing that will bear com-

parison with the uncompromising and fruitless tyranny which, in the West, compels men to choose between sacrificing society altogether, or preserving their place in it at the cost of devoting so many hours a week to the discussion of vapid trivialities with unsympathetic companions over a repast which serves only to parade its giver's barbaric hospitality and to tax its recipients' patience. Judged by the time it absorbs, the *Cha-no-Yu* is not much better, perhaps, than "dining out" as practised at present among ourselves, but in all other respects it is a far more intellectual and much less superficial pastime. Its due pursuit involves a study of all the gentle arts, and the profession, at any rate, of a philosophy that would grace any civilization. Thus the recent revival has made itself felt in many directions. It has made itself felt in a reawakened taste for the products of the country's ancient art, in a renewed reverence for the motives that inspired that art, and in a deference, more or less thorough, to the canons of taste that formerly prevailed. From a scientific standpoint there may not be much excellence in the æsthetic treasures to which popular taste has been once more directed. Despite the verdict of enthusiastic connoisseurs, MOTONOBU and TANIU will always be placed on a much lower level than RUBENS and TITIAN. But, on the other hand, it will be no less generally admitted that the graces of the former sometimes rival the genius of the latter, and that either might borrow from the other with advantage. We leave these comparisons to other analysts, however, being ourselves content to abide by the verdict which Europe and America have passed upon the characteristic phases of Japanese civilization. Unless that verdict is strangely erroneous; unless the unprecedented influence which Japanese art has exercised upon the whole Western world be a mere passing vertigo—a reasonless and transient caprice—there is no avoiding the conclusion that Japan is to be sincerely congratulated on having escaped the peril of sacrificing what her foreign friends have thought worthy of imitation for the sake of imitating what they have been able to offer. We can understand and sympathise with the apprehensions inspired in certain quarters by this apparently retrogressive movement. The *Fiji Shimpō*, in a leading article, which we translate elsewhere, declares that Japan will not be able to hold her own if she ventures to indulge in the dilettanteism of old times, and complains that there are evidences of a disposition to revive the

educational systems and doctrines which prevailed under the TOKUGAWA rule. But to us the writer in the *Fiji Shimpō* seems possessed by the same spirit of unreasoning radicalism which has already impelled the nation to efforts scarcely within the safe compass of its strength. During the past twenty years there have often been times when it was difficult to be free from an apprehension that Japan lacked discernment, and that much of what she has doing would ultimately be found ill-adapted to her physical resources and ill-adapted to her moral condition. These misgivings are relieved rather than confirmed by the so-called retrogressive tendencies which our Tokiyo contemporary deplors. That Japan's taste is sufficiently conservative to revert, after a brief period of apostasy, to those features of her civilization which we ourselves have not hesitated to adopt, is a satisfactory proof that in yielding to an impulse of almost reckless radicalism she has not lost her touch of the national idiosyncracies to which reforms, to be permanent, must be adapted. It is a singular and significant fact that, side by side with this art renaissance, there is daily growing up among the leaders of Japanese thought a firmer faith in the benefits of Christian morality. That the two impulses are contemporaneous may be accidental, but their association ought to set at rest such doubts as those formulated by the *Fiji Shimpō*.

THE BLACK AND YELLOW FLAGS.

A RECENT writer in the French *Opinion* explains the constitution of the Black and Yellow Flag Bands, whose names have been lately so frequently mentioned in connection with recent French adventure in Tonquin. He says that the Black Flags are the irregular forces of the Annamite monarch: the Yellow Flags are guerrillas from the province of Yunnan.

The great Taiping Rebellion which originated in 1849 had gradually extended to the very heart of the empire. The insurgents had taken Nanking, and made that big town their capital in 1853. Thence they overran the central and eastern provinces of the empire, leaving everywhere behind them a track of ruin and desolation. One of their divisions, reaching Tientsin, menaced the capital, Peking, itself. Shortly, thanks to the aid of French and British officers, the Imperial forces overcame the rebels; their capital Nanking fell into the hands of TSENG in July, 1864, and the decimated and demoralised dregs of the insurrection vanished,

in July, 1863, into the mountain mists of Fokien, Kwangsi, and Kwangtung.

One of the surviving Taiping chieftains, U'TSONG, at the head of an army of three or four thousand men, penetrated as far as Tonquin, pillaging as he went, and reached the Songkoi opposite Hanoi. Then the Chinese sent a force of ten thousand braves against him and drove him into the mountain fastnesses on the border of Yunnan. U'TSONG died in 1867, leaving the command of his adherents divided between his two lieutenants, LUN-VIN-PHUC and HWANG-AN, who promptly laid siege to Laokai. Of this fortress Mr. DE KERGAREDEC says that it is only a "square enclosed by a wall of rough ashlar about fifteen inches thick. At its four corners are placed storied towers mounted with some small cannon." It is not saying much for the credit of the rebels when we record that it took them nearly two years to carry this place. However, the two associate commanders quarrelled, after the capture of Laokai in 1868, and separated. LUN-VIN-PHUC remained in the town. HWANG-AN descended the Yellow River and established his head-quarters at Ho-yong, upon the Clear River (*Tsin-ho*), a tributary of the Song-koi. The former friends, now become enemies, were bound thenceforward to be mortal foes and to wage a remorseless war. They assumed, then, the names of the colors of their banners: the "Black Flags" (Chinese *He-ki*), are the adherents of LUN-VIN-PHUC: "Yellow Flags" (*Hong-ki*) partisans of HWANG-AN.

Thus Laokai, which means in Chinese the "Old Market," became the capital of the "Black Flags." It is not, properly speaking, a town, but a big village containing some three hundred houses, all covered with thatch, with the exception of the principal buildings of the fortified enclosure, which are built of brick and roofed with tiles to lessen the chances of fire. The place lying on the official frontier of Annam and China, where the boundary line is drawn by the Nan-Sin-ho, a little tributary of the Red River, is of considerable importance as a Custom House Station. Situated just outside the Celestial Empire it is a favourite refuge for Chinese rebels; and as it is very remote from the centre of Annamese authority it renders scanty obedience to the orders of TU-DUC, or whoever may be the reigning monarch of the Kingdom. Thus it happens that Laokai is, as it were, a Chinese town in Annamite territory, but yet as foreign, if not more foreign, to the Chinese towns on the other side of the frontier, as it is to the other places of Annam. In effect, the natives of the Chi-

nese province of Yunnan speak a mandarin dialect which closely resembles that of Peking, and is not understood by the Laokaian, who come for the most part from Kwantung and Kwangsi. These special conditions of a town which is ostensibly dependent upon the King of the territory, while they render it *quasi* independent yet place it at the mercy of the first adventurer who is able to carry and occupy it. He can, then, make of it a sort of toll-gate at which he can levy such taxes as he pleases upon travellers passing between Chinese and Tonquin territory. Providing that Annam is converted simply into a French protectorate, Laokai would make an excellent Custom House, as the writer in *L'Opinion* suggests. In any circumstances, under the new order of things, situated at the confluence of two rivers easily navigable by specially-built craft, it seems destined to become the *entrepôt* for any trade that may be organized between the delta of the Song-koi and the province of Yunnan.

As regards the Yellow Flags, we know that DUPUIS was well received by them on the occasion of his last journey in 1873, when he was obliged to traverse the region which they call theirs. And, beyond, the Black Flags, perhaps being unable to act otherwise, in no manner interfered with the traveller in his enterprise. Some time after his visit, the Yellow Flags, who had made a futile attempt to seize Laokai, were in their turn assailed by the men of the darker ensign, whose road to Tonquin they barred. Three hundred of the Black Flags, having been cut off from their main forces, were obliged to descend the Song-koi to the advanced posts of the Annamite army, to whose commanders they offered their services, which were accepted and soon employed. FRANCIS GARNIER, with a handful of men, had just achieved his swift and marvellous conquest of the delta. The Commander-in-chief of the Annamites, HUINKEVIEM by name, brother-in-law of the King, and at present the only mandarin of the first rank in Tonquin, was then Governor-general of Son-tai, the real military capital of the country, and situated up-stream as regards Hanoi. He took the outlaws into his employ and launched them, with other forces, against the latter citadel then held by the French. It was at their hands that GARNIER met his death in the fatal sortie of December 21, 1873.

Ever since that time the Black Flag Brigands have been in the service of the Sovereign of ANNAM, and have on several occasions borne arms against the French. They it was who, only the other day, compassed the death of Commandant RIVIERE

and his comrades in circumstances similar to those in which they killed GARNIER. In 1877, M. DE KERGAREDEC, then a Lieutenant and Consul at Hanoi, now a Post-Captain charged with a special mission to Hué, explored the Tonquin river as far as Yunnan. He gathered, as he was passing the town of Laokai which he only saw from afar, some information respecting the redoubtable Black Flags. He estimated their strength at 800 men, though their leader, LUN-VIN-PHUC, said that he had 1,565 when he claimed his pay from the Annamite Government. The band was installed in three ill-fortified posts, which could easily be burned, but whence the garrison could quickly escape to the mountains. To-day, no doubt, their condition is somewhat different. The Annamite Government pays them at the same rate as its own soldiers, or rather hands their pay over to their chief, who maintains and salaries them as he pleases. The scale is for each married soldier ninety catties of rice a month: unmarried men fifty catties. A daily ration of pork, and oil to burn, is issued, as the equivalent of a monthly pay of about one tael. Every warrior receives two suits of clothes a year, and from time to time a little Yunnan opium and rice-wine, either to make him mad or to keep him in a good humour, as occasion may require. The actual value of the food, &c., drawn by LUN-VIN-PHUC is probably about three dollars a month per man for each name on his roster; so that it is evident he can fare sumptuously on his squeezes. The Chief-tain himself is described as a man of about fifty years of age, short and slight of stature, extremely cruel, suspicious, difficult of access to any but his immediate friends, and neither Captain KERGAREDEC nor Mr. DUPUIS had ever seen him. The latter gentleman transacted all his business through the second-in-command of the gang.

KANA REFORM (SO-CALLED).

TO THE EDITOR "JAPAN MAIL."

SIR,—The object of the Japanese Society, called *Kana no Towa*, or "Friends of the Kana," is, as you pointed out in a recent article, to abolish the use of the Chinese written character in this country and to substitute for it the exclusive use of the native syllabary. This native syllabary has forty-eight signs. The Chinese ideographic system has more than forty-eight thousand. Hence the easily drawn conclusion that, civilization being in such matters identical with simplicity, the abolition of the Chinese characters in favour of the *Kana*

would be the most gigantic stride forwards ever taken by any nation eager to give its intellect free play by shaking off the shackles of an effete antiquity. The "Friends'" arguments would seem to have succeeded in making you more than friendly to them. Will you grant me space in your valuable columns to endeavour to convert you and your readers to the opposite way of thinking, by pointing out that sober reflection shows us that the result would be an altogether different one, that the "Friends of the *Kana*" are, in reality, the worst enemies of Japanese education, and that the adoption of the *Kana* (supposing such a thing possible) would mean the instant paralysis of every branch of thought and even of business?

To discuss the subject in all its aspects would require a treatise as long as a Scotch sermon. But the gist of the matter needs no elevantly and twelvethly to make it plain. It is not necessary to enter into all the *pros* and *cons* of the Chinese style. It is not necessary to imagine what the Modern Japanese language might have been had it been something different from what it is. Strictly speaking, it is scarcely even necessary to discuss the abstract merits of the syllabary,—or rather of the syllabaries, there being several,—known as the Japanese *Kana*. I would therefore, merely in passing, point out that the *Kana* is at once redundant, deficient, and misleading even as a medium for conveying the sounds of Modern Japanese itself. Of the caricature which results from its application to the words of other languages it is needless to speak.

But the root of the matter is not to be looked for here. Even were the *kana* a more imperfect system of writing than it is, it might be well to preserve it if it were already in common use, all change in such matters being accompanied by inconvenience. But it is not in common use. It has been given a thousand years' trial and has failed. Why has it failed? Because under the circumstances it is less practical than the Chinese system, cumbrous even as the latter may be deemed. The Japanese language has an enormous number of words derived from the Chinese. These words have penetrated into every branch of thought and of business; and the introduction of Western civilization, with its new ideas all demanding new terms to denote them, has had the effect of swelling the number of such Chinese words to an unprecedented extent. The result is that Archaic Japanese, which was a poor and barbarous dialect capable only of expressing the simplest facts and emotions, has now been developed into a tongue where, in most branches of knowledge, every shade of idea evolved by the genius of China and of Europe has its known and appropriate symbol. To think of expunging this vast body of words from the language is a pedant's dream. As well endeavour to expunge from English all words not of strictly Anglo-Saxon origin, and at the same time to carry on the business, the arts, and the sciences of modern life.

Now the peculiarity of the situation in Japan is this. The number of homonyms, that is of words sounded alike but differing in meaning, is enormous. This is a defect of the Chinese language which of course cleaves to its words when borrowed by the people of Japan. The inconvenience of this poverty of sounds combined with richness of vocabulary is felt occasionally even in speaking, where the listener can be guided by the circumstances attending the conversation, by the frequent iterations everywhere characteristic of spoken speech, and, as a last resort, by the possibility of asking for an explanation.

In writing, i.e. in phonetic writing, such as the *kana* purports to be, these helps fail. The very names of all the sciences, of all books, newspapers, government offices, in fact of all things excepting such as are quite primary, become an unintelligible chaos. Here the Chinese character steps in, and, by giving to each word its own particular ideographic symbol, makes the written language clearer than the spoken. The experience of the last thousand years has shown that this clearness of expression is worth obtaining even at the cost of laying a considerable burden on the memory. Indeed, what is the object of writing unless it be to make oneself understood?

This being so, how is it, it may be asked, that the "Friends of the *Kana*" manage to publish a magazine printed in *kana* alone? Simply thus: by not writing Modern Japanese at all, but by attempting to revive Ancient Japanese which they sprinkle with pseudo-ancient terms of their own invention. To such straits are people driven by pedantry mistaken for patriotism and divorced from common sense! Endeavour to imagine the English or American public being gravely requested to speak the language of Chaucer or to write exclusively in words of one syllable, and you have an idea of what the "Friends of the *Kana*" are agitating for in Japan.

If it were possible,—which it is not,—to change a language violently for the sake of fitting it in with a new system of writing, there is indeed a system which it would be well worth the while of the Japanese nation to make an "alarming sacrifice" to adopt. Need I say that I mean the Roman Alphabet? Even as a method of writing Japanese phonetically, the Roman alphabet is superior to the *kana*; and to be brought up to read and write their own language in the Roman alphabet would go half way to break down the intellectual barriers still existing between the Japanese and the nations of the West. On the other hand, to exchange their present mixed system for an exclusive use of the *kana* would only be to cut them off from what convenience there still may be in having a common medium of intercourse with China and Korea while leaving them as isolated as ever from Europe and America. At the same time they would be made, as it were, languageless,—unable to express in writing any but elementary ideas.

However, it is hardly worth while to discuss such a prospect seriously. Can it be believed that practical men,—administrators, men of business, workers in every branch of industry and science,—would allow themselves to be deprived for a single week of the power of expressing their thoughts clearly on paper? Even in Japan, where strange things happen, is the whole nation to be made the plaything of a few philologists, who, to judge from the last number of their periodical, believe ancient Japanese Grammar to be the most pressing question of the day, and opine that the writing of the syllable *i* with or without a silent *w* is a matter of the gravest importance?

I am, Sir, yours, &c.,

COMMON SENSE.

August 31st.

AN EXPLANATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reference to the paragraph which appeared in your issue of this morning regarding a foreigner who endeavored "to obtain money under false pretences," I beg to state that I am the person to whom you allude, and in justice to myself am compelled to contradict the statement

therein contained. Herewith is a copy of the telegram, or rather a translation of it, which was posted up in the "Grand Hotel" and the "Windsor":—

"A private telegram has just been received from the Governor of Boshu, stating that a typhoon is raging in that province. Over three hundred dwellings have been destroyed. The typhoon is travelling eastwards and probably will visit this Settlement. Residents are advised to take all necessary precautions."

The only error in my statement is that I interpreted *Yakunin* for Governor, whereas it signifies Government official.

I received the news from a Japanese gentleman who had just arrived from Tokio, and who is a native of that province. Had your office been open I would in all probability, have called and given you the information, but as it was a Sunday I deemed it proper for me to spread the report.

The whole amount which I received was \$2, and I considered myself justified in accepting the same for the trouble which I took and the jinrikisha expenses which I incurred while giving the information.

Trusting, Sir, that you will insert these few lines.

I am, yours most obediently,

F. CROSBY.

Yokohama, September 4th, 1883.

CONSULAR DECISIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Upon reading this morning's issue of the *Japan Mail*, I observe that the British Consul has dismissed a charge of assault against a fireman on the Chief Engineer of the *Strathleven* on the ground that the assault was committed on the "high seas," and therefore out of his jurisdiction. I believe that this judgment is correct, according to the powers given to the Consul by the Order in Council, but it does not appear to me to be consistent with a recent Consular decision, in which the boatswain of the *F. C. Graham* was convicted and fined for an assault which he committed on the "high seas"—to wit, the Bay of Biscay.

Yours, &c.,

DAVY JONES.

Yokohama, September 4th, 1883.

KANEKO'S EXPLANATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the article entitled "a Chapter of Yokohama History," which appeared in your issues of the 24th and 25th August, there are several statements made which, although I suppose for the purpose of avoiding the risk of an action for libel, names and places are changed or suppressed, I think I am right in supposing that I am the person referred to as "the Japanese gentleman from San Francisco." My reason for thinking so is in consequence of the statement that the above-mentioned person lives next door to a bathing establishment owned by two Japanese women, who are given the names of Mrs. O Tada and her sister O Gin. My house which is at Honmoku, and is known by the name of Kaneko, is next door to a place of that description, the owners of which are, I believe, two women named Taka and Kin. This close resemblance of names, taken in conjunction with the numerous communications which have lately appeared in the local papers relative to the Honmoku bathing establishments is, I think, sufficient

to localize the place and warrant me in presuming that I am the person referred to under the above appellation. It is, therefore, not without feelings of regret that I am compelled to impeach the veracity of your interesting romance, which I have no doubt gave the author much trouble to write, and I suppose afforded considerable amusement to some of your readers, but I am compelled to do so, as it contains untruths about myself which it would ill become me to allow to remain unchallenged. I therefore trust that, as you have circulated the falsehood, you will have the candour to publish my denial.

After introducing the house, called in your paper "Cove Cottage," the writer continues as follows:—"At any rate the cottage escaped, though the adjoining bathing house was less fortunate. Of the latter, too, curious facts are on record. Its owner was a gentleman who had distinguished himself in connection with a bath-house in San Francisco, where he dressed a Chinese girl in Japanese clothes and exhibited her as a native of Japan. Obligated to come home in consequence of this escapade, he rented a house beside Cove Cottage, and placed there six waitresses of comely mien. But he lacked finesse. Every body knew that the chief business of his new house lay in *et ceteras*: the police made it too hot for him; profits fell off, and he was fain to take service in a sugar refinery at six *yen* a month. He did not abandon his interest in the sea-shore commerce, however, but retained the place while surrendering the management;" and again, further down:—"The Japanese gentleman of San Francisco, understood this too, else he would not have dressed his Chinese doll in kimono and obi, and though capricious fate had banished him temporarily to a sugar refinery, his talents found able exponents at the cove;" and, as a parting shot, "I really think I'll resign my situation of the business at the cove says the San Francisco Lothario."

Now all this, although very amusing, is incorrect. It is true that I was in America for nearly 13 years, but I deny that I was ever connected with a bath-house in that country or had anything whatever to do with a Chinese girl, and I can, if necessary, procure evidence of an unimpeachable nature to support my assertion. Again, the statement that on my return from America I rented a house beside "Cove Cottage" and placed there six waitresses, &c., is also incorrect. The house was rented by my wife, who was previously nurse to a European family in Yokohama, twelve months before my return to Japan, and two years before the other house was built, and there has never been at one time more than four females employed on the premises, and that only on busy days; the usual number being two; again, the assertion that I took service in a sugar refinery is an untruth. The only time that I have been absent from my wife's place at Honmoku was during a period of three months, when I assisted a friend to run a restaurant in Yokohama.

I remain, your obedient Servant,

KANEKO TOSABURO.

Honmoku, August 31st, 1883.

[If Mr. Kaneko desires confirmation of the facts contained in "A Chapter of Yokohama History," we beg to refer him to the records of the Kanagawa Police and the Consular archives of his country. He will find that the statements contained in the article to which he refers are neither untruths nor romances.—Ed. J.M.]

THE LATE DR. GEERTS.

On Friday last the remains of the late Dr. A. J. C. Geerts were interred in the Cemetery of Yokohama. The funeral was largely attended. At the grave the following address was delivered by His Excellency the Dutch Representative:—

GENTLEMEN,—We have to bid a last farewell to one of our oldest Dutch residents of Japan, to a man who has been a kind hearted friend to many of us,—a dutiful son who supported his old parents at home, a kind and careful father, who leaves six little children to mourn their heavy loss. Our late friend, Mr. Geerts, had distinguished himself at home both as Military Apothecary and as tutor of the Military School at Utrecht, and the cross for 15 years' Military Service in Holland decorated his breast. He arrived in Japan in 1869, and during 14 years rendered highly important and distinguished services to the Government of this realm in Nagasaki, Tokyō, Kiyoto, and Yokohama, for which the Sovereign of this Empire granted him the decoration of the Rising Sun. We all bear witness to the eminent services which our late friend rendered to the Central Board of Health when the most dreadful disease raged amongst us, and both the foreign Community and the Japanese people united in high appreciation of the untiring zeal and the great care displayed by our friend on that occasion. Mr. Geerts was a man of great learning and science, and several learned Societies were proud to count him amongst their members. Unfortunately illness prevented him of late from finishing his last and most elaborate work about the natural products of China and Japan, and death overtook him at the early age of 40 years. Let us now unite in rendering the last honour to our deceased friend. Farewell to him and peace be with his soul.

After this a Japanese official read the following, in the name of His Excellency Yamada, Minister for Home Affairs:—

[TRANSLATION.]

Mr. A. J. C. Geerts breathed his last at his residence in Yokohama on the 30th of August, 1883. From the time that he was invited, in 1869, to occupy the chair of Chemical Science at the Imperial Medical School in Nagasaki, he discharged his duties with the utmost conscientiousness and assiduity, to the great benefit and advantage of this country. Indeed, to enumerate all that he accomplished would be very difficult. He it was who helped to organize and establish our laboratories, supplying numerous plans and schemes for their working and direction: he it was who undertook the task of remodelling and improving our medical system, and in addition to these arduous labours he performed many others which time fails me to detail. In grateful recognition of these many services His Majesty the Emperor was pleased to confer on him the decoration of the Fourth Class of the Order of the Rising Sun.

In the month of May of this year Mr. Geerts fell sick, and after long suffering which, day by day, wasted his strength away, he was finally removed from among us. I can find no words to express my deep regret for this sad event. To-day his family and friends have assembled to pay the last tribute of respect to his memory, and to accompany him to his last resting place in the cemetery of Yokohama. May he rest in peace!

TRANSLATIONS FROM NATIVE JOURNALS.

IS NOT OUR CIVILIZATION RETROGRESSIVE?

(Translated from the *Fiji Shimpō*).

Meeting an old friend after a separation of two or three years, one is first struck by the change in his personal appearance. Especially is this the case with children, who are always in process of development, so much so that when we meet them after only half a year's absence or so they have grown into quite different persons. When we are living, as it were, in a family circle, we fail to see

the change that is constantly going on in our surroundings. Parents are to children what they were yesterday: so are the children to their parents. Days and months pass. One party observes no growth: the other witnesses no decay. One's guests remind one of the growth of one's infants and one's own decadence. Although our physical development is nothing short of marvellous, our constant ocular perception fails to recognize it. We resemble the hands of a watch—always travelling from one to twelve.

So of a nation's progress: its revolving signs are imperceptible. To know whether it has been going fast or slow, we must consult its past history, and consider its circumstances. The notable events accompanying the Restoration were, politically, the substitution of prefectures for *han*, reform in land taxation, the introduction of enlightened law, the restoration of administrative power to the proper Government, foreign intercourse. Commercially, the changes were:—The establishment of trade associations, manufactories, railways, telegraphs, steamers and the postal service; and as regards education, encouragement of the study of foreign sciences, and the publication of books and newspapers. Such have been the most potent factors in the work of destroying the barrier of old customs and in introducing Occidental civilization. Although these methods are still in a state of infancy, and perhaps unworthy of consideration, yet had it not been for the courage of our countrymen, it would have been impossible to effect what progress has been made. No sooner had our internal affairs been placed on a sound basis than the innate force of the nation expanded. An expedition was sent to Formosa, a treaty was concluded with Korea, and the Riu-kiu-han was abolished. Since then we have witnessed a formidable rebellion and a considerable change in our commercial dealings. Looking back at the past, we are convinced that the present era of progress had its climax in the 12th and 13th years of Meiji (1878-9). Reflection on the subsequent general state of affairs suggests a retrogressive tendency in all departments of civilization, notably in politics and education. One of the present vicissitudes of society, which we are at a loss to account for, is that men look upon each other with suspicion, and prefer conservatism to being made the object of scrutiny by advocating their own ideas. Even those who but till yesterday have only exerted themselves with ordinary ability, to-day assume the appearance of men of vast experience and moderation who hesitate at every step, under the pretence that the time is premature, and that they are careful and so forth. This policy is dictated by anxiety to restrict youths who thrust themselves into politics with headlong impetuosity. So far so good. But politics are not alone the basis of the frame of human society. On realizing the danger arising from political strife, men may have taken some trouble to mitigate it, and have succeeded in restricting its evils. Politics are confined to one class of men who make it a profession; and consequently do not improve the general condition of the community. They are often indeed productive of great injury. Turning to the commercial aspect of the matter we are struck with the present stagnation of business. Merchants and manufacturers have succumbed to the heart-rending consequences arising from the violent fluctuations in the value of the fiat currency. The National Banks have collapsed almost to the extent of extinction. The monetary channels have been closed. Traders with energy but no capital are at their

wits' end. Such of them as have abundant capital, confine themselves to the purchase of Public Loan Bonds. Many factories have been closed, and thousands of labourers have been thrown out of employment. These evils have been caused by an unsound system of finance. As regards education, the base of national enlightenment, we find difficulties are constantly cropping up and causing it to retrograde. Ever since, the Restoration, the study of foreign sciences has been encouraged; and graduates therein only made an appearance a few years since. They ought to increase gradually; but there is no field for the exercise of their professions. Such is the case with all professional men—engineers, chemists, economists, statesmen, and others. Or even though there were positions for all of them, they are mostly prevented from occupying them on account of their birthplace and political positions differing from those of the men in power. As for education itself, we find that the old system and doctrines which were in full vigour under the Tokugawa régime are being revived. The educators are striving to check the tendency toward that extreme temerity which presents itself under the guise of civilization. Formerly, it was the rule in every school to encourage the cultivation of European science rather than that of Chinese literature. At present, however, the contrary is the case. Teachers who understand European languages are being replaced by Confucianists. These are all signs of a retrogression in our civilization. Since our country's policy is to introduce European civilization, we regret to witness such a revival of the Chinese classics as hinders progress. The Confucianists may desire to "Chinese" this country; but we do not desire to see reproduced the injury and danger to which this nation was exposed some two or three decades ago. Look at the state of affairs obtaining at the time when the American squadron steamed into these peaceful waters in the era of Kayei. Had it not been then for the progressive career upon which we had entered we should not have been able to hold our own. But now, retrogression is the order of the day. Tea-ceremonies and other old arts have been revived. As far as æsthetic taste is concerned, the tea-ceremony and such like arts are exceedingly heightened; but in view of the modern civilization of practicality, they amount to less than nothing. For Japan to compete thus with Occidental activity is similar to attempting to extinguish a large conflagration without the aid of steam fire-engines. We have no leisure to expend in the cultivation of æsthetics. That retrogressive tendency which we have pointed out must be conspicuous to those returning from foreign countries. A Westerner in his letter to our office says that Japanese civilization having reached its climax, will go backward. We are exceedingly sorry to hear such a remark, and earnestly hope that the forecast will turn out incorrect.

THE ILL-EFFECTS OF PREMATURE MARRIAGE.

(Translated from the *Choya Shimbum*.)

All the animal creation is endowed with the impulse of sexual affection and the instinct of the propagation of their species. Bakan, one of the best of Japanese novelists, says:—"The sentiment of love is common alike to men and animals. None of them can escape it—from the stag that pursues the hind through the difficult forest to the cat that miauls for its mate on the treacherous

house-top. As surely as the peach-tree will bear fruit in the third year of its growth, so will the firstlings of love display themselves without fail in the lass of sixteen." Apart from the poetic aspects of the tender passion, man resembles the lower animals in that respect. The feeling indulged in prompts to early marriage, heedless of all injury that may result to the principal parties, their progeny, and, in the long run, the nation at large. The evil is more pronounced and frequent in semi-civilized than in advanced nations. It is caused by ignorance, and diminishes with the increase of knowledge. Unhappily the custom has prevailed in Japan from days of old, and obtains even in these modern times. Daily we see the marriage of boys and girls, long before either their intellectual or physical faculties have matured, encouraged by their parents and guardians. "A man is not a man before he has attained the age of twenty-five," is a familiar aphorism. His marriage, then, before that age, cannot fail to be injurious to the corporeal and mental powers of the next generation as well as hurtful to himself.

The following are the three principal evil results of too early marriages:—

1.—The community is composed of rich and poor, the latter in far larger proportion. It is a man's duty before marriage to provide sufficient resources for the maintenance of his wife and family. Does he neglect this precaution he cannot bestow the benefits of the commonest education upon his children, whose natural endowments, therefore, cannot enjoy proper culture. When arrived at maturity his offspring will be devoid of any accomplishments, and unable to earn an independent livelihood. Probably they will be reduced to poverty and misery, and driven to steal. Indigence is the mainspring of robbery; and most of the poverty prevailing has its origin in early marriages. On the other hand, children born of parents whose physical and intellectual faculties have, before union, been allowed to attain full development, will, if properly trained, grow up, in spite of obstacles, useful members of Society.

2.—In the event of frequent marriages the population multiplies with rapidity—a fact which at first glance would appear an element beneficial in increasing the resources of the nation. In reality, however, this is not so; for a country's prosperity is not in corresponding ratio to the increase of its inhabitants. The present wealth of European States is due to their numerous inventions, and foreign commerce, and the employment, in the right direction of the energies of their people. In their turn, these inventions and this well-applied force are the outcome of a perfection of mental and corporeal capacity. Evidently, opulence is not a result of mere increase of population. In domestic life we find that the feeble cannot constitute a comfortable home. They become swamped in squalor and misery. It is a law of nature that decay follows growth. A severe winter is followed by a summer correspondingly hot: long droughts are waited on by continuous rainfalls. Trees and herbs grow in Spring and Summer, and wither and die in Autumn and Winter. The amorous passion is vehement in youth, but gradually declines with advancing years. It may be, then, that a population may be increased by premature marriage; but a reaction will surely set in and the number will rapidly diminish—in the event, say, of epidemic, famine, and similar calamities. This is simply in accordance with natural laws of expansion and contraction. And, indeed, it is better that people of imperfect intellectual and physical

capacity should perish, than survive to assist in the spread of epidemics and like sources of misery.

3.—According to the theory of hereditary transmission, children acquire by birth the characteristics of their parents for good or evil. Leprosy and stomachic and other terrible diseases are bequeathed from generation to generation. So does an infant succeed to the literary and scientific tastes of its ancestors. Thus, parents of short stature beget offspring of like structure to themselves; and tall adults give to the world successors of similar proportions. Of course there are exceptions; but, the proverb, that "egg-fruit does not grow on a melon vine" is correct. As a broad rule, children inherit both the intellectual and physical attributes of their parents. And so we may remember here the careful farmer's rule to select good seed, as "with bad seed one ensures a bad crop." If the present custom of early marriage, now prevailing in Japan, be allowed to continue we shall deteriorate into a nation of pigmies.

The numbers of the American Indian tribes have diminished with the march forward of the white man. The Ainos are becoming gradually extinct as Japanese immigration into Hokkaido progresses. This is the effect of unequal conflict between the widely different capacities of the respective races. Especially in this day of universal intercourse, when the weak invariably succumbs to the strong, premature marriage should be promptly prohibited before it permanently weakens the nation. Recent investigations of this subject give interesting results. The passion that we call love is largely influenced by climate. As a rule those living in tropical, develop it sooner than those living in temperate and colder climates. Indian girls become women and marry, at a very early age. In Europe marriage is deferred till much later years. Thus, in France the average age for marriage is, for men 30 yrs. 1 mo., women 25 yrs. 8 mos.: England, men 27 yrs. 5 mos., women 25 yrs.: Holland and Belgium, men 31 yrs. 4 mos. women 28 yrs. 4 mos. [And so the author quotes of Denmark, Italy, and Switzerland, with marrying ages varying on the average from 30 to 38 years for men: 21 to 28 years for women. He resumes:] It is said that, even in the above-mentioned countries, young people sometimes marry young; but they do so very seldom before they are twenty years of age. And this wholesome restraint is not the effect of preventive laws, but rather of the intelligent application of practical observation, one of the highest attributes of Western civilization. In the absence of statistics we cannot state positively at what average age people marry in Japan; but we should say, from experience, men at twenty-two or twenty-three: girls at eighteen or nineteen. The expense of supporting a wife and family in Japan is comparatively trifling; and, consequently, people do not feel the burden as heavily as in other countries—a fact which of itself encourages the evil of premature marriages. The principal cause, however, is ignorance of the various ills arising from the practice. Our present population is all that can be desired in point of number; but the majority of its constituents lack energy, adaptability, and endurance; and these defects we do not hesitate to attribute to premature alliances.

Some may argue that to prohibit people from marrying when they please, is analogous to prohibiting them from taking food, and that it would be as difficult to put a stop to one custom as the other. They might as well contend that, if freedom of alliance were forbidden, men would necessarily indulge in debauchery, and ruin themselves in profligacy and disease-engendering vice. What we desire, however, is not the interdiction of marriage but exertion on the part of parents to put an end to an evil usage. We earnestly hope that the pernicious custom will soon be abolished.

JAPANESE STATISTICS.

CENSUS RETURN FOR 1882 (PREPARED ON THE 1ST JANUARY, 1883).

| CITIES AND PREFECTURES. | IMPERIAL FAMILIES | PRINCES | KNIGHTS (NOBILITY) | SHIROU (GENTRY) | HEIMIN (COMMONERS) | MALES. | FEMALES. | TOTAL OF THE TWO PROCEEDINGS. | PERSONS ABOVE 15 YEARS OF AGE. | PERSONS ABOVE 20 YEARS. | PERSONS ABOVE 30 YEARS. | PERSONS ABOVE 40 YEARS. | PERSONS ABOVE 50 YEARS. | PERSONS ABOVE 60 YEARS. | PERSONS ABOVE 70 YEARS. | PERSONS ABOVE 80 YEARS. | PERSONS ABOVE 90 YEARS. | PERSONS ABOVE 100 YEARS. | DEATHS. | REMOVED FROM THE CENSUS. | NUMBER OF FAMILIES (KOKO). |

THE KOBE COMPETITIVE TEA EXHIBITION.

The following is translated from the pamphlet issued by the Commissioners, which has been forwarded to us for publication:—

The ceremony of opening the Competitive Tea Exhibition in Kobe took place on the 1st instant, in the presence of Mr. srs. Takei, Sekigawa, Wada, Secretaries of the Agricultural and Commercial Department; Morioka, Prefect of Hiogo; Kitagaki, Governor of Kyoto; Tateno, Governor of Osaka; Koteda, Prefect of Shiga; Yagimoto, Secretary of Hiogo Ken; and Ogawa, Superintendent of the Kobe Custom House. Besides Magistrates of the Urban Divisions, Members of the Hiogo Prefectural Assembly, and functionaries of the commercial and trading establishments.

At 9.30 a.m. on the above date, the Commissioners to the Exhibition, including Kanji (Directors), Committees from the various cities and prefectures, the judges, representatives of the exhibitors, as well as a special Committee appointed by the exhibitors for the arrangement of their exhibits, and several visitors, took their respective seats in order to prepare for the ceremony.

At 10 a.m. His Excellency Shinagawa, Vice-Minister of Agriculture and Commerce, arrived, accompanied by Mr. Katayama, Secretary of the Agricultural and Commercial Department, who represented Kanji. All the members present rose from their seats and paid their respects to the Minister. Mr. Katayama approached the Minister, and making a short speech about the condition of the Exhibition, presented him with a catalogue of the objects on view. His Excellency briefly responded; and his address was replied to by the representatives of the exhibitors. Next, the Superintendent of the Kobe Custom House and the representatives of the Trading Company each spoke in felicitation of the occasion. The ceremony was then concluded, and the meeting dispersed. The Minister then inspected the premises of the Exhibition under the guidance of the Kanji, and subsequently regaled the remaining guests with tea and cake. The Exhibition was opened to the public in the afternoon. The number of exhibits and exhibitors is more than 4,480 and 3,810 respectively. Of the former, 786 are from the prefecture of Saitama, 535 from Shiga, and more than 300 from Osaka and Miye; while Tokiyo, Kyoto, Kanagawa, Niigata, Chiba, Ibaraki, Gifu, Fukushima, Fukui, and Kumamoto—two cities and eight prefectures in all—exhibited less than 300 and more than 100. The exhibits from all other prefectures were less than 100 in number. In a special apartment, were exhibited several samples of teas from the Botanical Gardens and the Engineering Bureau of the Imperial Household Department; tables and books on the use of tea, as well as drawings of the tools employed in the tea plantations,—sent from the Commercial and Agricultural Bureau, the Industrial Sections of the various Prefectures, and by exhibitors from different localities.

The address delivered by His Excellency Shinagawa runs as follows:—

The origin of the growth of tea in our country can by no means be accurately ascertained, yet topographical investigation leads us to the conclusion that the staple has grown wild in the Empire from very remote periods. As to the method of its culture and production, we are also unable to obtain any precise knowledge. Referring

to the old annals, however, we remark that when the Emperor Saga proceeded to Kanzaki in Shiga, Omi, in the spring of the 6th year of Kojin—about 970 years ago—and took up a temporary lodging at the temple called Bonshakuji, the Abbot Yeichiu, of the temple Sōfukuji, prepared tea in person, and presented it to the Emperor and his younger brother. From these facts it may be inferred that the culture of tea as well as the method of preparing it for drinking purposes has had its origin in the knowledge acquired by Yeichiu when he travelled in China in the epoch of Yenryaku. However, the use of tea was temporarily abandoned, until, in the reign of the Emperor Toba II. during the years of Bunji, the priest Yeisei, founder of the temple Kenninji, who had previously been dispatched to So, in China, to study Chinese literature, returned with tea seeds and founded a plantation on the mountain called Seburiyama, in the province of Chikuzen. His produce was known by the name of Iwakami tea. Later he presented some plants to Hōye Shōnin, rector of the Toganowō temple, in the province of Yamashiro. This priest planted them in Uji, and thus the cultivation of tea has been in progress during more than 860 years. Therefore the reputation of the Uji tea is traceable to these facts.

The exportation of our tea to foreign countries is of recent date—after the opening of Nagasaki to foreign commerce. The quantity exported was then so insignificant as to be hardly worth recording. When Yokohama was opened to foreign trade in the 6th year of Ansei, some American merchants made purchases of tea, and this gave rise to extended exportation. Later on, the export of the staple increased year by year, to such an extent that one-fourth of the total value of our exports from the 1st year of Meiji to the 14th year (1868-1881) was contributed by tea.

I have heard that the American Government has lately prohibited the import of spurious teas. That America, our chief customer, has adopted such a measure, will serve to terrify cunning and fraudulent, and encourage upright, dealers. Both our tea cultivators and manufacturers must work candidly, taking legitimate measures for packing and transportation, so that they may be enabled to compete with rivals of other countries and maintain the reputation which our teas earned from Heaven more than one thousand years ago. This is the reason why the Second Competitive Exhibition of tea is opened, and why I call the attention of producers to the facts that I have mentioned above.

SPECIAL COURT, TOKIYO.

SATURDAY, SEPTEMBER 1ST, 1883.

Before Mr. Justice TAMANO, and Messrs. HAYASHI, KAWADA, and NAGAOKA, Assessors.

THE PROSECUTION OF THE FUKUSHIMA SUSPECTS.

On Tuesday, the 28th instant, the case terminated, and the Court reserved decision. This morning it reassembled, and delivered the following judgment:—

Upon Kono Hironaka, aged 34 years 3 months; Tanomo Hideakira, 34 years 8 months; Aisawa Yasukata, 34 years 3 months; Hiroshima Matsuwo, 28 years 11 months; Hanaka Kiojiro, 27 years 2 months; and Sawada Seinosuke, 21 years one month, accused of having conspired together to subvert the existing Government, a trial has been held and judgment is hereby pronounced by the

Chief Judge of the High Court, in the presence of assessors, having regard to the opinions of the Public Prosecutor, the answers of the accused, the arguments of their counsel, as well as their own confessions, and all the documents handed in as evidence. Judgment is as follows:—

From the following summary of evidence it is inferred that the accused devised a plot at the *Mumeikwan*, in Fukushima, in July or August of the 15th year of Meiji (1883), with the express intention of subverting the Government.

On the 27th of January of the 15th year of Meiji (1883), Kono Hironaka made a statement at the Wakamatsu Court to the effect that on the 1st of August in the 15th year of Meiji (1882) he entered into a covenant at the *Mumeikwan*, with Hanaka, Aizawa, Tamono, Sawada, and Hiroshima. On being asked whether he remembered the items of the covenant, he took a pen of his own accord and wrote as follows:—

COVENANT.

1.—Our party must consider it its duty to overthrow a despotic Government which is the common enemy of liberalism, and to organize a system of democratic administration.

2.—In order to accomplish our ends, we must lay down our lives, abandon our property, and disregard all ties of affection should occasion require.

3.—Our party must conform to regulations framed in accordance with the decision of our meetings, and must act as thoroughly in concert as though we had but one mind and one body.

4.—Before our aims are accomplished we will not dissolve our party, whatever difficulties we may encounter, and whatever space of time may be required.

5.—Any member of our society who may reveal its secrets, or behave in contravention of our covenant, must immediately commit suicide.

The above five items must be observed at the risk of our lives.

Given under my hand before the Wakamatsu Court.

KONO HIRONAKA.

January 27th, 16th year of Meiji (1883).

On April 4th of the 16th year of Meiji (1883), this prisoner stated at his preliminary examination before the High Court that the phrase, "to overthrow the Government," in the covenant did not refer to the Japanese Government alone, but to all the governments of the world, and that although it might include the Japanese Government, its limitation to that institution did not correspond with the original intention of his party.

On the 17th of January of the same year, Hiroshima Matsuwo produced at the Fukushima Police Station a covenant, said to have been made by six of the prisoners. Its first article refers to the subversion of an oppressive government. On being asked whether he alluded to the Japanese government, he replied that the existing Government has a tendency to oppression, and that the article in question referred to all such governments. He was told that the meaning of "refers to all governments" was too wide, and therefore unintelligible; and when he was asked whether "tendency to oppression" meant that the Government is oppressive, he answered that he was impelled to enter into the covenant on account of the present oppressiveness of the authorities. To the question, "Does 'oppressive government' refer to the existing Japanese Government?" he replied "Yes."

On January 25th, he was examined by the Public Prosecutor at the Wakamatsu Court as to the truth of statements made by the accused on the 2nd, 3rd, 17th, and 24th of the same month, when trial was held at the Fukushima and Wakamatsu police stations. He replied that in the reports of the examination in Fukushima, one item regarding the

assemblage of rioters was erroneous, but that, as respects the covenant and other matters connected with it, there was no mistake. "You have only five coadjutors: where can you find others numerous enough to support your cause?" was another question put to him. He answered that each of his companions was to induce his intimate friends to subscribe to the covenant, signing their names with their blood.

When enquiry was made on the 25th of January at the Wakamatsu Court as to whether there were no mistakes in the record of the statements made by the accused on the 2nd, 3rd, and 17th of the same month, at the Fukushima Police Station, and on the 24th at the Wakamatsu Police Station, his reply was that the statements, as contained in the reports of the examination in Fukushima, which refer to the consultation with Kono about the convocation of rioters, were entirely wrong, but that the allegations with regard to the covenant and other matters were true.

On the 17th of January, Hanaka Kiojiro was examined at the Fukushima Police Station as to whether the original covenant contained the words "despotic government," and he answered that the word "despotic" may have been mistaken for "oppressive," and that the words below "in order to accomplish our ends" in the 2nd Article should be changed to "must disregard life and property as well as all ties of kindred." On being asked whether he alluded to the Government of Meiji by the words "despotic government," he replied "Oh, Yes!" The covenant as written by him under date of January 14th of the 16th year of Meiji (1883), runs as follows:—

1.—Our party, inhabiting Japan, must strive to overthrow an oppressive government and establish a democratic system instead.

2.—In order to attain the ends mentioned in the above article, we must sacrifice our lives and property.

3.—We must carry out all decisions arrived at after discussion in our meeting.

4.—Any member of our party who discloses our secrets will be punished with death.

5.—Until we accomplish the various objects prescribed in the foregoing Articles, we must not change motive or resolution, even though it may be necessary to spend in our achievement a considerable number of months and years.

The above covenant is the outcome of our convictions and the principles we cherish, and we are bound to observe it at the sacrifice of our life. We swear it.

I do not remember the exact wording of the articles of the covenant, but I believe that what I have given above was its purport.

HANAKA KIOJIRO.

January, 14th, 16th year of Meiji (1883).

A preliminary examination was held at the Wakamatsu branch of the Fukushima Court on the 3rd of February in the 16th year of Meiji (1883). There this prisoner was asked whether he found no mistakes in the record of his statements made at the Fukushima Police Station on the 17th of January in the same year. He replied that he did. When he was ordered to point out the errors, if there were any, he answered that the words "inhabiting Japan" were misrendered for "enemies of liberalism," and that the answer in the reports of the examination affirming that the allusion was to the Meiji Government, should be replaced by the clause, "All the despotisms of the world are referred to, and the Japanese Government is one of them." To the question, what other mistakes there were? he answered, "none." Next he was asked what he meant by "subverting the Government." He replied that his idea was to over-

turn it. On being asked again whether "overturning" was to carry the sense of rising in rebellion, he answered in the affirmative, saying that any sense might be given to the word "overturning" according to the choice of the judges.

When the preliminary examination was held at this special Court on the 2nd of May, in the 16th year of Meiji (1883), Kono Hironaka was asked on what day he entered into a covenant with two conspirators besides the four with whom he had consulted on the night of August 1st. He answered that he made the covenant with Aizawa about two or three days after that date, and with Hiroshima a day or two later.

When the copies of the covenant produced by Hiroshima Matsuwo, Hanaka Kiojiro, and Kono Hironaka, were read to Aizawa Yasukata at the preliminary examination in the Wakamatsu Court, on January 28th of the 16th year of Meiji (1883), and enquiry was made of him by the judge as to which of the three copies of the covenant was correct according to his recollection, he replied that Kono's was exact, he thought, with very slight difference, and that he would write a covenant from his own memory, although he dared not vouch for its perfect accuracy. He then wrote a copy of the covenant and handed it to the judge, who asked him how it happened that what he had written corresponded with Kono's copy without a tittle of difference. He answered that he had simply racked his memory, and that it was impossible for him to guarantee exactitude. Enquiry was then made of him as to the date when, and the place where, the covenant was concluded, as well as the number of associates. The rejoinder was that, in the beginning of August in the 15th year of Meiji (1882), a covenant was shown to him at the *Mumeikwan*, in Fukushima, by Kono, who, having stated that Hanaka, Tamono, and Sawada had already joined in the covenant and signed their names to it with their blood, had induced him to it follow their example.

Hanaka Kiojiro was subjected to a preliminary examination at the High Court on the 30th of April in the 16th year of Meiji, and there stated that the absence of Hiroshima from his house on the 1st of August might have been possible, but that as the covenant was drafted six or seven days before, namely about the 22nd or 23rd of July, he must have been present at the time when it was drafted, and that, notwithstanding his absence on August 1st, he must have been perfectly familiar with the circumstances connected with the conclusion of the covenant; otherwise his signature could not have been given. On being asked whether Hiroshima was present at the meeting held before the 1st of August, he answered in the affirmative. To the question, on what day was the covenant drafted? the reply was that it was about a week prior to the subscription of the covenant with blood signatures—namely about the 22nd or 23rd of July. As regards the number of persons with whom he had consulted, he mentioned Kono, Tamono, Sawada, and Hiroshima.

Tamono Hideaki was examined at the Wakamatsu Police Station on the 25th of January in the 16th year of Meiji (1883), as to whether he remembered that he had ever made an extraordinary covenant with Kono, Hiroshima, and Hanaka. He answered that he had made one about July of the 15th year of Meiji. As to the order and the number of his associates, he mentioned Kono, Sawada, and Hanaka, saying that he subsequently heard that Hiroshima had also entered into the covenant. On being asked whether he had

undertaken to fulfil the agreement, even with the sacrifice of his life, he answered resolutely in the affirmative. Then he was ordered to name the provisions of the covenant from memory, but refused on the ground that he did not remember them. The police authorities stated that he appeared to attempt to evade his obligation under the covenant on the plea of not remembering its provisions; and that, as they would show him copies of the covenant handed in by Hiroshima, and would inform him of the statements made by that person, he must give a decisive answer.

The documents were read to him. The covenant written by Hiroshima at the Fukushima Police Station, which was subjoined to the reports of the Wakamatsu Court, ran as follows:—

1.—Our party, inhabiting Japan, must strive to subvert the oppressive Government and organise in its place a system of democratic administration.

2.—In order to attain the ends prescribed in the above Article, we must be careless whether we live or die.

3.—Our party must relinquish all ties of relationship, our wives and children, and sacrifice even our properties if occasion requires.

4.—The decisions of our meetings must be strictly carried out.

5.—Revelation of the secrets of our party is punished by beheading.

The above conditions must be observed even with the sacrifice of our lives.

8 p.m. on the 14th of January, 16th year of Meiji (1883). (Signed) HIROSHIMA MATSUWO.

The police proceeded further:—"As you have alleged that you do not remember the provisions of the covenant, they have been read to you, and we believe that from the confessions thus made by your colleagues, you have perceived that you were equally concerned with them in the matter." The accused replied that, although he did not remember anything, yet the documents read to him were in fact the covenant. On being asked whether the words "to subvert the oppressive government," in the first article, referred to the Japanese Government, he answered that they did not merely allude to it, but to all oppressive governments in the world.

Again, at the preliminary examination at the High Court held on the 18th of June of the 16th year of Meiji (1882), he was asked on what day the covenant was concluded. He answered that it was at the end of July of the 15th year of Meiji (1882), and that, although he did not know what was the exact course of a conversation carried on by six companions in the *Mumeikwan*, the dialogue at last turned on the contemplation of a scheme to maintain the welfare of the society; and an attempt was made to draft a covenant. He also said that these six companions assembled again on the 1st of August, and sanctified the covenant with signatures in blood, and that therefore the proposal for the covenant was mooted five or six days prior to the assembly. On being asked who were present, he mentioned Hanaka, Hiroshima, Kono, Aizawa, and Sawada—six in all—stating that the covenant was signed by these companions who had met not purposely, but accidentally. He was then questioned whether none of them had suggested the necessity of altering some words in the covenant, when Sawada tried to write it out fair. He replied that opinions differed considerably with regard to the 1st and 2nd articles, and that therefore serious arguments ensued among them. Some asserted that "overthrowing" the Government as the enemy of liberalism might convey the idea of overturning it by means of arms, and that, in so far as they cherish the principles of liberalism, they ought to improve the Government

by means of discussion or the dissemination of literary works, and the harsh words employed in the covenant did not correspond with their real ideas. Others said that the words "oppressive government" made it necessary to insert the words "to overthrow," without which the composition would be inelegant, and that the resort to such terms could in no way be confined to the case of rising in arms. He continued to say that he did not remember exactly whether the harsh words in question were replaced by others conveying the sense of amendment, when the covenant was to be written fair after long discussions, but that it is certain that the original contained the words "to overthrow."

At the preliminary examination before the High Court held on the 2nd of March in the 16th year of Meiji (1883), Hanaka Kiojiro stated that, when the covenant was drafted, the words "to overthrow" were used in their legitimate meaning, but that on the occasion of signing it, a proposal was mooted as to the advisability of changing them to "to improve," on the ground that, as the meaning of overthrowing might be confined simply to overturning the Government, the words should be replaced by such as should convey the idea of improvement. On being asked whether his idea was to ameliorate the Government after subverting it, he gave a decisive answer in the affirmative. Sawada Seinosuke made the following statement at his preliminary examination before the High Court opened on the 30th of May in the 16th year of Meiji (1883):—"I have cherished the idea of improving an oppressive government, and so I remember that the first Article of the covenant contained the words "to improve" instead of "to overthrow." But as I was not present at the meeting of the other associates who had devised a covenant, and as the instrument in question was shown to me by Mr. Kono about twenty days after it was signed by them, I have forgotten what were its provisions. I may be allowed to say, however, that in which ever way the first article may have been phrased—namely to subvert the Government or to improve it—there is no difference in the idea, for improvement necessitates subversion, while on the other hand subversion necessitates improvement.

When, at the preliminary examination before the High Court held on the 30th May of the 16th year of Meiji (1883), Sawada Seinosuke was asked whether he had entered into a covenant with Kono and others at the *Mumseikwan* in or about July or August of the 15th year (1882), he replied that he did so on the 30th of August. Another enquiry having been made as to the place where the covenant was signed, he answered that it was at No. 25, Minami Uradori, Nichome, Fukushima-machi, where the offices of the *Fukushima Liberal Gazette* stand. On being asked whether it was not the *Mumseikwan*, he replied "Yes," adding that the street was formerly called Rokkencho. As to the number of persons present at the signature of the covenant, he remarked that as he was busy with his newspaper work, he did not remember well, but that he recognised the presence of three friends, namely, Tamono, Hanaka, and Kono.

Taking the above evidence into consideration—namely, the mutual agreement of liability to decapitation or suicide, and the oath taken to sacrifice their lives in the achievement of their schemes; their decision to persuade others to join in their covenant by means of lectures; their statements concerning the subversion of the Government in order to its amelioration; or the necessity of improving it after its subversion; the attempt made to give to the covenant the sense of amending after

overthrow; the affirmative answer to the question, whether the so-called improvement was to be effected after overthrowing the Government, and whether the subversion indicated rising in rebellion—it is hereby judged that there are sufficient reasons for declaring the accused guilty.

Although the accused have alleged that they have destroyed their blood-signed covenant, such allegation must be regarded as invalid, for want of evidence—although they have asserted that the copies of their covenant dictated from their memory contained the words "to overthrow," but that the original had a label showing the alterations of these words into "to improve," such assertions must also be denounced as unfounded, for the covenant signed with blood cannot be made invalid by any addenda: although they have declared that the words "to subvert the Government" contained in the covenant written from memory, do not necessarily allude to the subversion by violence but by discussion or newspaper agitation, such declarations are also untrustworthy, for the evidence given in the foregoing lines suffices to show that the accused refer to subversion by force, and that the subversion in question must be restricted to the object of creating domestic disturbance or committing tumultuous actions: although they insist upon the statement that they have never devised a plot, such must also be regarded as invalid, for while they have inserted the words "to overthrow the Government" in their covenant, and the phrase "to carry out their resolutions at the sacrifice of their lives," and moreover, have affirmed the question whether they meant rising in rebellion by the words "to overturn the Government," it is quite unreasonable to say that they have never attempted to create a riot or civil disturbance: although they have pretended that the words "to overturn the Government" mentioned in the covenant dictated from their memory, refer to a foreign government, and not to the Government of Japan, such pretences are also unjust, for it is clear from the foregoing evidence that the government adverted to by the accused must necessarily be regarded as the Japanese Government. Therefore, referring to the law for these offences, we find that Article 121 of the Penal Code provides that all individuals guilty of having taken part in a civil war, in an insurrection or an armed sedition, having for its object either to overthrow the Government, or to take away from the Imperial authority any part whatsoever of the territory of Japan or its dependencies, or to diminish the rights and prerogatives of the Emperor in the Government of the country, shall, according to the nature of their participation, be punished as follows:—

- 1.—With the penalty of death; those who have been the instigators of the crime, and those who have held the office of Commander-in-chief in the civil war, the insurrection, or the sedition.
- 2.—With transportation for life and, if the circumstances are less serious, with temporary transportation, those who have held any office in command, in employment, or function permitting authority.
- 3.—With imprisonment and hard labour and, if the circumstances are less serious, with imprisonment only, those who have furnished arms and munitions of war, and those who have exercised any function or employment less important.
- 4.—With simple imprisonment for a period of from two to five years, those who, without exercising any of the aforesaid employments have participated in the insurrection, or who have been employed in different services less important, during the insurrection.

Article 125 of the same Code says that, if there have been only levies or enrolment of bands, supplying of arms, munitions of war, or provisions, or other acts preliminary to the offences before mentioned, the penalties borne by Article 121 shall be diminished one degree.

If there has been only conspiracy formed, not followed by preliminary acts, the penalties shall be diminished two degrees:—

Article 104 provides that, when two or more individuals have taken a direct part in the execution of an offence, each of the individuals is considered as a perpetrator and punished with the ordinary penalty of the offence.

Article 68 provides that the political criminal penalties are lowered or raised in the following order:—1. Death. 2. Transportation for life. 3. Transportation for a time. 4. Major Detention. 5. Minor Detention.

For the above reasons, the penalties to be inflicted at the High Court upon Kono Hironaka, Tamano Hideaki, Aizawa Yasukata, Hiroshima Matsuwo, Hanaka Kiojiro, and Sawada Seinosuke, shall each be diminished two degrees in accordance with the 2nd clause of Article 125 and the 1st clause of Article 121 of the Penal Code, and they ought to be sentenced to temporary transportation; but as there are extenuating circumstances, the 1st clause of Article 89 of the Penal Code, which provides that extenuating circumstances may be admitted even when already there have been one or several legal excuses in his favour,—and Article 90—which provides that when the judges have admitted extenuating circumstances the penalty is lowered one degree at the least and two degrees at the most—, should have to be dealt with. Therefore, in accordance with the 2nd clause of Article 23 limiting the minor detention from six to eight years, Kono Hironaka is sentenced to seven years' minor detention, and Tamono Hideaki, Aizawa Yasukata, Hiroshima Matsuwo, Hanaka Kiojiro, and Sawada Seinosuke are each condemned to six years' minor detention.

September 1st, 16th year of Meiji (1883), at the High Court, in the presence of the Public Prosecutors, Watanabe, Takenouchi Hori-ta, and Sumikawa.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, AUGUST 31ST, 1883.

Observatory of Daigaku, Moto-Fujiicho, Hongo, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—velocity of wind.
Percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
• Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 18.6 miles per hour on Sunday at 1 p.m.
The highest reading of the barometer for the week was 30.130 inches on Saturday at 10 a.m., and the lowest was 29.759 inches on Tuesday at 6 p.m.
The highest temperature for the week was 88.4 on Tuesday, and the lowest was 66.0 on Sunday. The maximum and minimum for the corresponding week of last year were 87.0 and 65.8 respectively.
The total amount of rain for the week was 0.032 inches, against 1.070 inches for the corresponding week of last year.

SUNDAY CHURCH SERVICES.

From Shanghai, Nagasaki, & Kobe, per M. B. Co. Thursday, Sept. 13th.†
From America, per P. M. Co. Monday, Sept. 24th.‡

* *Kankow* left Nagasaki on September 7th at 1 a.m. † Left Shanghai on September 5th. ‡ City of Arling left San Francisco on September 4th.

THE NEXT MAIL LEAVES

For Europe, via Hongkong, per M. M. Co. Sunday, Sept. 9th.
For America, per O. & O. Co. Sunday, Sept. 9th.
For Kobe, per M. B. Co. Monday, Sept. 10th.
For Shanghai, Kobe, and Nagasaki, per M. B. Co. Wednesday, Sept. 12th.
For Hakodate, per M. B. Co. Wednesday, Sept. 12th.
For Europe, via Hongkong, per P. & O. Co. Saturday, Sept. 15th.
For America, per P. M. Co. Saturday, Sept. 22nd.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

LATEST COMMERCIAL.

IMPORTS.

The week's business has been on a small scale for Yarns, best qualities being weak, whilst the prices for common are well maintained. In Shirtings, there have been but small sales with no improvement in prices. We have to note a better enquiry for Mousselines at advancing rates: also more demand for Pilot Cloth, and there has been a better demand for Velvets and Satins. Metals, too, show some improvement. Stocks of some kinds being much reduced.

COTTON YARNS.

| | PER PICUL. |
|---------------------------------|------------------|
| Nos. 16 to 24, Common to Medium | \$25.00 to 28.50 |
| Nos. 16 to 24, Good to Best | 29.25 to 30.25 |
| Bombay, No. 20, Good to Best | 25.50 to 28.25 |
| Nos. 25 to 32, Common to Medium | 31.25 to 32.00 |
| Nos. 28 to 32, Good to Best | 32.75 to 35.25 |
| Nos. 38 to 42 | 35.00 to 37.00 |

COTTON PIECE GOODS.

| | PER PIECE. |
|----------------------------------------------------------|----------------|
| Grey Shirtings— $\frac{3}{4}$ yd, 38 to 39 inches | \$1.70 to 2.15 |
| Grey Shirtings— $\frac{3}{4}$ yd, 38 to 45 inches | 1.87 to 2.40 |
| T. Cloth— $\frac{3}{4}$ yd, 24 yards, 32 inches | 1.42 to 1.52 |
| Indigo Shirting—12 yards, 44 inches | 1.55 to 1.67 |
| Prints—Assorted, 24 yards, 30 inches | 1.10 to 2.40 |

IRON.

| | PER PICUL. |
|-------------------------------------------|----------------|
| Flat Bars, $\frac{1}{2}$ inch | \$2.50 to 2.90 |
| Flat Bars, $\frac{1}{4}$ inch | 2.80 to 3.00 |
| Round and square up to $\frac{1}{2}$ inch | 2.80 to 3.00 |
| Nailrod, assorted | 2.25 to 2.50 |
| Nailrod, small size | 2.85 to 3.12 |

KEROSENE.

Sales during the week amount to 13,000 cases, and deliveries to 35,000 cases. The *W. H. Lincoln* has arrived with 63,200 cases, making our present Stock of sold and unsold Oil some 768,000 cases in first hands. The Market continues weak.

| | PER CASE. |
|--------|-----------|
| Devoe | \$1.62 |
| Comet | 1.60 |
| Stella | 1.52 |

SUGAR.

A slight advance in Brown sorts has taken place, but the transactions are of a retail character. No change in the prices for White, and but little business doing.

| | PER PICUL. |
|---------------|----------------|
| White, No. 1 | \$7.50 to 8.00 |
| White, No. 2 | 7.00 to 7.50 |
| White, No. 3 | 6.75 to 7.00 |
| White, No. 4 | 6.00 to 6.50 |
| White, No. 5 | 5.00 to 5.20 |
| Brown Formosa | 4.50 to 4.60 |

EXPORTS.

SILK.

Business is in full swing. Settlements for the week total 800 piculs, and prices for nearly all kinds are firm at quotations given below. Arrivals are coming in, and Stock is increased to 3,000 piculs. Export to date is 4,902 bales, against 4,752 bales last year, and the outgoing American and French mail steamers will take a fair quantity.

Hanks have been currently sold at former rates. Some Annaka have been done at \$495, with Shimoda and Tomiyoka at \$525.

Filatures.—Best have been dealt in at full rates for shipments by the *Coptic*, a particularly good parcel of Tokosha (white color) bringing \$642.

Good Medium kinds are offered and weak. *Ko-shu fil. "Uchida"* was done at \$610. Mino and Hida sorts \$580.

Re-reels have not been much enquired for, and prices for all but the best are tending downwards. A sale of Shorusha (Two-butterfly chop) is noted between Japanese at \$600.

Oshiu sorts, both *Kakeda* and *Hamatsuki*, are moving off to a fair extent, the latter having a decided tendency towards higher rates.

QUOTATIONS.

TEA.

Business during the week now under review has continued much on the same scale as previously reported. The demand has been well distributed for all grades, but at the close, those below Fine are mostly sought for. Transactions aggregate 1,600 piculs consisting of the following grades:—Common 40, Good Common 371, Medium 610, Good Medium 245, Fine 210, Finest 120, Choice 109, and Choicest 35 piculs. Market drooping at the close. Settlements here and at Kobe are 197,832 piculs, against 215,617 piculs at the same period last year. The *O. & O.* steamship *Oceanic*, despatched on the 31st ultimo, carried from this port 52,553 lbs. for New York, 170,081 for Chicago, 75,160 lbs. for San Francisco, and 29,585 lbs. for Canada, making the total of 327,379 lbs. Tea. The American ship *St. David* which sailed on the 31st August took 440,458 lbs. Tea for California. The British steamer *Merionethshire* sailed from here for New York, via ports, on the 30th ultimo also took 75,435 lbs. for Yokohama; via:—34,911 lbs. for New York and 40,524 lbs. for Canada.

| Friday, September 7th | 116 |
| Saturday, September 8th | 117 |

NOTES FROM JAPANESE PAPERS.

The opening ceremony of the Nippon Railway Company will shortly be performed. The Company proposes to petition His Majesty the Mikado to honour the occasion with his presence.

A report from the Prefect of Kagoshima states that that prefecture was visited by a fierce hurricane on the 18th ultimo, in consequence of which dwellings and plantations were considerably damaged.

The Agricultural Bureau has determined to despatch a number of officers to Awomori for the purpose of taking precautions against the insect blight, which has appeared in Hokkaido, lest it spread to the central provinces.

Kono and Aizawa who were sentenced to seven years' and six years' imprisonment respectively, have been summoned before the Tokiyo Saibansho on a charge of libelling the Fukushima Ken authorities.—*Choya Shimbu*.

Some residents of Sekinakacho in Ise propose to organise a patriotic society to be designated the *Yuntoku-gisha*, whose object is to take over the foreign loans of our Government. According to the scheme arranged by the society, the sum of yen 13,400,000 is to be refunded in two years.

A clerk of the Osaka branch of the First National Bank has been arrested on a charge of forging promissory notes of the Bank.

Reports are to hand to the effect that a rock of considerable size overhanging the sea in Hamamura, Kadsusa, slipped from its bed on the 23rd ultimo. A woman was killed by its fall.

The construction of coal depots on the island of Getsubi, Korea, has lately been completed.

The editor of the *Choya Shimbu* has been fined five yen for neglecting to publish a statement from the *Official Gazette* contradicting a paragraph that appeared in his journal.

A thunderbolt fell in Fujikawa, Yenshiu, on the 30th ultimo, setting fire to a dwelling house, and injuring two persons.—*Nichi Nichi Shimbu*.

Mr. Chiba Shinsaku, a famous fencing master, contemplates organizing a *salle d'armes* at Nishiki-cho, Kanda, Tokiyo.

Five hundred soldiers in Tokiyo are down with *kakke*.—*Fiji Shimbu*.

A special Cabinet council was held yesterday.

Messrs. Todo Koketsu and Todo Koken, *hwa-soku*, have lately presented a sum of ten thousand yen towards the fund for educating the children of the *shisoku* in Ise and Iga.—*Fiji Shimpo*.

The value of the export of timber hence to Shanghai amounts to eighty or ninety thousand taels per year. It is said that the Chinese Customs authorities vary the import duty on planks without giving due notice to the Japanese Consul. The latter immediately reported the matter to our Minister at Peking, who has demanded an explanation from the T'sung-li Yamen.

Destitute patients treated gratis by the Doaisha Society in the Capital during last month were 215 in number.

Three students will be dispatched to China by the Foreign Department on the 15th instant to study the literature of the Middle Kingdom.—*Hochi Shimbu*.

Intelligence from Korea announces the establishment of a Board of Health in the Japanese settlement in that country.

Counterfeit paper money is reported to be in circulation in Osaka.—*Mainichi Shimbu*.

The import of rice and other grain in Kobe during the two halves of last month amounted to 61,974 bags and 14,487 bags respectively. The actual stock of rice on the 1st instant is said to have amounted to 104,567 bags.

The 1st National Bank has established a branch in Niigata.—*Bukka Shimpo*.

The sailing vessel *Chihaya Maru*, of the Public Works Department, which left Shanghai with coal on the 2nd ultimo, is reported to have experienced a gale on the 5th at the mouth of Yangtze River. One of her masts went by the board, and she put back to Shanghai for repairs.—*Official Gazette*.

NOTIFICATION.

TO ALL CITIZENS of the UNITED STATES OF AMERICA in JAPAN, and to all COMMANDERS and MASTERS of VESSELS bearing the flag of the UNITED STATES in JAPANESE WATERS.

THE UNDERSIGNED, in accordance with the request of HIS IMPERIAL JAPANESE MAJESTY'S MINISTER FOR FOREIGN AFFAIRS, hereby notifies the CITIZENS of the UNITED STATES in JAPAN and the COMMANDERS and MASTERS of all NAVAL and MERCHANT VESSELS of the UNITED STATES arriving from SWATOW, CHINA, at the Ports of NAGASAKI, KOBE, or YOKOHAMA, JAPAN, that the port of SWATOW, CHINA, has been declared to be infected with CHOLERA, that all Vessels arriving at either of said Ports in JAPAN from SWATOW will be subject to MEDICAL INSPECTION, and that the Regulations for such Medical Inspection promulgated by the Imperial Decree of His Japanese Majesty's Government by Notification No. 31, dated the 23rd of June, fifteenth year of Meiji (1882), will be enforced in said several Japanese ports, in respect to all vessels arriving therein from SWATOW, and that the COMMANDERS and MASTERS of all UNITED STATES NAVAL or MERCHANT VESSELS arriving at either of said ports in JAPAN from SWATOW will be required, until further notice shall be given, to CONFORM in all respects to the PROVISIONS of the aforesaid REGULATIONS, for the Medical Inspection of Vessels arriving from localities infected with Cholera.

Given under my hand, at the UNITED STATES LEGATION, Tokei, Japan, this 21st day of August, 1883.

JNO. A. BINGHAM,
Envoy Extraordinary and Minister
Plenipotentiary of the United
States of America in Japan.

July 21st, 1883.

W. Y.

THE GREATEST WONDER OF MODERN TIMES.
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co., Corbet Court, London, E.C.

May 1st, 1883.

**ROOT'S PATENT
TUBULOUS STEAM BOILER,**

Safe, Economical, and Easy of Transport in Mountainous Countries.

Knap's Patent Mechanical STOKERS, applicable to all kinds of Boilers and Furnaces, economical and smoke consuming.

The Patent Steam Boiler Company,
HENKAGE STREET, BIRMINGHAM.

May 1st, 1883.

FOR SALE.

FOR SALE, Volumes No. 1 and 2 of the "China Review," bound in Half Calf, and in good condition.

Apply to the *Japan Mail* Office.
Yokohama, May 2nd, 1883.

NOTICE.

THE "JAPAN DAILY MAIL" is now the largest newspaper published in Japan. The paper is issued every morning and immediately delivered in the Settlement and Bluff.

A new rate of charges for Advertisements has been devised on a very moderate scale, and the Paper has a good and increasing circulation.

The "JAPAN DAILY MAIL" is the principal Morning Paper published in Yokohama in the English language, and is delivered at places of Business during Office Hours on the day of publication. Advertisers will therefore see that the "JAPAN DAILY MAIL" offers unusual facilities for public announcements.

OFFICE, 72, MAIN STREET, YOKOHAMA.
Yokohama, 1st May, 1883.

**Macfarlane's Castings.**

Plain and Ornamental for Rain Water and Building purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 15TH, 1883.

BIRTH.

On September 9th, at 219A, Bluff, the wife of H. Moss of a Son.

WEEKLY NOTES.

HIS Majesty the Mikado has telegraphed his condolence to the King of Italy in connection with the recent terrible catastrophe at Ischia. This expression of sympathy will doubtless be received in Italy with much satisfaction, nor does it fail to remind us how completely the barriers that once separated Japan from the rest of the world have been broken down. We understand that the Italians resident in Japan subscribed a handsome sum for the relief of the sufferers and despatched it within two or three days of the receipt of the intelligence of the disaster.

LITTLE has been added during the week to our knowledge of the circumstances which led to a charge of violence being preferred against the police in the United States Court. Our readers will remember that the seaman McCarthy, who was said to have been so cruelly beaten, swore that the assault was committed upon him before his arrival at the Police Station in the Settlement—on his way there, in fact. Of this he was

very positive, and indeed went so far as to state that it was in the Japanese town, near the Station, he was beaten. The evidence of the Japanese police who conducted him to the Station absolutely contradicted this statement, but since then a German, Mr. Harry Witt, has testified that, while passing the Station, at about 11 o'clock in the forenoon, he saw McCarthy put out of the gate, and saw, also, a number of policemen beating him with their clubs. This, we presume, is the operation which McCarthy described as getting "fired out of the gate." He did not seem to find much fault with the method of propulsion, but fortunately for himself his feelings were a little blunted from other causes. As the case stands, however, it is plain either that McCarthy was too drunk to remember times and places, or that the hammering he received at the "firing out" was a supplementary affair. The United States Consul-General has, it is said, lodged a formal complaint with the Local Authorities, and it will be for the interest of both sides to see the matter thoroughly investigated. An opinion appears to prevail that the action of the Japanese has been ill-advised in this case. It was unquestionably a blunder on their part to send the police to the U.S. Consular Court for examination in the first instance. Such a course cannot be justified on any grounds whatsoever. If an American citizen has any complaint to prefer against a Japanese, it is for the Japanese Authorities, and for the Japanese Authorities alone, to take the evidence of their own people. Any other plan would convert the United States Consul into a Judge—not a complainant. It is quite plain that if he is to hold a preliminary examination of the Japanese, as well as the foreign witnesses, and in consequence of that examination to decide whether or no there is just cause of complaint, he virtually forestalls the judgment of the Japanese authorities. The latter may disagree with him, but they can only do so by accepting the responsibility of recording a different verdict on the same evidence. Possibly the United States Consul-General did not fully appreciate the import of his own action, but that he altogether exceeded his functions there can be no manner of question. The Japanese, however, having acceded at the first to his extraordinary request, and allowed two of their constables to appear before the U.S. Court under such unprecedented circumstances, committed themselves to a position from which there was some difficulty in receding. By subsequently refusing to send forward the policemen who were on duty at the time of the alleged

assault, they certainly incurred the danger of grave misinterpretation. But, on the other hand, they could not foresee where the Consul-General's new request might take them. Some shadowy excuse may have presented itself with regard to the constables who had been actually engaged in conducting the prisoner to the Station; but when it came to a question of sending to the Consular Court all the policemen who were on duty in or about the station at the time of the occurrence, the Consul General's enthusiasm was obviously assuming extravagant dimensions. Here, then, the line was drawn. As to the conduct of the police themselves, it would of course be premature to speak, pending the result of an official investigation. But we cannot too strongly emphasize the necessity of either proving the charge to be utterly groundless, or severely punishing the perpetrators of the alleged assault. We are ready to give the police credit for excellent motives, but we cannot forget that they have to contend with serious disadvantages, and that instances are on record where they have abused the powers entrusted to them. Among the lower classes of foreigners in Yokohama the Japanese police are treated, and spoken of, with the utmost disrespect. No opportunity is lost of holding them up to contempt and ridiculing the authority under which they act. A drunken sailor, who in his soberest moments probably thinks that a blow is more suitable than a bow as a method of initiating converse with an Oriental, is not likely to be disabused of his rough notions in this Settlement. In the gin-shop he hears the Japanese described as "niggers," or something even less complimentary, and reeling out of the gin-shop, he finds some of these very "niggers" waiting to arrest him. Naturally he resists, and in nine cases out of ten his resistance is temporarily successful. The police, on the other hand, get badly punished at first, but soon they assemble in sufficient numbers to vindicate their authority. Now on previous occasions where violence was employed—rare occasions it must be admitted—it was precisely when the police found themselves in force that they proceeded to use their clubs, whereas it was precisely then that all necessity and excuse for such a proceeding disappeared. A policeman has to remember always that the only place he can properly obtain redress is in Court. If he tries to "get even" with a recalcitrant prisoner before-hand, he is guilty of a most grave offence. Knowing what infinite pains are taken to inculcate this lesson upon

English constables, and how often the teaching goes for nought, we cannot profess to believe in the perfection of Japanese training. Even granting the ability, there has not yet been time to evolve a system of drill calculated to satisfy the extraordinary conditions that exist here. It is, therefore, natural that foreigners should be ready to suspect the police of abusing their power, and since these suspicions are calculated not only to augment the difficulties the police have to contend with, but also to embitter the relations between the Foreign and Japanese residents, we trust that on this occasion a really searching investigation will be held, and its results publicly announced.

On Wednesday and Thursday Tokiyo and Yokohama were visited by weather which unmistakably proclaimed the vicinity of a typhoon. Indications of serious atmospheric disturbance had already been recorded at the Imperial Meteorological Observatory, Tokiyo, and the coast from Sakai westward round to Kochi was warned. The barometric pressure began to fall on Monday, the readings being lowest in the north-western district and highest in the central, while, at the same time, a rise of temperature amounting to 12 degrees Centigrade was reported from Sapporo. On Wednesday the centre of the storm passed over southern Kishiu. Its greatest force was experienced at Wakayama, Miyasaki, and Nobiru, but nowhere did it attain the dimensions of a hurricane. At Tokiyo and Yokohama it expended its strength in heavy gusts, accompanied by dashes of rain and a close oppressive temperature. This state of things lasted throughout Thursday, but at 6 o'clock in the evening the wind fell more rapidly than it had risen, and on Friday morning the sun rose in a clear sky and shone through that peculiarly crisp, exhilarating atmosphere which always succeeds an autumnal typhoon. We may reasonably hope, now, to escape without further visits from typhoons, in which case the rice harvest will be one of the most abundant that Japan has enjoyed for many years.

THE warlike news which reached us by telegram at the beginning of the week, has been succeeded by more pacific intelligence. The return of the Marquis Tseng to Paris was the signal for the re-opening of negotiations, and if Reuter may be trusted, M. Challemeil-Lacour assumed a tone very much more reasonable and sensible than might have been anticipated from his previous utterances. Indeed, he is reported to have favorably entertained the Marquis' proposals that France should acknowledge Chinese suzerainty in Annam, and agree to the delimitation of the frontier and the demarcation of a neutral zone. Such concessions as these, if France can really persuade herself to make them, will go far to restore her reputation for fairness and liberality. Nobody can pretend to have any doubt as to the result of a struggle between her and China, but there would be more involved in such a war than military or naval achievements. *Le Temps*, writing on the 12th instant, says that

the British Government has agreed to mediate between France and China, so that we may reasonably hope for a peaceful solution. It may cost France an effort to be magnanimous enough to return to the lines mapped out in the Bourée convention, but she is capable, let us hope, of the effort.

• • •

Meanwhile military operations in the south proceed. The blockade of all the ports of Annam and Tonquin was announced by Admiral Courbet on the 17th ultimo, and preparations appear to be in progress for a decisive expedition against the Black Flags. It is in Tonquin, after all, that the real danger lies. If, as last Monday's telegram stated, fifteen thousand Chinese troops have crossed into that province, we may at any moment hear of a collision between them and General Bouet's forces—an event which, with France in her present humour, would put a final period to all negotiations. Thus, the issue is to a great extent dependent upon chance, for we cannot suppose that the Chinese forces are under efficient control from Peking. Their behaviour must be virtually regulated by their immediate commanding officers, and these, for aught we know to the contrary, may desire to precipitate war.

THE funerals of the deceased Princesses, Shige and Masu, took place on the 13th and 15th instant respectively. His Majesty the Emperor is said to be much afflicted by this double bereavement. The deceased children were both daughters of the same lady, yet, strange to say, Japanese etiquette required that they should live in separate palaces and have entirely distinct establishments.

THE two Fukushima ringleaders, Kono and Aizawa, who at their recent trial in Tokiyo preferred such sweeping charges against the police, and who are under sentence of seven and six years imprisonment respectively, are said to have been brought before the lower Criminal Court on a charge of libelling public functionaries. We may therefore hope that the events which caused such a painful impression in connection with the Fukushima troubles will be thoroughly investigated.

SIR HARRY PARKES' arrival in China will already have inspired the foreign residents with a sentiment of more than general thankfulness. Scarcely had he reached his post when the foreign settlement at Canton was made the scene of an outrage of unusual magnitude. Fourteen houses were burned on the 11th instant by a mob of rioters, and had not the foreign community evacuated the place in good time, some loss of life would doubtless have accompanied the destruction of property. The affair has no political significance, we are told, but it is impossible to avoid a conviction that the feeling of animosity against the "foreign devils" must be singularly accentuated and wide spread if a mere rumour of a Chinaman's death at the hands of an European can suffice to pro-

duce such a demonstration. Her Majesty's Representative will have enough to occupy his attention pretty fully if this incident may be taken as an index of the spirit prevailing in China.

NOTES.

We are a little surprised to find the *North China Daily Herald* abandon the courtly and moderate style which generally distinguishes its writing, and adopt, instead, a fashion of controversy that belongs to an entirely different rank of journalism. In its issue of the 25th ultimo appears the following:—

The last number of the *Japan Mail* contains an article which may well excite the astonishment, if not indeed indignation, of most residents in the far East. The editor seems to have had no other reason for writing it than an irresistible impulse to pour the vials of his ridicule upon exterritoriality. In order to compass this end, the writer has accumulated the strangest and most heterogeneous mass of inconsequent allusions into one short paragraph, in which soiled doves, scavengers, jinricksha coolies, night-soil, and youthful gallants pass in succession before one's bewildered gaze. The gist of the whole seems to lie in this remarkable sentence:—"Exterritoriality, in short, is propped and buttressed by such a multitude of pleas, that men are constrained to pity its tottering decrepitude. It is a good old fossil which has survived the disappearance of the stratum it belonged to, and will soon be buried under the ridicule its advocates' hysteria excites." Now it is simply impossible that the writer of these words can believe in their truth. He must know perfectly well that whatever his own opinion on the subject may be, exterritoriality is not ridiculed, it does not require to be buttressed up, men do not pity its tottering decrepitude, it is not in a state of tottering decrepitude at all, and it is by no means likely to be soon buried under any ridicule by whatsoever or whomsoever excited. These are plain facts. But the editor of the *Japan Mail* has before now distinctly asserted that he has never advocated the abolition of exterritoriality by any means, and that the only thing he deprecates, and the Japanese authorities deprecate, is the conflict of jurisdiction which exists among foreigners at the open ports. That is a widely different matter. Since then the editor of the *Japan Mail* seems to have assumed a bolder attitude, and now makes no scruple of ridiculing exterritoriality and pretending to think it is on its last legs. We can only echo the question of a Yokohama contemporary, not generally too squeamish in its remarks, and ask why on earth the editor of the *Japan Mail* doesn't naturalise himself as a Japanese subject without more ado? That would be the only logical step for him to take; for certainly there is little chance of his being able to place himself under Japanese jurisdiction, as he is evidently very anxious to do, by any other means. By the publication of this article, however, the editor of the *Mail* has rendered one very great service to his own paper, though probably without intending it. For a long time he has lain under the imputation of being the paid mouthpiece of the Gaimusho, and of writing whatever he is told to write. That suspicion should now be very greatly shaken, for Mr. Inoué is much too far-sighted a statesman to have dictated an article so admirably calculated to throw ridicule upon the abolition of exterritoriality, even supposing such a change to form part of his political programme.

One of the experiences generally garnered pretty early by men of moderate discernment is this—that the more violent forms of speech, and especially those which directly impute false and dishonest motives to others, have only the result of drawing attention to their employer's intemperance. Our Shanghai contemporary appears to be still without this experience. The deficiency is to be regretted for his own sake, but we cannot pretend to be much concerned about it ourselves. The knowledge will come in time, no doubt, bringing with it a perception that when he declared it "simply impossible" we could believe in the truth of what we wrote, he at once announced the viciousness of his own cause by having recourse to the

weapons of conscious impotence—namely, rudeness and abuse. For the rest, if the *North China Herald* wishes to form a conception of the frivolous absurdities that are employed in Japan as pleas for extraterritorial jurisdiction, he had better examine the files of the English local press for the past two years. He will then learn that the "strange and heterogeneous" instances we grouped together fairly represent the nature of the arguments commonly advanced on behalf of extraterritoriality—arguments which are ridiculed by many of the advocates of the system just as much as by its warmest opponents, and which are weak enough to impart an appearance of decrepitude to any cause. Indeed, we are almost constrained to think that the task of championing extraterritoriality has an enfeebling effect upon the minds of those that undertake it. Even our Shanghai contemporary forgets the ordinary requirements of logic when he approaches the question. He seems to think that his case can be won by simply transforming his opponent's affirmatives into negatives, and describing the results as "plain facts." We do not quarrel with the method: quite the contrary. It savours a little of girlish repartee, but at all events it is quite consistent with the conclusion we find in its context, namely—that the only logical step for the editor of this journal to take is to place himself under Japanese jurisdiction. That step would doubtless promote the solution of an international problem, quite as much as the arguments of the *North China Herald* help to elucidate it.

One point only in our contemporary's article deserves notice. It is this statement:—"The editor of the *Japan Mail* has before now distinctly asserted that he has never advocated the abolition of extraterritoriality by any means, and that the only thing he deprecates, and the Japanese authorities deprecate, is the conflict of jurisdiction which exists among foreigners at the open ports." The italics here are our own. We employ them to emphasize an interpolation which—doubtless without its author's intention—entirely misrepresents our position. We have never said that extraterritoriality ought not to be abolished "by any means." Our firm belief, on the contrary, is that the sooner it can be abolished, the better for foreigners and Japanese alike. But public opinion is not yet ripe for such a comprehensive measure. What is required immediately—what the failure of foreign governments to provide is a disgrace to their intelligence and a serious blot on their good faith—is some measure competent to correct the anomalies and abuses of the present system. That measure must take the form of conferring upon the Japanese a certain limited amount of jurisdiction, and though the prejudice entertained by many of our fellow residents against any step in that direction is natural and well worthy of respect, it must yield sooner or later to the necessities of the case. When it does yield, we shall see a much happier spirit prevail on both sides; we shall see the end of the exclusive attitude which Japan

deems it necessary to preserve in the face of our jealous conservatism; we shall see the removal of the restraints which at present cripple enterprise and render life in Japan irksome and profitless. It is to bring about these results that we labour. The object is sufficiently large to make us quite indifferent to any abuse and misrepresentation we may encounter in its pursuit.

The *Mainichi Shimbun* publishes some items of intelligence from Korea. Trade is said to have seriously declined since the termination of last year's disturbances in Seoul, owing to the grave depreciation in the value of commodities in Japan. The merchants in Wŏn-san are much distressed. The prominent firms of Sumitomo and Ikeda have closed their stores and withdrawn their establishments to Japan, while Messrs. Yamaguchi and Keida of the Miyoshi Company have amalgamated their business with that of the Saiyo Trading Association. The number of the leading houses has decreased by forty per cent. Exports and imports during the first half of last year were valued at yen 744,128: this year they reach only yen 577,723. A decrease of yen 166,405 has thus to be recorded. Part of this depression is ascribed to the opening of the port of In-chhŏn and the consequent diversion of some trade thither. The year's imports into Wŏn-san were valued at yen 348,412: exports yen 229,310, giving an excess in favour of the former of yen 119,102. Imports may be said to have virtually ceased.

THERE can be little question as to the meaning of the order to the German naval officer in command on the China Station, published amongst the telegraphic news in this issue, and it is not difficult to come to the conclusion that Bismarck has made up his mind to afford protection to the shipping trading in the East under the German flag, in view of certain events coming to pass. German bottoms under canvas have greatly increased in the last ten years on the China Coast, and steam tonnage under the same flag has probably trebled in the last seven years, so that there is something at stake should France and China ultimately become belligerents. The telegram is an indirect expression of opinion of the probability of war.

WHEN tramways were established in Tokiyo we used to hope that a walk in Ginza would no longer be made painful by the spectacle of emaciated horses, covered with sores, and incapable of any exercise of muscle that was not evoked by the lash or the goad. The hope has been realized, but only to a limited extent; for though the number of carriages drawn by scare-crow ponies has perceptibly diminished along the routes traversed by the tramways, the vehicles that remain do not appear to be subjected to any efficient police supervision and certainly not to any laws of humanity. It will be remembered that regulations intended to check these evils were enacted by the Municipal authorities of Tokiyo in 1881, but experience has invariably shown

that the suppression of cruelty to animals is a duty which cannot be satisfactorily discharged by official effort alone. In every Western State private associations have been formed to assist the police, and there is no reason whatsoever to suppose that Japan can afford to despise these precedents. But it seems an almost hopeless task to persuade the Japanese that private persons need concern themselves about such matters. In contradiction to the recorded opinion of more than one observer, we venture to think that the people of this country are naturally quite as sensible of humane influences as Europeans or Americans; but the dictates of mercy, like all other impulses, lose their authority from disuse. It is one of the many anomalies presented by the character of the Japanese that, while they are ready to make, and indeed do habitually make, sacrifices almost heroic for the sake of those related to them by blood, they often exhibit a stoical indifference to alien suffering. Indeed one of the leading principles of their social creed is that the results of unsolicited interference are generally worse than the ills it seeks to remedy. This idea, that every man knows his own business better than his neighbour, has become crystallized into an apathetic mood, which in the West would indicate callousness, but cannot here be so easily interpreted. There is certainly no want of kindness in the treatment which animals generally receive in Japan. Anybody familiar with the habits of the people must have been struck by the fact that the Japanese *mago* never carries either whip or stick. He manages his pack-horse entirely by voice, and though his method of fastening the bit is sometimes severe, the invariably excellent condition of the horse is incompatible with any serious ill-treatment. But the use of draft-horses is something quite new in this country, and the drivers of the Tokiyo carriages—men evidently selected from the lowest class of *belto*—appear to be absolutely indifferent to everything except the necessity of pushing their cattle along. The marvel is that the streets are not more often encumbered by dead or dying horses. Much as has been written upon this subject by foreign newspapers in Yokohama, the vernacular press has persistently ignored it, and the citizens of Tokiyo are doubtless, for the most part, quite ignorant of the cruelties daily practised in their midst. Many charitable associations have sprung up of late years in the capital, and it is probable that a very little effort would suffice to enlist active sympathy on behalf of the miserable animals daily tortured to death in the streets. Surely this matter is not unworthy of some attention.

In connection with this subject, we find recorded, in a recent Italian journal, a curious instance of the practical measures resorted to in Rome by the *Società protettrice degli animali*. It appears that the street *Nazionale* is exceedingly steep, and that painful scenes are often witnessed when tired horses have to draw a heavily loaded carriage up the incline. The law provides no complete remedy for such a case, yet it was plain that the sufferings of

the horses were very great. To meet this difficulty the Society determined to station a powerful horse at the bottom of the incline under the charge of a driver who was instructed to employ him in assisting heavy vehicles to ascend the hill. Ultimately it was found necessary to detail a second steed for this duty, as the traffic continues about fourteen hours *per diem*. The sum required for the support of the two horses and their drivers is 16 francs a day, and the journal from which we extract our information urges the Municipality to come to the aid of the Society in this good work. This is truly a practical method of helping over-worked animals. How long will it be before the spirit that prompts such measures finds active expression in Tokijo?

But with whatever deplorable brutality the wretched hacks in Tokijo are treated, they are not deliberately submitted to torture for the pleasure of the torturer. The idea of their drivers is simply to hammer as much work out of them as possible. For a piece of murderous barbarity, followed by wholly inadequate punishment, commend us to the instance cited in the following short story from a London paper. A man named Goss, described as a "labourer," was charged with cruelly ill-treating a horse. Goss, it appeared by the evidence, thrashed the horse for half an hour until its side, back, and loins were one mass of wounds. The wretched animal shortly after being subjected to this horrible treatment was, as might have been expected, taken ill, and ultimately died of lock-jaw. If ever there was a case in which the utmost penalty allowed by law might with propriety have been inflicted surely it was this. The magistrates, however, appear to have thought differently; for they let off the ruffian who had been guilty of an act of barbarity, so gross as to be almost incredible, with a fine of 50s. and costs. This was a merciful decision for Goss, but a most unmerciful one for hosts of dumb animals with no protection against brutality but that afforded by the law: which will soon lose its deterrent effect if it allows them to be actually beaten to death for a few shillings.

Not long ago the Parliament of Great Britain passed a Bankruptcy Bill which reimposed upon the Government functions not at all consistent with the *laissez faire* principles of modern political philosophy. Since then we have seen France provide official protection for atheists against the consequences of a momentary reversion to theism, and now we have the German Reichstag enacting a law by which every workman in the empire is compelled to insure his life. These three measures, considered together, confer upon 1883 the distinction of marking a manifest tendency to return to the old-fashioned methods of paternal government. The motive of Prince Bismarck's Bill is to be found in the growth of socialism, which he connects, doubtless justly, with the sufferings caused by indigence. He thinks that these sufferings are keenest when illness paralyses the energies of

the bread-winner of a family, and he proposes that the new system shall furnish funds against such contingencies. To this end it is now enacted that, with the exception of agricultural laborers, every workman in Germany, whose daily pay does not exceed 6½ marks, must insure his life, *nolens volens*. The idea of extending the system to agricultural laborers also found many supporters in the Reichstag, but the majority opposed it. The insurer is left free to choose between private offices, associations formed by the workmen themselves, and the offices of the Commune, though recourse to the last becomes compulsory in certain events. The amount which the workman has to set aside for this purpose is from 1 to 2 per cent. of his pay, and in cases where this appropriation is found insufficient to maintain insurance associations among the workmen themselves, the office of the Commune is required to make good the deficiency. At its next session the Reichstag proposes to take up the question of compulsory insurance against accident. Curiously enough, almost simultaneously with the adoption of these measures in Germany, the Italian Chamber also voted a scheme for insuring the lives of workmen, with this great difference, however, that in Italy the workman is free to insure or not as he pleases. If he does please, the Government promises him assistance and protection: that is all. It must be confessed that Italy is socially more fortunate than her new ally.

In the Netherlands Court, Wednesday, before F. Krien Esq., Acting Consul, and Messrs. Von Hemert and Hegt, Assessors, the claims of two Japanese against Mr. Jan de Boer, a Dutch subject, were investigated. The case had been adjourned from the 13th of August, when the first plaintiff, one Yamamoto, was examined. The demands arose originally out of the question of the proprietorship of the *Kokusan*, which will soon be tested in H.B.M. Court. Mr. de Boer said that he had entered into a contract with Mr. Whittall to remove the steamer from the Creek to the harbor. He said that in executing his orders he was obstructed by Yamamoto, and assaulted by the second plaintiff, Nakamashiro, the latter singing out to his comrades for a rope, which, being brought, the Japanese tried to tie around him (De Boer). He struggled to free himself, at the same time calling for help, and was rescued by the efforts of Mr. Whiteford, in charge of the vessel, and a Japanese policeman, whom Mr. de Boer accompanied to the Central Station. He did not deny the possibility of his having struck the plaintiffs while trying to elude their grasp. They each subsequently preferred comparatively heavy claims against him for injuries sustained, and medical and other expenses incurred. As, although they had been warned by the Consul to come to the final hearing armed with something more than mere assertion as to the amounts they had expended, they failed to do so, His Honour could not do less than reduce their demand proportionately. After a patient hearing and a short retirement, the Court ordered Mr. Jan de Boer

to pay Yamamoto *yen* 13.60, and Nakamashiro *yen* 8.75, as compensation for the injuries they alleged they had sustained. This is only an incident in the romantic early history of the young steamer *Kokusan*.

Our telegraphic news on Wednesday was of an alarming character, the wire announcing the pillage and burning by a Chinese mob of the Foreign Concession in Canton. It is some consolation, however, to learn that the Foreign residents have escaped without loss of life up to the time of the despatch of our message. The Shamien, on which the Foreign residences and Consulates are built, is a little island in front of the City of Canton, and is connected with it by several bridges over the canal which separates it from the city. The island is partly natural, formed by the silt of confluent waters of the Pearl River, but was improved in 1861 at a cost of \$325,000, and conceded to the English and French. At the present time, covered with well-grown trees, and beautifully laid out, it is one of the prettiest spots in China, and looks like a small piece of England dropped into the big river. The community is a small but sociable one, and the Shamien boasts a Club and a very pretty little theatre. As a rule there are usually one or two steamers at anchor off the Settlement, and the steamers of the Hongkong, Canton, and Macao Steamboat Company lie at the wharf alternately during the night. These boats carry good stands of small-arms and would be a safe refuge for the foreign community, as they are officered by Europeans and Americans who could be relied on to a man in an emergency. Under the circumstances, it is not probable that any foreigners have been injured, but we shall probably not get the particulars till the arrival of the Hongkong papers.

By the courtesy of His Excellency the Minister for Foreign Affairs we have been furnished with additional particulars of the above riots. Three telegrams were received in Tokijo on the 13th instant. They describe the rioters as a disorderly mob, which had been roused to ungovernable fury by the reported murder of a fellow countryman by a foreigner. Particulars of this murder were, at first, variously given, one report being to the effect that a Chinese youth had been shot by a foreigner employed in the Customs Service, while another asserted that the fate of a man who had fallen from a steamer into the water and been drowned was the cause of the excitement. It subsequently transpired, however, that the affair which had excited the popular indignation was the death of a Chinese who was killed on the preceding day (10th instant) by an European petty officer belonging to the steamer *Hankow*. It is, at all events, quite certain that the riots were entirely free from political complexion. The mob broke into the Foreign Settlement and succeeded in burning 12 houses as well as the wharf. It was at first reported that no personal injuries had been sustained by foreigners, but subsequent enquiry showed that several foreign

officers of the Imperial Customs Service had been slightly wounded. The riot was quelled by the Chinese troops, but in the meanwhile the Foreign Consuls hauled down their flags, and ordered their nationals to abandon the Settlement. By 5.45 p.m. on the 12th instant the mob had been completely dispersed, order restored, and three gunboats, two English and one French, had reached Canton.

ENGLAND'S Egyptian policy seems to inspire certain continental journals with a species of sinister joy. Her conquests on the banks of the Nile mark, they say, the highest point of her national trajectory. Henceforth she will follow the descending branch of the curve. So long as she remained behind the natural fortifications of her island home, she was comparatively invulnerable, but now that she has extended her outposts to Egypt, she becomes at once more assailable and more likely to provoke assault. And Europe, if we may credit these croakers, is very willing to be furnished with a pretext for humbling the purse-proud islanders. Scarcely a year has passed since English influence became paramount in Egypt, and already the Continent cries out that it is menaced by cholera entirely because England has more care for her own commercial interests than for those of a considerable portion of the globe. It used to be thought that the British empire represented, in itself, a not inconsiderable portion of the globe, and that a country did not sin very grievously when it preferred its own, to its neighbours', interests. But England is evidently expected to practice principles of exceptional altruism, and it must be confessed that the expectation, though somewhat exacting and slightly ungenerous, is not without an element of subtle flattery. No pains are taken to explain the exact process by which cholera germs have been developed from commercial selfishness. It is sufficient that the disease has appeared in Egypt during the English occupation, and that England is proverbially a nation of grasping traders. Any links that may be wanting in this chain of reasoning are easily supplied by jealousy. There was a momentary hope that this same cholera would drive the British troops home, and in the presence of a prospect so cheering, a French journal exclaimed:—"What a delightful riddance it would be for Europe if we learned, some fine morning, that the whole English army of occupation had quitted Egypt for good!" But as that event did not come off, dissatisfaction has been deepened by disappointment, and quite a little army of malignant mischief-makers are busily trying to pick holes in the commercial monster's armour. This, doubtless, may be regarded as a foretaste of the danger to which England has exposed herself by her escapades at Alexandria and Tel-el-Kebir, but it is a species of danger that generally accompanies success.

In the context of these attempts to saddle England with the responsibility of the cholera in

Egypt, it is interesting to note that some doubts are entertained as to whether the disease is cholera at all. The United States Consul at Smyrna writes to the National Board of Health, Washington, as follows:—

The news from Egypt is less alarming than at the time of my last report. Facts have come to light tending to show that the disease which is decimating the population of Damietta is not Asiatic cholera but a malignant distemper caused by the filthy condition of the town and the unclean habits of its lower classes, whose principal article of food is fish, caught from water polluted and poisoned by being used as a receptacle for offal, the carcasses of diseased animals, etc. During the British occupation many animals perished, and their bodies were dumped into the water regardless of consequences.

This theory is strengthened by the following facts: First—The disease first made its appearance in Damietta on the 4th of June, but was not made public until the 20th, at which time the death-rate became too large for longer concealment.

Second—The mortality is confined almost wholly to natives, who disregard in their mode of living all sanitary requirements.

Third—The disease is limited to a small territory.

Fourth—Its previous course, on the supposition that it is Asiatic cholera, cannot be traced.

Fifth—The disease does not spread with the rapidity of Asiatic cholera. In 1865 the cholera was only two days in traveling from Damietta to Alexandria.

I may add that some of the best physicians of Smyrna do not regard the present scourge in Egypt as the cholera. With the stringent measures taken to confine it within its present limits it is fair to assume that its ravages will not be much further extended, although the death-rate shows little diminution as yet.

A GENTLEMAN, writing over the signature "Tojin," addresses one of our local contemporaries on the subject of two persons riding in one *jirikisha*. He complains that while riding thus with a friend, his vehicle was stopped by a policeman and the coolie's number taken with a view to subsequent proceedings. "Tojin" expresses much surprise at this proceeding, and not without reason. The explanation is, however, very simple. About two weeks ago it was found necessary to notify the owners and drawers of *jirikisha* that only the larger class of vehicle (*ni-nin-nori*), which pays a higher tax than the smaller (*ichi-nin-nori*), is permitted to carry double. The single *Kuruma*, even though it be of the ample dimensions dictated by foreigners' physical development, is not permitted to accommodate two people unless it pays the corresponding tax. The penalty for infringing this regulation—which in itself is reasonable enough—is fixed at 1 yen. It seems a pity, as "Tojin" justly observes, that steps have not been taken to inform the foreign public of this new measure, but the action taken by the police in "Tojin's" case was perfectly in order.

A CORRESPONDENT in Korea of the *N.-C. Daily News* forwards proclamations just issued by the King. They are four in number and very verbose. The first is a "Warrant for the banishment and death of certain conspirators." For "opposing the teaching of literature," it exiles three men to a distant island from which escape is dangerous and orders their imprisonment within a bamboo enclosure. Some of "the great" have been "plotting secretly." His Majesty enquires:—"What has our country ever done to them, to have incurred such dangerous ill-will on their part?" and adds:—I

cannot be expected to present them with the Sword of State that I may connive at My own destruction and surround Myself with their enmity; therefore let the prisoners Tseng Tsien-tê and Tsao Chai-hsia be exiled and confined within the bamboo enclosure, and the prisoners Li Tsao-wan and Li Yuen-ching suffer the penalty of death." Number 2 conveys "Pardon and admonition to suspects." Number 3 pronounces "Sentence of death on guilty nobles in deference to Censors and public opinion." It means evidently that his Majesty's lenience has been authoritatively blamed by the Censors; as it orders that four of the prisoners sentenced by the first proclamation to exile in an island be decapitated—a most inhuman, injudicious, and cowardly proceeding, as vile as that which beheaded Raleigh after his release was promised him. The blood of these men is not likely to cement the foundation of the Korean throne. Number 4 provides for the banishment of four other alleged criminals to the island Shan Pei Tung and their confinement thereon.

In a more recent letter the correspondent gives some particulars of one of the nobles implicated in the late sedition:—"Pu Teiyang," he writes, "is a bad man and full of schemes, who owes his rise to the corruption of his family. Years ago, when the House of Mi held the power of State, Pu's father and uncle, by dint of spending tens of thousands of taels in bribery, procured for themselves high and lucrative posts, in which they ruled to the misery and wretchedness of the people. Pu, the son, rose to be a Hanlin, and his father and uncle were promoted to the second rank. When the Dai In Kun came into power their crimes were made public, and, driven to desperation, they secretly joined the conspirators while openly praising the progressive part. Their unworthy son afterwards fell a victim to his friend, Tsao Tung-shan, who eventually became the possessor of his favourite concubine and nearly all his fortune. Such was the shameful career of one of Korea's foremost noblemen."

An interesting meeting has been held recently between Governor Bowen of Hongkong and a deputation of his Chinese subjects, when some matters of interest to both European and Celestial communities were discussed. The *Daily Press* says that, a delegation of the Tungwah Hospital Committee and other Chinese gentlemen having waited upon His Excellency and made sundry representations on affairs which they thought required the attention of the Executive, in due and rapid course Sir George Bowen forwarded his reply through the official channel. After considering some points of detail in which he agrees with the views of the deputation, His Excellency deals with the important subject of gambling, as laid before him. The Committee request the suppression of lotteries on account of the social and moral injury caused by them. The Governor replies that the police have orders to act in the suppression of public gambling with as great energy as

the law will permit, and says that, if the existing law is not sufficient, the Government will propose a new Ordinance on this subject. He suggests that Chinese owners of houses can materially assist the efforts of the Government by not allowing their houses to be used for gambling or other immoral purposes—a very wholesome suggestion which, it is to be hoped, Chinese owners of property will duly note and act upon, thus giving practical effect to the views they have expressed. Next, the Committee wish some steps to be taken to prevent married women from deserting their husbands in China and coming to Hongkong. They recommend that such women should be delivered up to the Chinese authorities and by them restored to their husbands and families. They urge also that a law punishing adultery criminally should be enacted in Hongkong as in China. The answer of the Governor is clear and to the point. He says the Government of Hongkong has much difficulty in dealing with questions of this nature, in consequence of the importance attached by the English people to the right and principles of personal liberty; and although this personal liberty may in some cases, such as the present, seem to entail undesirable consequences, yet His Excellency is sure that the gentlemen who waited on him, and have so many proofs of the advantages which it confers on all residents in this Colony, will not desire that it should be unnecessarily curtailed. It will be noted, however, that what the deputation proposed was that in the case of women this liberty should most decidedly be curtailed. He Excellency goes on to say that persuasion is the only weapon that can be employed, and that the Registrar-General has instructions to give every assistance in his power towards inducing runaway Chinese wives to return to their husbands. It is hard to imagine what more could be done; though one can scarcely escape the reflection that His Excellency credits his subordinate with the "voice of the charmer." The idea then arises of how his charms will operate upon the recalcitrant ladies, "charm he never so wisely." The next question touched upon is that of hawkers' stalls. The deputation requests that hawkers may be allowed to have stationary stalls in the streets, and His Excellency, without making any definite promise, says that in all well regulated cities certain rules are necessary for securing order and cleanliness, that nothing further is contemplated in Hongkong, and that, in carrying out the regulations, the police have strict orders to exercise forbearance as far as the law permits. The *Press* remarks that this point had been already considered in the time of one of His Excellency's predecessors in the administration, when another Chinese deputation was at variance *inter se* upon the subject, and that it is difficult to know what the agitators really do want. Another question touched upon is that of distrains for rent, the Chinese complaining that the new system of having to take out distrains through the Supreme Court causes delay. This is a matter of detail as to which the Governor says there must be some misap-

prehension on the part of the deputation. The last and most important question is that of the bankruptcy law. On this point our contemporary remarks that "the present bankruptcy law is defective and unsatisfactory in every respect; its defects have been repeatedly commented on, and it is satisfactory to be at length informed that the Attorney-General is now preparing a new Ordinance on bankruptcy which will shortly be laid before the Legislative Council."

• • •

Regarding the demanded surrender to Chinese on the mainland, the extradition as it were, of absconding wives—a demand which is not without a comic element in its utter unreasonableness, and display of ignorance on the part of those who propound it of International Law in general and English Law and prejudice in particular—the *Daily Press* moralizes in a style which is almost Pecksniffian. "In the Blue Book on Restrictions on Chinese, we find no mention of this matter as a grievance under which the Chinese population of Hongkong were groaning. Had it been so mentioned it would hardly have commanded the sympathy of the English humanitarians. The representation of the Committee serves to show how unfitted the Chinese really are to take any direct part in the Government of the Colony. They have not yet imbibed the spirit of English freedom, and if they were allowed to have their own way would cause the law of this Colony to be assimilated to that of China, including its tyranny and some of its barbarities. The position of the woman in China is one of degradation and hardship. Whether wife or concubine she is practically in the absolute power of the man and possesses no rights in her own person. The treatment she receives is often cruel, as it must necessarily be under such a system, human nature being what it is."

MR. KELLAR gave the first of his series of three magical entertainments on Wednesday evening in the Gaiety Theatre to, for Yokohama, a fairly good audience. Verily, modern magic has advanced beyond the wildest dreams of the necromancers of the middle ages; and Mr. Kellar is one of its most brilliant exponents. Gifted with a gentlemanly manner, pleasant voice, and fluent and correct delivery, he at once impresses his visitors favorably; while his tricks of prestidigitation are executed with more than ordinary dexterity. The three figures that he had on the stage are of themselves worth three times an ordinary show. While "Arno" was executing a medley upon his cornet, "Clio," at the request of one of the audience sketched a picture of the late Earl of Beaconsfield producing a wonderful resemblance to the dead statesman. Asked to touch an eye and the memorable curl, the obedient automaton laid its pencil upon them. "Arno," mysterious Oriental, in an incredible short time did astounding sums of multiplication, squared and cubed as fast as the numbers could be called, and, more astounding still, extracted cube roots as swiftly. Was not Master A. R.

astonished when he found the glassful of brand that he was holding transformed into a glass of water; and the rings that he himself had hampered up and rammed into a pistol shot out as good as new. Mr. Kellar gave Maskelyne's magical cabinet trick. Bound and imprisoned, he released himself at will, rang bells, played tambourines, threw off his coat, and in a few seconds was discovered tied and seated as before. Probably the well known and jocular resident who consented to be shut up with the wizard in the cabinet will not care to repeat the experiment. We have not heard from his own lips the secret of his seclusion; but believe that he was rapidly unfrocked. In fine, as Mr. Kellar will shortly leave, it will be a pity if the public of Yokohama to an individual does not witness his entertainment. The performance has the additional merit of commencing punctually; and the intervals being very short there is no tedium. In all the magician is not before his audience much, if at all, more than an hour and a half, during which time, however, the interest does not flag for a moment.

SHANGHAI was visited by an electric storm on the night of Saturday the 1st instant. Some curious phenomena were observed. The oppressive heat of previous days had warned the inhabitants that some meteorological disturbance was imminent. The *North-China Daily News* relates that, at about 7 p.m. on Saturday, heavy banks of cloud floated over the Settlement from the North-west and North, accompanied by violent gusts of wind and lurid flashes of lightning in the South. At 7.15 rain began to fall. At 7.30 a vivid flash of bluish lightning filled the whole of the visible heavens, and simultaneously there was a streak of silver coloured lightning in the South. In less than three seconds, a deafening peal of thunder shook houses and made window-panes rattle, and rain came down in torrents. Lightning in vivid flashes was followed almost instantaneously by resounding thunder. The last flash was the most vivid of all and the clap was the loudest. It was this discharge that did most damage. The following are some of the incidents of this terrific storm. A foreign constable on duty in the Woosung Road felt a shock as if he was holding a powerful electric machine and was unable to let go. Four Chinamen who were near him were knocked down flat in the road. The electric fluid struck one of the Municipal telegraph wires, and, communicating with the transmitter at the Hongkew Station, smashed the box that covered the transmitter and knocked the sergeant on duty, about five feet distant, out of his chair at the office desk. The Chinese prisoners said this was "joss pidgin," because he had shot a number of captured dogs lately. The Electric Company's lamps all went out, as the fluid was absorbed by some of the wires and flew to the dial at the station in Chapoo Road. An electric spark projected for some time about two inches from this dial. In the meantime, a small portion of the glass was melted and the iron-work was blackened. A house at the corner of the

Seward and Wuchang Roads was struck, and the corner wall was rent asunder. The fluid first struck the edge of the tiled roof of a house in the same block. Just below this there is a verandah with a corrugated iron roof, and the lightning ran along this to the corner of the other house over an iron telegraph pole connected with the shattered angle by a stay which was wrenched away. Many other strange effects are reported. At the Astor House, where the Electric Company's wires are still attached to a lamp in the Bowling Alley, the electric fluid ran along the wire, filled the alley with light, and burnt some leaves out of a book that was in one of the verandahs of the Hotel. At the Central Police Station, the electric fire-alarm rang, and the apparatus, through contact with the current, was so charged with electricity that the alarm rang again some minutes afterwards when the sergeant on duty went to put the bell-plug in. Happily the electric fury was of short duration, having expended itself at 7.45, or within a quarter of an hour of its actual outburst. At 8.15 the weather was fine, and the rain had ceased. The thermometer during the storm fell eleven degrees. On the whole this manifestation appears to have been one of the most remarkable atmospheric electrical commotions on record.

Among the potentialities of the future is one that a vessel coming from San Francisco to Yokohama may bring into this harbor, trailing at its stern, a ton or two of the precious metals. At least that is the harriolation of a Nevada Editor. This gentleman reminds us that the fact has long been known to chemists that the water of the ocean contains an appreciable quantity of gold and silver in solution. Scientific experiments have demonstrated the fact that each ton of sea water contains about one milligramme of gold and two of silver. To this amount these precious metals have frequently been extracted from the sea water, but like the manufacture of diamonds, the expense necessarily incurred in the operation rendered the work unprofitable. For more than a century, chemists in all parts of the world have been endeavoring to discover some unexpensive process by which the precious metal thus in solution could be collected, but thus far without success. In this context we are told that, some years ago a gentleman who graduated at one of the Eastern colleges when a young man, and subsequently followed a sea-faring life for a number of years, a pioneer in the gold fields of California, and one of the first to successfully work the refractory ores east of the Sierras, undertook to solve this problem. He has spent many years of hard labor and much money in the work, and the result of his study and labor is destined ere long to astonish the world. That his efforts have been crowned with success there is no longer any doubt, and the means employed are as simple as the results are wonderful. It would be an unpardonable breach of confidence to enter into details, and the reader must be content for the present to know that it consists of a simple yet ingenious ap-

paratus, fastened to the keel of a ship, which, being thus submerged and moved through the water, collects and securely holds every particle of the precious metal with which it comes in contact. It is estimated that the instrument will collect at least a ton of gold and silver on a single voyage from San Francisco to Yokohama. If the name of the inventor should be given it would not be a strange one, for everybody on the Pacific coast knows, or at least has heard, of Captain Jim Townsend, of Mill Creek.

In recent paragraphs and extracts we have alluded to actual cannibalism in China and elsewhere, and superstitious scares, such as that which even to this day accuse the Jews, among ignorant European populations, of inhuman and ghoul-like atrocities. The correspondent in Korea of the *N.-C. Daily News* mentions a similar illusion which the lower classes of the community in the peninsula are said to entertain toward their Japanese guests. He writes:—

On the 9th day of the 6th moon, which was the anniversary of the *Emute* against the Japanese, a rumour was prevalent that the latter were going to offer some Koreans as a sacrifice to the spirits of the murdered men. This caused considerable agitation, but did not come to anything. Another report said that these same terrible Japanese intended to draw blood from Korean girls and children for the purpose of concocting medicine. So great was the alarm among the maidens in the Capital that many betook themselves to flight, and others actually got married off post-haste without caring much what sort of husbands they were getting so long as they could save themselves from the impending danger to the unwedded. A third rumour was to the effect that the long drought that has prevailed in Korea was caused by the Japanese having hoisted on tall flagstaffs their national standard, the device on which is the Sun. The case here was plain enough. The music played at the Japanese Legation, too, had effectually dispersed the wind and driven away the rain. The God of Drought had been invoked by Japanese to blight the country of the Koreans. Last summer a similar period of drought was broken up immediately after the slaughter of the Japanese, which proves the latter event to have been the will of Heaven. Ah! we are a progressive people, and can read the signs of the times. All the same, these absurd and injurious rumours have a very bad effect upon the relations of the two peoples.

THE following telegram has been addressed by His Majesty the Mikado to His Majesty the King of Italy:—

The terrible catastrophe which occurred in Ischia greatly touches my heart. I desire to express my sincere sympathy for the sufferers and for the Italian people generally.

FINANCIAL articles in the London papers draw attention to a slackening in shipbuilding, which industry for years now has been going on at a rapid rate. The additions made to the mercantile marines of the world have resulted in depressing freights to such an extent that a pause in building has become necessary. In consequence, new orders have almost ceased to be given upon the Clyde. It is said, indeed, that the yards have orders that will keep them fully engaged for nine months or a year; but new orders for some time past have been growing scarcer and scarcer, and now have ceased to come in. A falling-off in shipbuilding must have a serious effect upon the iron trade; for activity in marine construction has materially contributed to keep up prices and to maintain business. If now there were to be a serious

check, the consumption of iron would decidedly fall off. It is probable, however, that with a series of good agricultural years trade would improve so considerably as to give employment to all the vessels now afloat; and with increasing trade no doubt owners would recover courage and would again begin to order new ships. Besides, it is to be borne in mind that in no department are greater improvements being made. Types rapidly grow old, and competition is so keen that there is a constant demand for larger and quicker vessels. Lastly, the losses are heavy every year. Although, therefore, the activity of shipbuilding has been so great of past years, the real additions to the mercantile marines of the world are not so great as they appear.

ALL men are born to trouble, but some are more richly dowered than others in this respect. We should be inclined to say that Mr. James McDougall has no reason to complain that his "peck" is not fairly filled. He has just been released from prison in Oneida County by Governor Cleveland, whose explanation of this act of clemency is as follows:—

The wife of the convict left him, and for some time he could not discover her whereabouts. He learned that she was living with another man, ostensibly as a domestic, but, as it now seems to be conceded, actually in a very different relation. The husband's repeated requests that she should return to him and restore his child, which she had taken with her, were refused, and his efforts in that direction were resented by the man with whom she was living. The crime of which the prisoner was convicted consisted in his bursting into the house where his wife had taken up her abode, in the night, apparently with the idea of reclaiming her and his child. He was confronted by the man who had alienated and was harboring his wife, and was by him shot and nearly killed. As soon as he had sufficiently recovered from his wounds to appear in court, he was convicted of burglary in the first degree, and sentenced to prison for ten years. Nearly six years of his term of imprisonment having expired, I have but little difficulty in agreeing with the judge who sentenced him and the attorney who prosecuted the indictment in their opinion that he should be released.

It is with much regret that we announce the decease of the infant Princess Masu, who expired at the Urugasumi Palace on Saturday, at 1 o'clock p.m., thus surviving her half-sister, the Princess Shige, by a few hours only. The Princess Masu was but 10 months old. Her illness was of a similar nature to that which carried off her sister on the preceding day. This is the fourth child His Majesty the Emperor has lost within the past few years.

At Dover the two 80-ton guns in the turret at the end of the Admiralty Pier were tested. The authorities have for some considerable time been looking forward to a favourable day on which to test these immense guns, and as there was a favourable west-south-west wind on that day, they took advantage of it. When the wind is in this direction it blows off land, and the danger of the concussion causing a downfall of the overhanging cliffs, or otherwise damaging the houses along the sea front, is reduced to a minimum. A large multitude of people assembled near the Admiralty Pier and along the seashore. On account, however, of the large number of passing vessels, it was found impos-

sible for several hours to get a clear range for the shots seaward. There was a signalling party on an elevation on the Western Heights, who communicated with those at the turret by means of flags. At length the turret was seen to go round, and number one shot was fired in a straight line for Calais. There were five rounds fired. The charge was increased at each succeeding shot. Prismatic powder was used, and each shell weighed 18 cwt. The turret worked most satisfactorily.

THE *Pall Mall Budget* suggests that the educated Baboo will have to do his best if he does not want to be eclipsed by the educated Kaffir. The latter is going along fast. He has already got as far as having a newspaper of his own, and this journal appears to contain the civilized refinement of matrimonial advertisements. A Port Elizabeth newspaper gives us a specimen of one of these advertisements which appeared in the *Isigidimi* during last month:—

MARRIAGE: The advertiser, a Kaffir, begs to announce to all girls that he wants a good-looking spinster to be joined with him in holy matrimony. She must be of average height, of bright copper colour, age between seventeen and twenty-one years. The qualifications required are that she is efficient in book-learning and a thorough good hand at all domestic work. The advertiser is tired of eating stamped mealies and unleavened bread. He is of ordinary height, twenty-five years of age, pretty, with a good moustache. In stock and property he is worth £135, has a healthy constitution and strong arms. He understands how to work. The girl who, on reading this advertisement, may choose to accompany him through thick and thin in this life, may depend upon her choice. Those willing to reply to this advertisement must enclose their photos, that will be submitted to the advertiser and his friendly advisers for selection therefrom. Rejected photos will be returned after the decision is come at. "Ponies" (very short girls) need not apply. Address A.B.C., Port Elizabeth.

"We are not going to comment," says the Port Elizabeth journalist, "but we may remark that the natives are certainly advancing."

THE German newspapers call it an American duel when two persons pull straws to determine which of them shall commit suicide. It is a mistake to call this duelling on the American plan, for such a method of appeasing wounded honor is unknown in the United States, but this is not saying that the practice might not be introduced with profit. As a method of getting rid of objectionable people it is only second to the Japanese custom of hara-kiri. If all the disagreeable persons in the United States could be paired off and made to pull straws to see which ones should kill themselves, there would be a riddance of half of the whole number at once. Then the survivors might be made to repeat the performance until they were all gone but one, and the chances are that he would soon be overcome with remorse and also kill himself. The "American" plan is worth thinking about.

—*Alla*.

MESSRS. KELLAR and CUNARD gave their third performance in Yokohama last evening to a good house. The programme in the first part was very similar to that of Wednesday, consisting of brilliantly executed sleight-of-hand tricks and illusions. After the first interval, Mr. Collins, a young musician of evident promise, played several airs on the cornet and was twice enthusiastically encored. Mr. Kellar was then bound by two well-known residents (one at least of whom

should be able to tie even a Gordian knot), and was imprisoned in the cabinet with the invariable result of resonant tumult and spiritual manifestations, which ceasing, the magician was found tightly pinioned as before. Mr. Kellar explained the secret of the knots, a secret which, in view of his expected return within a few months from Shanghai, whither he and his confederate go by mail steamer to-morrow, we decline to divulge. They will be heartily welcomed back by the Yokohama community.

At about 3.45 this morning, the fire-bell gave notice of a fire, and within a few minutes thereafter both the Relief and Victoria steam fire engines were on the spot; their services were, however, scarcely required as the fire had complete mastery of the small building in which is originated, a blacksmith's workshop and dwelling-house at No. 31, lately occupied by M. Maigre, and in which the business was still conducted by his successor. The efforts of the brigade-men were chiefly directed to preventing the spread of the fire to the adjoining buildings, and in this they were successful. The fire was eventually subdued by about 5 a.m. when the engines returned to their stations.

A CORRESPONDENT of *Nature* mentions a fish recently acclimatised in England which would be a valuable addition to the ornamental waters of Japanese gardens. The specimens which attracted his attention had been presented by the Duke of Bedford to the International Fisheries Exhibition, and were exhibited in one of the tanks of the Aquarium. They are some of a number which Lord Arthur Russell succeeded in importing from Wiesbaden in March, 1874, and which were placed in a pond at Woburn Abbey in Bedfordshire. Owing to the succession of cold summers these "Orfes," as they are called, did not breed until last year, but may now be considered acclimatised. The Orfe, whose bright yellow or golden colours resemble those of the goldfish or golden tench, is, like these two latter fish, a permanent variety of a wild and much less brightly coloured race, belonging to the same genus as, but specifically distinct from, the chub, with which it was confounded by some writers. Its systematic name is *Leuciscus idus*; of vernacular names those of "Aland" and "Nerfling" are those most generally used in Germany, whilst the Swedes know it by the name of "Id." The name "Orfe" refers to the golden-cloured variety only, which has been cultivated for centuries in inclosed waters in Bavaria. Willoughby knew it well; he says in his *Historia Piscium* (Oxon, fol. 1686), p. 253:—"At Augsburg we saw a most beautiful fish, which they call the 'Root oerve,' from its vermilion colour, like that of a pipin apple, with which the whole body is covered, except the lower side, which is white." As in the golden tench, individuals of pure golden-yellow tints are scarce, the majority retaining marks of their origin from a plain-coloured ancestry in brownish spots or blotches on some part of their body. The ordinary size

of this species is ten or twelve inches; but it is known to have attained to double that size and to a weight of six pounds. The writer in *Nature* adds that the Orfe will thrive in all inclosed waters suitable to roach and goldfish. As an ornamental fish it is preferable to the latter on account of its larger size, livelier habits, and rapid reproduction; it takes the bait, and is eaten in Bavaria. As an ornament in ponds and aquaria the goldfish will always hold its own, but for waters of any extent and free from pike and perch there is no more ornamental fish than the Orfe, a worthy rival of the golden tench, which has been so successfully acclimatised by Lord Walsingham. To introduce the Orfe into Japan would be a worthy achievement for any persevering admirer of the delightful *genre* of gardening peculiar to this country.

THE *Echo* thinks it was a mistake for Lord Ripon to again refer Mr. Ilbert's Bill to the different Local Governments for their opinion. "It is not easy to understand the necessity for this step. Before the Government of India decided to make the alterations proposed by the Bill, all the Local Governments were consulted, and all, with the exception of Curg, the least important of them all, reported in favor of the Bill. To send back the Bill to the Local Governments, is to invite an expression of opinion less favorable to it than the one originally given, and that means the loss of the Bill."

A RECENT number of the *Shen Pao* contained some curious rumours. One was to the effect that the Dai In Kun died recently in captivity at Pao-tung Fu; another that the chief of the Annamese Mission at Peking had fallen mortally sick in consequence of the Chinese Government having failed to send assistance to his country against the invasions of the French.

A BLUE-BOOK just issued by the British Government contains reports on the mineral wealth of Korea. The explorers found numerous veins of iron, copper, lead, and also some gold. These were worked in the rough native fashion, and it is noticeable that no indications of coal were found. In twenty days' journey ten mines were seen, and many of them, especially those of iron and copper, are said to be very rich in excellent ore.

THE *Alla* says:—If it is true that France has remonstrated with the United States against allowing our manufacturers to fill orders for military arms for the Chinese Government, it only shows that the European Republic has subjected herself to the danger of a snub. China has a right to buy arms and ammunition in this country if she pleases. If she sends these arms to the rebellious Tonquinese, that is a matter which France must settle with China, not with the United States. Our Government would have no right to demand of China to know what she is doing with the arms.

FRANCE AND CHINA.

THE telegrams which we publish in this issue present the Franco-Chinese embroglio in a more hopeless light than ever. "Fifteen thousand Chinese troops are said to have crossed the Tonquin frontier; the French have decided to send strong reinforcements to Tonquin, and the threatened rupture between France and China is being anxiously discussed in all quarters." Such is the latest intelligence, dated London, September the 6th. Careful readers of the telegrams received by the last American mail will have observed matter which serves as a fitting preface to these announcements. A despatch, dated New York, August the 5th, said that M. BOUREE, who recently represented the Republic at Peking, had waited on M. CHALLEMEL-LACOUR on the preceding day, and informed the Minister for Foreign Affairs that in spite of China's pacific declarations she was continuing her warlike preparations. M. BOUREE added that the Chinese forces are excellently armed and drilled à *Euro-péenne*; that guns of long range are mounted in their forts; that in his opinion Peking is virtually impregnable, and finally, that he strongly advised M. CHALLEMEL-LACOUR to come to an amicable understanding with the Middle Kingdom. Acting, *more suo*, on this excellent counsel, M. CHALLEMEL-LACOUR had an interview, the following day, with the Marquis TSENG, from whom he demanded explanations with regard to the Chinese troops massed on the frontier of Tonquin, threatening that unless their recall was ordered immediately, France would declare war. The Marquis could give no decisive reply, but asked for time to communicate with Peking. Just a month after these events comes the intelligence which we publish to-day, its significance not a little augmented by the defiance it seems to throw in the teeth of French menace.

But, after all, what are we to understand by the fact—if fact it be—that the Chinese forces have crossed the Tonquin frontier? Does it mean that China has at last roused herself to face all the contingencies of a struggle with a first class European Power? Many people will be reluctant to admit any such interpretation. Unvaried and often repeated experiences have taught everybody to regard the Middle Kingdom as a species of unwieldy semi-comatose animal, which uses its head with tolerable facility but possesses no intelligent command over its limbs. Ready enough to vindicate her title to consideration by an

appeal to abstract principles or a reference to national traditions, China invariably shrinks from any physical effort which might compromise her dignity, being content to docket and file the insults she receives, as though she thought to persuade the world that a day of reckoning is deferred only by her magnanimity. Nothing short of a very firmly rooted faith in her inability to overcome her own inertia could have rendered people so indifferent as they showed themselves to the outcome of the recent negotiations at Shanghai. For certainly a nation was never more effectually deprived of every loop-hole to escape peacefully from an undeserved dilemma. To fight or be hopelessly humiliated, these were the only alternatives offered her. It is impossible to conceive anything more insulting and less considerate than the policy which M. TRICOU is said to have pursued in his Shanghai negotiations. We shall not do him the injustice of supposing that he was primarily responsible for that policy; but that its most offensive features lost nothing by his method of presenting them, is a presumption warranted not less by the reputation he left behind him in Japan than by the mood he is known to have carried with him to Shanghai. China was told, in so many words, that she had no concern with any events which might occur on her borders; that she had no concern with any forcible arrangement which a foreign power might make there for the purpose of opening up a new route to her territories; that she had no concern with the fate of a neighboring tributary state where some twenty thousand of her own subjects are residing; that though it had formerly pleased the Government at Paris to acknowledge her right to concern herself about these matters, it did not please them to continue that acknowledgment any longer, and that finally she must either abandon all her pretensions and forego, without question, whatever measures she had deemed essential to her safety, or be prepared for the chastisement with which France would certainly visit her interference. This was the pill which China was required to swallow. No attempt was made to gild it in any way. France reckoned, as indeed others also reckoned, upon the illimitability of Chinese tolerance, not reckoning, however, that there might be a worse alternative in China's eyes than even a war of defeat, and that were she driven to accept that alternative, the strength of her resolution might be proportionate to the patience which preceded it.

It is not, of course, absolutely impossible that this passage of Chinese troops across the Tonquin frontier may be merely another move in the game of "bluff" which the Government at Peking are supposed to have been playing in obedience to precedent and inclination. But before entertaining this hope, we have to remember that France had distinctly pledged herself to regard any such manœuvre as a declaration of war. China cannot have forgotten that. She knew the full import of the step she was taking, and not even her inimitable reputation for drawing back at the eleventh hour is sufficient to weaken the significance of what she has done. On the other hand, it will be seen from the last telegrams in the series just received, that the trouble has not yet passed beyond the stage of peaceful discussion. The Marquis TSENG is said to have returned to Paris with the intention of resuming negotiations, a fact which looks as though the action of the Chinese troops may have been planned solely as a practical method of drawing France's attention to China's real position and her determination not to be thrust out of court unheard. British mediation is again urged by the London Press, but the nature of the relations at present existing between France and the United Kingdom is unfortunately ill suited to friendly intervention. Still there is a loop-hole, and we may be quite sure that both sides will be equally anxious to avail themselves of it. One of the best features of the affair is the skill with which China has removed the scene of the discussion from Shanghai to Paris. The rude, blustering policy pursued at the former place was not calculated to serve either the interests of peace or the reputation of France, and its elimination, as well as the elimination of its representative, from the controversy is a matter for congratulation. Nevertheless, it would be idle to pretend that the situation is not extremely critical. Whatever China's will may be, the presence of her troops in the field introduces a new and grave element of complication. Her ability effectually to control their action at such a distance is doubtful, and any collision between them and the French would at once carry matters to a fatal crisis. We have seen the Cabinet at Paris publicly place a paltry casualty among the salient motives of the Tonquin campaign, and we are, therefore, at no loss to discern the consequences of an encounter between Chinese and French troops on the banks of the Red River.

A HONGKONG JOURNAL ON
EXTERRITORIALITY.

WE are not quite sure whether gratitude or amusement is the dominant sentiment inspired by a perusal of the *Hongkong Daily Press*' latest dissertation on the subject of exterritoriality. Our colonial contemporary is so very respectable that we feel constrained to listen to him with the utmost gravity, but the effort is a little trying. It was a worthy and characteristic *coup* to enlist Christianity among the supporters of a system so admirably efficient and so charitably considerate of national prejudices. "On exterritoriality," says the *Daily Press*, "the safety of Europeans and Americans in non-Christian countries greatly depends." Christianity has broad shoulders, but a little more reverence for its reputation might have induced our contemporary to keep it out of this context altogether. "Men," says COLTON, "will wrangle for religion; write for it; fight for it; die for it; anything but—live for it." Excellent representatives of New Testament morality are those gentlemen who force their manufactures upon "non-Christian" peoples with bayonets and blunderbusses, and whose lives in "non-Christian" countries are a long epic of charity, humility, and toleration. On the whole, religion had better not be imported into this discussion. It will gain nothing by contact with such elements.

The reason of our gratitude for the homily of the *Daily Press* is that the *naïveté* of its arguments considerably strengthens the cause we advocate. Our colonial contemporary "doubts very much whether the Japanese themselves do practically entertain the strong objections to exterritoriality put forth on their behalf by their English organ." He thinks that, "under existing conditions it is the system which works best for all parties." He opines that to remove it would be to impose upon Japan "a responsibility the burden of which would prove heavy." In short he pirouettes delicately on the outskirts of the question but never gets fairly within its circumference. The point is not whether exterritorial jurisdiction has proved in practice a failure or a success: not whether the Japanese are seriously opposed or comparatively indifferent to its exercise. Exterritoriality might be one of the most perfect devices ever conceived by human wisdom. It might be free from every one of the defects and abuses which render it a disgrace to civilized intelligence. It might be all this, and yet the deadlock into which Japan's foreign intercourse has

drifted would remain as stubborn as ever. That deadlock is this. Japan refuses to remove the restrictions to which foreigners residing within her territories are subjected by treaty, unless foreigners, on their side, remove the restrictions similarly imposed upon the exercise of her authority within her territories. "You do not trust us!" they complain. "Set us the example!" she retorts. "Treat us as we treat your people when they come to us!" the foreigners urge. "Allow yourselves to be similarly treated!" the Japanese reply. It ought to be plain enough that under such circumstances the practical working of exterritorial jurisdiction is a mere incident. To say that the system should be perpetuated because it accomplishes certain ends, is like telling a man that he has no reason to complain of losing his leg provided the amputation be neatly performed. If foreigners are determined to perpetuate a scheme specially adapted, twenty-five years ago, to a condition of partial intercourse, they have themselves to thank for the fact that that intercourse remains partial. Our Colonial contemporary thinks that the *Japan Mail*'s efforts in the matter of exterritoriality are "worthy of a better cause." Yet the cause is not a bad one; for on its issue depends the nature of Japan's foreign relations. We are living here under conditions which, if not absolutely intolerable, are at all events humiliating to our tact and inconsistent with our professions. We want to be treated with greater liberality, but we refuse to make the pettiest concession ourselves. If Japan needed to be taught the nature of a treaty and the obligations it imposes, we have instructed her after a fashion that could not fail to remove every shadow of uncertainty from her mind. Perhaps it might have been more convenient had she been left a little ignorant, but certainly her teachers have no business to cry out if she profits by her lesson. We enjoy privileges to-day that cannot be based upon any rendering of the treaties, however distorted. We want more privileges. Japan's answer is that so long as we decline to offer her any prospect of treating with us on an equal footing, she proposes to abide by the treaties she has, and expects us to abide by them also. Which side is the more likely to yield? We do not pretend to foretell, but we do say that it is time to change a policy which has been fruitlessly pursued here for the past twenty years and which has ended by landing both sides in a wretched deadlock. It is the habit of some minds to think that everybody who advocates a more liberal and trustful at-

titude towards this country is inspired by base motives—is, in short, a traitor to the cause of his own nationals. Were this notion universal, the position would be indeed hopeless, for though many a just and generous man may be unwilling to take a step whose full consequences he cannot discern, none but a knave and a bully will believe that to advocate justice and generosity is unpatriotic or traitorous. That such an evil spirit should find expression and toleration is a remarkable illustration of the sentiments which have been engendered in vulgar minds by the mistaken character of foreign policy towards Japan. Our earnest desire is to see things placed upon a sounder and more sensible footing, and our unceasing object has been and shall be to promote that end. The *Hongkong Daily Press* may think such a cause unworthy of so much effort. We, however, do not think so, seeing that it is the cause of our fellow residents' comfort and prosperity as well as of Japan's.

SOLAR ECLIPSE.

From observations made during the solar eclipse of 1878, Dr. C. S. Hastings, Associate Professor of Physics in the Johns Hopkins University, Baltimore, was led to believe that the sun has no corona, and that the light seen round the luminary during a total eclipse is not due to a material envelope but is purely a phenomenon of diffraction. The latest views enunciated by scientific observers in reference to the physical nature of the sun are to the effect that the entire orb is an aggregation of vapour altogether destitute of any trace of liquid or solid agglomeration. Rossetti's estimate of the heat existing at the surface of the sun is eighteen thousand degrees Fahrenheit, and this figure has been accepted as reasonable by many of the best authorities. Such a temperature, amounting to nearly five times the greatest heat that man is able to produce by artificial means, is quite incompatible with the existence of either liquid or solid substance. Everything compound, of whatever nature, would be dissolved—dissipated into vapour. It is generally believed that the heat must be higher within the mass of the orb than towards its external confines, and consequently that the whole matter composing the vast luminary is in a state of dissociation. Under the gravitating influence of its own stupendous mass the sun doubtless grows more dense towards its central regions. But this condensation cannot amount to the production of a solid, though the centre of the sphere, under the vast superincumbent weight of the outer parts, may be in a kind of plastic, half-coherent state. Dr. Young, writing on this subject says:—"But while, on the whole, it seems probable that the sun's core is gaseous, nothing could be more remote from the truth than to imagine that a mass of gas, under such conditions of temperature and

pressure, would resemble our air in its obvious characteristics. It would be denser than water; and since, as Maxwell and others have shown, the viscosity of a gas increases fast with rising temperature, it is probable that it would resist motion like a mass of pitch or putty." On the other hand, the outer portion of this enormous sphere of heated gas is converted, where it comes sufficiently within the influence of the external cold of space, into a shell-like expansion of brightly luminous cloud. This is called the 'photosphere' of the sun, because it is the immediate source of the brilliant illumination which radiates out into space. Outside the photosphere there is supposed to be a layer of more refined and quite incondensable gas (chiefly hydrogen), which not even the cold of external space can convert into visible cloud-like vapour, but which, nevertheless, glows to some extent with its own inherent light, as a kind of ruddy flame, often playing outward in the form of lambent tongues. This is called the chromosphere. It is the region of the red protuberances, which were first observed shooting out from behind the opaque body of the moon on the occurrence of a total eclipse, and at once drew so much wondering attention to themselves. Outside the chromosphere, again, there appears to be a coronal investment of radiating glory, which is also lost to sight in the superior effulgence of the photosphere when the latter is in view, but is seen with the red flames on the occurrence of a total eclipse. This corona has been hitherto attributed to the glimmering of some still more rare gaseous envelope, interspersed with masses of glittering meteors wheeling as a kind of solid spray outside the brighter envelope. According to Dr. Hastings' new theory, however, the corona is not due to a tenuous atmosphere extending for millions of miles from the sun, but is light (from the photosphere) which has undergone diffraction—that is to say, light which, instead of impinging directly on the retina, is bent round the opaque body of the moon, and thus conveys the impression of coming from beyond the edge of the sun. Dr. Hastings' conception is simple but very ingenious. The moon's disc overlaps that of the sun during an eclipse, so that the former can move for about five minutes and still cover the latter entirely. Now if the corona consists of light from a solar atmosphere, it should not change at all during the movement of the moon. But if diffraction is the cause of the luminous appearance, then the slightest change in the relative positions of the sun and moon should change the configuration of the corona, and the character of the light, as shown by a spectrum analysis, should vary. By the aid of an ingenious instrument, so arranged as to show an accurate image of the eclipse from the first to the last instant of totality, and, at the same time, to divide the light of the corona into its constituents, Dr. Hastings found, on the occasion of the eclipse of May, that a certain bright green line—whose presence in the spectrum has hitherto been regarded as an argument in favor of the view that the corona is a solar atmosphere—instead

of remaining fixed during the phenomenon, as it obviously should were the corona an atmosphere, grew shorter in the light from one side of the corona and longer on the other. The only way in which this change can be accounted for is on the diffraction theory. Three other independent facts seem to support Dr. Hastings' new theory. They are:—(1) An atmosphere extending to anything like the limits generally assigned to the corona would cause an enormous pressure at the Sun's surface, whereas it is known that the gaseous pressure there must be less than an inch of mercury. (2) The laws of gravitation would require a solar atmosphere to be distributed symmetrically round the sun, whereas the corona is exceedingly irregular in form. (3) The solar atmosphere is supposed to extend for millions of miles from the sun, yet the recent comet passed within two hundred thousand miles of the luminary, and its orbit was not affected in the least—as it must have been had it ploughed its way through a material substance. Dr. Hastings accordingly concludes that though there is a small envelope round the sun, it does not extend beyond the chromosphere.

Every discovery which tends to disprove the existence of atmosphere in the neighbourhood of the sun militates against the truth of Siemens' theory with regard to the recuperation of solar heat. It is true that Dr. Siemens conceives that all inter-stellar and inter-planetary space is filled with something of a much more substantial character than imponderable ether, and he will therefore be little disturbed though Dr. Hastings' demonstrations reduce the supposed coronal atmosphere to a so-called vacuum. Still, as his theory essentially depends on the presence of some residual gas throughout all space, he would certainly have found it more convenient to leave the old theory of the corona undisturbed. It is known, by calculations based upon the size of the earth and its distance from the sun, that of the entire energy radiated by the latter only about the 1,250,000,000th part is caught by our planet, and that probably about ten times as much falls to the share of the other planets. In other words, not more than the 125,000,000th part of this radiant energy is utilized by our system. With the exception of this infinitesimally minute fraction, all the rest is dissipated into space. Nothing whatever is known as to what becomes finally of the vast amount which thus wanders off into the void fields of the measureless immensity. The 1,250,000,000th part which our earth receives "creates a world teeming with life out of a dead rocky chaos." But the immeasurably larger quantity that trembles off into the unbounded immensity seems to be lost to the sun and in some way absorbed into the infinite void. Now our mundane experience tells us that fires go out unless they are periodically supplied with fresh stores of fuel, and it has been computed that the present annual yield of all the coal-mines of the earth would scarcely suffice to keep up the fire of the sun, at its present intensity of light and heat, for the forty millionth part of a second. How then is that

fire kept up? Is the solar sphere gradually growing chilled, and will the beneficent luminary ultimately become a mass of cold and desolate scoræ and rocks? Were the surface heat of the sun reduced from 18,000° of Fahrenheit to 13,500°, the collections of water upon our earth would all be frozen into ice, and the terrestrial surface would be transformed into an uniform glacial mass. But, on the other hand, all observation goes to show that for two thousand years there has been no material diminution in the sun's heating power, and that, even with no specific provision for restoring his waste radiations, his mass is so vast and his heat so enormous, that he could go on cooling by free radiation into space for what, taken in reference to man's method of counting the lapse of time, would be a very long period before any actual change of temperature could be perceived. Nevertheless, we cannot get over the fact that this enormous loss of radiant energy must in the end exhaust its source unless some means of recuperation exist, and scientific ingenuity has consequently been strained to show how the loss may be compensated. First came forward Dr. Mayer, of Heilbronn, with a theory that the sun is a stupendous anvil in the course of being perpetually hammered upon by falling meteors, and that its heat-energy is maintained by this hammering, as a lump of iron is kept red hot by the vigorous blows of a blacksmith. The disciples of this theory proved, scientifically enough, that a mass of matter, equal to about the hundredth part of the earth, falling every year from the earth's distance, would in this way suffice to maintain the Sun's heat radiation permanently. The trouble of the thing, however, is that if meteoric material were so abundant in space, the earth's share, instead of merely furnishing it with an occasional pyrotechnical display, ought to batter its mass in a year into a temperature something like that of boiling water. Moreover the anvil upon which these meteoric blows have to be delivered, instead of resembling the iron mass upon which the blacksmith operates, is more of the nature of an air cushion fashioned upon a nucleus of putty, while the meteors themselves, before striking upon this anvil, would be transformed into tenuous vapors and gases. Five years subsequent (1883) to the enunciation of Dr. Mayer's theory, Professor Helmholtz of Berlin propounded the very beautiful conception that if the solar mass is gradually but progressively contracting its dimensions without any loss of substance, some of the outer portions of the sphere must be gradually thrust in upon its inner and more central parts, and on that account the temperature of the mass rises in proportion to the compression accomplished in its entire bulk. This statement is in accordance with incontrovertible scientific truth. If any orb in the regions of space be diminishing in size without loss of ponderable substance, it is certainly growing hotter at the same time. Reasoning upon these data, Helmholtz showed that, if the diameter of the sun contracts 250 feet every year, or a mile in a little more than 20 years, as much heat

would be furnished every year as is really scattered in the same time from the luminary into space. Naturally one is disposed to imagine that, if this contraction were in constant process, evidence of it ought to be furnished by our measurements of the sun's diameter. But the truth is that our finest and most powerful instruments scarcely enable us to measure anything so small as a second of arc, and as a second of arc represents 450 miles at the sun's distance, the diameter of the orb might go on contracting for 9,500 years, at the rate of 250 feet per annum, before any change became appreciable here. Helmholtz's hypothesis, however, does not profess actually to maintain the existing state of the sun. It contemplates the gradual cooling of his mass and the ultimate extinction of the solar fires. For science has proved that, though loss of heat involves contraction of size; and contraction of size develops sensible heat, yet when a contracting mass of gas begins to change into the solid or liquid state, the further contraction is then accompanied by the production of cold instead of by the augmentation of heat. Keeping these facts in view, Professor Newcomb, of Yale College,—who is a believer in Helmholtz's theory—holds that, if the sun maintains its present rate of radiation, it will shrink to half its present diameter in five millions of years and will then be eight times more dense than it is now. With these data he infers the high probability that the conditions which would have enabled the earth to preserve its present state, cannot have existed for more than ten millions of years, and that it is quite as probable the sun will not be able to issue heat enough for the support of terrestrial life for another like period of ten millions of years. Thus the entire life of the solar system, from its birth to its death, would be comprised within a limit of something like twenty millions of years. The latest theory, however,—that of Doctor Siemens,—contemplates the perpetual maintenance of the sun's radiant energies. He conceives that all space is filled with some sort of atmosphere, however tenuous; or, more particularly, that the vapours of water and gaseous compounds of carbons and hydrogen are universally diffused. This material vapour, if it exist, must be drawn towards the solar orb with tremendous energy. But it is so drawn in a dissociated* state owing to the resolving agency of the solar beams. "The dissociated elements come ultimately into contact with the whirling sphere, and are carried along as a sort of rushing wind from the polar regions of comparative quiescence towards the equatorial zone of more rapid rotatory progress, to be there whirled off again into space as a sort of gaseous spray. But, as they are carried along in this way in intimate association with the whirling mass, they first burst into flame under the influence of heat, and are so turned back into the compounded state—as hydrogen is converted

*Dissociation means the resolution of all chemical alliances and bonds, and the severing of material substances into their primary atoms, by the dispersive powers of exceedingly great heat, controlled only by the gravitating pressure of the resulting vapours.

into water in terrestrial combustion with the evolution of flame—to be there dealt with over again by the resolving force of the solar radiations. But, as this continuous play of resolution by dissociation, and of recombination by combustion, is carried on, the recombined elements give back to the sun the heat which is generated by the renewal of their union, as heat is generated in the fire by the union of the carbon and hydrogen of the burning coal with the oxygen of the air. In this way the sun day by day receives back as much heat as it loses by radiation into space. The solar orb thus assumes the rôle of a stupendous turbine, sucking in combustible vapours from space by its whirl, to feed with them the enduring vitality of its fires, and to generate the vapour compounds which are scattered in return into space." One of the most interesting points of this theory is that it exonerates nature from the charge of wanton wastefulness implied in the useless radiation of immense quantities of solar heat into space. According to Dr. Siemens' conception the dissipated heat scattered out from the sun is first caught in the residual gas medium diffused through space, and with it is drawn back into the sun, being thus used over and over again. By this instrumentality the apparent waste is transformed into an abundant flood of recuperating power, the heat alone which has been usefully spent upon the planets being absolutely lost to the sun. Unfortunately there are difficulties which seriously impede faith in this beautiful theory. There is first the mathematical difficulty that, in order to free themselves from the control of the sun's gravitating force, the recompounded vapours, which are supposed to be whirled off into space from the sun's equatorial regions, would need to start from the luminary with a minimum velocity of 27 miles a second, whereas the maximum speed that could be communicated to them by the sun's rotatory movement is one mile and a quarter per second. There is also the physical difficulty that, if the cosmical vapour with which Dr. Siemens fills all space, be dense enough to arrest the heat rays issuing from the sun and to convert them into dissociative impulse, it must carry with it the consequence of a resisting medium, and be competent to produce a marked retardation of the planetary movements. No such effect, however, is produced, the retarding influence of this medium even upon the filmy material of a comet being still regarded as very problematical. Further, it is well known that the most subtle trace of watery vapour in the air we breathe suffices to take into itself the heating power of the solar rays, and to shut them off from the solid surface of the earth. Yet the vapour sphere which can produce such an effect is limited to an extent of some four or five miles. Surely then if such a vapour were diffused in space, however thinly, to a distance of ninety-three millions of miles, it could not fail to intercept the heat vibrations of the sun considerably more than the atmospheric vapour screen enveloping our earth ever intercepts them, and there would be little heat radiations left for our atmosphere to deal with

when the vibrations reached its outer limits. However these things may be, it is plain that everything which tends to contradict the existence of a gaseous or atmospheric envelope in the vicinity of the sun, renders Dr. Siemens' theory more difficult of credence. The whirling off of gaseous spray into space from the solar equatorial regions fits in very well—other considerations apart—with the atmospheric character hitherto attributed to the corona, and becomes correspondingly unlikely when the latter is divested of that character and relegated to the rank of optical illusions.

REVIEW.

Sunny Lands and Seas: A Voyage made in the S.S. "Ceylon." By HUGH WILKINSON. London: John Murray, 1883.

It would be generally thought a foolish and profitless speculation for any traveller to write down exactly what he sees and knows, leaving out what he hears. Yet the experiment might be worth trying, if only as a novelty. The reflection is forcibly suggested by a perusal of Mr. Hugh Wilkinson's "*Sunny Lands and Seas*," a book which records the story of its author's voyage round the world in the S.S. *Ceylon* and other conveyances. It is a clever book, an amusing book, and, on the whole, an instructive book, but one lays it down with an uneasy feeling that, wherever the author thought his pictures lacked colour, he did not hesitate to borrow any pigments that came handy, however bizarre and exaggerated. An Irishman by name, he possesses an Englishman's idiosyncrasy,—albeit tempered by a genial disposition,—of seeing no good in anything that is not English. It is not till he is sailing once more in British waters within sight of the Emerald Isle, that he suffers himself to break out into unqualified praise of any people, and they are "the hardy, fearless, weather-beaten men of Britain—frank honest and free as the rough air they breathe." He had at the outset "no theories to support nor prejudices to overcome," and yet he had not spent many hours in San Francisco before he was in a position to "reckon up" the community of that city, writing them down as "pushing, reckless, self-reliant, enterprising, and intensely selfish to a degree unknown in the old world." "Clothe or cloak this selfishness as they will," he tells us, "it would still win, hands down, in a canter amongst any other communities in the world eligible to compete. They have one aim; that is money—nothing but money! They have one god; which is self—nothing but self!" At another place, a "pretty, peaceful-looking little village," he finds that "even the schoolboys carry revolvers, and have been known to use them against their masters, just *pour encourager les autres*;" while "in a bar opposite to the hotel where he is stopping, four men have lately been shot; the brains of the last one being still on the wall which they splattered. So trifling a matter as one person's brains they do not think it worth while to clean away: So they wait until there is a crop of them." The reader will perceive that Mr. Wilkinson is, in some degree, a humorist, and indeed there is much in his writing that justifies the title. But it happens—as in truth it often does happen—that he is most diverting when he means to be most serious. This is especially the case in his account of Japan and the Japanese. Landing at Nagasaki on

March the 10th, he set out from Yokohama en route for home on the 25th of the same month, so that he had exactly fourteen days to "do the country." It was natural, under the circumstances, that he should refrain from venturing on any un-beaten tracks. A portion of the hackneyed round was the utmost his opportunities made feasible, and we find him, accordingly, travelling from Nagasaki to Kobe via the Inland Sea; thence to Osaka, Kiyoto and Nara; then to Yokohama, Tokiyo, Kamakura, and Daibutsu, and then—to the Sandwich Isles. A gentleman who had resided in Japan for some years, was once heard lauding with effusion the remarkable politeness of the people, and on being requested to give a reason for the faith that was in him, he explained that wherever he went, the commonest coolies saluted him with a courteous "O-hayo." Now as it would be difficult to conceive anything ruder from a Japanese point of view than that a labourer or artisan should thus accost a person whom he happens to meet by the way and who is entirely unknown to him, and as it is, nevertheless, quite certain that in the great majority of instances the salutation is offered with the best possible intentions, the inevitable conclusion is that when a Japanese says "O-hayo" to a foreigner, he is doing what the latter has taught him to do, not by any means what the etiquette of his own country prescribes. In fact, if it be necessary to convey a precise idea of the import of such an act in Japanese eyes, we may find a fair parallel in the sentiments we should ourselves experience did we see a crossing-sweeper in England kiss his hand to the inmates of every carriage that passed. This O-hayo-admiring gentleman's conceptions of Japanese politeness were derived from a source very similar to that which furnished our author's ideas. Travelling along the beaten track of tourists and holiday-seekers, Mr. Wilkinson encountered everywhere on his route the hybrid manners and customs which Western intercourse has created, and as he had not time to look any further, he concluded that what he saw was a fair sample of the whole. At first he is charmed beyond measure. "Had we to return to-morrow," he says, on the second day of his visit, "we should feel we had been fully compensated had we seen nothing else." He finds the air "bright and clear;" the streets "quaint and clean;" the people "happy, light-hearted and more than friendly." In short his early enthusiasm leads him to speak with unusual frankness:—

A remarkable trait in their character, that one cannot help noticing, is that all seem so kind and loving to one another! A little dot of a child came near being knocked over by one of our jinnikishaws, which was being pulled so fast that it was with the greatest difficulty it could be stopped without knocking the little fellow down. Our coolie patted him on the head as tenderly as if he had been his own child, and without the shadow of an angry look at the trouble to which he had been put. It was impossible to help comparing him with one of our too often brutal cabmen or carters at home, who with an oath and a slash of the whip would have sent the little fellow away screaming; and yet this is the country to which English and American missionaries come to teach them our civilization and what we are in the West—how good we are—how gentle—how loving, clean and sober—how exalted are our methods of life—how high our aims! Is it not wiser to teach men how to live before teaching them how to die? The latter plan has been tried long enough; and of its fallacy the records of the world are unhappily by this time full enough!

It would be far more pertinent, and less impertinent, were they to send missionaries from Japan to England and America, to teach us what is the grand potent which makes them so happy, sober, so clean, and so kind and loving to one another. When one thinks of our East End and the stupendous depths of degradation to which whole masses of our people at our very doors have sunk, and whose deplorable condition, both spiritually and bodily, so loudly calls for help, it seems at least odd that missionaries should be sent to a people who seem to need it far less than the multitudes of our people at home. Until our own festering sores are cured, should not every missionary be recalled, and every farthing of the money which now leaves England

for missionary purposes be applied to wipe out our own deep national disgrace?

His favourable opinions receive their first shock when he pays a visit to a bath-house. It does not seem to strike him or his companions that although there is nothing to prevent a party of foreigners from walking into a woman's bath-house and inspecting the ladies' ablutions, the visit may be quite as great an intrusion as it would be anywhere else. Nothing of the sort occurs to him, because, like the majority of foreigners who visit Japan, he does not give himself the trouble to reflect that susceptibilities not superficially evident may possibly exist. He sees a bath-house where no precautions to secure privacy are apparent, walks right in among the nude females, is "greeted with smiles;" persuades himself that the ladies whom he treats with so much consideration "are evidently pleased and flattered at his visit;" comes away astounded by such an absence of modesty, and records a statement that in Japan "both sexes bathe together with all the innocence of simple animals." Mr. Wilkinson may perhaps be interested to learn that a Japanese acting as he acted would be hooted by the very children. Of decency, as the word is interpreted in the West, there is very little to be seen at a Japanese bath-house of the inferior class, but it is wrong to say that the sexes bathe together, except in the sense of bathing under the same roof. The men and the women are separated by a partition which, if it sometimes seems a scanty affair, is quite sufficient for persons who never think of violating one another's privacy. Your Western tourist, however, has no scruples of this nature. He marches into the bath-house, sees whatever he can, emerges piously shocked, and is greeted with "O-hayo" by the coolies and city urchins who, in their turn, fall into the error of judging falsely by appearance and imagining that because some hilarious hoidens from the West are impelled by a feeling of good-humoured condescension to chuck every Oriental under the chin and pat him on the back as though he were a pretty child or a pet dog, all foreigners like to be treated with similar *sans-gêne*. Individuality strong enough to leave its mark wherever it goes is a fine thing in its way, but in this instance the mark might be obliterated with advantage. Those who remember the charmingly quiet, courteous, and unassuming manners of the lower orders in Japan a dozen years ago, and compare them with the rough effrontery that now passes for manners in regions where foreign influence has been chiefly exercised, cannot but feel somewhat humiliated that the most palpable consequences of our example should be so unsightly. The visitors from the S.S. *Ceylon*, however, knew nothing of these distinctions. They took everything as they found it, and thought that their bath-house deductions were strikingly endorsed when, at Nara, they were "escorted to their rooms (being led by the hand) by two not blushing nor even modest damsels with jet black teeth, who tried on their ulsters and examined their rugs nearly laughing their ribs out all the while," and of whom one stood beside them when they were at dinner, helping herself, as she had a fancy for meat diet, and "deposing, with the most innocent grace, her leavings on their respective plates while they were still eating from them." What a singularly significant marginal note to the history of foreign intercourse with Japan! These young ladies fancied they had learned exactly how to make themselves agreeable to foreign tourists, and experience had given them confidence in the correctness of the lesson. True

it involved some outrage to their early training and habits, but women are versatile things, and to live is the first necessity of life. It is not surprising that Mr. Wilkinson and his friends drew some unfavorable general inferences from these novel circumstances. Similar inferences will be recorded by other tourists and credited by the public until the Japanese recognise that rowdiness is not a trait but an accident of Occidental behaviour.

It seems fated that of the tourists who visit Japan some should judge the people wholly by the good they have learned from foreigners, others, wholly by the evil. Sir Edward Reed is the most remarkable representative of the former class; Mr. Wilkinson, of the latter. Both appear to have been naturally adapted for the rôle they played; Sir Edward by a more than ordinary share of romantic good-nature; Mr. Wilkinson by a precipitancy of deduction scarcely less conspicuous than his proneness to hyperbole, which latter habit of mind induced him to describe the Tokaido between Kanagawa and Kanazawa as "a road made of rich virgin soil, as soft but not nearly so level as a newly ploughed-up field." Yet strange to say the author of *Sunny Lands and Seas* falls into his most glaring errors when he arrives at Yokohama, and places himself at the feet of a Gamaliel among the "old residents," a gentleman who far outstrips any tourist in the complacency with which he estimates the traits of a whole nation by his own limited experiences, and who appears to have even amused himself a little by gulling his pupil. The lesson Mr. Wilkinson learned from this teacher is worth quoting in full:—

One of the old residents here told us much about the inner character of the people, for whom he had (in common with all those who know them well) a far from exalted opinion. Naturally the ideas one receives during a short sojourn amongst them can be but the merest 'surface' impressions; and we are quite aware that a longer stay amongst them would undoubtedly make us alter our opinions in many respects. From our friends here we always hear the same story, viz., that their greatest sins are licentiousness and untruthfulness; the latter is with them no sin, the former only after marriage. There is no word for 'virtue' in their language. There is no romance, nor love, nor courtship, as we understand them; the women are almost invariably so frail, and so obedient, that no winning is necessary. 'Tis enough for the swain to say, 'You shall be my wife,' and like happy slaves they obey, much obliged for any notice and kindness. Of the wild throbs of being wooed, or of the ecstatic glory of being won, they consequently know nothing; neither have the men ever experienced the rapture of the murmuring assent, told in fearful, broken accents by their loved ones (which De Bosco tells me is so delightful). Both men and women have gentle and affectionate natures, and are very kind to animals, as well as to one another, but they have very little feeling. The suffering of another they can contemplate without emotion, like our philosophers at home; and no sight which would horrify us moves them at all. In manners every woman is a lady, and every man a gentleman. They are like children—they lie like them too; but every sin, like those committed by a child, seems to have a deal of innocence in it. They don't lie with the same amount of sin as our people do, for, lying being no sin with them, it seems innocent to do it. It becomes a way of expressing ideas; and people talk and lie to one another like fends; each knowing that the other is doing it. In business they do the same, and they are entirely without honour. It is like a game of chess—the same old moves on the board, which are well known to all—for lying is a national pastime in which all are expert. They are also without sincerity, and personal gain overrides everything. Shyness and shame are unknown in the land; and, though it ought constantly to be met with, no 'blush of maiden shame' has ever yet been seen. There being no shame, there is little secrecy of any sort. In hot weather men and women go about the country unclothed, with the exception of a large straw hat on the head; and girls powder and paint openly, sitting in the street with their powder, rouge, and cosmetics, and decorate themselves at a little hand-glass of the smallest dimensions, talking all the time to the passers-by.

This marvellous miscellany of truth and falsehood—the latter largely predominating—professes to be, not a "mere surface impression," but a true analysis of the inner character of the people. To make such an analysis correctly and conscientiously is a task of immense difficulty, demanding very exceptional qualifications—as, for example, a thorough knowledge of the language of the country;

long and intimate intercourse with all classes of the people; an extensive acquaintance with their literature, and a mind absolutely free from prejudice. How many of us possess these qualifications or anything resembling them? And yet how few of us, while consciously possessing not one of them, hesitate to pronounce judgment upon every trait of Japanese national character! This "old resident" who so successfully deceived himself and misled the author of "Sunny Lands," seems to us to speak the language of the self-opinated sciolists that abound all over the world, but especially in Japan—men whose charity is in the inverse ratio of their ignorance, and their assurance directly proportionate to their partiality. We cannot allow ourselves to think that romances such as these which Mr. Wilkinson's records are prompted by any impulse of wanton malignity, but that they are cruel and unjustifiable libels there can be no shadow of doubt. Nor does their maleficence lose anything by the grains of truth they embody. It were idle to deny that, so far as our limited opportunities enable us to judge, the Japanese are licentious and untruthful. The women with whom we come in contact show little respect for chastity, and the men who frequent the foreign settlements have no regard for truth. But that "licentiousness is no sin" before marriage; that there is neither "romance, nor love, nor courtship;" that a Japanese "can contemplate the sufferings of another without emotion;" that "no sight which would horrify us moves him at all;" that lying has become a "national pastime" and "merely a way of expressing ideas;" that "in business the people are entirely without honour or sincerity;" that "shyness and shame are unknown in the land;" that "no blush of maiden shame has ever yet been seen"—all these statements are just as gross falsehoods as the assertions that "there is no word for virtue in the language" and that "in hot weather men and women go about the country unclothed, with the exception of a large straw hat on the head." Mr. Wilkinson, or, to speak more correctly, his informant, is a veritable Munchausen rebuking mendacity. It is true that there is no word for virtue in the "pidjin" dialect of Yokohama, and it is also true that romance, love, courtship, and blushes of maiden shame do not flourish abundantly in the air of Takashima-cho or Honmoko. But what then? Do the social types which Yokohama offers for inspection—types which are a by-word among the Japanese themselves as well as among foreigners whose experiences have been acquired outside the Settlements—truly portray the character of the nation, and is it either generous or honest to assume that they do portray it? It is not necessary to be very extensively acquainted with Japanese literature to know that there is a word for virtue in the language; that the romance of love and courtship enters at least as largely into the national life as it enters anywhere else; that the heroine of fiction and history alike is a girl who holds her virtue dearer than everything except filial piety, while the hero is a man upright, loyal, fearless, and faithful. Limited opportunities and restricted intercourse incapacitate us to interpret with confidence the many idiosyncracies which, of necessity, exist among a people so long isolated from the outer world, but of this we can be quite sure, that the moral types depicted by their writers truly represent the ideals which men and women admire, and boys and girls are taught to emulate. The study of these ideals by persons setting up as judges of Japanese character would avert the disgrace of such cruel and unscrupulous libels as those which Mr. Wilkinson has been persuaded to publish.

H.B.M. COURT FOR JAPAN.

TUESDAY, 11th September, 1883.—Before N. J. HANNEN, Esq., Judge.

THE CHARTERED MERCANTILE BANK OF INDIA, LONDON, AND CHINA V. THE HONGKONG FIRE INSURANCE COMPANY (Limited).

This case is heard before a Jury composed as follows:—Messrs. J. Esdale, J. W. Gray, G. Sale, J. H. Curtis, and R. Abbey. It consists in a claim for the sum of \$6,237.83, with interest from the 15th March 1883, together with interest on \$2,685.63 and \$15,000 from the 15th March to the 18th May, and also for costs.

Mr. Lowder appeared for the plaintiffs, and Mr. Kirkwood for the defendants, whose local Agents are Messrs. Jardine, Matheson, & Co. Mr. W. B. Walter of that firm was present.

Mr. Kirkwood took exception to the amended petition, as it was not of the same date as the original, and to all intents and purposes was a new petition. He said he was not prepared to answer it in its present state, the particular point of his objection being the date.

Mr. Lowder did not see that it required altering as he had received permission from the Court to amend the original petition, and had dated it according to the order given by the Court.

His Honour said that the amended petition should mention the date of the order given by the Court, but should bear the actual date of the original.

Mr. Lowder, who repeated that he did not see any necessity to alter the date, then opened his case. He said—This is an action brought by the Chartered Mercantile Bank of India, London, and China against the Hongkong Fire Insurance Company (Limited), for damage done by a fire which took place in March last, the goods being insured with the defendants under three policies. The petition of the 23rd April stated that the plaintiffs carry on a banking business in Yokohama, and are in the habit of insuring goods in their own name, when such goods have been hypothecated to them. The goods in question were insured under three policies, one for \$15,000 on coal, lumber, and merchandize in godown 255c; one for \$5,000, of which \$3,000 was on merchandize in Lot 114 and \$2,000 on coal on Lot 255c; and one for \$8,000 on lumber, goods, and merchandize on Lot 255c. On the 15th March, Lot 255c was damaged by fire, and the plaintiffs claimed, under the original petition, the sum of \$21,625.46 and interest at 10 per cent. from the 15th March, 1883. In answer to this, the defendants stated that the property was partially damaged, but not to the extent claimed; also that the policies were granted under the stipulation that the insured must give full particulars of his loss, and that the plaintiffs had not satisfactorily complied with this rule. The petition had been amended, and the present claim was for the sum of \$6,237.83 and interest from the 15th March, 1883, and interest on \$2,685.63 and \$15,000 from the 15th March to the 18th May, 1883, with costs of suit and any further relief that the Court may think fit.

Mr. Lowder then read the correspondence between the plaintiffs and defendants: also schedule of the property destroyed in the godown, with an affirmation signed by Mr. P. Bohm. Some correspondence between Mr. Masfen and Mr. Bohm was not read, as it had been written without prejudice. It was after this correspondence had passed that the case was placed in Mr. Lowder's hands.

Mr. Lowder said that, as there had been no answer to the amended petition, he presumed the answer to the original petition was supposed to be sufficient. He thought that, as the case stood, the first issue for the jury to consider would be, did the loss sustained by the fire amount to \$23,923.86? The second issue would arise out of Article 3 of the petition, and the third on paragraph 4 of the answer which stated that the Bank only held the property as mortgages; but the policy of insurance does not state that the Bank must declare whose property is insured. Should the other side say that Mr. Masfen purposely suppressed the name of Mr. Bohm, as being the owner of the property, he would call Mr. Masfen to prove that the defendants knew that the property was Mr. Bohm's. Had Mr. Masfen suppressed

Mr. Bohm's name to obtain an insurance which would not otherwise have been granted, he should certainly not have had anything to do with the case. Issue five will be whether the \$15,000 and \$2,500 is sufficient to satisfy the claim of the plaintiffs. It will be proved by Mr. Masfen, and a Chinaman who was put in charge of the godown some twelve months ago, that the Chartered Mercantile Bank held a mortgage on the property. He said it was a claim on lumber *ex Peiho* and *Black Diamond* and various other merchandize. The lumber *ex Peiho* and various other articles were in the godown, when the Chinaman was put in charge. He would give proofs that the goods were equal to the value claimed. He thought that, if a list of the contents of the godown prior to the fire and a list of the salvage were produced, the jury could readily see the amount lost. As to values, he should depend principally on Mr. Bohm's valuations, he being a dealer in these articles, and also on a list of actual sales made. The law is that the insured can claim the actual market value of the goods destroyed and no more, so the claim is based on the actual market value of these goods, and not on the invoices, &c., to which he would only have to refer for quantities. With regard to the outside articles, he would call witnesses who actually dealt in these goods.

Sou Hin, a Chinaman, godown-keeper for the Chartered Mercantile Bank, whose evidence was interpreted by Mr. Kingsell, stated that he entered into the employ of the Bank on the 19th of August last, and received instructions to take possession of godown No. 255c. It was on the 19th August that he received the keys. The keys were kept by the Compradore of the Bank, and he got them whenever it was necessary for him to go to the godown. He had a list of the goods that were in the godown on the 19th August. They were as follows:—63 casks cement, 3 bundles wire rope, 20 casks spikes, 3 packages coffee, 41 pieces rope, 70 bundles oakum, 70 tins paint oil, 155 tins paint, 150 packages salt, 4 cases preserves, 2 cases cigars, 20 cases beer, 3 cases whiskey, 3 casks shark oil, 3 casks resin, 3,000 pieces large and small timber, and some coal—how much he did not know. On September 5th, there were 40 casks vinegar, 88 cases whiskey, 200 casks cement, taken into the Godown; and on October 12th, 1,280 pieces large and small timber, 11 spars and 780 bundles shingles were received. The deliveries were:—August 24th 1 cask cement, 26th 3 tins paint oil, 28th 2 tins paint oil, September 5th 2 cases whiskey, 18th 57 tins paint oil, October 27th 1 case whiskey, 30th 1 coil rope, November 3rd 2 coils rope, November 6th 3 coils rope, 21st 1 tin paint oil, 28th 2 bundles oakum and 1 case whiskey, 29th, 1 tin paint oil and 1 bundle oakum, December 6th 2 tins paint oil and 14 tins paint, 26th 1 tin paint oil, 22 tins paint and 2 cases whiskey, 28th 1 cask cement and 2 tins paint, February 27th 1 cask whiskey. Out of the lumber there had been delivered on October 23rd 77 pieces lumber, 4 planks and 45 bundles shingles, 28th 15 bundles shingles, November 2nd 3 pieces lumber, December 6th 5 pieces lumber, 9th 2 bundles shingles, 28th 28 planks, February 7th 12 planks, March 10th 15 planks.

This ended the translation from the godown-man's book, and the Court adjourned to 1.30 p.m.

On the Court resuming,

Witness, in reply to Mr. Kirkwood, said that, in addition to the articles above mentioned, three tons of coal were delivered on the 21st of August. Altogether 134½ tons were delivered. He knew of no more goods. Mr. Walter never asked him to see the list of goods that were in the godown on the 19th August. Mr. Walter asked witness if Mr. Bohm had been in the godown, and to tell him what goods were in the godown.

To Mr. Lowder witness said that Mr. Walter had sent for him; and he had not asked Mr. Masfen's permission to go. The conversation was partly through the compradore.

Mr. W. Bourne, auctioneer, was next sworn. He remembered being instructed in March last to sell damaged goods at godown No. 255c, by Messrs. Jardine, Matheson & Co. He received a list of the goods and sent it to be printed, according to a list produced in Court. There were some alterations made afterwards which appear

in the account sales. (A press copy of the account sales was handed into Court.)

To Mr. Kirkwood witness stated that Mr. Walter instructed him to sell the goods for account of the concerned, and to hand the account sales to Mr. Masfen. The goods were all more or less damaged by fire and water. Witness could not say if much zinc was off the wire rope.

Mr. L. C. Masfen, Manager of the Chartered Mercantile Bank, Yokohama, believed these (produced) to be the same policies that he handed to Mr. Lowder. The endorsement on the policies were not done in witness' office, but obviously in the office of the Insurance Company. (Policies handed into court). Mr. Bohm is the actual owner of the goods mentioned in the policies. Witness insured the goods for the security of the Bank, as it had advanced money on them. It was for an overdraft on various loans. From the evidence of others, Mr. Masfen satisfied himself before bringing the claim into Court that it was a fair one.

To Mr. Kirkwood, in a lengthy cross-examination, Mr. Masfen replied to the effect that he had not seen an accurate list of the goods in the godown. He saw the Chinaman's approximate list. His shroff made out a detailed list after the fire. He had not seen a detailed list before the fire. Mr. Bohm supplied him with a periodical list for despatch to London, which were the only lists he kept personally. Witness believed that he first advanced on goods in that godown in July last year. He recollected the policy No. 1,514, for \$10,000, dated 31st December, 1881. (Policy No. 1,513 was shown witness, who admitted having had a lien on that policy). He had no list of the goods in the godown in December, 1881. He thought the keys were in the custody of the Bank from December, 1881, to the occurrence of the fire. He always kept the keys of any godown that contained goods on which money was advanced to Mr. Bohm. All transfers of such goods from one godown to another were made at the request of Mr. Bohm. Witness did not recollect what goods were transferred to No. 255c on the 31st May, 1882, to cause the change in the risk, and was not aware that there were goods in that godown belonging to other people. If there were such goods, Bohm ought to have notified the fact or he would have been much to blame. He certainly had not with witness' consent the control of the keys at any time. It would not be necessarily surprising that in July, 1882, other people went into the godown and measured goods on which they had a lien. Witness was away at the time, but was not told that other people had goods in that godown. Other goods were taken, not against special loans, but against current overdrafts. The proof that they were so taken is that witness had possession. If the keys were left in the possession of Mr. Bohm, he (Mr. Masfen) should consider the Bank people very much to blame. The Chinese who was examined did not make a report to witness on the 19th of August, when he took charge. It was a matter for the Jury to decide to whom the coal belonged that was sold to Mr. McArthur. Mr. Masfen, in conclusion, declined to express any opinion about Mr. Bohm, or to say what he thought was the general opinion current in Yokohama about that gentleman.

Re-examined by Mr. Lowder, Mr. Masfen stated that the coal spoken of was under mortgage to the Bank at the time of the fire. The Insurance policy proved that the goods were in the godown in December, 1881, and if so, he must have had the key.

A. Davis, sworn, said he was a chemist: that as to the length of time it would take to burn the whiskey would depend on the state of the doors and how much oxygen got into the godown. It was quite possible that, with a strong heat for some hours, the bottles would melt; but it was impossible that there should be no traces of the molten glass afterwards.

L. C. Masfen, recalled, acknowledged that the policy for \$10,000 was in his possession on 31st May, 1882, when \$3,000 was transferred to godown No. 255c. He could not say whether \$3,000 worth of coal were stored there that day; but no doubt it was transferred on the application of Mr. Bohm.

P. Burnside, sworn, stated that he was in the employ of Messrs. Busch, Schraub, & Co. who dealt in rope, oil, paints, and such like stores. He said that the following were about the market values of the undermentioned articles in the middle of

March last, viz.:—paint oil \$5.50 per drum, wire rope 7½ cents per lb., galvanized spikes 12 to 13 cents per lb., best charcoal made wire rope would be about 15 cents per lb., Manila rope, European, 13½ cents per lb., Santa Mesa 17 cents per lb., Russian rope about 20 cents per lb., oakum machine picked 12 cents per lb., German rope 16 cents per lb., rosin \$3.50 per picul. He could not give the prices of coffee, salt, marmalade, beer and vinegar. The prices are current quotations. He had made sales at both lower and higher prices. The price of spikes is not so much regulated by the length as they are generally averaged. He had not sold Russian rope lately, and had not heard of any sales having been made, but should think 20 cents per lb. a fair price.

Mr. Lowder here put in the correspondence, and the enclosures in the correspondence read in the morning as exhibit No. 1.

J. P. Bohm, sworn, stated that, after the fire he made a list of the goods that were in the godown at the time of the fire. He was a dealer in lumber, ship's stores, &c., and was under advances to the Bank at the time of the fire to about the amount of \$46,000, of which the contents of godown No. 255c were part security. He drew out the statement (shown) as to the contents of the godown and the statement of the value of the balance of the *Peiho* cargo is in his handwriting. He remembered being called upon to give further details as to the lumber, and wrote to Mr. Masfen (letter produced and recognized.) He said the information in the letter was correct, as was also the statement of the other goods in the godown. The number of tins of paint he was not certain about, the shark's oil would be rather more than estimated. He could not produce a statement as to the number of pieces of lumber, as the book in which the pieces were marked was kept in the godown, but by his books he could tell the number of superficial feet, the feet only being entered in the books. The market price of cement on 19th March would be about \$5.00, but he had reduced the claim to \$4.50 per cask. Paint oil was worth about \$6.00 per gallon. For wire rope he used to charge 10 cents per lb., and thought it a fair value. Galvanized spikes he valued at 10 cents per lb., they were small ones: coffee \$22.00 per picul, cigars \$20.00 per case, but he had only charged \$18.00, Manila rope 17½ cents per lb., Russian rope 16 cents per lb., oakum 10 to 12 cents per lb., paint, white zinc \$12.00 per cwt., salt \$35 per ton: it was special salt for curing furs. Marmalade was \$5.00 per dozen, vinegar 50 cents per gallon. For the whiskey the market value would be from \$6 to \$7 per dozen, beer \$3.00 per case, German rope 16 cents per lb., mixed paint \$10.00 per cwt. Of shark oil he could not tell the value. Rosin was \$13.00 per cask, shingles, \$2.25 per bundle, or about \$9.00 per million, deck planking for first quality 7 cents per foot, tongued and grooved 5 cents per foot for narrow, clapboard 6 cents per foot, rough lumber of extra lengths 5 cents per foot, ordinary rough lumber 4½ cents per foot. Spars were sold according to size and quality. He considered the amount put down for spars less than their actual market value. Australian coal was worth about \$9.00 per ton. He further stated that the list of deliveries of lumber was made up in his office and that he checked it. The two items of deck planks were actually sold at 7 cents per foot. The actual measurement of lumber is generally in excess of the invoice, as the wholesale trade does not calculate inches, and also, if an order is given for certain lengths and the lumber measures slightly more, it is invoiced according to the order and the extra is not charged for.

This finished Mr. Lowder's examination, and the Court adjourned till 10 a.m. next morning.

WEDNESDAY, 12TH SEPTEMBER, 1883.

On the opening of the Court, Mr. Lowder asked permission, which was granted, to put another question to Mr. Bohm, who, in reply, stated that the lumber was delivered from Godowns 255c and 256.

Mr. Bohm was further cross-examined by Mr. Kirkwood. He said that he leased the godown 255c from sometime in 1881. He kept the goods contained there since December, 1881, insured with Messrs. Jardine, Matheson & Co. He was not sure whether the particular goods referred to were insured in any other company. (Exhibit E was produced by Mr. Kirkwood, policy No. 1513, Dec. 31, 1881, Hongkong Fire Insurance Co.) He had

no particular book showing where his goods were stored during the last seven years. (To the Court witness said if particular goods were named he could say in what godown they were put.) He would refer to his books and see if there was any entry, if that were permitted.

Here some discussion ensued between Court and Counsel as to notice given about books to be produced, the Court deciding that no such notice had been officially given.

Witness resumed, after referring to a letter from the Chartered Mercantile Bank. He said that, on the 19th of July, 1882, he had insurance for \$3,500 on goods in godown 255c. The Hongkong and Shanghai Bank had held one policy. He did not inform Mr. Masfen of the fact. He did not think it necessary, as he himself held the keys of the godown for the Chartered Mercantile Bank up till the end of August, 1882, when the Bank comptroller took charge. Mr. Masfen's statement that the Bank held the keys before that was incorrect. On the 19th of July there were seven or eight hundred tons of coal, mortgaged to the Hongkong and Shanghai Bank, and no more, in godown 255c. The coal had been in that godown since May or June—he thought the latter month. (A policy No. 1591, was here produced by Mr. Kirkwood, covered by a letter, written under witness's instruction, to Messrs. Jardine, Matheson, & Co., announcing the transfer of coal therein assured to godown No. 255c, and was admitted by witness.) That insurance covered coal mortgaged to the Hongkong and Shanghai Bank, the coal being the same as was in the godown on the 19th of July. He had approximately, besides, 517 tons of coal during part of the same period in the same godown. This parcel was taken to the godown between the 27th of May and the following Monday, in pursuance of a promise given to Mr. Masfen, the coal being mortgaged to the Chartered Mercantile Bank. Thus, there were about 517 tons in charge of that Bank, and between seven and eight hundred tons mortgaged to the Hongkong and Shanghai Bank, in all more than twelve hundred tons, in the godown. In the interval all that was pledged to the former Bank, but none pledged to the latter, was taken out of the godown. Lumber *ex-Peiho* was in the godown, but was transferred on the arrival of the *Black Diamond*, belonging to witness, with a cargo of about 300,000 feet of lumber, 50 spars, and 179,000 shingles, and 100 cases of salmon. The freight charged was \$12,000. Witness charged the freight to himself: the cargo was his. Exclusive of the spars and shingles, the freight would come to about \$39 per thousand feet. Sometimes the price is \$30. The freight on lumber *ex MacNeil* was very much less, about \$16 or \$17; but that vessel had arrived here two or three years ago, and would have had to be rebuilt before it could carry such a cargo as the *Black Diamond* could. Rates had increased last year from the previous year. The *Black Diamond's* tonnage was 601. The rate of interest here was about 10 per cent. Sales of lumber at 4 cents per foot would not bring a profit of 25 per cent.; 4½ cents might with rapid sale. Some of the cargo witness had sold at four cents. Some at 4½, and two parcels only at 7 cents, in all sustaining a loss. Witness was questioned at some length on the particulars of his losses from the fire at No. 255c, as furnished by the Chartered Mercantile Bank to Messrs. Jardine, Matheson & Co., and referred to in his evidence in chief. The cement in the warehouse was in good order, witness explaining how it was the part of a consignment of 200 cases on commission, and 200 of his own property.

After questioning witness as to the value of shingles which he had placed at \$2.25 and 50 on. Mr. Kirkwood returned to the subject of the coal destroyed.

Witness said that before the quantity of seven or eight hundred tons was transferred on the 31st of December, 1881, it had been stored in Benton. At that time there was pledged to the Hongkong and Shanghai Bank an amount of 1,100 tons. He had no trouble about it with the Bank, as he had repaid his advances. A long course of questioning and cautious replies, or replies which were not at all to the point, followed between counsel and Mr. Bohm as to the discrepancy of three hundred tons between the quality at Benton and that actually transferred to No. 255, the witness ultimately admitting that if the whole had not been

transferred the balance must have been sold. He had not his books with him, and no delivery order book had been kept at Benton. Mr. Clark was supposed to hold the keys for the Hongkong and Shanghai Bank, but witness really held them, sometimes giving them up as a matter of form. He did not necessarily ask the Bank's authority to sell coal. He reported sales and paid in the money when collected. After some opportunity from Counsel, Mr. Bohm admitted that Mr. Clark might have pressed him upon several occasions for the keys, and that he, witness, might have put him off with some excuses. Witness remembered being in Miyanosita in July, 1882, and his return before the fire at his house on the Bluff in that month. He was constantly travelling backwards and forward, and often received while in the country messages to return to Yokohama on urgent business. It was such a telegram that brought him home before the Bluff fire. He had an interview with Mr. R. Clark the evening of his arrival. Clark told him that he was anxious about what he thought to be the disappearance of coal from the godown, and had had it measured, with the result that there was only 350 tons. Witness did not remember whether he had asked Clark if the latter had informed Mr. J. Walter of the deficiency. As regards the policies on the Bluff property, he thought Mr. Kirkwood held that on the house, he himself had one on the effects, and to Mr. Clark he had transferred one on the furniture and other things in the house as "general security" for what he owed that gentleman. Witness could not be brought to admit that the policy was made over to cover any deficiency in the coal. People had been able to see him the day after the fire, although he had been hurt. He saw several people, and was in his office in the town during the following day. Some amusement was caused in Court by witness' naive admission that there were ten keys to the godown which has ten doors, and that he held eight keys, one each for as many doors, on behalf of the Chartered Mercantile Bank, while Mr. Clark held two, one each for two doors on behalf of the Hongkong and Shanghai Bank. Mr. Clark was only appointed to look after the "special heap" of coal, which had been mortgaged to the Hongkong and Shanghai Bank.

The Court adjourned at a quarter-past noon until 2 p.m.

On the hearing being resumed, Mr. Kirkwood continued his cross-examination of Mr. Bohm, who said that, after the fire on the Bluff, Clark held two keys of the godown only, witness holding the balance, and occasionally having access to the other two. The reason of his borrowing them was to get out lumber which could not be got out through the other doors. Two keys were given Clark for his convenience in charge of the coal. When witness had them he finally detained them. When the keys were handed over to the Chartered Mercantile Bank the coal was not under mortgage to Clark, whose consent was obtained to their surrender. At that time Clark held all the documents. Witness was not aware that, when Clark discovered that the keys had been given up, he forced him to a settlement in the German Consulate under threat of proceedings, nor does he remember Clark reproaching him with giving the Bank keys securing goods belonging to Clark. The arrangement with Clark was made about the 18th of August, and subsequently witness pledged a number of other skins in lieu of the coal, the skins being put into Clark's own godown, witness having second sets of locks put on the doors. It is German law that there should in such cases be two sets of keys. That is it is discretionary. As regarded the Chartered Mercantile Bank's mortgage witness did not think it necessary to have double sets of locks. Witness had to work in the godown with the skins, and had access solely to one door, with Clark's consent. (It will be understood that the arrangement was supposed to be that each man should only be able to get in without the other.) Witness remembered that he did not get Clark's consent to this duplicate contrivance. He did not think it necessary, as Clark might have had the keys at any time. He ultimately sold the cement referred to, as good cement, to Mr. Forbes.

Re-examined by Mr. Lowder—The Hongkong Fire Insurance Company made no objection to the transfer of the risk asked for in April, 1882. At

the burning of the godown there was much more lumber than in Dec. 81. As regards the freight by the *Black Diamond* from Puget Sound he had been offered \$30 p. 1,000 cubic feet by Messrs. Fraser & Co., at the end of 1881. He had been offered by Mr. E. B. Watson the same year to go in on joint account for a similar freight at \$27. Neither offer was accepted. At Mr. Lowder's request, witness here went through his godown order-book marking in prices which had been left blank in the rate column, and making and correcting two errors of calculation. The item represented actual sales made by him. Other papers than those produced in Court as having been sent by him to the Bank or the Bank's lawyers had been sent by him—a bill of lading for the cement in question, some letters and draft agreements, and the *Black Diamond's* bill of lading for her cargo from Burrard's Inlet. Witness repeated his evidence of the morning about the cement. He had claimed for 179 damaged casks out of the consignment of 400. The Mitsui Bussan Kaisha had it surveyed and he was allowed \$283, or \$10 less than the freight he had to pay. These casks were stored, and are still, in godown on 261. Up to the middle of 1882 witness had always had pleasant dealings with the Hongkong and Shanghai Bank. Once before that time they took the keys of a godown containing their securities and kept them for one day, as the Bank's people said, "for form's sake." Clark was the Bank's custodian of the coal by mutual agreement between the three parties. Witness was not requested by the Bank to hand over all the keys to Mr. Clark. Had he been so requested he would have refused, having goods in the godown partly his own and partly mortgaged to another Bank. There was a quarrel between him and Clark about the alleged deficiency in the coal. He made the transfer of property to Mr. Clark because he was under an obligation to him. To his knowledge none of the coal pledged to the Hongkong and Shanghai Bank was taken out of godown 255C. He owed Mr. Clark \$13,000 or \$14,000. The first amount lent was some four or five thousand without security. Since August witness had not once had the key held by the Chartered Mercantile Bank, nor access to the godown without being accompanied by an officer of the Bank. Witness described the process by which, under this system, he effected sales and gave delivery. He was present at the fire on 255C after the roof had fallen in. (Mr. Lowder was here stopped by the Court, as this matter had not been touched in cross examination.)

Mr. Bohm asked leave to correct his statement as to the number of doors in the godown. There were eight doors and two gates, with of course ten keys.

Mr. Masfen, called by Mr. Lowder, wished to correct a statement he made yesterday to the effect that the Bank had general custody of the keys before the 19th of August. He had now to say that they had not been in the Bank's possession before the 19th of August.

In answer to Mr. Kirkwood, Mr. Masfen stated that he had much the same security after, as before, the 19th of August. The lien he had upon the goods was the letter of hypothecation.

Mr. Kirkwood asked that they be produced; as they had not all been put into Court. After some conversation Mr. Masfen was asked and promised to produce all documents relating to the goods in question running on the 19th of August.

Mr. Charles Wiggins, a member of the firm of Messrs. Carroll & Co., was next examined. He deposed that the average price of best paint white zinc in March last was \$12 per cwt.: white lead from \$10 to \$10½, according to quality, paint oil \$5 a drum of 5 gals.: wire rigging 10 cents per lb.: galvanized spikes 7 to 8 cents: Santa Mesa Manila rope 17½ cents: best Russian 15 cents: oakum 10 to 14 cents: rock salt \$25 per ton: vinegar 50 cents a gallon: Scotch whiskey about \$8 per case: beer \$10½ per cask of 4 dozen (quarts): German rope 10 cents per lb.: medium rosin \$3 per piecl.

To Mr. Kirkwood, witness admitted that the prices varied according to quality. Very common paint might be sold as low as \$6: the very best at \$14. English Manila rope might be sold at 13 cents. Good rope, properly stored, would not deteriorate in two or three years. Keeping would not be likely to affect Russian or German

rope. A keg of rosin would be worth \$7 or \$8. Mr. Wiggins gave other expert testimony on the various articles enumerated in the godown list.

Re-examined by Mr. Lowder, Mr. Wiggins said that a keg or cask of rosin at \$13 would be dear, even if the material were of superior quality: 40 casks of vinegar for \$400 would be cheap.

Mr. Julius Helm remembered carting cement for Mr. Bohm in Sept., 1882. It arrived from London in the *Kumusaka Maru* to the extent of 400 casks. He carted 200 to 255C, on separate days, and the others later to Mr. Clark's godown, after it had remained for some time on the tatoba.

In cross-examination, Mr. Helm said that the casks were arranged in two lots, and that by Mr. Bohm's direction he took two hundred good casks to 255C, leaving the bad. He did not think the matter of much importance, particularly as Mr. Clark told him to collect the charges from Mr. Bohm.

Mr. Thomas Rose, dealer in Marine Stores, gave the average price in March last of cement at \$1.50 (about) per cask: oakum 8 to 10 cents: white lead \$9.50 per cwt.: rosin \$5 per cask: assorted paints from \$7.50 to \$10 per cwt.: galvanized spikes (the largest) 8 to 9 cents per lb.: 7 and 7½ cents would be very reasonable. Cement if hardened by damp is useless.

Kawaishi, a Japanese dealer, deposed that the day before the fire at 255C he went to Mr. Bohm's place and obtained a sample of cement which was good. Mr. Bohm asked \$5 a cask. Witness made no offer but intended to do so, as the stuff was good. He bought the whole 200 casks salvaged at the auction. It was damaged by water, but he made it up again. He had many dealings in the article.

Mr. Louis Stornebrink, a Marine Engineer, said that after the fire he had been called in to estimate about the amount of coal burned. He did so in square feet; 10 lbs. per square foot for each hour of burning, and the fire was burning about five hours. It would have burned very quickly because it was lumpy.

The Court adjourned at five o'clock till ten a.m. next morning.

THURSDAY, 13TH SEPTEMBER, 1883.

Mr. Lowder asked leave to recall Mr. Bohm, who stated that he had measured the coal left in the godown after the fire, and found the stack to be 15 ft. by 30 ft. by 10 ft. and a fraction. That would expose a surface of more than 3,100 ft. to the fire. Supposing ten feet of coal were burned per hour over that surface, 13½ tons per hour would be consumed or in 5 hours 67½ tons.

Cross-examined by Mr. Kirkwood, witness referred to the report that the fire had lasted four or five hours. His calculation was on his measurement. With great heat it would be impossible to walk on the mass. He did not take a note of how many broken bottles were left in the debris; nor did he know what space the burnt rope occupied; nor did he count the tins of paint. If the paint contents were destroyed the tins would remain. Drums having contained oil, or traces of them, would likewise remain.

Mr. J. Carst deposed that he been a resident of Yokohama since 1865, and was connected with shipping. He took all the cargo out of the *Black Diamond* last year, and landed it from the Creek near the Subic Gardens. He had seen many fires in Yokohama. In this case he was not present, but saw the godown after the fire. There is always a good deal of thieving going on at fires. At No. 255C he observed broken bottles among the debris but did not know how many bottles had been broken.

To Mr. Kirkwood witness said that the burned godown was close to another, but he did not know if there was a fence between. Many people, how many he did not know, pass during business hours. The night of the fire was wet. So many fires have occurred that he was disgusted with them, and on this occasion did not turn out, though it was not the rain that kept him at home. He did not see glass in a molten mass, nor did he take special notice of the condition of the burned rope. He did see a lot of rope scattered about and covered with spars and other things. A ten of rope would cover about six feet square space.

Mr. Masfen produced the documents demanded yesterday by Mr. Kirkwood, witness believing that they covered everything in the Bank's custody at

the time of the fire. There were a promissory note and a letter of hypothecation accompanied by a general godown order. The balance of the goods enumerated, after account of deliveries, remained in the godown. The hypothecation paper stated that all the goods but the coals were stored in No. 114. He had only the Chinaman's testimony as to what goods were in No. 255c. Witness is not in the habit of keeping tally of all the pots of marmalade stored in warehouses on whose contents he has a lien.

His Honor remarked that the documents asked for by the defence were letters of hypothecation on goods stored in godown 255c, which this letter was not.

Mr. Masfen remarked that he had been told by Mr. Todd that the goods were removed from 114 to 255c. Witness had possession of the keys. What security he had on the *Peiho* lumber was Mr. Bohm's cheque, cashed and placed to the debit of his current account. Mr. Bohm used to furnish periodically a list of goods under lien to the Bank. He did not generally state the godowns in which the merchandise was stored.

Mr. Lowder said that he had only one more witness to call, and he had been obliged to go to Tokyo, but would be in Yokohama this afternoon. Mr. Johnstone of the Mitsu Bishi Company would then testify as to the quality and value of the timber purchased by him for the Company from Mr. Bohm.

Mr. Kirkwood then addressed the Court stating the case for the defence. He proceeded, generally, to outline the defence, contending that the plaintiff's case rested solely upon the statement furnished by Mr. Bohm and the list supplied by the Chinaman who had been in charge of the godown. It would be found that there were great discrepancies between Mr. Bohm's statement of what was in the godown previous to the fire, and what was shown by experts to have been actually there. The only articles of which correct account had been rendered as to quantity were the cement, spikes, and spars and this for the obvious reason that they were articles that could not be destroyed. Meanwhile the cement had been damaged before the fire and the claim for the other two things was excessive, while the statement of the other merchandise in the godown was grossly exaggerated. This was the general line of Mr. Kirkwood's argument. Messrs. Jardine, Matheson, & Co. had paid \$2,600, the amount realized from the salvage, to Mr. Bohm, and had now deposited \$15,000 in Court. The jury would have to find whether that was not the full value of the loss sustained, or rather whether it was not far more than the loss sustained. Of the 1,100 tons of coal mortgaged by Bohm to the Bank for \$10,000 in January only 350 tons were left in July. The learned Counsel alluded to Mr. Bohm's connection with Clark in the latter's capacity as custodian of the coal, Clark's finally forcing him to a settlement, the burning of Bohm's house on the Bluff, and payment of mortgages out of the proceeds of the insurances; and stigmatised other transactions on Bohm's part with Clark, particularly that of the cement as fraudulent.

Mr. Kirkwood then called Mr. W. B. Walter, Manager of Messrs. Jardine, Matheson, & Co.'s local branch, Agents for the Hongkong Fire Insurance Company, who said he recollected the fire which destroyed godown 155c. on the 16th of March. He declined to satisfy the claim on account of that fire because he thought the circumstances suspicious, the claim exaggerated, and no proper proof of loss adduced. Mr. Masfen had also stated that he considered Mr. Bohm, who was proving the loss, to be a thief, who would "do" him or do "us" (J. M. & Co.), but would probably prefer to do "us," as he had still something to hope for from the Bank in business. The Bank gave no proof whatever of loss except statements and documents furnished by Mr. Bohm. Mr. Masfen had said that personally he knew nothing of the contents of the godown, and that the only person who did was a Chinaman, a friend of Jardine, Matheson, & Co.'s compradore. Witness saw that Chinaman, who said he had had nothing to do with the godown until the 10th of August, 1881, since when he had been employed in delivering cargo from 255 to 262. He said also that he had not made a complete list. Of timber he had taken Bohm's word for so many pieces. No list

was sent to witness, who had not seen any other list, except Mr. Bohm's, until this case came on. After the fire witness arranged with several experts to report upon the salvage, and tried to arrive at an estimate of the quantity of timber that should have been in the place before the fire, judging from what remained. In the letter produced, dated in March, Mr. Masfen promised to furnish details of the contents of the godown through Mr. Bohm. The expert's reports when furnished did not agree with Mr. Bohm's statement, and witness required further proof of loss. His previous experience of Mr. Bohm had been unsatisfactory, and he had heard that Mr. Bohm had hypothecated goods with the Hongkong and Shanghai Bank. He would not have insured miscellaneous property for Mr. Bohm. At the end of 1881 he had ordered in the office that no policies except for coal should be issued to Mr. Bohm. The reason for this precaution was that, in the case of a stack of coal catching fire it would burn slowly, and there would be considerable salvage. The loss should be comparatively small. He had paid the proceeds of the salvage to Mr. Bohm, and \$15,000 into Court. The policy of Insurance Companies (the Hongkong Fire among others) was to be liberal in the settlement of claims. Grave suspicion is necessary to cause any delay in adjustment, a policy which in Yokohama has perhaps of late years been carried to excess, where, he believes, several fires have been the result of incendiaryism. In fact he had told Mr. Masfen that, if that gentleman would supply, on behalf of the Bank, some reliable evidence apart from Mr. Bohm's, as to the accuracy of the lists of the contents of the godowns, he would pay up to the full extent of the assigned value, on the part of the Company. No such evidence had been tendered.

At noon the Court adjourned until 1.30 p.m.

On the Court resuming, Mr. W. B. Walter was cross-examined by Mr. Lowder. He said that, though prior to the fire the Bank Agent had visited him and spoken to him about the goods, he would not necessarily infer that the property was the Bank's. He might think that it was in charge of the Bank. He knew prior to the fire that the godown was not Mr. Bohm's, although he may have known that the latter had property in the godown. Witness told Mr. Masfen that the amount of lumber was stated in excess. As for the cement, he had told Mr. Masfen that he would require very full particulars. He had entered into particulars with Mr. Masfen as to the exaggeration in the claim. He had spoken of lumber, cement, and, he was sure, whisky: other things also. His first offer to Mr. Masfen was \$14,000. He did not go through the list item by item. Mr. Masfen had frequently agreed that the claim was probably exaggerated, and told him that he would assist him in every way in paying only what was fair, and would look into the amount of Bohm's indebtedness to the Bank, and the value of other securities, and do his best to get witness's claim settled for the \$14,000 proposed. Mr. Masfen said, as witness deposed this morning, that Bohm was "a thief." The exact words were that he was "a — thief." Mr. Masfen went on to say that Bohm would rather "do" Jardine, Matheson, & Co., than the Bank, but that he had future expectations of business from the Bank. He did not add that his (Masfen's) claim was a just one, and he meant to press it. That could hardly have been, as the expression alluded to was used at one of the earliest interviews between him and Masfen after the fire. Nor did witness remember that Mr. Masfen ever said that he meant to press his claim. All the documents referred to (produced) were furnished at witness's request, with the exception of Mr. Watt's statement (made as the result of an agreement between witness and Mr. Masfen) and a bill of lading from *Black Diamond*, about which he was not sure, and Mr. Bohm's statement which was only sent in by Mr. Masfen as a proof of loss. (Witness took some time in examining the documents, but could make no other statement than the foregoing). As for the affirmation made and sealed by Bohm before the German Consul, it was the result of a conversation between himself and Mr. Masfen, he (witness) having heard from the Consul that it was in accordance with German law to take a loser's oath or affirmation in support of claims made. When the affirmation was sent to witness he did not, as far as was aware, write to tell Mr. Masfen that it was unsatisfactory. He

had previously mentioned that any mere unsupported statement of Mr. Bohm's would be unsatisfactory. It was very shortly after the fire that Mr. Masfen advised him to see "the Chinaman." The conversation was in Masfen's own office. The Chinaman was said to be a friend of the Bank's compradore, and was understood by witness to be not the custodian of the goods, but the man who had charge of receipts and deliveries. Witness believed he had asked for Mr. Bohm's books. He had not demanded the Chinaman's godown records: they would have been useless—written in Chinese. He communicated verbally, not in writing, the result of the reports of the experts about the debris in the godown after the fire, including Mr. Watt's statement. When telling Mr. Masfen that he would require further and full particulars of the loss, witness did not specify what particulars he required, Mr. Masfen having previously stated that he could give none but what were supplied by Bohm, and the Chinaman. Jardine, Matheson and Co. in times past have had fairly large dealings with Mr. Bohm, and were very glad to get rid of him. He was never, to witness's knowledge, in their debt without security. He eventually paid, but there was great difficulty in getting payment. He paid a fair rate of interest. This morning witness had stated that he had directed his clerks to ensure nothing but coal for Mr. Bohm. It would have been out of his way to tell his customers that he had given such order. He did not warn those taking policies from him that he would not insure miscellaneous property standing in the name of Mr. Bohm after the last renewal of a policy on No. 255. Before the fire he found fault with one of his clerks because a policy had been renewed on goods held by Mr. Bohm, but in what godown they were he did not know. Possibly he may have pointed out to Mr. Masfen that if the question of the renewal of one of the policies on godown 255c had been submitted to him he would have prohibited it. He had never taken possession of the salvage at 255c. He had a watchman looking after the debris. The fire-brigade had a policeman from the Kencho. He thought that Mr. Masfen had a watchman also. (Letter produced from Mr. Masfen dated 16th, asking witness to look after the property on account of those concerned). He put a man in charge (a Chinaman) immediately after receipt of the letter. From the time of the fire the place was never left unguarded by the police. In the Auctioneer's catalogue, is "No. 41, Hoops and Staves." Mr. Bourne made his own list by witness's direction. If he had stated the contrary he had stated what was incorrect. (Mr. Lowder asked Mr. Walter to look up his letter-book to see if there was no letter from Jardine, Matheson & Co. to Mr. Bourne, enclosing a list of salvage articles to be sold. The Court supported Mr. Lowder). After working up values as far as he could and making liberal allowances he offered a lump sum of \$14,000, in addition to the salvage money \$2,600. That offer was subsequently increased to \$17,000, which he considered to be excessive, to avoid proceedings. At first Mr. Masfen treated with perfect candor: latterly he was by no means frank, having made an affidavit on a private conversation with witness. That was subsequent to the filing of the petition.

Re-examined—The Chinaman in charge of the godown could give particulars of receipts and deliveries from a godown-book kept in Chinese. He could not give particulars of what was in the godown when he took charge. There was then only Mr. Bohm to fall back upon. No further particulars than those given in the documents produced were furnished as to the goods in the godown; no list of prices at which merchandise had been sold, except lumber, was supplied. Witness was told that there had been no sales of other goods. Later he received particulars of cement, vinegar, and so forth. He thought they referred to the whole parcels. He received no particulars as to other contents of the godown. Mr. Masfen had said that he could not accept witness's offer because Mr. Bohm refused all compromise. No particulars of *Peiho* cargo were furnished. Witness had a policy on some coal and lumber for Mr. Bohm on the creek. He considered that he had been acting in the affair of the settlement of the claim after the fire both for Mr. Masfen and himself.

Mr. John Walter, Manager of the Hongkong and Shanghai Bank's branch, being sworn, stated that

he recollected, in January, 1882, Mr. Bohm having coal in godowns at Benten.

Here Mr. Lowder remarked, and the Judge concurred, that only testimony relevant to the case should be given. Mr. Kirkwood answered that the question of character was part of the evidence in this instance; and the examination was continued.

Mr. John Walter—The Bank advanced \$8,000 on eleven hundred tons of coal, on the condition that it should be stored in charge of a disinterested third party, and accepted Mr. Robert Clark as its custodian. Delivery should be only on the Bank's order. The Bank gave no authority for the removal of any coal from the Benten yard to No. 255c. There was no trouble until April, when Mr. Clark informed witness that there was a considerable deficiency, and that he thought Mr. Bohm had stolen the coal. It was supposed to have been stored in the original sites at Benten and 255c. Witness ordered that the coal should be measured. Captain Martin measured it (copy of measurement produced) and found 383 tons of Australian coal, worth in godown \$7 per ton, in 255c, and none at Benten. At that time the loan had not been in any way reduced.

The Court here asked Mr. Kirkwood what this had to do with the case. Counsel replied that he must tender testimony as to character. Asked for his authority, the learned Counsel failed to cite one, and was stopped in this line of questioning by the Court.

Mr. Walter said that he had not ordered any delivery of coal.

To Mr. Lowder, witness said that he had taken a letter of hypothecation of the coal from Mr. Bohm. It is always the Bank's custom to have such documents except in cases of small temporary advances on current account where there is a general letter of hypothecation. Supposing that the Bank had possession, either in its own godowns, or elsewhere in charge of a custodian by it appointed, of merchandise, it would consider that it had a lien.

Re-examined, witness said that he would not advance on goods in an outside godown where he knew that goods belonging to any one else than the hypothecator were stored.

Mr. James Johnstone was next called by Mr. Lowder for the plaintiff. He said he had been in the habit of purchasing lumber from Mr. Bohm. A portion was delivered out of the godown destroyed by fire and a portion out of the adjoining godown. It was of fair quality. The fair price of deck-planking in March last was about 6 cts. per superficial foot; for spars 16 inches square 8 to 8½ cts.

To Mr. Kirkwood, witness explained that the prices varied according to the length of the spar from 7 to 9 cts. Common rough lumber is worth from 4 to 4½ cts. Witness had seen quotations in February last at less than 4 cts. He would not purchase at that price.

To Mr. Lowder—The reason was that the timber was not good enough.

Mr. James Martin, Junior, deposed that a document shown him was a correct copy of a report of his measurement of coal at the request of the Manager of the Hongkong and Shanghai Bank. He found in 255c, 283 tons; in the enclosure indicated to him at Benten he found none. There were indications that coal had been stacked there—how long ago he couldn't say. In March last Australian coal was worth probably \$7 or \$8 per ton.

To Mr. Lowder, witness said that he had about 500 tons of Australian coal in March last. Selling it on board ship he would have charged \$8½ per ton in small quantities, on the Bluff \$9 to \$9½. At the godown it would be worth about \$8 wholesale. He was certain that he had made no mistake in his measurement. He had measured twice.

To Mr. Kirkwood—In March last 280 tons of Australian coal taken from witness's godown would have been sold at \$8.00.

Robert Clark acknowledged his signature to a document produced, dated Yokohama, 17 January, 1882, being a storage receipt for 1,100 tons of Australian coal, valued at \$10,000, taken charge of by him on behalf of the Hongkong and Shanghai Bank, by whose manager he was appointed. He received the keys. Part was subsequently removed from Benten to 255c. (Paper produced.) That relates to half of the whole quantity. The document is in the handwriting of Mr. Batavus, Mr. Bohm's clerk. Witness did not keep the keys

of the place at Benten all the time between January and April. Mr. Bohm had them when he said he wanted to repair the fence. After April Mr. Bohm had the keys of 255c to put the coal in. He only put half in. Witness often asked him for the keys, but was answered that the coal had not all been removed. The last answer was that Bohm wanted the keys to effect an insurance. Subsequently, witness passing by Benten found was no coal left in the Benten enclosure. There were marks of coal having been removed; but grass was growing where coal had been stored. Later he went into godown 255c, and saw the same quantity of coal as was first put in. He was present when Captain Martin measured the contents. He had never authorised Mr. Bohm to take any of the coal either thence or from Benten. When told of the deficiency, Bohm said "there ought to be more." The Bank told witness that he was responsible for the amount deficient—worth about \$7,000. The balance was then hypothecated by Bohm to witness and so remained for three or four months. Mr. Clark did not know that any part of a shipment of cement to his order had been changed by Mr. Bohm for any other part.

Mr. George Whitfield, Engineer, of 69, Yokohama, had been in business in Japan as part proprietor of the Yokohama Iron Works for seventeen years. He had visited the ruins of 255c a few days after the fire. His principal object was to examine the cement, of which he thought there were about 200 barrels. It was damaged, and he should think long before the fire occurred. The reason of this belief was that the cement was lumpy, with none of the wood-work of the barrels adhering. Galvanized wire rope in a fire could only lose the weight of the zinc covering, about 5 per cent., and then only if the fire were intense enough to melt zinc. Thin wood planks might be destroyed entirely in a fire of three or four hours duration. As regards the timber in godown 255c, he thought it might have lost about 20 per cent. during the fire.

Cross-examined by Mr. Lowder, witness admitted that cement was a delicate article; but insisted that that in question, from its appearance and the way it was stacked, "he could stake his existence," has been damaged before the fire. Mr. Lowder failed to shake Mr. Whitfield's evidence in this respect.

To Mr. Kirkwood—The best cement is the longest setting. Witness thought it would take a day for a caskful of cement to "set" after being played upon by water.

The Court adjourned till 10 o'clock next morning.

FRIDAY, 14TH SEPTEMBER, 1883.

John Lindsley, of the firm of Frazer & Co., was called by Mr. Kirkwood. He said that he had made no offer to Mr. Bohm for a freight from Puget Sound to Yokohama for lumber at \$30 per 1,000 ft. He offered \$30 for the same quantity from Burrard's Inlet to Shanghai provided the ship was a good risk. Burrard's Inlet is a port in Puget Sound. That would be the further voyage of the two—about ten days longer. Whether the ship was a good risk or not was left to the decision of Mr. MacArthur who did not give a satisfactory report. In March last rough lumber was selling at 38/10 cents to 5 cents per foot. Five cents would be for plain flooring tongued and grooved. This is a very small market for lumber. Witness could not sell any quantity last year at the prices quoted: the reason perhaps was that the sizes were not suitable.

To Mr. Lowder—Witness could not say whether the difference of distance between Puget Sound and Shanghai, and Puget Sound and Yokohama, made any difference to the charter. The firm wished to get a fair offer from Mr. Bohm to Shanghai for a charter. Probably he had offered Mr. Bohm some lumber at 4.30 cents instead of 4½ cents if he would take the lot.

To Mr. Kirkwood—He did not recollect definitely ever making such an offer, nor the time when it might have been made.

Mr. Alexander Clark said to Mr. Kirkwood that he recollected the fire at 255c. Shortly before that he had seen Mr. Bohm in the neighbourhood of the godown.

Mr. Lowder objected to the examination.

Mr. Kirkwood said that he was going to prove by this witness that Mr. Bohm had a key with which he let himself into the compound and went

to the door of the godown at the time when he had said that the keys were in the custody of the Bank.

His Honor said that Mr. Kirkwood ought not to have called this witness. The line pursued was only calculated to prejudice the character of Mr. Bohm in the eyes of the jury.

Witness, allowed to proceed, said that he saw Mr. Bohm go towards the godown, which was then fenced round.

Mr. Lowder objected.

To the Court witness said that he saw Mr. Bohm take a key from his pocket and unlock the outer gate; but did not see any other key in his hand.

Mr. Kirkwood having nothing further to ask the witness on this head, His Honor said to the learned Counsel that he should have informed himself better: that his brief should have shown him whether he could prove that Mr. Bohm entered the godown; and that the implications he was now endeavoring to establish were quite irrelevant to the issues.

Witness had had experience in cement, and saw some cement at 255c after the fire. It must have been for months in a solidified state—in a block: it could not have been so rendered in two or three days. To "set" free cement would take about 36 hours. About a month would be necessary to set a cask of cement to the shape of the cask when immersed in water. In that case the middle portion would not harden first: the hardening would be a gradual process. The cement he saw after the fire was solidified to the exact shape of the casks. If a fire were to take place, and fire and water were to act on casks of good cement at the same time, as soon as the casks broke the contents would fall in a heap. The effect on a good cask of cement, in case water had first been pumped on it and the cask were then burned, would be that the outside would be caked, and the inside would be normal. It would be impossible to cake the contents of such a cask by playing water on it. The water would loosen the hoops, the staves would fall down, and the cement would run out. The cement in question now was not merchantable after the fire.

To Mr. Lowder—Witness had never been a butcher. He had been in various occupations in his 22 years residence in Japan. He had been a comprador's assistant. He had gained his knowledge of cement by attending salvage sales, buying it, and using it on his own property. He had worked cement there with his own hands, teaching Japanese how to mix it.

Mr. James Walter, Chief Superintendent of the Yokohama Fire Brigade, recollected the fire at 255c on the morning of the 16th of March. Had had considerable experience of fires during 16 years in Yokohama, and with the fire Brigade during 10 or 12. Was called to the fire in question at a quarter to four, arriving on the spot at five minutes to four. There were then only a few persons present, consisting of four or five men of the brigade—some Japanese and one foreigner. The godown was of tiles nailed on to slight woodwork, one of the most flimsily constructed godowns in the settlement. It had been in flames from half an hour to three quarters. The fire was by no means a "hot" one. Pillering of whisky was going on during the fire to the extent perhaps of two or three dozen bottles or less. Witness thinks there was no other robbery, because he made supervision of all parts of the compound at short intervals, and there was a good guard of Japanese police in the vicinity. The godown was situated in a part of the settlement where there is little nightly traffic. The dwelling-house of the watchman of Messrs. Smith, Baker & Co. is near: no foreign dwelling house is near. Robberies are more frequent at fires of dwelling-houses than of godowns. Danger from this fire was over at seven o'clock; but, the ruins still smoking, an engine was kept on the compound. He went over part of the debris before leaving the fire—all but that portion in the centre where the cement was stored. He then saw no rope. He left at about half-past seven, and returned between half-past eight and nine, when he explored the whole of the debris, and then saw some rope, he should think about half a dozen or a dozen coils, hardly more. He saw no whisky then. During the fire he saw some—none in cases but only in bottles—to the extent of perhaps four cases. During and after the fire he saw broken bottles, to what quantity he could not say exactly, but not more than a dozen. On the South side facing the creek

was a strong wooden fence: on the West the godown was open to the compound of Smith, Baker & Co.: on the East and North sides each was another godown.

To Mr. Lowder—The fire alarm always attracts great crowds of Japanese. After every fire from private dwellings there are serious complaints of robbery: not from godowns. A thief would not be less attracted by a fire in a godown than in a dwelling-house. It is much more difficult to steal from the former than the latter, owing to the weight of the articles; and that consideration would probably enter into the thief's calculations. Formerly the police were incompetent to prevent stealing at fires; but there is now a much better organization, and that was in force at the time of the fire. The whisky was stolen under the eyes of witness who prevented it as far as possible. By "went over" the debris he meant "walked over," not with any idea of taking a list of what he saw. When he returned he had no idea of doing so. His observations were casual.

To Mr. Kirkwood—Before he left the premises witness put Japanese policemen in charge of the ruins. They remained the whole day and the following night, and he believes for several days later.

To Mr. Lowder—He put them in charge when he first left the premises.

Mr. George Watt, carpenter, said that he had been thirteen years in Yokohama, and for thirty years had had experience in timber. He remembered the fire at 255c, and on the 18th of March measured the timber and counted the pieces left in the godown. (List produced and admitted by witness to have been furnished by him). The timber was partly burned. A fair amount to add for burning to what he found would be a fourth of the lengths. From the state of the whole none would have been so completely burned as to leave no trace. The number of pieces was increased by the fire: some of the long pieces were burned into two or three. He measured the spars. (List produced and admitted). The spar measurement allows for the loss sustained by the fire. He saw three coils of wire rope, zinc-covered. The zinc was only removed from the outside parts of the coil. The largest coil had not lost 20lb. in weight. He also saw some rope—over three tons but not four—of hemp and Manila rope. The weight estimated was that of the material before the burning. He counted 60 paint tins, and saw about 2 cases of whisky and beer, each, some in the cases and some among the lumber, and broken bottles to the number of 105 or 106—not 200.

To Mr. Lowder—Witness said that he made the examination on the Sunday after the fire. He commenced with the lumber, which took him two days to examine. He estimated the loss of "three tons, not four," of the original rope by guess after collecting the debris, and putting it in a pile. He made a rough calculation but did not measure or weigh it. He does not know how much a coil of wire-rope generally weighs. He did not weigh the wire-rope, and guessed at the excess of loss from the largest coil at 20lb. He did not see more than 60 tins of paint and didn't look for any. (At least Mr. Watt was understood to say this; but for some sentences he had given his evidence in a very weak voice; and at this stage of the proceedings he fainted, and had to be lifted from the witness box.)

Mr. George Ford remembered buying a cask of cement from Mr. Bohm some time last year, after the discharge of the *Kumasaka-maru*, as good cement. When it was opened it was found to be bad, but was broken up and made use of. Witness was landing-agent for the *Kumasaka-maru*. The cargo was generally in bad order: he should think from the appearance of the cement that the whole was damaged.

To Mr. Lowder—Witness said that he did not examine every cask for sea-damage. He knew that Mr. Bohm had refused to take away any of the cement, claiming that it was sea-damaged.

Mr. Kirkwood raised the point whether a certificate given by the late Dr. Geerts of the Benteen Laboratory of his analysis of a piece of cement from the consignment would be admitted after some conversation between the Bench and Counsel. His Honor ruled that it should not be admitted.

Ah Cheng, a Chinese whose evidence was interpreted by a compatriot, said that he had kept watch at No. 255c from the time of the fire for

twenty-one days. He took turn about with another Chinese watchman, and saw no stealing from the premises.

At noon the Court adjourned until 1.30 p.m. On reassembling, Mr. Watt not having yet returned, Mr. Kirkwood called.

Nicholas Morgan, Superintendent of the Fire Brigade hand-engines. He recollected the fire at 255c. When he arrived there the flames had spread to the roof. Very few people were there. He was the first European to arrive, and was accompanied with six coolies. He lives near the Fire Brigade. It would take him about five minutes to arrive. He remained till the fire was completely put out—between eight and nine. The roof came down in about three quarters of an hour from his arrival. He did not see people carrying away things. Japanese coolies in employ of the Brigade were handing each other drinks. If these coolies could they would carry things away; but they are nearly naked and are watched. Perhaps three dozen bottles were drunk. None was carried away, as far as witness saw. He must have seen if things were taken. Before he left he examined the debris, and saw casks of stuff solid as rock, which he supposes to be what is referred to as cement, piled up; rope, wire and Manila mixed together, perhaps ten coils; broken glass representing about one hundred bottles, scattered among the shingles, not two hundred.

To Mr. Lowder—Witness said that he had not looked at the bottles and rope with a view of remembering how much was there.

Mr. Watt's cross-examination was next continued. He said that he had looked for remnants of everything except coals. He did not look specially for tins. He calculated that there were about 100 broken bottles on the 20th of March. He had five coolies and a Chinaman turning over the place and had collected broken and whole bottles. (List shown him and admitted as a copy of his original list of property found by him in the godown. In one list a quantity of timber is calculated at 22,580 ft.: in another at 17,163 ft. The explanation is that one calculation is for one inch, the other for three quarter inch, boards). The rough lumber is estimated to be worth 4½ to 5 cents per foot. Deck planking in March last was worth 6 to 7 cents. Tongued and grooved boards 5½ to 6 cents. Galvanized spikes 7 to 10 cents per lb. Mr. Whitfield charges more, 10 to 12 cents.

To Mr. Kirkwood, witness explained his double calculation of the timber, which may be sold in lots of ½ and 1 inch. Then a calculation is made at ¾ inch. He would have found remnants tins of had they been among the debris. He knows prices of timber by buying and selling it. His quotations of prices for galvanized spikes are for small quantities: not per pound, by the keg.

A Japanese police officer was called and testified to having been one of four told off to guard the debris of the fire at No. 255c. in March last. Each policeman was on duty for two hours at a time. Witness did not see any robbery going on from the premises.

To Mr. Lowder, witness said that he received his orders from an inspector at 8 a.m. on the 16th, the fire having occurred a short time previously.

Another policeman testified to the correctness of the statement of the previous witness, who was on duty from 8 to 10, and relieved by witness from 10 to noon and so on. He, too, saw no robbery going on from the premises.

Ah Heng, a Chinese, examined through a countryman of his, said that he remembered the fire at No. 255c, and took alternate watches, with the previously examined Chinese witness, of the premises after the fire.

Mr. Bing, in the employ of Messrs. Jardine, Matheson, & Co., is a foreman of the Fire Brigade, and remembers the fire at 255c. His engine is the "Relief," stationed on the Brigade compound. He brought the engine down, and on arrival found very few people, Mr. Morgan and some Japanese coolies. Witness was present from four till daylight, when Mr. Jas. Walter, danger being over, gave him leave to go home. The actual flames only lasted for three quarters of an hour from four o'clock. He saw a heap of coal in the godown which did not actually burn. It was not so hot but that he could sit on the top and play on the fire below. Beyond a small quantity of whisky drunk there was no thieving. There is very little

at godown fires. At Mr. W. B. Walter's order he afterwards took a list of the things among the debris. He saw some brown stuff, which he supposed was cement: it was very hard.

To Mr. Lowder witness said that he had attended forty fires, small and big, during his 2½ years residence in Yokohama, as well as others abroad. He thinks there have been more than forty fires in Yokohama since he has been here. About ten of these were godown fires, one at Owston, Snow, & Co.'s, one at the China and Japan Trading Co.'s, and several so called godowns in Japanese town. There is not so great a crowd at godown as at dwelling-house fires. During the greater part of the time of this 255 fire he was sitting on the coal and playing on the fire below.

To Mr. Kirkwood witness said that he had opportunities from time to time of seeing what was going on, as he was occasionally relieved.

Mr. C. D. Moss, Chief Clerk of H.B.M. Court, had not received his appointment in March last. He remembered the fire now in question. He arrived on the spot at a quarter to 8 a.m. He returned later with the view of making a careful examination of what was there, and remained about one hour. He saw some cement, casks stacked in rows, the wood work burned away and the contents standing solid. In some instances the cement had fallen and crumbled, some in lumps, and some like sugar, but not much. About a quarter had fallen, and the remainder was standing, and was very hard. He could not put a stick through it though he tried. He had experience of cement for twenty years. Some cements will set in twenty-four hours: some in longer time. He did not think that a full quarter of the cement was merchantable: it was not so bad as the rest. The contents of ten or fifteen casks were merchantable. What was "set" had so set before the fire. The bulk was useless, unsaleable. He saw some coils of rope, and iron nails: no trace of coffee: sixty tins of paint he counted later: a quantity of oakum and salt; no cigars: he was astonished at this, as Mr. Watt had said there should be 20 million (*sic*). No fish-oil but some staves: 2 cases beer a quantity of rosin; 2 cases of whisky and some bottles: some casks of vinegar: no marmalade: the lumber: some beer; and some broken bottles, certainly not more than 200 bottles. Witness remembered a letter (produced) from Mr. Bohm, accepting an offer made by the former for shingles. Witness had previously bought in all 120 bundles at \$2 per bundle. His offer was for the lot, supposing that to be about 500 bundles, at \$1.75. As it turned out there were 1,400 bundles, which was much more than he wanted. Best cement was selling last March at \$4 to \$4.50—that is in quantities of ten casks at a time. People will always sell a large quantity at less than a small one. Good cement could not sell for much less than \$10 a cask in any quantity.

To Mr. Lowder.—Witness said that Mr. Bohm refused to let him have a lot of 500 bundles at \$1.75. The best part of the cement left after the fire was not more than 15 casks. Even that witness would not have bought except for some special purpose—not for building. The balance might be worth \$2.00 a cask.

Mr. Kirkwood addressed the Court for the defendants, commencing by thanking the Jury for their patient attention during a tedious trial. The issues for them to decide would be two simple ones: 1, are the amounts paid, namely that realized from the salvage \$2685.63, and \$15,000 lodged in Court as the full sum fairly due under the policies, sufficient to meet the plaintiff's claim? 2, what was the value of the articles in the godown at the time of the fire, and if less than that already paid by the defendants what amount should be returned to them? At some length he insisted that the Bank had given no proof whatever of what was in the godown 255c., except through the evidence of the Chinese custodian and Mr. Bohm. The former's testimony he discredited because he could get no answer to his repeated questions: the latter's on account of the nature of the transactions in which the evidence showed Mr. Bohm had been engaged, his failure to produce his books, and the small likelihood that goods would be kept under-insured in his godowns. Counsel asked the jury to set the Chinaman's and Bohm's evidence on one side altogether. He then entered item by item into the question of quantities, making some scathing remarks about the "first-class quality," according to

Mr. Bohm, of cement which had been amply proved to be "rocks" and so forth, and three-fourths of the claim on which had been virtually abandoned by his learned friend. After dissecting the various portions of the claim, and calculating them, according to the quantities which he argued were in the godown previous to the fire and the prices fixed by experts, and allowing the value of dubious items on what he asserted to be the most liberal scale, he found that \$14,000 might be considered due to the plaintiffs from the Insurance Company, leaving a sum of \$3,600 odd, to be distributed as the Jury might decide. Mr. Kirkwood concluded by re-insisting that the Chartered Mercantile Bank was really nothing in the affair: that the case was Bohm's, the property Bohm's, and that he by the mass of evidence, his own included, and the transactions with which it was proved he had been connected, was wholly unworthy of credit.

Mr. Lowder followed for the plaintiffs, thanking the gentlemen of the Jury for their patience and attention. He traversed Mr. Kirkwood's argument, and specially deprecated the attacks upon Mr. Bohm's character, and the unfair use which had been made of his connection with one transaction, the error of which he had admitted though not with the candour which would probably have been employed by an educated man. Mr. Bohm was for nothing in the case directly. It was the Chartered Mercantile Bank's case alone; and Bohm could only indirectly benefit by reducing his debt to that institution if it gained the case. Referring lengthily to the coincidence of Mr. Bohm's evidence and that of Sow Hing, the Chinese custodian, and other features of the case, Mr. Lowder argued that the testimony of both those witnesses was perfectly trustworthy. He ridiculed the high moral grounds on which the Hongkong Fire Insurance Company had resisted the claim of the Bank. He wished that the sentiment professed were more common than it is, but here it was manifested in questions of cents, and spikes and nails. He referred to the correspondence which passed between the parties prior to the litigation, and insisted that the Bank had done everything it was called upon to do under the policies from the very first, and had acted with such fairness that, if the defendants had only emulated it, the case would never have come into court. He then proceeded to consider the items of the claim in detail, holding that much property must have been consumed in the fire, and that the existence in the godown of the articles mentioned in Mr. Bohm's list was proved by the Chinaman's godown book, taken with the auction account sales and the very condition of the debris. He made elaborate calculations from the evidence adduced on both sides, original receipts *ex Peiho* and *Black Diamond*, and deliveries, that the claim for lumber specially was accurate; and admitted a discrepancy in that for cement to the extent of three-fourths of the whole, requesting the Jury to take Mr. Moss's valuation as correct. Some items were charged below the value assigned them by the experts. In one or two others the charge was a trifle in excess of that testimony. All such he begged the Jury to reduce as they thought fit. It was beneath the dignity of the Bank to claim one dollar which was not due to it; and he was not there to argue any unjust claim. With this understanding, he left the case in the hands of the Jury, asking them to put on one side any consideration of pity for the Bank and to be guided in their decision only by what they thought to be strictly its due.

His Honor then charged the Jury briefly, explaining to them the nature of the claim which was preferred by the Chartered Mercantile Bank against the Hongkong Fire Insurance Company. It was evident that behind the Bank was the real owner, Mr. Bohm, about whom very much had been said; but in this case he must be judged by the evidence, and by that only. Mr. Kirkwood had said everything that he could to damage the value of his testimony; while Mr. Lowder had endeavored to show that it was trustworthy. He would leave the Jury to form their own opinion, adding only that if Bohm's admission of a questionable transaction had been as candid as, according to Mr. Lowder's illustration, it might have been, he would have placed himself in a better light; but, as Mr. Lowder admitted, it was not candid. About the unreliability of Sow Hing's testimony, also, Mr. Kirkwood had made many remarks; and the Jury

had heard what Mr. Lowder had said about Mr. Kirkwood's insinuations as to the motive of the Chinaman's first saying he had a list and then that he had no list, and being unwilling to answer Mr. Kirkwood's questions. The value of this testimony was also for the Jury to decide; but His Honor pointed out the difficulty of making a Chinaman understand what one means whether in a Court or in an office. It might have been as difficult for Mr. Walter to make that witness understand him in his office as it was here. To show that there might have been no contradiction in Sow Hing's statements, the Judge read from his notes Mr. Walter's question and the Chinaman's answer about the goods in the godown on the 19th of August, 1882, and his taking Mr. Bohm's word for the quantity of lumber, and also Mr. Walter's remarks on the same subject in re-examination. Had, then, Mr. Kirkwood made a case strong enough to throw out the testimony of this witness? Mr. Kirkwood admitted that the book of entries and deliveries since August, 1882, had been correctly kept, and yet among the items were some which he scouts, as vinegar and whiskey; so these the defendants cannot be said to dispute. Referring to the receipt of the cement and the changing of the barrels under the bill of lading, His Honor stigmatised it as unjustifiable, but yet held that it proved that the cement had gone into 255, and the Jury might find that it was there. Meanwhile, Mr. Lowder admits that only one-fourth of the claim can be substantiated; and Mr. Moss's evidence may be taken as a basis that one-quarter of what was salvaged was good and the rest worth \$2 a cask. Without going into the details of the smaller claims, His Honor directed the Jury to consider whether the main amounts were proved, and if so then, perhaps, they need not go into the minor ones. The first question to be decided was:—"Have the plaintiffs sustained damage to the extent of the sum paid into Court plus the proceeds of the salvage?" (\$15,000 and \$2,585.63). There was only \$6,237.83 to be decided upon. If the amounts struck out exceeded that sum, there was an end of the matter, and there would be a verdict for the defendants. On the other hand, if greater damage than \$17,585 had been sustained, the Jury would have to say how much, and give a verdict accordingly. His Honor then ran rapidly through the various items, and remarked, as regards the lumber, that Mr. Lowder's calculations were not unfair. As regards the coal, if Mr. Bing's testimony that he was sitting on it during the fire is to be believed, 67 tons could not have been burned.

In answer to jurors, His Honor said that if they found for plaintiffs they would have to decide the question of interest; and that the market value of goods as stated by experts should be a guide to their verdict. The Jury retired to consider their verdict soon after six o'clock.

At 8.15 the Jury returned. Their answer to the question, "Have the plaintiffs sustained damage to the extent of the sum paid into Court plus the proceeds of the salvage?" was "No."

A verdict for defendants was entered accordingly. The question of costs was reserved for future discussion.

THE DONCASTER ST. LEGER.

The St. LEGER STAKES of 25 sovs. for then three-year-olds; colts, 8st. 10lb.; fillies, 8st. 5lb.; second to receive 200 sovs., and third 100 sovs. out of the stakes; Old St. Leger course (about one mile six furlongs and 132 yards).—202 subs.

The classic race of the North, run on the 12th inst., on the Town Moor, resulted in a finish which must have upset a great many calculations—Ossian 1, Chislehurst 2, Highland Chief 3—the winner having hitherto been the most unfortunate three-year-old of his year, for with 26 engagements, the greater number of which must have been at the spring and summer meetings, he has only now (so far as is known by last mail) succeeded in earning a winning bracket, having been continually placed—often in very good company—and several times a good second. Ossian is owned by the Duke of Hamilton, and is trained by Marsh, who has always prophesied a change in the hitherto persistent bad luck. A Duke of Hamilton won the

Leger in 1814 with William, and two years in succession (1807-1808) landed the same race with Petronius and Ashton; but this does not come up to Lord A. Hamilton's *comp.*, who in 1736 and the two following years won the Leger with Paragon, Spadille, and Young Flora, and again in 1792 with Tartar. Ossian is a brown colt by Salvador—Music, and only ran once as a two-year-old, when he started at 20 to 1 in a field of five for the Molecomb Stakes, for which St. Blaise and Elzevir ran a dead heat. He was not brought out for the Derby, having been reserved for the rich prize run on the following day; the race, however, fell to Prince Soltykoff's Padlock, but Ossian, with his usual luck, managed to struggle into third place. His best form in other races was exhibited when he ran second to Grandmaster in the Craven Stakes at Newmarket, his second to Ladislas in the Ascot Derby—which was a desperate and punishing finish, and a near thing—and a similar position to Galliard in the Prince of Wales Stakes.

Chislehurst is a bay colt by Beauclerc—Empress, belonging to Mr. C. Perkins, and in five essays as a two-year-old managed to win twice—the Whitsuntide Plate at Manchester, and the Seaton Delaval Stakes at Gosforth Park, beside running into a place in the Champagne Stakes and in a race at Redcar. Chislehurst this year won the North Derby at Gosforth Park, and the Rous Memorial Stakes at Ascot. The latter performance brought the colt to 8 to 1 in the St. Leger betting, but he afterwards dropped back in the quotations.

Highland Chief, owned by Lord Ellesmere, is a bay colt by Hampton—Corrie, and, starting six times as a two-year-old, won the Exeter Stakes at the Newmarket July, and the Home-bred Sweepstakes at the October meeting. He made a good race of the Middle Park Plate, where he got a half-length beating by Macheath, but the brown son of Macaroni and Heather Bell was giving Lord Ellesmere's colt 3lb. His best performance this year is well remembered—second in the Derby—when, with Webb up, he made a grand effort at the finish, and only lost the race by a neck.

NOTES FROM JAPANESE PAPERS.

H. F. Matsukata, Minister of Finance, is confined to his house on account of indisposition.

Great difficulty has hitherto been experienced in collecting the taxes in Tokijo, owing to the brisk transfer of property and changes in the registration of persons from one place to another. This year, however, a committee was appointed to go round the various ward offices, assisting the officers in making the people pay their taxes. This scheme proved a great success, and the taxes for the first half of this year are already collected.

The Japanese banks in Yokohama have agreed to reduce the daily interest to 30 *sen* per one thousand *yen* on the security of silver and 15 *sen* per one thousand dollars on the security of paper money.

The railway between Kumagai and Honjo—a distance of 14 miles—has been completed and will be opened for traffic at the end of this month.

The native Christians in the provinces of Cholla-do and Chung-chhông-do, Korea, number upwards of ten thousand. Their influence is great. They generally pray at night when the neighbours are in repose. But they have not yet established a Church. The Catholic missionaries in Nagasaki have adopted Korean names and will shortly enter upon their evangelical work in Korea.

Intelligence has reached here from Holland, announcing that the Japanese articles in the Exhibition attracted great attention and that they have been nearly all contracted for. The Meisan Kwaisha have disposed of goods worth 3,500 florins, Shippo Kwaisha 2,240 florins, Mr. Maronaka 8,630 florins, and Mr. Tanzan 1,955 florins. The King bought a pair of vases from the Senji Kwaisha for 1,900 florins.—*Mainichi Shimbu.*

The total amount of gold, silver, and copper coins turned out in the Osaka Mint from November 1870 to July this year, was *yen* 51,807,988, *yen* 45,367,873, and *yen* 9,266,813.27 respectively.—*Fuyu Shimbu.*

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

CHINESE TROOPS IN TONKIN.

It is reported that fifteen thousand Chinese troops have crossed the Tonquin frontier.

FRENCH REINFORCEMENTS FOR TONKIN.

The French Government has decided to send strong reinforcements to Tonquin.

PRINCE EDWARD OF WALES.

Prince Edward, eldest son of the Prince of Wales, has been created a Knight of the Garter.

FRANCE AND CHINA.

The threatened rupture between France and China is being anxiously discussed in all quarters.

BRITISH MEDIATION URGED BY THE PRESS.

The London Press urge British mediation between China and France.

RENEWAL OF NEGOTIATIONS.

The Marquis Tseng has returned to Paris to initiate a resumption of negotiations.

London, September 8th.

FRANCE AND CHINA.

The interview between the Marquis Tseng and the French Minister for Foreign Affairs is described as friendly.

The Marquis Tseng proposed a settlement of the questions at issue on the following basis:—The acknowledgment by France of Chinese suzerainty; the delimitation of the frontier; the demarcation of a neutral zone along the frontier.

This proposal is stated to have been favourably received by M. Challemeil-Lacour.

London, September 10th.

THE GERMAN FLEET IN CHINA.

The German Admiral has been ordered to collect his squadron at Hongkong and to cruise in the vicinity of the Treaty Ports.

London, September 11th.

FRANCE AND CHINA.

The *République Française* publishes an article in which demands are made for a French Protectorate over the whole of Annam. The article advocates the concession to China of honorary suzerainty, but opposes the neutral zone scheme.

NEW MINISTER TO THE HAGUE.

M. Pâtenotre has been appointed Minister to the Hague.

London, September 12th.

FRANCE AND CHINA.

The *Temps* publishes a statement to the effect that the British Government has agreed to mediate between France and China.

London, September 13th.

DEATH OF A FRENCH ADMIRAL.

Admiral Pierre is dead.

THE RESULT OF THE ST. LEGER.

The Duke of Hamilton's Ossian 1
Mr. C. Perkins' Chislehurst 2
Lord Ellesmere's Highland Chief 3

"SPECIAL" TO THE "JAPAN MAIL."

Hongkong, September, 11th.

The Foreign Consession at Canton has been attacked by a Chinese mob, and the Shamien partly burned and pillaged.

The Foreigners have fled to vessels anchored in the river. No lives had been lost at the time of sending this despatch.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 7TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hangō, Tokyo, Japan.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Dotted line—percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 54.7 miles per hour on Thursday at 3 p.m.
The highest reading of the barometer for the week was 30.145 inches on Monday at 10 a.m., and the lowest was 29.595 inches on Thursday at 3 p.m.
The highest temperature for the week was 88.6 on Saturday, and the lowest was 61.0 on Sunday. The maximum and minimum for the corresponding week of last year were 87.0 and 63.0 respectively.
The total amount of rain for the week was 1.735 inches, against 0.601 inches for the corresponding week of last year.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Europe, via Hongkong, per M. M. Co. Tuesday, Sept. 18th.*
From Shanghai, Nagasaki, & Kobe per M. B. Co. Thursday, Sept. 20th.†
From America per P. M. Co. Monday, Sept. 24th.‡

* Tanais (with French mail) left Hongkong on September 12th.
† Left Shanghai on September 12th. ‡ City of Peking left San Francisco on September 4th.

THE NEXT MAIL LEAVES

For Europe, via Hongkong per P. & O. Co. Saturday, Sept. 15th.
For Kobe per M. B. Co. Monday, Sept. 17th.
For Hakodate per M. B. Co. Wednesday, Sept. 19th.
For Shanghai, Kobe, and Nagasaki per M. B. Co. Wednesday, Sept. 19th.
For America per P. M. Co. Saturday, Sept. 22nd.
For Europe, via Hongkong per M. M. Co. Sunday, Sept. 23rd.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

LATEST SHIPPING.

FREIGHTS.

Beyond noting the movements of the few vessels on the berth for various destinations, there is really nothing of interest to put on record in the freight market. The American ship *J. V. Troup* sailed yesterday for Hakodate to load sulphur for San Francisco, and the American 3-masted schooner *Mary Winkelman* sails on Monday for the same destination direct with a full general cargo. For New York we have the *Galley of Lorne* and *Benarty* circulated with quick dispatch, with possibly the *Strathleven* to follow. In other directions nothing offers, although for London there is quite a considerable accumulation of sailing ship cargo, for the disposal of which negotiations are pending. Among our arrivals may be noted the American ship *W. H. Lincoln* and the British ship *Gloaming*, both from New York with oil, the former making the voyage in 139 days, while the latter occupied only 113.

ARRIVALS.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 8th September,—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.
Higo Maru, Japanese steamer, 806, R. N. Walker, 9th September.—Hakodate, Mails and General.—Mitsu Bishi M. S. S. Co.

"Special" Trains leave UYENO at 7 a.m. and 12 m., and OJI at 7.30 a.m. and 12.30 and 6.30 p.m. in addition to the above.

LATEST COMMERCIAL.

IMPORTS.

There has been more business during the week in Yarns, sales amounting to some 2,000 bales with no appreciable change in prices. In Shirtings there has been a large business done, some 50,000 pieces having changed hands, and in some cases an advance in price has been established. There has been also more doing in Velvets. Other Goods call for no special remark. Metals continue fairly active, with but little change in prices.

IRON.

| | PER PICUL. |
|-----------------------------------|----------------|
| Flat Bars, 1/2 inch - | \$2.50 to 2.90 |
| Flat Bars, 3/4 inch - | 2.80 to 3.00 |
| Round and square up to 1/2 inch - | 2.80 to 3.00 |
| Nailrod, assorted - | 2.25 to 2.50 |
| Nailrod, small size - | 3.00 to 3.15 |

KEROSENE.

Sales during the week amount to 12,000 cases, and some 5,500 damaged cases at auction. Dealers hold back in expectation of lower prices. The *Gloaming* has arrived with 52,000 cases, making our Stock of sold and unsold Oil some 813,200 cases. Quotations are unchanged.

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.62 |
| Comet - | 1.60 |
| Siella - | 1.52 |

SUGAR.

With a stagnant trade in all kinds of Sugar, quotations admit of no alteration from rates last reported, and no immediate improvement in the Market is to be expected in view of present requirements being apparently satisfied. Stocks of Brown Formosa amount to 35,000 bags.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$7.50 to 8.00 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.40 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.50 to 4.60 |

EXPORTS.

SILK.

There has not been so much doing during the week, and Settlements do not much exceed 400 piculs. Buyers think that with a turn in currency exchange, prices should be easier. Sellers are not very tractable on the point, and generally speaking quotations are unaltered. Stocks are still further increased by the excess of arrivals over Settlements, being now estimated at 3,400 piculs of all descriptions. Export to date are 6,119 bales, against 6,592 bales to same date last year, and the outgoing P. & O. steamer *Kashgar* will take some.

Hanks—These have been dealt in at about former rates, but rejections from godown have been heavy, and the real business done has not

been large. We notice settlements of Shimoni: \$525, Shinshu \$515, Chichibu \$505, Maibash \$485, and Hachioji \$450.

Filatures—Some business passing on the basis of Nihonmatsu \$650, Shinshu kind \$610 to \$620, Koshu and Mino sorts \$600 down.

Re-reels—Not so much doing in these, some Five Girl Maibash taken at \$610. Other chops held for about the same figures, while best Shinshu are quoted \$625 sellers.

Oshu—A few bales *Sendai* district brought \$515. *Kakedas* have moved slowly at about former rates, one parcel "inferior" changing owners at \$540. *Hamatsuki*—Some sales reported at \$450 to \$475.

QUOTATIONS.

| Hanks—No. 1 - | - | \$520 to 530 |
|--------------------------------------|---|--------------|
| Hanks—No. 2 (Shinshu) - | - | 515 to 525 |

| Hamatsuki—No. 3, 4 - | - | 455 to 465 |

TEA.

Business has been on a larger scale than the preceding week, Settlements reaching 2,980 piculs, consisting of the following grades:—Common 150, Good Common 850, Medium 825, Good Medium 650, Fine 325, Finest 30, and Choice 125 piculs. Market at the close is pretty firm at the under-noted quotations. Estimated Stocks are 6,000 piculs. Settlements here and at Kobe are 204,555 piculs, against 218,369 piculs at the same period in 1882. The British steamer *Oxfordshire* which sailed from here for New York, via ports, on the 4th instant, took 234,974 lbs. Tea, viz.—159,351 lbs. for New York and 75,623 lbs. for Canada. The cargo despatched by the steamship *Coptic* on the 9th instant comprised 267,277 lbs. Tea from this port, viz.—76,069 lbs. for New York, 47,422 lbs. for Chicago, 81,997 lbs. for California, and 60,889 lbs. for Canada. The *City of Rio de Janeiro* is advertised to leave here for San Francisco on the 22nd instant, taking Tea at 2 cents per lb. gross to the Eastern States and Canada, but the rate for San Francisco is at present undecided.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

WEEKLY NOTES.

It is almost a hopeless task to attempt to follow the course of the military operations in Annam. Broadly speaking, however, we may say that the campaign is, or was, in progress at two widely separated points, one being the capital of Annam and the surrounding district, the other, the Delta of the Red River. At the former place the record of French successes is complete. Hué was bombarded for thirteen hours incessantly by five men-of-war on the 19th of August, the Annamite forts replying all the while with commendable pertinacity but meagre results, inasmuch as, of the 6,000 shots they are said to have fired, only one touched a French ship. Then on the 20th we read of a "magnificent attack," conducted by 940 Frenchmen, assisted by 100 coolies from Saigon; an attack which "proved to Oriental Powers that old French renown has not disappeared." The Annamites, well found and well armed, "fought to the bitter end," according to the *Saigon Independent*, and "defended themselves with courage and tena-

city," according to the official proclamation of the French authorities, but again the results they achieved were meagre, for while losing 700 men themselves, they succeeded in killing of their assailants—not a single soldier, nor even a coolie. With the terms of the treaty subsequently concluded our readers are already familiar. It is a treaty which surrenders to France the control of the Annamite revenue, forts, and telegraphs, and cedes to her the sovereignty of several important places as well as the right of disposing of all government offices. In this direction, therefore, the campaign has been signally decisive. Turning, however, to the Delta of the Red River we find a somewhat different state of affairs. There France has taken upon herself the task for failing to accomplish which Annam was found guilty of treaty-violation and sentenced to suffer loss of sovereignty. It is the task of freeing the Red River from the piratical Black Flags whose presence renders its navigation impossible. These brigands appear to be massed chiefly in the neighbourhood of Hanoi and Sontai, and they have well chosen their post. A glance at the map will show that Sontai is the key of the position. At a short distance above that place the Red River receives two large tributaries, the Clear River and the Black River; while a little farther down, it separates into two branches, enclosing the island on which Hanoi stands, and these again, in their turn, divide themselves into a labyrinth of streams and canals, forming the delta whose occupation France seems so anxious to accomplish. Thus Sontai acquires special importance from its position, and, further, while the country below it is flat and easy of access, the districts above it are mountainous and difficult. It will be remembered that, almost simultaneously with the bombardment of Hué, a sortie in force was undertaken by the garrison of Hanoi, the object being to dislodge the Black Flags from their outposts between that place and Son-tai. Several sorties with a similar object have been already reported from Hanoi, and though all were described as successful, not one appears to have produced any permanent effect. The affair on the 15th of August was of some magnitude. Three columns marched out, each taking different routes. The enemy was very soon unmasked, and a stubborn fight ensued, the casualties among the French troops being 2 officers and 13 men killed, and 60 wounded, while the losses suffered by their allies, the Yellow Flags, are not recorded. The result was described as a partial success, but inasmuch as its immediate

consequence was a telegraphic appeal from General Bouet for further reinforcements, there is reason to interpret it less favorably. Then followed the telegraphic news published by the *Ki-sampo (Official Gazette)* on Wednesday last, to the effect that an engagement had taken place between the French troops and a column of Black Flags, numbering 4,000 men, the issue being a decisive victory for the former. This looked promising, but scarcely two days had elapsed when the wires transmitted a very different sort of message—namely, that the French had sustained another defeat at the hands of the Black Flags; that the civil and military authorities had quarrelled; and that Admiral Courbet had declared his inability to maintain his positions with the troops at his disposal. It seems pretty plain from all this that to charge the King of Annam with violating his treaty engagements because he failed to hold the Black Flags in check, was to credit him with ability to achieve more than the French themselves can readily accomplish. Of course these pirate hordes will be swept away sooner or later, but we cannot help regretting that France underestimated their strength in the first instance. Meanwhile the situation is considerably complicated by the presence of the fifteen thousand Chinese troops, which, as it now appears, crossed the Fonquin frontier at a place called Mongkai, and declared Hai-duong to be their goal. It is true that according to the Chinese authorities this force is to be employed, not against the French, but against the Black Flags. But this interpretation is opposed by the fact that the Chinese troops, while passing through Mongkai, drove the French missionaries out of their station and killed two of their people. Hai-duong, the reported destination of this army of braves, is one of the places recently occupied by the French, and according to latest intelligence M. Harmand was *en route* thither to arrange for carrying out the new treaty. China's real intentions must, therefore, be very soon declared unequivocally. European telegrams certainly lead us to suppose that the movement of these troops had been used as a lever by the Marquis Tseng in his negotiations with M. Challemel-Lacour and interpreted by the general public as an emphatic Chinese protest against the contemptuous indifference with which her claims had been treated. However this may be, it appears tolerably certain that China means to prepare herself to the best of her ability for anything that may eventuate. The purchase of arms in English, German, and American markets

is said to be proceeding merrily, and proclamations are issued calling upon the subjects of the Middle Kingdom to take military service. Among these documents that of His Excellency T'so T'sung-tang is remarkable. The Viceroy of the Liang-Kiang, after gravely enunciating the platitudes that fishing-boats are abundant along the sea-coast and at the mouth of several large rivers, and that "persons born in fishing boats and brought up as fishermen are generally well-built and of sound constitution, enjoy good health and are experienced in marine movements," proceeds to declare his intention of selecting thirty per cent. of these boat-born individuals to become soldiers, and registering the rest as a reserve. General T'so is not a man of forms and ceremonies.

THE Customs' officer, Mr. Roberts, who was committed to prison by order of Assistant Judge Mowat, for refusing to give evidence without the permission of his superiors, has been released, after six days' incarceration. No understanding appears to have been come to so far as Roberts was concerned, but as the man charged with stealing opium confessed, and the case was thus brought to a close, the testimony of the Customs' officer was no longer required. It is unfortunate that such questions should remain unsolved, as they cannot fail to impair the efficiency of the Customs Service, as well as to bring ridicule on a system which leads to complications so senseless.

NOTES.

GENERAL CROOK'S story of his campaign against the Apaches is an instructive record of the conflict which is still going on between the white inhabitants of America and the unfortunate aborigines who are vainly struggling to defend the right God conferred on them of living and breathing in the land where his providence placed them. That, at all events, is their method of regarding the position, and nobody can say that it is an extravagant view. General Crook assumed command of the Military Department of Arizona just a year ago. Very shortly after his arrival at head-quarters a party of Indians made an irruption into Southern Arizona from Mexico, and, despite the efforts organized to intercept them, succeeded in effecting their retreat without any casualties. The General arrived at the conclusion that nothing decisive could ever be accomplished unless these savages were fairly hunted down, and he accordingly resolved to make the attempt. But how was the pursuit to be managed? Apaches travel without impediments of any kind, and move across country at the rate of 75 miles a day, abandoning and killing their horses as fast as they play out and helping themselves to remounts at every ranche they pass. The best cavalry in the world cannot accomplish so much, and consequently the only resource lay in a surprise. At first sight this plan seemed even more impossible of accomplishment, but the capture of an Apache deserter, commonly called "Peaches," inspired

the General with fresh hope. This man, after undergoing a "severe examination,"—whatever that may mean—agreed to act as guide, and General Crook, having arranged for the passage of the troops through Mexico, set out on the 1st of May. His force consisted of 193 Apache scouts, commanded by three American officers, and one company of United States cavalry numbering 42 men and two officers. They had field rations for sixty days and 150 rounds of ammunition per man. For three days they did not encounter a living thing upon their march, the whole country having been converted into a wilderness by Apache raids. After this they passed three Mexican hamlets, whose inhabitants were living in a state of such constant apprehension that no man could venture away from the vicinity of his own dwelling. The delight of these Mexicans at the appearance of General Crook's force was excessive, and they would have joined his ranks, but the General prudently declined, having made up his mind that his little army was already quite as large as he could hope to lead successfully through such a country. And truly it was a country that must have baffled any but the most indomitable energy and resolution. General Crook tells us very little of the difficulties he had to encounter. He simply says that when the column made its way into the recesses of the Sierra Madres, the trail became very precipitous, and that "a number of mules were lost by slipping over precipices." The notion of troops traversing a route where mules could not keep their footing is novel, but the General has nothing to say about it except that the packs of the deceased animals were generally recovered without much difficulty! On the 12th day of its march the column came in sight of the Apache stronghold. "Peaches" had fully justified the confidence placed in him after his "severe examination." The only trouble was that the place seemed absolutely impregnable. The Apaches, however, were absent. It appears that they are people of a somewhat nomadic disposition, not naturally insensible, perhaps, to the advantages of a settled home, but knowing them only by tradition. From his earliest infancy the American Indian "has to defend himself against enemies as cruel as the beasts of the mountain and the forest." In his brief moments of peace he constantly looks for attack or ambuscade, and if in defending himself he neglects the codes of "civilized warfare"—monstrous absurdity—it is because his foes never set him any better example. So he scurries about from place to place like a wolf, building himself, wherever he stops, a species of bush fortress called a "wick-a-up," which can be destroyed in a few moments so as to leave to the unpractised eye hardly a trace of its sometime existence. Indications were not wanting, however, that the stronghold in the Sierra Madres had been very recently evacuated, and General Crook determined to leave his pack mules there and to send out his Apache scouts on foot to reconnoitre. On the second day the latter discovered the camp of the "hostiles." The General's instructions were that no shot should be fired, but that the dispositions he had

made for surrounding the camp should be carried out in the strictest silence. One of the scouts, however, not being able to resist taking a shot at a buck and squaw, the alarm was given, and the Indians, standing to their arms, fought for several hours. But the surprise had demoralized them. They had deemed their position impregnable, and had always succeeded in driving back, with rocks as well as bullets, the Mexican troops who ventured to pass the foot of the hills. So at the last they fled, leaving nine of their number dead in the camp, and five "half grown girls and young boys" in the hands of their assailants. The eldest of the captive girls finally acted as a go-between, and General Crook, by the exercise of some finesse and a considerable show of sternness, had the satisfaction of seeing the Apaches come in little by little, until, in the end, he marched back to San Carlos with 384 Indians, prisoners, and six recaptured Mexicans, captives. The whole affair reflects the greatest credit on the American troops and their leader alike. General Crook's despatches show that he is not only a brave and skilful commander, but also a merciful and far-seeing man. He takes the utmost care to impress upon his superiors that the Indian must not be judged by the same standard as that applied to white men. In all his combats with the latter the Apache has found that neither age nor sex is spared—his women and children are the first to suffer. It does not much surprise him, perhaps, that, when his camps are attacked and destroyed, squaws and babies are invariably found among the dead, but it certainly does not help to correct his own methods of warfare. "All that we can reasonably do," says the General in conclusion, "is to keep the Apache under such supervision that he cannot plan new outbreaks without running the risk of immediate detection, and for these acts of rascality punish him so severely that he will know we mean no nonsense." Unfortunate Apache! The approach of civilization is his death warrant, and even though his executioners be men of General Crook's stamp, they are still his executioners.

A BEAR-STORY is related in the *Mainichi Shimbun*. It is said that the villages in the district of Chitose and Iburi, Hokkaido have lately been plundered in a mysterious manner. Horses and rice, not an extravagant combination, provided the animals were used to carry away the grain, have unaccountably disappeared, stone fences even having been broken through to effect the removal. Night watches were set, but in vain: the evanishments continued. In spite of all precautions, a big hole, about four feet square, was found to have been perforated in the wall of a godown, whence twenty-seven bags of rice had been abstracted. Probably this led to increased vigilance on the part of the country-people whose fears and superstition must already have been heavily taxed; for we read that on a subsequent night four watchers observed approaching the building three enormous figures, which, being fired upon, rapidly retreated toward the mountains. The robbers turned out to be

huge bears, as big as the ponies which they had impressed into their service to carry away the bags of rice. A raid was made upon them, and sixty-seven fell to the weapons of their wronged and enraged pursuers.

THE statistics of fires in Paris show that Japan is not quite as badly off in this respect as people generally suppose. Thus in 1882 there were 982 conflagrations, in the French capital being at the rate of nearly three *per diem*, and in addition 1,656 chimneys took fire. In the former cases, buildings and fixtures were insured in 926 instances and furniture and effects in 751. The losses paid by the insurance offices amounted to 7,729,315 francs.

PROFESSOR THOROLD ROGERS, M.P., declares that he entirely sympathises with the wise and judicious action taken by Lord Ripon and embodied in Mr. Ilbert's Bill. He says:—"If India is to be governed on the principles of the Queen's Proclamation; the Natives to be gradually introduced to self-government and the political institutions of Western civilization; if the extension of education is to give content and hope instead of inciting those who receive it to the sense that they are debarred from that to which they conceive themselves entitled; it is essential that all the residents in India, European and Native, should be equally amenable to law." Professor Bryce, M.P., also writes:—

I am glad to express the conviction forced on me by all I have heard and read upon the subject of Mr. Ilbert's Bill, that it was necessary for the Indian Government, after what had been done and promised by successive Viceroys, with the full approval of successive Home Governments, to make some such proposal as the Bill contains. That Bill seems to me, if I may venture to express an opinion, to be an integral and indispensable part of a scheme of policy whose main lines have been drawn some time ago. I am not competent to judge of its details, but the principle seems to me to be a sound one and a far safer one on which to proceed than the doctrines which we hear from the assailants of the measure.

ISEZAKI, in Gumma, is reported to be infested with gamblers, who are a source of constant disturbance. A successful raid was recently made by the police upon the hells of the district; but one of the gang who had given information was set upon by his fellows and beaten to death.

THERE is nothing surprising in the news (received on Monday) of the seizure of the British schooner *Otomé*. Something of the sort has long been expected. There seems to be a notion among a certain class of adventurers that the commonest rights of property may be violated with impunity provided the operation involves sufficient risk, pecuniary and physical. The man who breaks into one's house and steals one's goods is treated as a common felon, but the man who fits out a schooner and goes to steal seal-skins in the territories of a foreign power is regarded as a gentleman of shrewdness and enterprise. It is possible that the owner of the *Otomé* may have been an unwitting offender. It is possible that he had no certain knowledge of the trespass he was committing or of the fraud he was perpetrating. But even

this excuse, if it be credible, shows him in the character of a man who trusted chance to keep him honest. Everybody in Yokohama knows that there are islands to the North of Japan which belong to Russia, and that there are islands where the right to hunt seals and otters has been exclusively leased to private individuals. Under these circumstances, to sail northward and capture seals and otters wherever one can find them is, morally speaking, quite as bad as to go in search of them with deliberate intent to trespass. Behring Island is Russian territory, and the sole right to procure furs there was leased by the Russian Government to an American Company in 1871. According to the terms of the Company's charter they are obliged to pay a fixed price to the inhabitants of the island for every fur exported thence. The money thus paid constitutes the islanders' principal means of support, so that any trespass on the Company's rights by outsiders is not only defrauding the Company but also depriving the islanders of their source of livelihood. All question of Russia's right to forcibly oppose such trespass is superfluous. If she has practically failed to do so hitherto, it is doubtless owing to the inadequacy of her precautions, not to the invalidity of her right. It will be seen that in the case of the *Otomé* the sealing party was driven back, in the first place, by the islanders, who are naturally anxious to prevent the theft of skins for which they would receive payment under ordinary circumstances. Further, the steamers engaged in the capture of the *Otomé* form part of the American Company's fleet, so there need be no doubt as to the nature of the offence which has been so summarily punished. The schooner's fate will be a salutary warning, and we sincerely hope that Russia's example will be followed by Japan before preventive measures cease to be worth taking.

A CORRESPONDENT of the *Hochi Shimbun*, who has recently visited the Bonin Islands, contributes to the vernacular journal a few items of intelligence acquired during his stay. The highest temperature is 90 degrees: the lowest 50 degrees, according to a series of observations taken during the last seven years. The group contains upward of four hundred inhabitants, most of whom are immigrants from the Hachijo Islands, there being only about sixty foreign residents, all of whom were naturalized last year. Their children are educated in the common school, and have made rapid progress in the study of Japanese, written and spoken. It is proposed to enlarge the school. Many of the foreign women dress in Japanese style. One of the oldest settlers was a Mr. Whip (*sic*), who died last year after a sojourn of twenty-eight years in the island. He was a good Japanese scholar and was greatly esteemed by his fellow-exiles, the majority of whom are unable even to write their own names. The turtles of the isles are to the inhabitants what the grain harvest is to the people of Nippon. Four thousand of the animals have been caught this year, being an increase of one thousand already over the take

of 1881, and two thousand over that of last season. Of the ten islands that compose the Ogasawara Archipelago, the Chichi-jima or Father Island is the best tended, being under cultivation in nearly its whole area, and producing abundantly both cereals and vegetables. Only a few years ago coffee was first planted as an experiment. It is now one of the staple products of the islands, and grows luxuriantly, producing a berry which, though not of the choicest kind, yet serves the simple wants of the islanders. Sugar cane was planted a few years since, and is expected to give satisfactory results at no remote period. The flora of the group is profuse; in fact some flowers or other are in bloom the year round; and all are honey-laden. Bees have been imported from America; and, having taken kindly to the climate, are increasing rapidly. Last year 120 *kuamme* of honey were taken from the hives; this reason more than three hundred *kuamme* have been already collected. The quality is said to excel the far-famed produce of Kumano and Saga. Cattle-breeding is a thriving pursuit. The islands are well watered, and good provender grows in profusion. Brandy is much approved of by the residents, who receive their stock of spirits with rice and other provisions at three-monthly intervals. No edible fish, except a certain river-fish, is to be found in the waters of Ogasawara; but, as a set-off, the teeming soil produces quantities of fruits and vegetables. A lemon-tree, said to have been planted by Commodore Perry, is annually covered with fruit.

ANY one who has travelled along the Grand Canal in China, and specially through the terminal and very short section which connects Tung-chow with Peking, cannot fail to have remarked the signs of corporal punishment carried on their persons by the sturdy boatmen who navigate the heavily-laden junks bearing the rice tribute of the various provinces to the capital. An astounding percentage of the men toiling at the oar or the punt-pole are in such a lacerated condition about their nether man, as to be not only unable to sit down but even to endure the touch of their scanty clothing. In fact a tribute-rice boatman appears to be despised by his fellows until he has been, at least once, well thrashed with bamboo by order of some local mandarin. A well scarred buttock is to the Grand Canal boat-hauler what a row of scalps is to the American Indian, or what a garment of tatoo in quaint but artistic device was to the ordinary Japanese coolie of three lustres ago. There is this distinction, however, that the celestial waterman must qualify for his degree by some desperate theft of the cargo which he is helping to convey; and by all accounts he is the most reckless and barefaced thief in creation. The thrashings that he receives he is bred to and laughs at. Not long since some foreign travellers journeying in a small boat from Tung-chow to the capital, passed one of the heavily laden lighters crawling up the stagnant canal. Of the visible crew of three,

there were two middle-aged men tranquilly punting, but both so circumstanced as to their sedentary apparatus that any upright position would evidently be preferable to a sitting or recumbent one—unless horizontal repose were indulged in face downward. The third was a lad of some fourteen years of age with the lips and lower part of his face swelled to the size of a small melon. The condition of the two men awakened no sort of interest in the foreigners' native boatmen, who probably knew from personal experience how to account for it; but the boy's face did provoke some apathetic curiosity on their part. At least they inquired, lethargically, what he had been doing. He mumbled out, laughing as well as he could, that he had been "cheeky" to a mandarin when questioned, and had been battered about the jaws to teach him future civility. Now, it appears that the system under which these junk-men toil, live, and bring up families to succeed them in their servitude, is not sufficiently severe to hold them in reasonable check. At least, according to recent abstracts of the *Peking Gazette*, published in the *North China Daily News*, such is the lamentable case. We read of a "Decree acknowledging a Memorial from the Commissioners of the Peking Granaries, who request that the penalty for stealing government grain on board the boats that convey it from Tientsin to Peking may be made more severe. They represent that the speculation that goes on on board these boats has greatly increased of late, the boatmen becoming so bold in their depredations that as much as several score of piculs are stolen from every boat in a fleet, some even going so far as to steal the whole of the rice and abandon their boat. The Decree characterises such defiant contempt of the law as most abominable, and calls upon the Board of Punishments to consider what heavy penalty shall be laid down as the punishment of offences of the above nature. In a Postscript Memorial the same officers go on to say that the boatmen engaged in the transport of government rice play into the hands of persons that are characterised as grain sharks, who aid them in their thefts on the passage from Tientsin to Tung-chow. The Governor-General of Chihli and the Governor of Peking are called upon to instruct the authorities in whose jurisdiction the route lies, to be on the watch for thefts of the kind described, and to punish the offenders with the utmost rigour. Any officers displaying special zeal in the detection of the frauds will be rewarded." It will be interesting to learn what form this additionally rigorous punishment takes.

A few days ago an English gentleman who has travelled much in Australia, and "knows some" as the colonists, like their American cousins, say, of colonial politics, was talking to a Japanese acquaintance, who has a good knowledge of English but is deficient in the science of slang. Their conversation turned upon the subject of railway extension in Japan; and the English-

man said, "I hope you will have no 'log-rolling' in your work." "How can railway construction be carried on without it?" replied his friend. "Necessarily much timber will be employed and it is often more economical to roll logs than to carry them." The Saxon laughed loudly and entered upon the following explanation: He said:—"I have lately been reading in an Indian paper, an account, ostensibly written by a Madrassee on his travels, of the various countries, including Australia, which he had visited. In one of his letters he describes this very operation of 'log-rolling' which is abstract, and not as the term would imply physical. He remarks with perfect truth that it means that kind of backstairs influence which eventuates in jobbery. 'Scratch me, and I'll scratch you' was once the explanation of 'log-rolling' as given to the Hindoo. It is a kind of benefitting one another all round: one good turn must result in another. As an illustration of this, the Indian once travelled on a railway in Victoria where the curves were so sharp and frequent that it was said that a train of forty carriages would be on at least three curves at once. This peculiarity of construction necessitated short trains, and therefore two trains where one would otherwise have better suited every purpose of traffic. The explanation of this was 'log-rolling.' Estimates were prepared for the construction of a line between two places. One engineer went about among the Committee, who were also the local tradesmen, and offered to make the line at a very low rate per mile. He persuaded them to vote for him, and he was appointed: but *no mention was made as to the route to be taken.* The consequence was that he avoided all hard ground and all elevations as far as practicable, and ran his line wherever it was cheapest to make. Several miles additional length and numerous inconvenient curves were the result. The local tradesmen, that is to say the Railway Committee, gained a good deal of additional trade by the extra labor employed, and seemed tolerably well satisfied with their bargain. Now, however, as the charges on passengers and goods are according to the mileage, a different feeling prevails. It is not at all improbable that a new line will have to be made there. Such is 'log-rolling,' and this will, perhaps, explain some of the strange freaks of legislation in places where this system prevails. Now you understand," added the Englishman to the Japanese, "the peculiar process of preparing timber for railway lines which our modern English describes as 'log-rolling,' and you will understand the benevolence of my desire that the operation may not be found essential in your national scheme of railway extension." The remainder of the conversation was either not overheard or was comparatively uninteresting.

A long and thoughtful article in the *Bombay Gazette*, dealing with Mr. Marvin's work on Central Asia, tends to show Russian advances in the interior of the great continent in the moderate light in which Englishmen generally and Anglo Indians in particular should regard them. The contribution is too long to be considered

here in detail. What is most worthy of notice is the writer's idea that the events of the last five or six years have demonstrated the political object of Russia in her advance eastward. It was the common belief of the Russophobe of former days, and may still be of many, that the aim and ambition of the statesmen of that country were to wrest from England her great Indian Empire. For that reason she was supposed to be swallowing up the independent Khanates of Turkomania, and expending large sums upon a line of connections between her Eastern frontier and its European base. There can, our contemporary thinks, be little doubt that this view of the question was a false one. It was not one cause, but several acting together, which prompted the advance, and, when once begun, kept it always to the fore. Land-hunger has had much to do with Russia's Central Asian conquests. The conflicts with half-civilized nations to which those conquests led have in many cases rendered new advances imperative in a most natural way. The desire, too, of Russia's generals for employment and fame may have had much to do with the matter. But behind all these causes there has, no doubt, always existed a desire to approach India. Perhaps the desire has been at times faint, and it must have been a very vague one for long. Those who felt it years ago would possibly have been unable to explain what their desire really amounted to; whether to a hope of conquering India, or merely to a wish to annoy and alarm the British nation. The desire has, however, of late taken a very tangible and intelligible form, as Mr. Marvin impresses upon his readers. There can, one thinks, be but little doubt about the correctness of his interpretation of recent events, when he points out that the main object of the Russian statesmen of to-day in their policy of advance, so far as it concerns British interests and India, is to use the latter country as a menace to England in her Western politics, and gain such a hold over her in Asia as to prevent in future her interference with their schemes of aggrandisement in South-Eastern Europe. The writer holds that if any doubt existed on this subject it must have been extinguished by the manner in which Russia showed her hand, in 1878, when towards the close of the Russo-Turkish war the expedition of General Kaufmann was planned. It is hardly to be believed that that experienced officer, or those under whose orders he acted, conceived for one moment that the force under his command could reach the Indian frontier, much less that if it ever arrived there it would be in a position to make a serious attack upon the Indian Empire. But Russian officials have always held a very poor opinion of the internal solidity of that Empire. The prevalent feeling is well exemplified in the brochure of General Annenkoff, who briefly sums up the British position by remarking that, "from what has been already said on the matter, it is evidently beyond dispute that the allies are doubtful, and the sepoys untrustworthy." This is a matter for deep consideration, and it affords a reason of the most

cogent nature why England should not view with equanimity the establishment upon her border of a Power having the means, and under certain circumstances the will, to work upon the feelings of her allies and subjects. The chances of Russia ever being able to invade India are, doubtless, of the remotest, provided that the necessary precautions are taken; nor does the contingency seriously occupy the thoughts of Russians whose opinions are worthy of consideration. Amongst other evidence to this point is the opinion of the late General Skobeleff. The actual invasion of India is probably not the object of Russia to-day, but that which really is her object is a feasible one. To "shake the frontier" is a very different thing from passing it, and it is the consequences of such a shaking that England has to guard against. If the Russians in 1878, from their comparatively harmless and remote position in Turkomania, were prepared to send an army to approach the frontier, and by the aid of internal dissensions try to endanger England's position in the East, is it not clear, asks the Bombay journal, that in the future when troubles again arise, as they assuredly will, in Eastern Europe, England must be prepared to withstand a similar attack, this time made in real earnest? Russia, speaking from her outposts along the Persian frontier, perhaps even at Herat, will be a very different Power from Russia speaking from a far distant land across a high mountain range and a mighty river.

ONE of those ever recurring and harrowing stories of adventure and suffering, with little new save in its details, is narrated in a Bombay journal by the people of the wrecked steamer *Knight of the Bath*, who were brought to Bombay on the 12th of August from the Arabian coast. The *Knight of the Bath* left Bombay on June 12th with a cargo of wheat and seeds, for Havre, and six days afterwards, having in the meantime experienced very bad weather, was driven ashore on the desert island of Kooria Moor. The breakers swept over the deck of the ship with great violence as she lay on the rocks, and no time had to be lost in taking to the boats. This was a hazardous enterprise, however, and some members of the crew positively refused to leave the vessel, with the result that they were every one carried overboard by a huge wave and drowned. One or two others were lost in getting into the boats. Altogether seventeen got safe ashore, and sixteen were lost. The two boats made the mainland at about the same spot, and their occupants on landing were immediately surrounded by a band of armed Arabs, and robbed of nearly all their clothes. The boats also were taken possession of, and the unfortunate castaways were left in a terrible plight, with scarcely any clothing, and without food or water. They wandered inland, and, after meeting with several other bands of Arabs who treated them very churlishly, but did not rob them, evidently because they had nothing more to lose, and undergoing great sufferings from hunger and thirst and from their sore and

blistered feet, they on the third day arrived at a fishing village, the inhabitants of which received them with friendliness and kept them for forty-five days, feeding them on rice, seeds, and boiled shark. They were here discovered by a messenger to whom Captain Cuthbert, of the *Amberwitch*, had intrusted a note for Captain Williams, of the wreck, and the man acted as guide to where the *Amberwitch* was lying. They reached her after two days' journey, the greater part performed on foot. Captain Cuthbert steered straight for Bombay. Those saved were the captain, second and third officers, the third and fourth engineers, and twelve of the crew and firemen.

THE Honorable Rivers Thompson, Lieutenant-Governor of Bengal, who has recently made a tour of inspection through the province under his jurisdiction, took occasion, on the presentation of an address to him by the municipality of Chinsurah, a town on the Hooghly, to express himself strongly on the subject of race animosities. Referring to the great changes which had taken place since his arrival in the country, or even within the last ten years, he said that coming up the river from Calcutta, he had been struck very forcibly with the extent of the industries which were being promoted along each bank. There were everywhere jute mills and other industries which supplied labor for the crowded populations of agricultural districts; and all these were due to the enterprise of Englishmen. Such changes must be telling on the minds of the people, and telling in a way which they must realize for themselves, and which, was breaking up their caste prejudices. Female education, also, must have its effect on native society. He deplored, no one could do so more, for it affected him very much, those differences between Europeans and natives which had found such severe expression during the past few months. It was difficult to say whether Europeans or natives had begun them, but they were begun, and they found strong expression, especially in Bengal. He would be glad if the cause of these animosities were removed. They seemed to him to be based on a very small matter. After all, the Bill to give natives criminal jurisdiction over Europeans, which had given rise to these differences, was such a petty and small affair, that if it were passed, it would confer the privilege on only two natives in India. Whereas, on the other side, it offended the susceptibilities, and he was inclined to think the just susceptibilities, of a very large class. Whichever way it was settled, he would be very glad if this cause of dispute were removed. He would be very glad of it, because he thought it turned away their attention from the development of those great reforms to which the Government of India, and also the Government of Bengal, attached very great importance.

A NEW vernacular magazine, the *Kokwai Zasshi* (*Nautical Magazine*) has appeared. Its main object professes to be to urge the Japanese people to develop their mercantile marine, and

to instruct them in the best methods of so doing. With this view it is written in familiar style, and avoids as far as possible all technicalities. It proposes to treat of maritime law, the science of navigation, the history and progress of marine commerce, naval architecture, ancient and modern, and kindred subjects. It desires generally to be useful to all those that "go down to the sea in ships and occupy their business in the deep waters." The office of the Magazine is styled the "Japanese Lloyd's;" and it is within the scope of the projectors to establish as soon as possible, an institution which shall answer to that name. Nos. 1 and 2 of the periodical, published on the 18th of August and 16th of September respectively, contain congratulatory addresses from friends, and articles on the government rules for building wooden vessels, their classification, and facilities of insurance: translations from Lindsay on Merchant Shipping, Lees on Shipping Laws, the *Nautical Magazine* on Freeboard, and other items of general interest. Mr. S. Sato, Interpreter and Translator to the Marine Office, has assumed editorial charge of the translation department of this new literary venture, to which we wish all success in a long career of usefulness and profit.

ATTENTION is drawn to a Government notification published elsewhere announcing that all telegraphic communication is suspended from the 20th instant, to and from the Omori Kawasaki and Tsurumi stations on the Yokohama-Shimbashi line of railway, and to and from the Takatsuki station on the Kobe-Kiyoto line. No reason for the notification is assigned. Some of the telegraph officials suggest with subtle irony that the railway is so much more rapid than the telegraph, within limited areas, that the latter relinquishes competition with the former between small distances.

ON Saturday night last a collision occurred in Nagasaki between the Police and some Chinese, in which one of the latter was killed on the spot and four others wounded. It appears that a policeman in mufti entered a Chinese house and took, or attempted to take, from one of the inmates an opium pipe. The Chinese soon swarmed round the house in numbers, and the police, to extricate themselves, drew their swords, with the result stated above. The police of Nagasaki have quite recently adopted side-arms.

YESTERDAY morning we stated that a telegram had been received announcing a decisive French victory in Annam. Our authority was the *Official Gazette*, so that the telegram was obviously forwarded from the Japanese Consulate in Hongkong. Yesterday afternoon, however, telegraphic news of a very different nature reached us from a trustworthy source. It was to the effect that the French had sustained another defeat at the hands of the Black Flags; that disputes had arisen between the civil and military authorities, and that Admiral Courbet, declaring himself unable to maintain his posi-

tion, had given up his command and set out for home. This news is important, for although no reverses the French arms may sustain at present can influence the result of the struggle, they may not only protract it, but also entail its prosecution on a scale that would render non-intervention on China's part exceedingly difficult. By way of a set-off to this bad news, however, comes intelligence from Shanghai that, according to China's version, the lately reported passage of fifteen thousand Chinese troops into Tonquin has no significance so far as France is concerned. The Marquis Tseng may have seen fit to put his own interpretation on the fact, but in reality the troops are intended to act against the Black Flags, who get the credit of being far more hostile to China than to France. The *North China Herald*, writing on this subject, says:—"Now that they" (the Black Flags) "have been in a measure driven back towards the frontier, it behoves the Chinese authorities to prevent them overrunning Kuangtung, Kuangsi, and Yunnan, which would be the natural result of the recent French successes. There seems nowhere in fact for them to go; and unless China has resolved once for all upon waging a war of extermination against hordes which have been fighting men from their birth, the prospect of peace in the Southern provinces appears very small."

Those who have attentively read the Hongkong papers for the last few weeks cannot have been greatly surprised by the news of the recent riots in Shamien. A pronounced feeling of distrust prevalent among the natives of Canton has been distinctly noticeable for some months past. Placards teeming with ill-will against all "outer barbarians" have been posted about the city, while petitions, signed by thousands of people belonging to the better class, have urged the magistrates to investigate the alleged assaults of Customs officials upon certain natives. This feeling of dislike is intensified often by the most trivial circumstance or the most casual rumour, for the Chinese need but little pretext to carry their hatred of Europeans to practical demonstrations. "Apart from all official direction," says Mr. Boulger in the *Fortnightly Review*, "the people are singularly antipathetic to foreigners." And though the Government has, partly out of necessity, partly from superior knowledge, thrown a cloak over its mind, we can safely assume that its real views are not widely different from those that appear to spring from the hearts of the people.

This antipathy of the Chinese towards foreigners seems to be one of their ruling passions. The three leading sentiments which form the basis of their political opinions are all more or less influenced by this same hatred of Europeans. China has, they claim, an inherent right to superiority: intellectually, morally, socially, the Middle Kingdom heads the nations of the world. Again, China has always been a self-sufficing world to herself: trade with foreigners is thus an irksome, even if lucrative, obligation. Finally,

the vast extent of the Chinese Empire makes it an axiom of prudence to abstain from cultivating close relationships with those independent of its authority. If China wishes to preserve her wide domains intact she must continue the anti-foreign policy which is so prominent a feature of her politics. But, be it noted, China makes a vast difference between inland and coast trade; as long as traffic with Europeans is confined to the sea and river-ports there is little to be apprehended from intercourse with foreigners.

So much, then, for the popular sentiments of the Chinese. There remains, however, an additional reason for their national prejudice against foreigners in the fact that there is a deep-rooted conviction that they are the losers in traffic with Europeans. It is quite true that at the outset of commercial relations with China, the balance of trade was heavily against the Chinese. The country was exposed to a continual drain of specie in return for the numerous imports from Europe, while only small quantities tea and silk were exported. Under these circumstances, the relations with outside peoples assumed the appearance of a calamity which the Peking authorities felt justified in endeavoring to cure by every means in their power. A climax was reached in 1840, when the destruction of English property in Canton led to hostilities which terminated with the Treaty of Nankin; and from that time trade was conducted on a new basis. In fact, its conditions then became entirely reversed; for, owing to the increased demand for Chinese tea in Europe and America, China was a gainer in specie to the amount of more than a million annually. Nevertheless the Government of the Middle Kingdom is always confronted by the uncomfortable fact that the single item of imported opium equals in value all the other goods brought to China from foreign countries, and is considerably more than half the total export trade. In 1879 the value of the imported opium, including that smuggled *via* Hongkong, was estimated at sixty-five millions of dollars, while the whole export trade only amounted to 100 millions.

We have in the recent riots in Canton a very similar occurrence to that of 1840. But we can justly assume that the outrages committed and the destruction of foreign property were this time neither instigated nor sanctioned by the authorities. Our telegraphic despatches lay stress upon the fact that no political importance is to be attached to the riots. They would have us believe that the disturbances originated in an altercation between some natives and officers of the river-steamer *Hankow*. Chinamen are notoriously clannish, and the cry of *Tai tai* is sufficient to attract eager partisans for a fray with foreigners. But this was certainly not the sole cause, as there have been for several months past almost constant collisions between officers of the Custom House and the native populace. It must be remembered that smuggling, in especial the smuggling of opium, is one of the principal causes of ill-feeling between the Cus-

toms officials and natives; for not only are many thousands of Cantonese engaged in it, but is it also constantly carried on. As early as 1838, Captain Elliott foresaw that the continual smuggling of opium would result in a collision between foreigners and natives. To avoid this, he wrote to the then Governor Choo an urgent despatch, calling upon the native authorities to assist him in putting an end to the illegal traffic. "The undersigned," he wrote "deliberating on those serious risks to which the lives and properties of many innocent men, both natives and foreigners, are at present exposed, considers that it is his duty to lay his thoughts before your Excellency. Seeking for the immediate source of this dangerous state of things, he finds it in the existence of an extensive opium traffic conducted in small craft in the river. From one condition of undisturbed lawlessness to another and still more hazardous, the course is sure and rapid. Illegalities will be committed more and more frequently, the difficulty of distinguishing between the right and the wrong will become daily more difficult; the foreign interests and character will suffer increasing injury; violent affrays will be of constant recurrence; life, and probably the lives of innocent men, will be sacrificed; some general catastrophe will ensue, and there will be employment for none but the reckless and the culpable. The undersigned is without doubt that the continuance of this traffic in the inner waters will involve the whole foreign community in Canton in some disastrous difficulty,"—and the riots of 1840 amply proved the justice of his apprehensions.

Although forty-five years have passed since Elliott wrote this despatch, the position of affairs to-day is practically the same. Many of the officials as well as thousands of the natives are actively engaged in smuggling operations. Even the vessels of the Hoppo's notorious 'blockade fleet' are only so many conveniences for the furtherance of illegal traffic. It is true that the ostensible excuse for the maintenance of this fleet is to prevent opium smuggling and the like between Canton and Hongkong; it is true, also, that they confiscate yearly goods to the amount of 300,000 *taels*, although twice as much passes into Canton in safety. But it is positively known that wholesale smuggling is being carried on by nearly every vessel of this doubtful fleet; more than this, the confiscated goods are only delivered up in part, and the frauds on the Government are endless. When will China learn that only evil can come of a policy which keeps corrupt officials, unjust magistrates, and tyrannical governors in office?

What were the possible defences of Shamien in case of riots? A few policemen stationed at the entrance and exit of the broad bridges connecting Shamien with Canton,—and nothing more. No precautions were taken to guard against an insurrection of the native populace, who could easily cross on boats if the bridges were obstructed; no available guard was

within call except the Tartar soldiers, and so the beautiful residences of Shiamien lay within easy reach of all sorts of desperadoes. Even last year, when the prevailing spirit of incendiarism gave the foreigners considerable cause for alarm, nothing was done to secure the safety of Shiamien, and the ease with which a large portion of the settlement was destroyed last week proves that the residents were totally unprepared for any assault. Canton has been the theatre of riots and violent actions of all sorts ever since the establishment of the East India Company in that city, and the bitter experience of the past will, we trust, carry with it a lesson not to be forgotten.

A DEPUTATION, mainly composed of gentlemen belonging to the medical profession, have waited upon the President of the Board of Trade for the purpose of urging upon the British Government the necessity of improving the *status* of ship-surgeons on board emigrant Atlantic and other large steamships. Sir Lyon Playfair, M.P., who introduced the deputation, pointed out the enormous increase of emigration from the British shores within recent years, and urged the absolute need of improving the medical and sanitary condition of the vessels in which these immense bodies of people were taken across the Atlantic. Many of the medical men who were employed on board those vessels had but very limited qualifications, and very frequently were appointed without due regard to age, health, professional *status*, or character. The Board of Trade ought to obtain powers to take this important branch of the public service under its immediate direction. Mr. A. Moore, M.P., Mr. Ernest Hart, Dr. Garbutt, Captain Bedford Pim, R.N., Dr. Irwin, and others having spoken in support of the prayer of the memorial, Mr. Chamberlain said he was very much impressed with the arguments used. He did not see his way to a perfect acquiescence in the proposal that the Board of Trade should take over the control of the medical service on board the commercial marine of the country, and regulate the most minute details of the surgical and sanitary arrangements of vessels. As to the appointment of medical men, the Board of Trade might as well be asked to appoint captains or other officers. No Government could interfere in such matters of mere control; but he promised the deputation he would carefully consider the matter, and if he had an opportunity, as he hoped he should have, of bringing before Parliament next year his Bill for the amendment of the Merchant Shipping Act, he should embody some of the suggestions made in the way deemed most expedient and advisable.

An ex-Ceylon resident now stationed in the Straits Settlements sends the following note to the *Ceylon Observer*:—"In your report of a meeting of the Royal Asiatic Society, Colombo, some doubt is expressed as to what purpose the kingfishers' and blue jays' wings exported from Ceylon to China are put to. I think I can tell you. I was dining a few nights ago with the

head of the Chinese here (a very remarkable man), and after dinner, before going over to his theatre, where we were to witness a performance of the 'Wayung,' a Chinese play, I saw a picture under glass in a carved ebony frame like a dressing glass standing on a carved ebony table. The picture represented a conflict outside a Chinese castle; there were knights on horseback heated and furious, raining blows upon each other, fair ladies loafing about doorways and windows to pick up the tip as to who was the best joustier, and the whole thing except the horses and the faces was done in jay's or kingfishers' wings. Every shade was used, and the effect was not only curious but very pretty." An ex-Ceylon resident is right so far as he goes, but he hardly goes far enough. The principal use to which the beautiful blue feathers of the kingfisher is put in China, is in decorating the heads of the ladies of the Middle Kingdom, the feathers referred to being very neatly inlaid after stripping from the quill, in the silver, and sometimes gold, ornaments used in ladies' head dressing.

We read in the *Yiji Shimpo* the following particulars of the progress of the Union Shipping Association. Two steamers to be named the *Yamashiro* and *Omi*, are being built in England. Four others, the *Ist Owari*, *Totomi*, and *Suruga* are reported to have sailed from England for Japan, while the *Yetchiu-maru* (late *Hoshiwaka-maru*) is expected to arrive in Shinagawa within a few days. These vessels are deemed insufficient for the purpose of the company; and a further order has been forwarded to England for the construction of eight additional steamships to be delivered in Japan in the course of the next few months. It is estimated that in April next the fleet of the Company will consist of more than thirty ships. The names, tonnage, and speed of the new vessels will be as follows:—

| NAME. | TONNAGE. | SPEED IN KNOTS. |
|------------------------------------------------|-------------|-----------------|
| <i>Yamashiro Maru</i> | 2,000 | 13 miles. |
| <i>Ist Maru</i> | 1,200 | 10 miles. |
| <i>Totomi Maru</i> | 2,400 | 10 miles. |
| <i>Yetchiu Maru</i> | 1,350 | 10 miles. |
| <i>Satsuma Maru</i> | 1,970 | 12 miles. |
| <i>Higo Maru</i> | 1,360 | 10 miles. |
| <i>Mutsu Maru</i> | 800 | 10 miles. |
| <i>Idzumo Maru</i> | 800 | 10 miles. |
| A steamer for the trans- port of coal | 2,500 | 10 miles. |
| <i>Omi Maru</i> | 2,000 | 13 miles. |
| <i>Owari Maru</i> | 1,150 | 10 miles. |
| <i>Suruga Maru</i> | 700 | 10 miles. |
| <i>Nagato Maru</i> | 2,300 | 10 miles. |
| <i>Kii Maru</i> | 1,300 | 10 miles. |
| <i>Nine Maru</i> | 800 | 10 miles. |
| <i>Harima Maru</i> | 800 | 10 miles. |

Scotch papers record that the Japanese servant of Captain Dundas of Dundas, had a very narrow escape from drowning. The servant went down to the Forth near Queensferry and swam across to the opposite shore. On his return, however, owing to the coldness of the stream, he was seized with cramp in his legs, and had the greatest difficulty in getting back to where his clothes were, swimming only with his arms. The exertion of this was too much for him, and he fell down insensible on the beach

directly he landed. In this condition he remained about half an hour, when he was found by some men, to all appearances quite dead. He was carried to Captain Dundas's house, where the necessary steps were taken to restore animation with, we are happy to say, complete success.

THE telegraphic news which we published the other morning requires correction in so far as Admiral Courbet's resignation of his command or departure from Annam are concerned. The facts appear to be that the French have sustained a reverse at the hands of the Black Flags; that Admiral Courbet, declaring himself unable to maintain his positions, has recommended separate negotiations with the Black Flags, and that this recommendation being negated by M. Harmand, the *entente cordiale* between the civil and military authorities is for the moment disturbed.

THE *Nichi Nichi Shimbun* publishes the following report, said to have been forwarded to that journal by its correspondent at Inchhōn, Korea:—The Tariff question, which has for sometime past occupied the attention of the Korean Government, and Mr. Takezoye, the Japanese Minister, has at last been settled. The principal point of the agreement is that goods are to be charged an *ad valorem* duty. On dyes, shirtings, cotton cloth, silk, woollen Italians and *saké*, the duty is 8 per cent., damask, and satins 10 per cent., velvets, carpets, copper, iron, watches, and articles of luxury 20 per cent., fancy goods 15 per cent., and provisions for consumption by Japanese 5 per cent. There is no duty on the export of gold and silver ore or on gold dust; whilst cereals and all other merchandize are subjected to an impost of 5 per cent. Red ginseng is prohibited except by permission of the Korean Government, but when Koreans import it into Japan they have to pay the Japanese Government an import duty of 15 per cent. It is also stated that the trade regulations that have been framed, are rather more complete than, but on the same basis as, those of Japan. The tariff will come into operation within one hundred days after the ratification of the treaty, so that on and after the 5th of November next, all imports will be subject to it. The above information has been obtained from a trustworthy Korean source.

ACCORDING to the *China Mail*, the report that 10,000 Chinese troops are being raised in Canton and the immediate neighbourhood seems to be a matter of common knowledge in Canton. Certain Chinese officials in Europe also seem to have admitted that a very large force has been concentrated in Yunnan. The following "note" on this subject, which appears in the *Pall Mall Gazette* may be instructive:—"The report of the conversation between the Chinese military attaché in Berlin and M. Challemeil-Lacour reveals the dark cloud on the horizon. Referring to the concentration of thirty-five thousand men in Yunnan, the Chinese attaché explained that step as being directed to meet the frontier aggres-

sions of the Black Flags. These marauders have now harried the valley of the Songkoi, and probably also the Yunnan border, for nearly twenty years, and the Chinese never before thought it necessary to send a large army to the aid of the local forces in repressing their forays. This new army in South-western China probably awaits the result of the negotiations going on between France and China."

With reference to the awful calamities wrought by the recent seismic and volcanic tumult in and near the Straits of Sunda, and the dangers to navigation ensuing from geographical transformations, we are pleased to read that instructions have been telegraphed to Singapore by the Admiralty to despatch a British man-of-war immediately to Sunda Straits, to render any assistance that may be required by the Dutch authorities, and to assist any vessels in distress, as also to ascertain as far as possible the nature of the changes in the channel. H.M.S. *Champion* is at present (says the *Straits Times*) "on a cruise under sail in the Straits of Malacca, having returned from the eastward and passed through to the west, and we understand she will probably be communicated with by means of a private steamer."

An instance of Catholic missionary devotion is recorded modestly by the *Catholic Register* (Hongkong), Mgr. Pagnucci, Coadjutor to the Vicar Apostolic of Shansi, relates the death in August last, of the much-esteemed Father Lewis Martinetti, after a mission of forty-eight years in the interior of China without having a single leave home. The deceased Father came to China in 1835, worked as a missionary in the province of Hupeh for a short time and afterwards passed to Shansi, where he spent thirty-eight years in educating the native clergy. His death was deeply lamented by the whole community of the province.

The committee of the Calcutta International Exhibition have decided the form which the awards are to take. After inspecting and considering the numerous designs sent in, they have adopted that submitted by the Calcutta School of Arts, "principally on account of its excelling all others in its chaste and artistic combination of Oriental designs." The medals are to be executed by Messrs. Wyan and Co., London, and will be wrought according to the instructions forwarded to that firm by the Government of Bengal.

The *Yomiuri Shimbun* publishes a report to the effect that H.E. Inouye, Minister for Foreign Affairs, has been privately informed of his appointment as Minister to a Foreign Court. H.E. Terashima, Minister to Washington, is named as his successor. The journal in question does not vouch for the accuracy of the report.

A rumor, which the *China Mail* gives for what it is worth, is current amongst the Chinese to the effect that China has made overtures to

Japan offering to settle the Loochoo and Korean questions to Japan's satisfaction and in accordance with her wishes, provided that Japan will enter into an alliance, offensive and defensive, against France should the situation anent the Tonquin imbroglio require it. It is believed, still according to the *China Mail*, that Japan has taken the matter into consideration and will, through the medium of her newly appointed Minister to China, who has not as yet arrived at his post, give answer to the latter power very shortly.

Concerning the distribution of the British Squadron in Chinese waters, the *Daily Press* of Hongkong publishes the following correspondence:—

Hongkong General Chamber of Commerce,
Hongkong, 16th April, 1883.

To His Excellency Vice-Admiral GEORGE O. WILLES,
C.B., Commander-in-Chief.

SIR,—On behalf of the Committee of this Chamber, I beg to address Your Excellency on the subject of the naval protection to be afforded to British Commerce in these waters.

During the last two years, it has come under the observation of the Committee that for considerable periods of time this harbour has, on more than one occasion, been left without the presence of an effective vessel of war, and it is now rumoured, though the Committee are unable to give any good authority for the statement, that it is Your Excellency's intention to allow the naval service along the entire Coast between Foochow on the North and Hoihow on the South—including the waters of this Colony during the summer months to be performed by a single sea-going pennant.

The Committee feel it to be their duty to represent to Your Excellency that keeping in view the possibilities of local disturbance at any one of the Treaty ports and the special duties which a vessel of war may be called upon to undertake during a period of six months while the Squadron will be at the north, it is very desirable that this harbour should not be without the presence of at least one of Her Majesty's ships while another is doing patrol duty along the Coast.—I have the honour to be, Sir, Your Excellency's obedient servant.

(Signed) F. BULKLEY JOHNSON, Chairman.

Audacious at Hongkong,
17th April, 1883.

SIR,—I am commanded by Vice-Admiral Wiles, Commander-in-Chief, to acknowledge the receipt of your letter of the 16th April on the subject of the Naval Protection to be afforded to British Commerce in these waters.

In the 2nd paragraph of that letter you are good enough to make a statement, on behalf of the Chamber of Commerce, that for considerable periods of time this harbour has, on more than one occasion, been left without the presence of an effective vessel of war. The Commander-in-Chief regrets that the Chamber should have accepted information which is at variance with actual facts.

The Commander-in-Chief further directs me to acquaint you, for the information of the Chamber of Commerce, that it is his duty to give protection to British subjects, commerce, and possessions, and that he so disposes of the Squadron under his command as seems to him most conducive to the attainment of that object, or as may be ordered by Her Majesty's Government.

He need not assure the Chamber of Commerce that he reciprocates their desire to see British Trade effectually guarded, and that he is fully alive to the important mercantile interests which are represented in Hongkong.—I have the honour to be, Sir, Your obedient Servant,

(Signed)

WILLIAM W. PERRY,
Secretary to Commander-in-Chief.
The Chairman of the Chamber of Commerce,
Hongkong.

Among the items of news relating to the movements of the foreign fleets in Chinese waters, we read that the German men-of-war *Wolf*, *Leipzig*, *Illir*, arrived off the Bluff at Chefoo on the evening of the 4th instant.—H.M.S. *Kestrel* left

Shanghai for Chefoo on the afternoon of the 6th instant, and the *Foxhound* arrived at the former from the latter port on the same date.—The French frigate *Tourville*, Captain Bose, has arrived at Hongkong from Singapore. The *Tourville* is an unarmoured steamer of 5,340 tons displacement, 6,000 horse-power, carries a crew of 550 men, and is armed with 27 heavy guns, of which 20 are of a bore of 5½ inches and 7 of 9½ inches. The *Tourville* was launched at Toulon in 1876, and is a 17 knot boat.—The United States corvette *Junia* left Singapore on the afternoon of the 2nd inst. for the Straits of Sunda, under telegraphic orders from the American Admiral. H.M.S. *Champion* passed through Singapore on the morning of the 4th from a return cruise in the Straits of Malacca to the Straits of Sunda.—The French corvette *Kersaint*, left Hongkong ostensibly for a cruise, but, in reality, for Tonquin. The *Kersaint* carries despatches for Admiral Courbet and M. Harmand from Monsieur Tricou, the French Minister, anent the Tonquin matter. The *Telegraph* understands that the result of M. Tricou's negotiations with China has been far from satisfactory, and it is rumored that the Chinese Government have telegraphed to the Marquis Tseng, to ask the French Government to recall M. Tricou and send some one else in his stead. From a few particulars gleaned from various sources, the same paper hears that the French Minister has solicited his nation's naval authorities to make a naval demonstration in Shanghai with a view towards having a salutary moral effect upon the Chinese mind.

A CHINESE paper issued in Hongkong from the office of the *China Mail* suggests that a reward of \$10 should be offered for "each head of a French private soldier and \$100 for each head of a French officer, by which means they would soon be swept off the face of the earth." Apart from the fiendish barbarity of the proposal, and the wonder arising that it is allowed to appear without subsequent disclaimer on the part of the proprietor of the office from an English-owned printing establishment, the question arises how many heads each French private and officer carries, as they are appraised at so much each. To paraphrase Ancient Pistol, "Have we not Hydra here?"

We learn from the *Choya Shimbun* that the Naval Department have decided to postpone the construction of the dockyard in Kiushiu. It is now proposed to purchase two more men-of-war besides the one lately ordered in England, and that the five million yen voted for the dockyard be appropriated to this purpose.

TRAVELLERS on the Yokohama-Tokyo railway are warned that pickpockets ply their trade at the Shimbashi station, evidence to this effect having been gained on the 19th instant by one of the oldest residents in Yokohama, who did not apparently "pocket his watch, and watch his pocket, too," for arriving at Tsukiji he discovered that he was minus his chronometer. He

remembers, he says, that there was a good deal of pushing near the ticket-collector, and requested the people near him to take time. This, of course, was the time and place at which the operation was performed.

SOME time on Thursday evening or night a robbery was effected at No. 136, Honmura Road, a house which is in course of repair, and is in the occupancy of Mr. and Mrs. Whitman, who have recently arrived in this country. They retired to rest at nine o'clock, leaving the back door locked, with the key in the door on the inside, and a small door leading into the scullery unfastened for the entry of the scavenger. This morning at six o'clock Mrs. Whitman found that her dress had been removed from the bedroom. She found it on the floor of the kitchen, the door of which was unlocked, the key having been removed. The pockets of the dress, which contained \$150 in American currency notes, \$50 in local Bank-notes, an American gold dollar, and two sovereigns, had been rifled. Two suits of men's new clothes had also been stolen. It is uncertain at what time the theft was accomplished. Some time last evening a Japanese man changed \$80 worth of American currency notes at an Exchange-shop in Honmura Road; and early this morning, the Chinese proprietor, hearing of the robbery, with laudable promptness, gave information of his transaction. It is thought that this may afford a clue whereby to trace the robber.

THE *Hongkong Daily Press* is informed that the Wa Hop Telegraph Company's line has not been taken over by the Viceroy of Canton, as previously reported, but that offers have been made by the China Administration Telegraph Co., of Shanghai, to take over the line on favourable terms, but which are not to be considered settled until the money is paid.

THE Nippon Railway Company advertise in the native journals that the "special train" hitherto running between Uyeno and Oji has been discontinued.

THE following figures of the trade between France and China are interesting at the present time:—In 1870 the imports from the Celestial Empire amounted to f.56,000,000; in 1878 to f.140,000,000; in 1880 to f.158,000,000; and in 1881 to f.145,000,000; while the exports from France to China were no more than f.4,700,000 in 1870, f.20,500,000 in 1880, and f.36,100,000 in 1881.

THE name of King Theebaw of Burmah has of late years been so closely associated with every thing that is vile, cruel, and debauched that it bade fair to be bracketed with Nero's in the category of atrocious autocrats. Hence it is no ungrateful task to dash a few streaks of white over his rapidly darkening portrait. The *Pioneer*, one of the justest of Indian journals, has undertaken the task of an improving artist. It reports that a French gentleman, for more than eighty years resident in Mandalay, and the recipient

of numerous favours at King Theebaw's hands, affirms that the vices of cruelty, dissipation, and drunkenness with which the young monarch is daily charged, are not really attributable to him. The informant has had innumerable opportunities of seeing and interviewing His Burmese Majesty, and he believes that few Eastern rulers have been more maligned. Cruelties have undoubtedly been committed at Mandalay, but not by the King's personal direction; on the contrary, the commission of these cruelties—the cold-blooded executions which horrified British Burmah a couple of years ago—was really the handiwork of the officials to ensure the permanence of their high offices, and the preservation of the present régime. Theebaw's mother, the Queen Dowager, is a bold, designing, clever woman, possessing a resolute character; and she is responsible for much of the bloodshed. The writer in the *Pioneer* adds that, while disinclined to accept all that his present informant tells of the Mandalay Royal Family, it must be suspected that the "annexation party" in British Burmah are often misled by the wild stories which they readily accept, repeat, and urge upon the Government of India as reasons and pretexts for the immediate annexation of Upper Burma.

"STOCK-NOTES" are issued in India, with a view to tapping, and utilizing in improving the financial condition of the country, the hoarded wealth, doubtless enormous, of the inhabitants. The *Bombay Gazette* regrets that the documents have not become popular; but holds that it is well to acknowledge the fact at once, and endeavour to find a remedy. The scheme originally was well thought out, and if it had been accepted by the population for the purposes intended, the benefits would have been manifold. It is not difficult to understand some of the obstacles which have stood in the way of their adoption. They are less convenient than they might have been, though the restrictions on their usefulness were designed with a reasonable object. There is no ready market for the notes; and some other defects were not wholly unforeseen. Stock-notes are inconvertible into ordinary paper, and the coupon is not detachable as in ordinary coupon notes. The former provision saved the notes from the operations of speculators, and the second prevented their being employed as remittances. It was intended that they should supply the place of the jewellery which it is the custom to hoard up in India. The *Bombay Gazette* finds it not surprising that the scheme should not have been cordially received. "Traditional customs are hard to break through. But the attempt must be made, and we are glad to see that Government are disposed to persevere. Meanwhile the opinions of local Governments are to be asked for, before any final decision as to amendment is arrived at."

THE practice of "ensilage," the introduction of which into Japan has more than once been advocated in this journal, has long been known in the Mofussil, where it is applied even to grain, and not as in America and Europe to fodder

only. The grain is stored, when the prices are low, in pits dug under ground, where it remains sometimes for many years until a profitable market occurs for it.

IN the U.S. Consular Court on Wednesday, before Consul-General T. B. Van Buren, Hugo Lehmann, a marine of the U.S.S. *Richmond*, was charged with being drunk and incapable. He pleaded guilty; and as it was his second offence he was fined two dollars and ordered pay thirty *sen jinrikisha* hire, and to go on board his ship at once.

HIS Excellency Shinagawa, Vice-Minister of Agriculture and Commerce, was present at the opening of the German Language School in Tokyo, on the 18th inst.

THE American ship *Alex. McNeil*, from New York April 18th, with oil, passed Anjer for this port on the 12th August last, consequently she may shortly be expected; she brings about 39,000 cases.

THE M.B.M. Co.'s steamer *Kworio Maru* sailed on Monday for Korea, with from four to five hundred troops to relieve the present Japanese Legation guard at Seoul.

THE O. & O. Company's steamship *Arabic* left San Francisco on the 15th inst. for this port, on which date the *Oceanic* arrived, having left here on the 31st ult.

WE would draw public attention to an appeal in the advertisement columns to the generosity of the community on behalf of the sufferers by the late terrible events in the Straits of Sunda.

SIR R. T. KENNIE is now in Canton, where he will hear the case of the Customs' employé charged with shooting some Chinese in Honam.

WE are happy to see that the vernacular press announces the recovery of H.E. Matsugata, Minister of Finance, from his recent indisposition. He is said to have resumed his duties on the 17th instant.

THE attendance at the Gaiety Theatre last night was small, but this had no effect on the spirits of the performers, who gave a very good entertainment. Undismayed by empty benches, the enterprising caterer has announced two performances for Saturday, at two in the afternoon and nine p.m.

A TELEGRAM was received on the 19th instant announcing that the French had gained a final and decisive victory in Annam.

THE American flag-ship *Richmond* will leave the Anchorage at 9 a.m. this morning for Yokosuka.

WE are informed by the Messageries Maritimes Company that the outgoing French mail will be carried by the steamship *Godavery*, instead of the *Tanais*, as previously announced.

JAPAN'S DIRECT TRADE.

AN article which we reproduce elsewhere from the columns of the *Keisai Zasshi* (*Economist*) deserves attention. Its object is to dissuade Japanese merchants from enterprises of direct trade, above all direct trade under official auspices. In the abstract our Tokiyo contemporary is not opposed to this so-called "direct trade." He avowedly hopes that, as Japan's foreign commerce develops, her people's ability to carry it on independently of outside aid will develop in proportion. Commerce, however, is purely and simply a matter of money-making. The plain business of those concerned in it is to conduct it after whatever fashion offers the best prospect of legitimate gain. But it is much to be feared that this primary object has been obscured in Japan by considerations which ought to be wholly extraneous, and which, by crippling the country's resources, must ultimately have the effect of postponing the end they seek to compass. We admit frankly that to manage their foreign-commerce independently is a legitimate and natural aim for Japanese merchants to pursue, but this admission must not be interpreted as implying that the state of dependence carries with it any reproach whatsoever. The Japanese need be no more ashamed of employing foreign agents to conduct their business abroad, than of engaging Europeans and Americans to teach in their colleges. If, indeed, the agency can be carried on more economically or to greater advantage under Japanese management, then, but not till then, Japan ought to think earnestly of discharging her foreign assistants. This, we affirm, is the only practical and common-sense view. Let it be discounted as much as may seem necessary in consideration of our partiality to the interests of our own nationals, there will still remain the indisputable fact that commerce is purely a matter of dollars and cents, and that to make it produce a maximum of those coins is the principle which ought to underlie all the details of its management. But this, we repeat, is not the only motive which prevails with the Japanese. Politics have been suffered to obscure the question to a degree that cannot but cause great uneasiness to every well-wisher of the country. The term "politics" is not employed here in the sense of hostility to Western intercourse. Whatever umbrage Japan may feel at the anomalies of the system now existing, it would be unjust and untrue to accuse her of any lingering prejudice against foreigners themselves. What we mean is simply this—that among

the list of objects whose complete accomplishment must precede Japan's elevation to the status of a civilized Power—using the term "civilized" in its Western signification—she has placed the independent management of her foreign commerce. Her politicians and her people alike are persuaded that her reputation for moral competence is more or less concerned in this achievement, and to accomplish it the resources of the country are squandered to an extent which—if the figures of the *Keisai Zasshi* be even approximately correct—signifies almost a national disaster. It is this creed which inspires the talk we hear so often about "commercial rights" and about the "arbitrary conduct of foreign traders," and it is this which prompts the Government to assist a few clever, and we fear designing, Japanese merchants to an extent incompatible with any sound financial principles. For, after all, what is meant by direct trade? Does it mean the admission of a considerable section of the nation to privileges from which they are at present excluded by foreign intervention; or does it mean that half a dozen merchants are allowed to exploit the Treasury by way of reward for transacting affairs of which they have no knowledge and which they have hitherto hopelessly bungled? We assume the correctness of the *Keisai Zasshi's* allusions to official assistance, but we find much difficulty in persuading ourselves to believe that the Government really hopes to promote commercial competence by such expedients. It ought to be quite evident that these men who, without assistance from the Treasury, will not venture to essay direct trade, and who, with that assistance, make lamentable failures, will avoid any similar enterprise on their own account hereafter as they would avoid certain ruin. Something perhaps may be gained in experience, but at what a price! If there is really a desire so earnest to educate commercial ability in this particular direction, it would be infinitely wiser and much more economical to place twenty or thirty youths in merchants' offices in the manufacturing centres of the West, and let them devote nine or ten years to a careful study of the methods that have made Western merchants what they are. The only persons likely to succeed in direct trade are those who can conduct it profitably, independent of all official assistance, and it is tolerably certain that these men will make the attempt soon enough without any abnormal incentive. There is much that is admirable and deserving of sympathy in Japan's efforts to correct the evils of her long seclusion, but these official attempts to

foster direct trade seem to indicate the existence of an inconsiderate, if not reckless, impatience.

We are not blind to the apparent injustice of charging this confusion of commercial and political ideas entirely to Japan's account. There need be no hesitation in admitting that Westerners themselves have set the example. Her Majesty's Representative struck the keynote of the policy that has been pursued here when he said, in a letter to *The Times*, that Japan is the last market in the East left open to English commodities. There has been something particularly humiliating in the undignified attitude assumed by Great Britain when, postponing the consideration of really vital issues, she descended to haggle for years with a comparatively weak Oriental State over a question involving an alteration of two or three per cent. in the latter's tariff. We have no right to complain if the spirit which prompted such a policy finds an echo in Japan. Little by little, convinced that they can never recover the power of managing their own affairs independently so long as Western pockets are concerned in the management, the Japanese may have persuaded themselves that to minimize Western interests in this country is the only hopeful method of escaping Western arbitrariness. We do not pretend to assert that this is so, but neither can we pretend to deny its possibility. Japan has taken her cue from foreigners in so many other things that it would be unreasonable to suppose her entirely uninfluenced by this phase of our behaviour.

Such a scheme, however, is eminently short-sighted, in so far as it involves official assistance. Every fresh evidence of Governmental interference in commercial matters supplies the Treaty Powers with another argument against surrendering to Japan the control of her own tariff. This is self-evident. Further, the invariable results of this policy in the past have been financially so disastrous that, instead of rendering direct trade attractive, they have made it synonymous with loss and disaster. Yet, if our Tokiyo contemporary be credibly informed, a tendency still survives to repeat these fatal experiments. We can scarcely believe it. What seems much more probable is that the Treasury's devices for obtaining a specie reserve have been erroneously interpreted as part of a scheme to promote direct trade. Those devices are doubtless open to much criticism, but Japan is in the unfortunate position of having only evils to choose from. Let us hope, however, that she will not voluntarily add to her embarrassments by pursuing a policy so irrational as that criticised by the *Keisai Zasshi*.

RIOTS—A PARALLEL.

ON every occasion of an anti-foreign riot in China, the trouble is referred, directly or indirectly, to the malicious interference of the secret societies, those mysterious organizations which portend so much danger to the peace of the Chinese Empire. But the secret societies, in their turn, must be inspired by some motives which appeal forcibly to popular sympathy. Their ultimate purpose may be, and probably is, treasonable to the reigning dynasty, but assuredly that programme does not yet possess features sufficiently attractive to throw a city into commotion at a moment's notice, as was the case at Canton the other day. The materials upon which these social incendiaries have to work must be already in a highly combustible condition, else would they not burst into such energetic flame under provocation so slight as the death of one man in a country where human life is appraised at an extraordinarily low rate. There can be little doubt that anti-foreign feeling is the smouldering influence primarily responsible for the recent outrage, and we may be sure that on this ground the Chinese Government will be required to indemnify the losses of the foreign settlers. It will not be uninteresting, then, to recall the circumstances of a similar, and similarly inspired, outrage against Chinese residents in a foreign country, namely, the riot of October 31st, 1880, at Denver, Colorado.

At about two o'clock in the afternoon of that day, two Chinese were playing pool with an American citizen in the "John's Place" saloon, Denver. The game was proceeding quietly, when three or four drunken men coming into the room, began to disturb and abuse the Chinese. Quiet was restored for a moment by the exertions of the landlord, and the Chinese attempted to escape, but were followed and badly beaten. The sight of two Celestials getting pounded with boards and fists seems to have possessed singular attractions for the citizens of Denver. In a few minutes several hundred persons assembled, and put themselves in motion for the Chinese quarter of the town, shouting that they meant "to run the cursed heathen out" and embellishing the declaration with various figures of strong speech. The city of Denver had, at that time, a population of forty thousand souls, including 450 Chinese. The latter appear to have been singularly hard-working, well behaved men, as it is on record that not one of them had ever been before the local authorities on a charge of theft. The task

of preserving order in the city was entrusted to a body of police numbering, all told, fifteen men. Thus there was never more than one constable on duty at a time, and his beat was the whole of Denver. The constable on duty on the afternoon of October the 31st, 1880, was Mr. T. J. RYAN. He reported the disturbance to the Mayor who, being an official of ready resource, desired the policemen to inveigle the mob into Blake-street where there was a fire engine ready for use. RYAN succeeded in accomplishing this commission, and then the Mayor took stock of the crowd. "Concluding," to use his own words, "that they were determined to kill as well as rob," he ordered the fireman to turn the hose on them, whereupon the mob did what most mobs would have done under the circumstances—got out of the way of the water. But their burglarious and murderous ardor was not quenched. Therefore Judge WELBORN appeared and "requested them to disperse if they would." They would not, however; so the judge, by way of diversion, placed himself at their head and cheered for HANCOCK. Two or three hundred of the rioters followed this judicial example, but the balance of the crowd proceeded to carry out their original intention of wrecking Chinese houses and beating or slaughtering their inmates. Constable RYAN assisted by one citizen represented the whole opposition, and the wrecking and beating were not seriously impeded. After seven or eight houses had been gutted the mayor appeared with a squad of police, who fired some shots in the air. The mob then fell back and the Mayor went home, leaving two "specials" to hold two thousand rioters in check. The specials, strange to say, failed to accomplish this task, and the roughs proceeded leisurely with their pastime, their force constantly increasing until by seven o'clock in the evening they numbered more than five thousand. Things being now tolerably lively, a rumour of what was going on reached Mr. POMEROY, a gentleman of singular courage and humanity. He hastened to the scene of action and found the houses of some Chinese "entirely surrounded by a surging infuriated mob, who were breaking in windows and doors, cursing, howling and yelling, 'Kill the Chinese! Kill the damned heathens! Burn the buildings! Give them hell! Run them out! Shoot them! Hang them!'" and so forth. Presently "a Chinaman was found in one of the houses and dragged out, to be knocked down, kicked, jumped upon, and beaten with clubs by the rioters," until finally a rope was thrown over his head and the crowd started with

him on the run, to the cries of "Hang him! Hang him! Hang him!" Mr. POMEROY appealed to the bystanders to assist him in saving life and property and preventing a conflagration, but was "answered by curses and cries of 'the Chinese must go! They've got to go.'" Hopeless of effecting anything single-handed, he ran to the executive department and found Governor PITKIN in his office, having just come in. The Governor wanted to know what was going on, and having been informed, said that he could take no steps unless called upon to act by the civil authorities. He was ready enough to go himself and do what he could to stop the riot, but officially he could not move. Mr. POMEROY now "ran to the office of the Mayor and found there a number of gentlemen smoking." He hurriedly reported what was happening, and said the Governor was ready to call out the militia if required. "The Mayor replied that he had quelled the mob in the afternoon *all that he could*, but had no force at his command to preserve the peace." He was persuaded, however, to make another effort, and on his way to the Chinese quarter he was joined, chiefly through the exertions of Mr. POMEROY, by a number of respectable citizens who forced their way into the heart of the crowd. A few shots fired in the air and a few threats of calling out the militia sufficed to quell the disturbance, but not before one Chinaman had been hammered to death and several others cruelly handled. By way of precaution nearly the whole Chinese community were put into the county prison and kept there for three days so as to be out of reach of the mob. No steps were taken, however, to protect the property of these unfortunate men during their incarceration, so that what with the destruction caused by the rioters and the thefts subsequently committed, the losses of the Chinese amounted to upwards of fifty thousand dollars. An inquest was held on the body of the murdered man, when the jury appended to their verdict the following unequivocal but slightly ungrammatical corollary:—"And we further find that the said mob was but the outcome of a drunken attack by two or three white men on some Chinese in the rear of their quarters between Blake and Wazee streets, near Sixteenth, and which, the evidence shows, could have been suppressed by the regular police force had they fearlessly arrested the ringleaders; but which, owing to the disorganized condition of the police force of the city, and the incompetency and inefficiency of its government by the proper authority, and the failure of the

county authorities to render the necessary aid and assistance required in such emergencies, the mob assumed such proportions as culminated in the destruction of human life and the disgrace of the city in not affording protection to life and property."

We have described this miserable affair in detail to the end that our readers may be in a position to appreciate what followed.

Five days after the riot the Chinese Representative in Washington—Mr. CHEN LAN-PIN—called on the Secretary of State—Mr. EVARTS—and discussed the occurrence, subsequently placing on record a formal request that the affair should be investigated, the guilty persons punished, and "the owners of the wantonly destroyed property in some way compensated for their losses." He added that "the Chinese in Denver went there under treaty stipulations and engaged in labour and trade, but now unfortunately they are subjected to such persecutions that they cannot peacefully labour, and the destruction of their property has interrupted the prosecution of their business." He could not have described more accurately the state of affairs now actually existing in Canton.

To this despatch Mr. EVARTS replied in very remarkable terms. Having premised that, according to the constitution of the United States, the Federal authority can not be brought into operation in a State in such a way as to interfere with the administration or execution of that State's municipal laws, except in response to a formal request from the proper local authority, and having concluded that no occasion for such interference existed in the present case, he went on to say:—"In this connection, it is satisfactory to be able to note, with approval, the conduct of the public authorities of Colorado, and of the people of Denver, on the unfortunate occurrence in question. It was seen then, as it always is in such outbreaks, that the fury of the brutal and lawless, who compose such mobs, is ultimately turned against the weak and defenceless, and it is creditable alike to the appreciative sense of public duty of the authorities of Colorado and the humane instincts of the citizens of Denver that their first care in this emergency (involving as it did for the moment the lives and property of all alike), was the protection and safety of the Chinese residents, whose presence seemed to serve as a special incitement to the passions of the mob."

Mr. EVARTS must have had a very low idea of Chinese intelligence when he wrote in this strain. From first to last the Denver rioters were inspired by one and only one

motive—the destruction of Chinese life and property. The lives and properties of other citizens were never for a moment in any designed peril. Sixteen witnesses were examined at the inquest, and not one of them so much as hinted that the tumult was anything but an anti-Chinese demonstration. As for the "humane instincts" and "appreciative sense of public duty" which Mr. EVARTS attributes to the authorities of Colorado, we have seen what a jury of Denver citizens thought about them. We should imagine that State papers contain few examples of such transparent subterfuges as this attempt to show that the mob went for the Chinese, not because they were Chinese, but simply because they were weak and defenceless.

The Secretary of State then proceeds to discuss the question of compensation. Here is what he says:—"It seems superfluous to call your attention to the fact, but too well attested by history, that on occasions, happily unfrequent, often without motive in their inception, and always without reason in their working, lawless persons will band together, and make up a force in the character of a mob of sufficient power and numerical strength to defy, for the moment, the denunciations of the law and the power of the local authorities. Such incidents are peculiar to no country. Neither the United States nor China are exempt from such disasters. In the case now under consideration it is seen that the local authorities brought into requisition all the means at their command for the suppression of the mob, and all these means proved so effective that within twenty-four hours regular and lawful authority was re-established, the mob completely subdued, and many of the ringleaders arrested. Under circumstances of this nature, when the Government has put forth every legitimate effort to suppress a mob that threatens or attacks alike the safety and security of its own citizens and of the foreign residents within its borders, I know of no principle of national obligation, and there certainly is none arising from treaty stipulations, which renders it incumbent on the Government of the United States to make indemnity to the Chinese residents of Denver, who, in common with citizens of the United States, at that time residents in that city, suffered losses from the operations of the mob. Whatever remedies may be afforded to the citizens of Colorado, or to the citizens of the United States from other States of the Union resident in Colorado, for losses resulting from that occurrence, are equally open to the Chi-

nese residents of Denver who may have suffered from the lawlessness of the mob. This is all that the principles of international law and the usages of national comity demand. This view of the subject supersedes any discussion of the extent or true meaning of the treaty obligations on the part of this government towards Chinese residents, for it proceeds upon the proposition that these residents are to receive the same measure of protection and vindication under judicial and political administration of their rights as our own citizens. In communicating to you the views of this government in the premises, I have pleasure in adding the assurance that it will upon every occasion, so far as it properly can, give its continued attention to every just and proper solicitude of the Chinese Government in behalf of its subjects established here under the hospitality of the treaties."

The position taken by the Secretary of State is plain enough. While admitting that the Chinese residents of Denver were established there "under the hospitality of the treaties," he considers that the stipulations of the latter are satisfied if the same measure of protection and vindication is afforded to Chinese and American residents alike, and he holds that no compensation can be claimed of a Government which "has put forth every legitimate effort" to prevent outrage. It is curious to reflect how, *mutatis mutandis*, these arguments would have sounded in the mouth of the Bakufu Government, against which, at least as much as against its foreign allies, were directed the outrages by which the latter suffered in person and the former in pocket and prestige. This, however, by the way.

Mr. CHEN had an easy task in answering this despatch. His reply was:—"First, that since 'treaties as well as the Constitution are the supreme law of the land,' and since the Chinese residents of Denver 'had come there under the right of treaties between China and the general Government of the United States, and not with Colorado or any individual State,' he failed to see how the question could properly be relegated to the disposal of a State alone. Secondly, that, according to the verdict of the people of Denver themselves, as expressed by a Coroner's Jury, the local authorities, so far from 'putting forth every legitimate effort to prevent outrage' had failed to afford protection to life and property through 'the disorganized condition of their police force,' through their own 'incompetency and inefficiency' and through their 'failure to render the

necessary aid and assistance required in such emergencies." Thirdly that it was indisputably proved that the Denver riot had been motived solely by anti-Chinese feeling, and that it was not in any sense directed against citizens of the United States.

Fortunately for himself, perhaps, Mr. EVARTS had not to answer this despatch. That duty devolved on his successor Mr. BLAINE, who struck out a comparatively new line. He refused altogether to admit that the treaties had anything to do with the residence of Chinese subjects in the territory of the United States. The latter's treaty with China contains this provision:—

All citizens of the United States of America in China, peaceably attending to their affairs, being placed on a common footing of amity and good-will with the subjects of China, shall receive and enjoy for themselves and everything appertaining to them, the protection of the local authorities of Government, who shall defend them from all insult or injury of any sort. If their dwellings or property be threatened or attacked by mobs, incendiaries, or other violent or lawless persons, the local officers, on requisition of the Consul, shall immediately despatch a military force to disperse the rioters, apprehend the guilty persons, and punish them with the utmost vigour of the law.

"You will perceive" writes Mr. BLAINE, that in no part of the treaty is there any provision reciprocal with this with regard to subjects of China resident in the United States. * * * No treaty stipulations are necessary to enable subjects of China to come to this country, take up their residence here, &c. The subjects of China, in respect to their rights and security of person and property, are placed under the protection of the laws of the United States in manner and measure equal to that extended to native citizens of this country." He then goes on to vindicate the efficiency of the Colorado local authorities, and, in the face of the verdict of the jury at the Coroner's inquest, declares that "a more successful resistance to a mob of such character and numbers cannot be found in the history of any community or country." Mr. BLAINE's definition of executive efficiency is not very exacting. Suppose that a mob of Japanese were to attack the foreign settlement in Yokohama and wreck every third house occupied by foreigners, and suppose further that the Japanese authorities found it necessary to protect us by putting eight-ninths of our members in jail for three days, leaving our property at the mercy of native thieves all the while, would that be called an instance of executive efficiency without precedent for success and vigor?

If pushed to its logical conclusion, Mr. BLAINE's argument with regard to the conditions of Chinese residence in the United States compels the admission that treaty obligations are less onerous in the case of an Occidental, than of an Oriental, power.

For while it suffices that the former should afford to the subjects of a treaty State residing within its territories the same measure of protection and vindication which it affords to its own people, the latter is required to afford a larger measure—which proposition proceeds upon the hypothesis that in a civilized country the subjects of a foreign Power are not exposed to any danger on account of their alienage. How far this hypothesis has been justified by the experiences of Chinese resident in the United States we may learn from the Denver riot, from the outrages recently recorded in New York and elsewhere, and from the disgraceful legislation to which Congress allowed itself to be forced by the clamor of a party as exclusive, as bigoted, as vindictive, and as cruel as the lowest classes of political agitators in China. Secretary EVARTS, as we have seen, did not commit himself to any such definition of the United States' position *vis-à-vis* China. He thought that Chinese resident in America were "established there under the hospitality of the treaties." But he, equally with Secretary BLAINE, held that compensation for outrage cannot justly be claimed of a Government which has exerted every legitimate effort to preserve order. It is plain that Occidental intercourse with the Orient demands greater circumspection now than it demanded in the times when such precedents as the Denver riot did not exist, and such declarations as those of Secretaries EVARTS and BLAINE had not been placed on record.

FOREIGNERS IN THE CHINESE SERVICE.

THERE has occurred at Shanghai another of those curious cases which have led to so many conflicting interpretations of the doctrine of comity.

On the 1st instant a quartermaster on board the P. & O. steamer *Ancona* was charged with stealing 163 balls of Malwa opium from that vessel. The case came up for trial at the Police Court before Assistant Judge R. A. MOWAT. When thefts of this sort are discovered, it appears to be the habit to apply to the Custom House officials, who send their *employés* on board to search for the missing opium. Such, at all events, was the course pursued in the case under consideration. Three or four Custom House servants—the exact number does not appear—visited the *Ancona*, and, in company with the fifth officer of the ship, made a search which resulted in the discovery of thirteen balls of opium in the quartermaster's cabin. It was necessary,

of course, to take the evidence of the persons who had conducted this examination, and accordingly a Customs official, by name JOHN ROBERTS, who described himself as Assistant Examiner and Diver, was subpoenaed. This witness stated that he had been sent on board in his official capacity to search the *Ancona*, and the case then proceeded as follows, the Assistant Judge being the questioner:—

And what did you do when you went on board?—I cannot answer that question, as I am strictly forbidden to answer any questions on subjects of which I have a knowledge only by reason of my position as a servant of the Chinese Government.

You say you cannot answer that question?—No, Sir. Are you forbidden to do it?—Yes, sir; strictly forbidden.

By whom?—By the rules of the service. That is your view of what the rules of service mean, I suppose?

Witness—Yes, sir; that is what is laid down.

You have attended upon a subpoena, have you not?—Yes, Sir.

Let me see it.—I did not bring it with me.

Mr. M. Jones, Clerk of Court, produced a copy of the subpoena.

His Worship—You would not attend on the previous day without a subpoena?

Witness—No, Sir.

And now, when you have attended upon a subpoena, you say to the question I put, "What did you do when you went on board?"—that you decline to answer the question put to you because you conceive it conflicts with the rules of your service?

Mr. R. E. Wainwright—Your Honour, perhaps I may be allowed to say here that I appear to watch this case on behalf of the Chinese Imperial Customs. I perhaps have no right to say anything, but there is one question which I would suggest should be put to the witness in fairness to himself.—will you ask him whether he has been ordered by a superior officer in the Customs service to do this.

His Worship—I asked him, "By whom?" and he said "By the rules of the service."

Mr. Wainwright—Perhaps he will be able to say he was ordered to act in this way.

His Worship—Do you act on your own view of the rules of the service?

Witness—I had the rules read to me, and I was likewise told.

By whom?—By my immediate superior.

What is his name?—Mr. Glover, Commissioner of Customs in Shanghai.

Not to answer any questions?—Yes.

His Worship—Well, the English law is that you are not bound to answer any question, if the answer has a tendency, in the judge's opinion, to expose you to any criminal charge. If answering the question I have put to you would expose you to a criminal charge, then you are entitled not to answer it. But that is practically the only case in which a witness, attending upon a subpoena, in such a case as this at any rate, is exempted from answering. The English law casts upon you as a British subject the duty of answering a question of this kind put to you by the Judge, unless you can say it would expose you to a criminal prosecution yourself; then the law is tender, and does not require you to answer. But in any other case generally you must answer. The mere fact that you are an official in a particular service and have instructions from a superior officer not to answer is an explanation of why you do not answer, but it is not an excuse for not answering; and if you do not answer, I shall have, unwillingly, to commit you to prison. Will you answer?

Witness—No, sir.

Mr. Wainwright—Your Honour will remember this is a Government service.

His Honour—I cannot hear you, Mr. Wainwright. You must apply afterwards. The Rules of our Court provide that:—"If on the appearance of the person summoned, either in obedience to a summons, or on being brought up by virtue of a warrant, he refuses to take an oath,—or, having taken an oath, to answer any question put to him,—and does not excuse his refusal to the satisfaction of the Court, then the Court may, by warrant, commit him to prison, there to remain for not more than seven days, unless he in the meantime consents to answer duly on oath." Now, as I have said, it seems to me that you have not excused your refusal; because I cannot take what you have said as an excuse; it is an explanation, but not an excuse, and if you adhere to your refusal I have no other course

but to commit you to prison for a period of seven days, unless you answer in the meantime. If you are ready to answer within the seven days, you will be brought here to give your answer. I hope that you will be enabled to answer. I regret very much the course I have to take.

Mr. Roberts—Will you allow me one favour—to get my room locked up?

His Worship—Oh, yes.

Another Customs officer then stepped into the witness-box, but as Mr. Wainwright told him he had not been called, he retired.

His Worship—I shall adjourn the case for seven days; but the prisoner will be brought before me before that time if the witness who has just been committed will answer the question.

Mr. Wainwright—If your Honour will permit me, I may remark that it is perfectly open to the prosecution to get the evidence of these two officers.

His Honour—I have nothing to do with that.

Mr. Wainwright—There is a way of doing it. They have nothing to do but to apply to the Superintendent of Customs, and it is for him to say whether he will allow them to give the evidence required.

His Worship—It is for the Court to say whether he must answer.

Mr. Wainwright—Your Worship commits him under Rule 288?

His Worship—Yes; he has sworn it. (To the Clerk)—Mr. Jones, the witness was sworn?

Mr. Jones—The witness was sworn.

His Worship adjourned the case till Saturday next, the 8th September, at 10 o'clock, informing the prisoner that he would be brought up sooner if the case would permit of it.

It must be confessed that the reasons which induced the Commissioner of Customs in Shanghai to impose silence on his subordinate in this particular case are somewhat obscure. It seems to follow logically and naturally that if to assist, under certain circumstances, in the detection of crimes committed by British subjects be among the duties devolving upon officers of the Chinese Customs, then to assist in prosecuting the perpetrators of those crimes is equally their duty. This, indeed, is so self-evident that we may fairly assume the existence of some consideration quite apart from the case of the *Ancona* robbery. To understand that consideration it is necessary to go back to March, 1881, when a British subject, EDWARD PAGE, was indicted before Chief Justice French and a jury for the murder of a Chinaman. PAGE—who was employed, with the QUEEN'S sanction (in accordance with a Convention) in the service of the EMPEROR of CHINA as a Customs Revenue Officer—had used fire-arms in an attempt to capture some smugglers, and his act had already been pronounced blameless by the Chinese Authorities. Under these circumstances his subsequent indictment before a British Court involved the question whether a foreigner lawfully in the service of the Chinese Government is responsible to the tribunals of his own country for acts committed in the performance of the duties, and in the employment of the rights and immunities, of the office entrusted to him by that Government. Into that question we need not enter at present. It was fully discussed at the time, and we only mention it because it imparts additional significance to an incident which occurred at the trial

and which is an exact parallel to the case of JOHN ROBERTS, mentioned above. Among the witnesses summoned before the British Court was an officer of the Chinese Customs, who, when required to give evidence, refused, pleading the rules of the service to which he belonged. Chief Justice FRENCH threatened this silent witness with imprisonment for contempt of Court, but the threat was not put into effect and the matter was allowed to drop. The affair led, however, to a definition by the Chinese Authorities of the position they desired to maintain in such cases—namely, that if a foreigner in the Chinese service were accused, his Consul should ascertain of the Chinese authorities whether the act complained of was done in the discharge of official duty. If the reply were in the affirmative, the case should go to the Minister, who would adjust it with the Chinese Government. If the reply were in the negative, the accused should be discharged from the Chinese service, and his Consul should take up the case judicially. Finally, if a foreign *employé* were wanted as a witness, the summons should be sent to him through the Chinese authorities. Many persons will, doubtless, be of opinion that these claims are not inconsistent with a reasonable rendering of the doctrine of comity. Indeed, this view receives indirect support from a judgment delivered by the Privy Council in connection with a case which occurred thirteen years ago in Shanghai. Their Lordships said:—"If it were shown that, by the law and customs of China, officers in the service of the Government were absolutely protected in making reports concerning their subordinates, and that it was against the policy of the Empire to allow them to be questioned by any Court, it might be proper to hold that it would be contrary to the comity of nations, and therefore against our own public policy, having regard to this comity, to allow a subject of the Queen, who had voluntarily entered into that service, to maintain such an action as the present." To the Foreign Representatives in China, however, the position taken by the Customs Authorities seemed to trench unduly upon the rights of jurisdiction conferred by the extraterritorial clauses of the treaties. They were prepared to go to a certain length, but not quite so far as the Chinese desired. The United States Representative addressed his Government on the subject, asking for instructions. "In a criminal case," he wrote, "if the person injured is a Chinaman, and the Chinese Government approves the official act by which the injury

has been done, I think, on the whole, the wisest plan is in general to recognize the plea of the accused that he is protected by the approbation of the Chinese Government as valid, and to discharge him. There may be, indeed, some danger that feelings of animosity against foreign officials will be excited; but the Chinese are so obedient to their Government that the danger is not very great, and our Government can, if it becomes necessary, forbid its citizens from entering upon the Chinese service. And possibly some limit might be set to the extent to which this plea should be recognized, if it is thought that there is danger of any abuse of it in aggravated cases. * * *

In respect to what shall be required of Americans in the Chinese service, when they are called into court as witnesses, I think it must be admitted that there are some things which they should not be asked to disclose. They should be permitted to plead privilege to a certain extent. Perhaps it must be left to the Consul to decide in each case how far this plea shall be extended. But in view of the inexperience and lack of legal training of some of our Consuls, it would be helpful if the Government should lay down some general principles for their guidance."

These general principles, however, the United States Government was not very ready to lay down. The Acting Secretary of State ultimately answered a portion of Mr. ANGELL'S despatch in the following terms:—"If in such a case the Consul found that the *employé* killed or wounded a man in the discharge of his official duty, and under such circumstances that he, if tried by a Chinese tribunal, be held guiltless, or such as would, under the laws of the United States, make the act justifiable or excusable, it would be the duty of the Consul to discharge him." This is plain enough in so far as regards the justification afforded by the orders of the Chinese Authorities for acts done by United States citizens in obedience to those orders. But it leaves undetermined the liability of an *employé* to give evidence before American Courts on subjects connected with his official acts. That is the question now at issue, and its solution will involve points of much interest. In the recent case at Shanghai we can be tolerably certain that the whole difficulty was comprised in the Court's refusal to forward the summons through the medium of the Customs Authorities—a trifling concession, which in the interests of mutual good feeling might well have been made.

The Chinese, on their side, had already taken a step, which, if not very logical, was at all events in the nature of a compromise. After the Canton trial of March, 1881, the Inspector General of Customs issued a regulation to the effect that, if any foreign *employé* of the Customs should kill or wound any person, he must immediately resign his place and report to the Consul of his nationality. If the Consul tried and convicted him, his resignation was to be permanent. If the Consul acquitted him or decided that there was no cause for trial, the *employé* might resume his official position with full pay during the time since his resignation. All this, to be sure, has the appearance of a somewhat undignified evasion, but it is surely the business of both sides to avoid diplomatic embarrassments as much as possible. The original motive of extraterritorial jurisdiction is to protect the lives and properties of Westerners resident in the East. It is not easy to see how that motive can be reconciled with an obstinacy so careful of extraterritorial forms that it prefers imprisoning a British subject to serving a summons on him through any but the strictly conventional channels.

REVIEW.

I.—*Japan, its Architecture, Art, and Art Manufactures.* By CHRISTOPHER DRESSER, Ph.D. F.L.S., &c. London: Longmans, Green, and Co. 1882.

II.—*The Ornamental Arts of Japan.* By GEORGE ASHDOWN AUDSLEY, F.R.I.B.A.; Member of the Asiatic Society of Japan. London: Sampson Low, Marston, Searle, and Rivington.

A LEARNED sinologue, who with infinite labour and marvellous perseverance had prepared and published a compendious Grammar of the Japanese written and spoken languages, was once requested to act as interpreter at an interview between a Western potentate and an Ambassador from the Land of the Rising Sun. On occasions of this nature the set orations delivered by the principal parties are generally handed to the interpreter two or three days beforehand, and our grammarian found no difficulty in rendering them correctly, according to his lights. But when these pre-arranged parts of the programme were concluded, and the sinologue was requested to signify his royal master's will that the envoys should take their departure, a difficulty arose. It is precisely in these simple forms of speech that the idiom of the Japanese language differs totally from that of any European tongue. The grammarian was at no loss for suited terms, borrowed from books, all embodying, more or less obscurely, the idea of going or "getting," but it never occurred to him to make use of such an expression as "It is well now," or "Taking your leave now, it is well." So he bungled and stammered while the Japanese listened attentively but with gradually augmenting curiosity and the potentate marvelled impatiently. At last a bystander, who happened to have served for some years in an official capacity in Japan, became cognizant of the dilemma, and, stepping

forward, addressed the envoys thus:—"King-san hanas piggy arimas," which fragment of execrable pidgin was instantaneously successful.

There is a simple moral to this story. It is that to interpret Japanese one must have lived in Japan. The grammarian in the anecdote had not fulfilled this simple condition, and his failure to make himself understood might have been predicted.

What is true of the Japanese language is eminently true of Japanese art. To appreciate it, one must be familiar with every feature of the people's household life; with their habits, their traditions, their creeds, and their moods. To discuss their art before acquiring this experience is much as though one were to attempt an analysis of Chinese ideographs without knowing that each of them expresses an idea. No very satisfactory lessons are likely to be learned, therefore, with such men as Dr. Christopher Dresser and Mr. George Audsley for teachers, of whom the latter has never set foot in Japan, and the former spent only three months there, travelling during that interval, as he tells us with apparent pride, "a little over one thousand seven hundred miles." Perhaps at the outset we ought to confess that the reputation Dr. Dresser left behind him in the East is not calculated to procure his book a very enthusiastic welcome here. On this point, however, it will suffice to say that before he had been a week in Japan he showed himself so ignorant of Japanese and Chinese ceramics as to be unable to distinguish the wares of one country from those of the other. But he possessed unbounded confidence in his own knowledge, and it may be said of art critics more truly than of any other class of persons, that self-assurance is often quite as serviceable as competence. Yet judging Dr. Dresser by his book alone, we find him singularly frank in his description of the impressions he received during his first walk in Japan. "It will be impossible," he says, "to describe the impression of novelty left on our minds; but to give the reader some notion of the strange aspect of things, I may repeat a remark made by one of the Austrian princes during the stroll:—'Had we died and risen from the dead the scene presented could not be more strange.'" It will thus be seen that he came here with a virgin mind, and if his work be read simply as the record of an expert's impressions and observations, much will be found there that is interesting and instructive. But the reader must not suffer himself to be deterred by the opening pages. There is something else which is obviously quite as strange to Dr. Dresser as Japanese houses and Japanese people, and that is—the society of Princes and Ministers. On his voyage out he made the acquaintance of two Austrian Princes, and our admiration is involuntarily commanded by the ingenuity he employs to bring their names in, on every possible occasion, as well as those of General Saigo, the Honorable James Saumarez, and other gentlemen of title. Two extracts from this portion of his work will suffice to illustrate its character:—"I breakfast off fish, ham, eggs, and tea, as though I were sitting at my own table in London" (he is sitting in the Grand Hotel at Yokohama) "instead of being 12,000 miles from home, and then set out to view the shops and their contents. During my walk I find many curios that are to me quite irresistible, and I buy, I fear, in a truly reckless fashion. At 5.15 I return home somewhat tired, having had a perfect 'field-day' amidst the shops. While I was dressing, Prince Henri came into my room and asked me to join him and Prince Montenegro at dinner. Thus passed my second

day in Japan." And again:—"It is the 28th day of December; yet as we saunter through these beautiful grounds I see trees laden with camellia blossoms looking as fresh as if it were summer. General Saigo gathers a bunch of these beautiful flowers and presents them to me, after which my companions return to their homes, and I go to the British Embassy, where Mr. Mounsey (the First Secretary of Legation) presents me to Sir Harry Parkes and insists on my staying to dine with him. I return to Yokohama by the ten o'clock train." These are thrilling details. Whether they belong to the architecture, art, or art manufactures of Japan we leave the reader to determine for himself.

An apologetic tone is fashionable in prefaces. Dr. Dresser's apology for venturing into print is that he is a specialist. "An architect and ornamentist by profession," he says, "and having knowledge of many manufacturing processes, I went to Japan to observe what an ordinary visitor would naturally pass unnoticed. As a specialist, and a specialist only, I submit this volume to public notice." This being so, let us turn to the architectural portions of the book, since there, if anywhere, we may hope to find something of sterling worth. What we find is a treatise perhaps the fullest that has yet appeared in book form. But it is much too chatty and superficial a treatise to do justice to such a subject. Diagrams showing details of construction and arrangement of plan, as well as coloured plates representing the decoration of buildings, are conspicuous by their absence. The author apparently seeks to supply this deficiency by abundant rhapsodies, but he does not excel as a word painter, and too often the reader finds his hopes of fuller knowledge balked by an airy assertion that the resources of language are inadequate for the occasion. Speechless ecstasy is a pretty mood enough at times, but we venture to think that an "architect and ornamentalist," who writes "as a specialist and as a specialist only," might with advantage delineate more and rhapsodise less. Even this failing, however, looks trivial beside the grotesque theories and fictions which Dr. Dresser enunciates; as, for example, when he tells us that pagodas are built with a big pendulum, weighted in the middle, swinging inside them; the fact being that these wooden towers have a central stiffening post, which, being necessarily of considerable length, is spliced or scarf-jointed in the middle. Basing his conclusions, perhaps, upon this absurdity, he asserts that all Japanese wooden structures are specially built to resist earthquakes, to which purpose, he thinks, no other more substantial buildings can possibly be so well adapted; and observing that structures of a less flimsy nature are gradually coming into fashion as a consequence of Western intercourse, he exclaims:—"Why should we thus lead a nation which is great in itself to adopt new methods by which it can only be made to appear small?" And again, alluding to these same changes in style and material, he writes:—"Let us refrain from obtruding our advice upon a people who know their wants better than we do"—an exhortation by which he would do well to profit himself. Eloquent diatribes against innovations, uttered by such a master of language as John Ruskin, are too picturesque to be wholly condemned, but Dr. Dresser's impracticable conservatism has neither euphony nor logical sequence to redeem it. The wants of a changing civilization, the higher valuation of life and property, the ever-recurring calamity of conflagrations, the yearly death roll

calling for sanitary improvement—all these vital considerations are either left unnoticed or thrust lightly aside by an author whose boast is that he writes as an "architect and specialist."

With regard to durability, we are almost asked to believe that wooden buildings last longer than those constructed of stone or brick. In support, apparently, of this monstrous theory some of the oldest Japanese temples are given an antiquity about ten centuries too great, an obvious confusion existing in the writer's mind between the traditional founding of the temple and the date of the erection which to-day marks the original site. There are buildings, doubtless, which can boast a tolerably long life, but in every case they have undergone perpetual repairs in all their parts—repairs which in the course of a century amount to virtual reconstruction. That the Japanese have chosen wood as a building material is to be attributed to its former abundance throughout the country, as well as to the difficulties—still almost insuperable—of quarrying and transporting stone and other materials. A conservative seclusion and consequent lack of emulation and enterprise have, of course, conspired to preserve the wooden fashion much longer than it is known to have prevailed elsewhere. But, for the rest, neither the Japanese builder nor architect has any theory whatsoever with regard to earthquakes, unless it be that a special means of exit should be provided for use in the event of those catastrophes. He places his wooden framework on isolated supports, with the object of escaping the dampness of the soil as much as possible, after which he proceeds to build as stiffly and solidly as his knowledge of carpentry will permit, following, for the most part, the models which his ancestors borrowed from China and Korea. By these means he produces a house to which the people have learned to adapt themselves, but he cannot roof it scientifically. Its covering ultimately becomes, in his hands, a heavy structure in receding stages, which seismologists and mathematicians alike pronounce radically defective in all qualities calculated to resist earthquake shocks. The Japanese house, cleanly in appearance, chaste in decoration and possessing a certain air of charming quaintness, recommends itself at first to all the romantic instincts of a new comer, but experience shows it to be essentially uncomfortable, and, from a hygienic point of view, about as faulty a species of dwelling as can be imagined. Dr. Dresser, in another part of his work, where he seems for a moment to forget his partiality for wooden buildings, asserts that nations in changing their material have temporarily preserved in their new, the forms of their ancient, constructions. It is well known that in the stone temples of India and the transitional styles of the Grecian Colonies, there are to be seen attenuated forms which are merely petrifications of wooden arrangements. Such examples are interesting enough historically, but are, for the most part, unjustifiable whether considered historically or practically. Japan herself furnishes an example of a similar treatment in the stone *Torii*, which are proportioned, scarved, and framed like their wooden prototypes. The application of brick and stone in a thoroughly scientific manner to the development of a new style is, perhaps, more prosaic than the slow and struggling experiments of less ambitious nations. But it is sounder, and in better keeping with a rapid progress, eager to skip over much which has been slowly and laboriously evolved elsewhere. If to oppose such an aim be not the desire of Japanese politicians, it is certainly not the duty of her archi-

tecs. If solid building is to be introduced,—upon which point we differ *in toto* from Dr. Dresser—then the new materials must be applied in the development of a proper trabeated or arcuated style, strictly obedient to the latest knowledge of their properties. Even between these hard and fast lines there is still ample space for the display of the national artistic spirit in detail and decoration.

Dr. Dresser devotes one of the most curious chapters in his book to a discussion of Japanese analogies and symbols. He brings to bear upon this part of his subject a considerable knowledge of Egyptian, Persian, and Grecian decorative devices, and his object is to identify them with those of Japan. It cannot be said that the measure of success he obtains is very large, though he seems to satisfy himself that Japanese art has borrowed so much from Egyptian as to warrant him in assuming the existence of direct intercourse between the two countries in ancient times. Like all men who mount hobbies, Dr. Dresser finds few obstacles insuperable. Setting out with a theory that national styles of ornament are not less trustworthy ethnological tests than the words and construction of a language, he proceeds to illustrate his meaning by reference to certain Ceramic specimens which came to England from Persia and which were found to have Chinese marks on them. "When evidence reached us," he says, "of the fact that these vessels were made in Persia, there was no longer any room for doubt that Chinese potters had settled in that country." Whether or no this inference was correct in Persia's case, the test in general is utterly fallacious. Dr. Dresser might have found in Japan hundreds of specimens of pottery and porcelain bearing Chinese marks, in the manufacture of which no Chinaman was ever concerned. We doubt very much whether throughout the whole series of Japanese decorative devices and symbols there could be found one which is not traceable directly or indirectly to a Chinese or Korean original. Thus, to take an example, Dr. Dresser seeks to support his theory of ancient Egyptian and Japanese intercourse by pointing out, *inter alia*, that the latter use the stork (*tsuru*) in their ornamentation much as the former use the ibis, forgetting, or ignoring, that the idea of this style came to Japan from China. The truth is that, to avoid erroneous conclusions, the student of Japanese art cannot too distinctly recognize the fundamental difference between the technical processes of the two countries. He must not infer originality because the devices employed by Japanese keramists, metal workers, wood-carvers, and so forth, are not represented in Chinese works of a similar nature. For while in China the artist and the artisan were two distinct personages, in Japan they were one and the same. Before asserting, therefore, that this device or that style is the outcome of pure Japanese thought, it is necessary to assure oneself that its original does not exist in Chinese pictorial art. In the paintings of such artists as Lioki, Joken, and Yok'sai will be found the embryo of many beautiful fancies generally attributed wholly to Japanese genius. The result of deeper study will doubtless be to show China as the immediate source from which Japan drew her early art inspirations, receiving with them many traces of Indian, Persian, and possibly Egyptian styles. But the subject is one that demands very much wider research than Dr. Dresser was in a position to attempt. Indeed, nothing strikes one more in perusing his analyses than the flippancy and carelessness into which he suffers himself to be betrayed precisely where the utmost

accuracy is essential. Thus we find him adducing the use of the key-pattern and wave-scroll by Japanese artists as an evidence of Egyptian affinity, entirely careless of the fact that the same designs permeate the whole of Chinese art; while the frequent occurrence of lotus-leaves on mouldings, as well as Buddha's lotus throne, also remind him of Egyptian styles and of the flower home of the Nile god, but do not appear to suggest any thoughts of China or India. At other times we find his imagination considerably out-pacing the comprehension of his readers. At Nara he saw an idol whose fist was tightly clenched with the thumb inside. The priests informed him that this arrangement of the digits symbolized displeasure, and had reference to punishment with the sword. "So here," Dr. Dresser triumphantly exclaims, "we have an idea similar to that presented in the Book of Genesis by the flaming sword guarding the gate of Eden." Then again he seems disposed to detect the thought of the Trinity in the *mitsu-domoye* of Japan, which symbol he describes as "three jewels with three tongues of flame surrounding them." Apart from the fact that according to Japanese tradition the *tomoye* has nothing to do with either jewels or flames, Dr. Dresser might surely have known that all through the Orient odd numbers are preferred to even, and that in Japan when the idea of number occurs in art three is generally used. For the rest, there is some interest in the similarity he discovers between crossed Buddhist tridents and the British crown, as well as between the drops pending from Egyptian papyri and those hanging from the petals of Buddha's lotus throne, but on the whole this chapter, which his previous training ought to have made specially interesting, might be cut out of the book without serious loss.

Of his chapter on Ceramics we may say briefly that its multitudinous errors are on a par with the hopeless confusion of its arrangement. One is prepared for a good deal from a writer who describes Ritsuo as a worker in lacquer only, but no preface could quite deaden the shock imparted by Dr. Dresser's ignorance and assurance. Yet this is how he opens his exposition of sciolism:—"When I started for Japan I thought my knowledge of Japanese potteries and pots tolerably perfect; but when I returned from that country, after visiting nearly seventy potteries, I came to the conclusion that even then my knowledge of Japanese ceramics was most limited." The last clause of this sentence contains the most indisputable proposition in the whole book. The only thing regrettable is that the learned Doctor's conclusion did not persuade him to refrain altogether from parading his ignorance, instead of prefacing it by this mock-modest declaration. Every student who is familiar with the rudiments of Japanese Ceramic History knows that Gorodayu Shondrai visited China about the year 1520, and that on his return, being unable to find in Japan any materials suitable for the manufacture of porcelain proper, he had to confine himself to Chinese clay. Dr. Dresser tells us that this artist returned from China between the years 1580 and 1590, and that "settling in Hizen, he succeeded in making various kinds of porcelain with the material found in the country." About the same time, we are further informed, some Korean potters, setting up their kilns near Kagoshima, "succeeded in making the now famous Satsuma ware." After these marvellous blunders the Doctor seems to have been seized with an infirmity of Satsuma on the brain. True, he skips off at once to Banko ware, two

centuries later than his imaginary Satsuma, but he presently returns to the old love, and after explaining that specimens of original Satsuma were commonly decorated with "domestic fowls, pheasants, and peacocks"—it would have been quite as correct to say foxes, greyhounds, and cock-robins—he commits himself to the following marvellous statement:—"The popularity which Satsuma ware attained led to the establishment, in a suburb of Kiyoto called Awata, of certain potteries in which it was to be imitated." Ignorance can go no farther. Dr. Dresser apparently knows nothing of the name most celebrated among Japanese Keramists—Nomura Ninsai—knows nothing of the tragical story connected with the Kiyoto potter's discovery of the methods of decoration with vitrifiable enamels; knows nothing of the fact that the Awata factories had been established more than a century and a half before "the now famous Satsuma ware" began to be manufactured. One imagines that these must be the limits of his know-nothing-ness. They are only the beginning. He goes on to tell us that "after Awata, the island of Awaji began to produce imitation Satsuma wares," and that it has "given us finer works of the Satsuma type than any which has come to us from Kiyoto." Considering that the characteristic productions of the Awaji kilns are porcelains covered with yellow, metallic green, and purple glazes, Dr. Dresser might just as truly have ascribed the origin of Cochinchinese wares to Satsuma influence. It were, however, a profitless and thankless task to follow him through all his blunders. His book is likely to do more harm than any hitherto published on the subject of Japanese art, because it is overlaid with a sufficient gloss of expert knowledge to lull the ordinary reader's suspicions, and further, because, despite the charlatanism which disfigures every chapter, it does contain items that are interesting enough to attract perusal.

A very much briefer notice will suffice in the case of Mr. George Audsley's *Ornamental Art of Japan*. This gentleman was formerly associated with Mr. James Bowes in the authorship of a work entitled the *Keramic Art of Japan*, a species of costly scrap-book with beautiful illustrations and a letter-press chiefly made up of fables. Four years ago the public was very indulgent to writers about Japan. The subject was full of interest, and it was difficult to discuss it from any aspect that seemed hackneyed. Yet even this facile mood was disturbed by the heresies of Messrs. Audsley and Bowes, and while it was generally agreed that the Liverpool amateurs had added a new chapter to the history of chromo-lithography, there was an equally universal feeling that such delicate and costly illustrations were in singularly bad keeping with a text so untrustworthy. At all events, the last thing to be anticipated was a repetition of the same experiment by the same authors; and our surprise was, therefore, unqualified when an announcement reached us some months ago to the effect that another work of a still more pretentious nature was in course of compilation. It was to be published in a number of parts—eight, if we remember rightly—covering the whole field of Japanese ornamental art, ceramics excepted, and the cost was to be something like sixteen guineas. The first part—or rather the first half-part—is now before us. It is a portfolio of plates, with a red sun and a golden goose on the cover, the former very aptly representing the blank brilliancy of the book, and the latter, the pecuniary downiness of its purchasers. Apparently the quondam associates have fallen out, for the name of Mr. George Audsley

alone figures on the title-page. The effect of this separation is easily traced in the text, for whereas the amateurs' joint production was, as we have said, a melange of romance and platitudes, Mr. George Audsley's unaided intellect has avoided the romance and confined itself wisely to the platitudes. In noticing the work we are naturally disposed to set out with an explanation of its scope and purpose. But the truth is that having perused the portfolio carefully from cover to cover, we find ourselves involved in a hopeless speculation as to its use or design. There is an introduction, in which the author confines himself to a general eulogy of Japanese art, but carefully avoids hazarding any original statement. Twice only does he become interesting—once, when he copies Dr. W. Anderson's description of the "artist artisan;" and once when he tells us that "China, India, and Korea have largely contributed to the foundation of Japanese art;" and that "it is not a difficult matter to trace their influence in the works of all the great periods." The latter statement, though in no respect novel, becomes entertaining when contrasted with what the same writer tells us in his introduction to the *Keramic Art of Japan*, namely:—"Let the communication between China and Japan have been what it may, it evidently failed to effect their respective arts, for a careful survey of the works of both nations fails to prove a systematic copyism on one side or the other." In addition to this empty preface, the book consists of twelve plates—three in monochrome and nine in chromo-lithography—beautifully executed by Lemerrier & Co., Paris, and accompanied by "descriptions." There is no attempt at arrangement. "Variety is charming" says the author, and in obedience to that principle, he gives us four plates of paintings; two of textile fabrics; two of lacquer; two of incrustated work; one of cloisonné enamel, and one of metal work. Mr. J. Quin's essay on lacquer manufacture is reproduced verbatim, and comprises the sum total of the information which the book contains. The descriptions of the plates tell us nothing, absolutely nothing, about the articles and subjects depicted, unless it be the names of their owners. To take an example:—Plate XI. Section I. is a reproduction of six paintings from a Japanese album. It bears the painter's name, *To (Fujiwara) no Morikane*, and the subjects are, commencing from the left:—(1) Shaka; (2) Yamato-take no Mikoto and the Princess Tachibana; (3) Nomi no Sukune and Kehaya; (4) the god and goddess Izanagi and Izanami; (5) the exiled poet and statesman Michizane, and (6) the deity Bunshosei. Every student of Japanese history knows that to each of these subjects there is attached an interesting legend and that without the legend the picture is meaningless. Here, however, is the whole account given by Mr. James Audsley:—"Careful reproductions of six paintings from a very beautiful *orihon*, or folding book" (*gwajō*, not *orihon*, is the proper term) "are given in the accompanying Plate. The originals are evidently the work of a very talented Japanese artist." (Apparently Mr. Audsley cannot read his name). "The book contains eight paintings, the best of which have been reproduced." (They are among the worst specimens of modern Japanese painting we have ever seen). "They are very carefully executed, on a fine silk ground, in transparent colours, laid on so thinly as to resemble stains. The flesh colours are the only ones which have any appearance of body, but even these are clear and lustrous. The grey back-grounds of all

the pictures are most dextrously manipulated; and have a depth and sumptuous softness which are altogether charming. Gold is introduced sparingly, and in a manner which strongly reminds us of the miniatures of mediæval manuscripts. The subjects of the paintings appear to be mythological or legendary; but we have not been able to obtain any satisfactory description of them. The original paintings measure $7\frac{1}{2}$ inches by $6\frac{1}{2}$ inches." So, too, we find a gaudy, vulgarly executed picture of the princess Wakana, the celebrated spider sorceress, with a spider's web beside her and a huge spider at her feet, described thus:—"It is a spirit—a veritable 'maiden of the mist'—visible, yet thin as air. The first condition is clearly marked by the force and richness of her coloured garments; while the second condition is made evident to the observer by the clever way she is depicted as passing through the spider's web without breaking it." This sort of crass ignorance has at least the merit of being amusing, but Mr. Audsley shows elsewhere that he is a stranger to even the most elementary principles of Japanese art. Thus at Plate IX. Section I. he reproduces a duck swimming in water beside which grow a few sprays of reeds. Of this work he says:—"Among the many highly interesting and beautiful specimens of painting on silk tissues, which have reached Europe from Japan, few, if any, may be said to surpass the one represented in this Plate, either in artistic conception or skilful manipulation." The "manipulation," indeed, appears to be beyond praise, but the reader will be able to appreciate the nature of the "artistic conception" when we say that the duck is placed precisely in the middle of the picture—exactly at the intersection of the diagonals. Imagine a first class Japanese artist making such a blunder as that! Again, the "beautiful bottle" of cloisonné enamel depicted at Plate III. Section VII., is chiefly remarkable for the excessive weakness of the curves and scamped rendering of the blossoms in the floral scroll that covers the body. With such a picture before us, we are constrained to think either that the author's judgment is defective or that the specimens to which he had access were not representative. Altogether, nothing can be said of this latest addition to Japanese art literature except that as a book it is worthless, and, as a pictorial album, misleading.

THE STORM OF 11th TO 14th OF SEPTEMBER, 1883.

A ready method of comparing the different months with regard to the weather changes consists in simply counting the number of depressions. Rise and fall of pressure and temperature, wind and rain are all connected with them; and the more depressions pass in a month, the more changeable the weather.

March brought 7, April 10, May 6, June and July 5 each, August 1. Thus generally speaking the weather within the last 6 months was most changeable in April, with one depression for every 3 days; most steady in August, with one only for 31 days.

In September the number has increased again, no less than three having passed already during the first half of the month, and the great weather changes noticed everywhere in Japan have been the consequence.

The first of these, after a very erratic course in

southern Hokkaido, traversed eastern Nippon from north to south; before its disappearance a second one started from the Inland Sea northwards, crossing near Hakodate to the Pacific, and after a short interval a third one came up from the eastern China Sea, this being the most important one of the three, accompanied by heavy gales in the whole south and east of Japan.

Distinct traces of this disturbance were first noted on Monday, September 10, 6 a.m.: on the morning of the 11th the aspect of the weather in the south-west had become threatening, so that the coast was warned, and 24 hours later the centre had arrived at south-western Kiushiu.

Preceded was the large disturbance by an insignificant looking depression, shown in the weather-map for September 9th, 2 p.m.

Far earlier information of the extent and importance of the large depression might have been received in Tokio from Amoy, and probably Hongkong and Manila, as the Shanghai observations from September 9th to 12th show that its influence extended more than 500 miles to the westward, a northerly gale blowing at Shanghai on the 11th and 12th at 4 p.m. This proves the importance of regular daily telegrams from China, as all large disturbances passing near Formosa are sure to be indicated by the Amoy observations. (See weather-map for August 24th, 2 p.m., with remarks on a dangerous depression on the eastern China coast.)

On the 12th and 13th the centre followed nearly a straight course, passing south of Miyasaki on the 12th, about 2 p.m., south of Wakayama on the 13th, at 6 a.m., north of Hamamatsu at 1 p.m., leaving the east coast of Nippon somewhat nearer to Nobiru than to Tokio, passing the former place at 10 p.m.

The speed of the centre was thus from Miyasaki to Wakayama 15 n.m. p.h., to Hamamatsu 18, to Nobiru 31 n.m. With the rapid increase of speed on the 13th, the depression grew quickly shallower, as the lowest pressures observed were 736 mm. at Miyasaki, 734 at Wakayama, 749 at Hamamatsu, and 754 mm. at Nobiru.

Gales or heavy gales were reported from 15 stations, strong winds from 5 more, out of a total of 22; thus the storm was felt more or less all over Japan; but the distribution of the stations with gales was rather peculiar, some in the north-east reporting such far in advance of the centre, and in fact disconnected with the centre proper, and also unaccounted for by the distribution of pressure and the gradients.*

From an investigation of the daily weather-maps of the Deutsche Seewarte, embracing the greater part of Europe, it has been found that on an average a gradient of 3.4 corresponds to a moderate 3.9 to a fresh gale.

In the present storm the gradients in the south were much steeper, ranging from 4.1 near Hamamatsu to 5.9 near Miyasaki. Without reference to the actual wind observations we conclude, therefore, that in the south the force of the wind exceeded considerably a "fresh gale."

But while in the south the wind-force corresponded to the gradients, the same was not the case in the north-east, where heavy gales were reported from Sapporo, Miyako, and Nobiru without corresponding gradients. Until September 12th, 6 a.m., the steepest was only 1.7, until September 13th,

2 p.m., only 2.8, gradients which alone cannot explain the wind-force experienced.

We have to look thus for another source and find it in quickly moving masses of warm air, descending from a higher level down to the surface of the earth along the east coast of Nippon, and carrying down with them the greater velocity of higher strata of the atmosphere.

This view is confirmed by the cloud observations, the rapid increase of temperature in the north on the 11th and 12th, amounting to 12 degrees in one day at Sapporo, the little wind at Hakodate, which generally enjoys a good share of it, while at Miyako, completely land locked, a heavy gale blowing inside the bay can hardly be otherwise explained than by an upper wind coming down as on an inclined plane.

Usually the wind-force at Miyako is much less than at the stations near by, and even the passage of great depressions with much wind immediately outside of Miyako bay is only to a small degree indicated by the wind-force inside of it. A slanting wind from above may reach the station: a horizontal wind will be much impeded by the heights surrounding the bay.

This descending current was probably also the cause of a slight secondary depression near Awamori on Sept. 13th, 6 a.m., which was merged at 2 p.m. with the principal one, the centre of which was then near Hamamatsu.

An approximate method of observing upper currents is to note the direction and speed of clouds, as is done in all Japanese observatories; later experience will show perhaps, where and when such currents are likely to descend, and whether the warm current on the south and east coast, the Kuro Shiwo, has some local influence. That a rapid change of temperature deserves much attention, is plain enough.

In certain parts of the year the effect of descending currents may be noticed in Japan for days together, the wind-force in the 2 p.m. weather-maps being always higher than either at 6 a.m. or 10 p.m.; this increase being due to upper currents reaching further down. It is only at the time of larger disturbances, that this increase of wind towards afternoon is marked.

Such gales as those mentioned in the north-east may be compared with certain squalls in the tropics, which come down from aloft and strip a ship in a few minutes, the barometer giving little or no warning; they also bring down with them to the surface the greater velocity of a higher strata.

The most rapid rise and fall of the barometer was in 8 hours for Miyasaki and Wakayama a fall of 9 mm., for Kagoshima a rise of 12, for Wakayama a rise of 13 mm.

After the passage of the centre the temperature fell rapidly in central and north-western Nippon, 13° (in 24 h.) in Kioto, 14° at Kanazawa.

Within the three days from September 11 to 14 rain fell at stations, most near the track. The sums were for:

| | | | |
|----------|---------|------------------|--------|
| Miyasaki | 135 mm. | Hamamatsu | 67 mm. |
| Kochi | 94 mm. | Osaka | 54 mm. |
| Wakayama | 80 mm. | Kagoshima | 53 mm. |
| Kioto | 73 mm. | Kanazawa | 52 mm. |
| Gifu | 73 mm. | All others below | 30 mm. |

In many respects this storm resembled another which followed nearly the same track from August 25th to 27th in 1880.

E. KNIPPING.

Tokio, 20th September, 1883.

TRANSLATIONS FROM NATIVE JOURNALS.

THE DEPRECIATION OF SILVER.

(Translated from the *Hochi Shimbun*.)

Since the middle of last year the value of Silver has shown a downward tendency. It was anticipated, however, that the price would revert to the old rate at the beginning of this year, but such was not the case. Depreciation has steadily progressed, and silver is, with slight occasional fluctuations, quoted at 120. The fluctuations that have taken place in the value of Silver will better be seen by the following Comparative Table of the value of the Silver yen in paper currency:—

18TH YEAR OF MEIJI (1885).

| | | | |
|----------|----------|-----------|----------|
| January | yen 1.71 | July | yen 1.57 |
| February | yen 1.66 | August | yen 1.56 |
| March | yen 1.63 | September | yen 1.53 |
| April | yen 1.61 | October | yen 1.50 |
| May | yen 1.54 | November | yen 1.51 |
| June | yen 1.57 | December | yen 1.41 |

19TH YEAR OF MEIJI (1886).

| | | | |
|----------|----------|--------|----------|
| January | yen 1.38 | May | yen 1.38 |
| February | yen 1.39 | June | yen 1.36 |
| March | yen 1.45 | July | yen 1.33 |
| April | yen 1.39 | August | yen 1.24 |

The above table gives the highest rate of exchange in each month, and although at one time in August it was quoted at yen 1.24, still on the 27th of the month it was as low as yen 1.17 7/10 to yen 1.17 8/10. Comparing this with the highest rate in August last year, we find a difference of more than 48 *sen*, or in other words fifty per cent. on the yen. What can be the real cause of this anomalous depreciation?

We are informed that in Osaka and the neighbouring districts, ten and twenty *sen* silver coins have reappeared in circulation, and that each of the exchange shops in the city receives about twenty yen's worth daily. This state of affairs has led to the belief that the fiat currency will regain its value and that it will shortly be possible to establish a convertible currency. Whether this can be effected or not we are unable to prognosticate. Should the depreciation continue we shall be delighted, but if afterwards values are subjected to serious fluctuations, which must be detrimental to commercial interests, our joy would be turned into grief. As we stated some time ago, paper money only is in circulation in the interior, and it is simply for the commercial transactions that take place in Yokohama, Kobe, Osaka, and Nagasaki that specie is required. Of the open ports Yokohama is recognized as the emporium, and, therefore, the value of silver in this port regulates the market price throughout the Empire. If Yokohama is supplied with an abundance of specie, so that there is no obstruction to trade, the value will necessarily fall. On the other hand, if the supply be insufficient for the amount of business done, the price will rise; and thus oscillation will become normal throughout the country. From the above circumstances we may infer that the comparative value of *Kinsatsu* and silver does not vary in accordance with the quantities in circulation but in proportion to the amount of transactions requiring settlement in bullion. A general scarcity of silver throughout the empire does not affect its value; but if quite sufficient for trade purposes is in circulation in Yokohama, its price can hardly fail to depreciate; and what more there is of specie in the country shares the same fate. For, in the first place, the augmentation of the amount of specie in the interior must tend to flood the Yokohama market. Secondly, if silver is

*Gradient is the maximum slope of pressure for a distance of 60 naut. miles in millimetres.

rare in the interior, exports have a chance of equalling imports in value, and there will still be abundance of coin in Yokohama for its mercantile needs. Or again, imports may be reduced to the level of exports by a similar process. Either condition is calculated to establish an equality between the actual amount of specie available and the requirements of the market; and either condition may tend to a fall in the price of silver. It must be remarked, however, that in the first case the depreciation will not be so marked as in the second.

The question arises:—"Is the present depreciation the result of the first or the second condition?" The annual report of the Commercial Bureau states that, from the year when trade conventions were first made with foreigners to 1871, the excess of export of bullion may be estimated at eighty million yen, while the excess from the latter period to the present was sixty-nine million, the two sums giving a total of an excess of yen 150,000,000 since the opening of the ports. Exports may have been in excess of exports last year, with the result of an unexpected influx of specie; yet no one is likely to assert that the depreciation of silver is due to there being a redundant supply in the market, as would be the case in accordance with the first supposition. The conclusion to be arrived at is rather that the decline is due to such circumstances as are referred to in the second. Last year's exports and imports were worth yen 37,240,000 and yen 29,160,000 respectively, showing an excess in favour of the latter of yen 8,080,000. Bullion was sent away to the extent of yen 4,430,000, and brought in to the value of yen 6,360,000, showing an excess of the latter to the value of yen 1,930,000. An advantage on the side of export of merchandize and import of bullion simultaneously had not been observed since 1872. In 1876, however, there was a brisk demand for silk, resulting in an excess of exports over imports, but it was only an insignificant amount as compared with that just above mentioned.

This, as we may call it, anomalous condition of trade was not confined to last year. It has continued during the current season; with the direct result that there is abundance of silver in the Yokohama market. The silver yen's exchange value has fallen to yen 1.17 in paper currency. These facts demonstrate that the fall in the value of silver has no connection with the amount in circulation throughout the empire; but must be ascribed to the abnormal condition of the Yokohama market, where silver is absolutely indispensable for purposes of trade. One may ask, here:—"Will the present abundance of specie endure? Is its present cheapness likely to have a permanent effect upon the mercantile community? May not our present delight at its depreciation turn into future grief?"

Well, then: the fall in the value of silver may be safely ascribed to the recent excess of exports over imports, bringing more than the ordinary supply of specie to the Yokohama market. But more searching investigation shows that that very excess is owing to stagnation of trade and obstruction in the circulation of money, both of which are sources of constant complaint on the part of the public. If we question the industrial classes we shall find that a fall in the price of rice has deprived the farmers of half their income, while artisans are unable to dispose of the products of their labor. Merchants can do nothing with their goods but store them, having no other way of placing them. With folded arms they ruminate how they may preserve their capital. They cannot

dream of making a profit upon it. Look where we may, there is no activity in any branch of industry, except perhaps in the direction of attempts to escape future loss. This is proved, for instance, by the extraordinary rise in the value of public loan bonds, seven per cent. pension bonds being quoted at 90.60—a case which is without precedent. Placards "for sale or to let" are conspicuous in every street of the capital. Fears are entertained in many quarters that the land-tax will not be forthcoming at the end of the year. All seems to show that our commerce has reached the lowest point of depression. People cease to spend their money, and are eager for the gain of even one or two sen. Merchants having sold what goods they can, have suspended the import of all such as are not actually ordered. These circumstances must have an anomalous effect upon the relations between imports and exports. Hitherto it has been the custom for importers to hold in stock at least twice the quantity of goods in immediate request by consumers. The latter, however, appear to abstain from purchase as far as they possibly can, so that even if the merchants could dispose of all their present stocks, they need hardly import any for a reserve, while, on the other hand, should the fall in the value of merchandize continue, the stuff that they already have on hand must bring them heavy loss. Indeed, they have really ceased to make purchases. Evidently this tends to decrease imports and augment exports. Below is a comparative table of exports and imports for three years, from 1880 to 1882 inclusive, showing how trade stagnation operates:—

| | EXPORTS. | IMPORTS. |
|------|----------------|----------------|
| 1880 | yen 27,418,346 | yen 36,176,087 |
| 1881 | yen 30,232,564 | yen 30,797,470 |
| 1882 | yen 37,240,915 | yen 29,168,040 |

From the above it will be seen that the exports during 1882 exceeded those of 1880 by yen 9,822,569, while the imports for the former year were less by yen 7,008,047 than those of the latter. Whatever progress Japan may have made in her industry, it is against reason that she should have succeeded in augmenting her exports by more than yen 9,840,000 in two years, while whatever changes may have occurred in the proclivities of her people, it is absurd to suppose that the simultaneous decrease of seven million of yen in the value of her exports was due to merely natural causes. Such phenomena can only be ascribed to dullness of trade. Can one fairly suppose, then, that the depreciation of silver, resulting as it does from the extraordinary causes enumerated above, will be permanent? To arrive at an answer to this question it is first essential to inquire into the comparative value of our principal imports. They may be thus enumerated:—

Cotton and linen fabrics, yen 11,290,000; sugar, yen 4,520,000; oil, yen 2,420,000; woollens, yen 2,840,000; iron, yen 1,510,000; miscellaneous, yen 1,210,000; medicines and drugs, yen 790,000; silk textiles, yen 580,000; leather and horn, yen 530,000; dye-stuffs, yen 520,000. Of the commodities hereabove enumerated, cotton and linen fabrics, sugar, oil, and iron may be accepted as necessities of life, which denomination also applies to other articles with the exception of "miscellaneous." Therefore the consumption of these materials by our people must not be looked upon as extravagance on their part, but rather as true economy, inasmuch as the things referred to, having been used instead of others during ten years and more, have come to be actual necessities. Yet even their purchase is likely to be suspended in cases where great distress prevails. When times mend, their purchase will be resumed.

Trade remains as stagnant this year as it was last, and consumers of the merest necessities have become frugal in their use, while the mercantile community, as we have said, have suspended all purchase of stocks. In this way we account for a temporary decrease in imports; but if the present depression should be removed the consumption of imported commodities must necessarily increase.

Should, however the existing dullness of trade continue, we are likely to see our populace converted into a congeries of ruined households. Matters must improve sooner or later, inasmuch as it is the two-fold result of an extraordinary rise in the price of commodities, which has reacted upon the relative value of the currency. To restore the normal relations between the two, a natural law has operated, impairing the value of the latter whose appreciation was abnormal, and producing a temporary stagnation in trade. When complete stillness comes, the tide must turn: the price of merchandize must fall to its proper relation with the currency, and trade must revive, implying a consequent resumption of imports, and an augmentation in the value of silver. Are we to rejoice on the one side at the depreciation of specie? We must then mourn on the other for the catalepsy of commerce. Shall we exult over the return of commercial activity? The value of silver must appreciate considerably. Some may be inclined to dispute this last proposition; and say that the reaction of trade can by no means enhance the price of silver, because although imports exceeded exports between the eight or nine years from 1871 to 1879, the value of specie was not augmented. Whatever reason there may appear in this vanishes when we remember that now-a-days conditions are vastly different from what they were some eight years or so ago. Prior to 1879 there was in the country abundant store of coin, preserved from generation to generation, wherewith to supply the Yokohama market whenever a scarcity arose from a disparity between imports and exports. What though six or seven million yen in specie was required annually to meet the deficiency, yet the value of silver did not greatly fluctuate. Specie does not necessarily appreciate when it is abundant in this market, however scarce it may be in other parts of the empire.

As we have just remarked, any deficiency of that metal in Yokohama was made good until 1879 when the internal supply began to fall short. Since then its value has fluctuated; and we may look upon the native sources whence the stream has hitherto flowed as having been drained. It will hardly be possible to find coins henceforth as heretofore to fill the gaps created by trade. If future imports should exceed exports to the extent recorded prior to 1878 the oscillations in the value of silver will be still more serious than they have yet been. It is ridiculous to expect a repetition of the circumstances of the period preceding 1879. Seeing, on the one hand, that the demand for imported articles is liable to be resuscitated, and that an excess of exports over imports must involve a fluctuation in the value of silver, we are forced to the conclusion that the present depreciation of that coinage cannot be permanent. The public should be aware that all financial evils have their origin in the unsettled condition of the money market, and if even the existing depression in the worth of silver be not of an enduring nature, the inconvenience which arises from it must still entail as great loss upon merchants, farmers, and manufacturers as would supervene from an augmentation of its value. If the public are content with the present state of affairs, all we have to say is that we cannot agree with them.

THE PROPOSED DIRECT EXPORT OF SILK.

(Translated from the *Tokyo Keisai Zasshi*.)

A rumour is current to the effect that the Government, with a view to the encouragement of direct trade, have decided to advance capital to Japanese exporters to the amount of ninety per cent. of the value of their shipments, at 4 per cent. interest per annum. A certain merchant is said to have contracted a loan on this basis for 300,000 yen. Whether there is any truth in this we cannot say, but considering the earnestness with which it is discussed, we are inclined to think that there must be some truth in it. This method of encouraging direct export presents no new features. It is only what has been already done by the Specie Bank, which obtains the amount of the proposed loan from the National Debt Bureau, and hands it over to the silk merchant, who repays it to the Government after the silk has been disposed of. There being a tendency in every direction to protectionist principles, this sort of paltry interference is quite characteristic. We have had on several occasions to discuss the advantages of direct exportation. It will therefore be sufficient to recapitulate the events of the past to show its disadvantages. Direct shipments have been tried at three different periods. The first period was during the 13th and 14th years of Meiji (1879-80), when many merchants embarked in the enterprise. The second period was during the silk difficulty, and continued throughout the second half of 1880. The third ranges from the 15th year of Meiji (1882) to the first half of this year: a period remarkable for the direct exportation undertaken by a certain merchant. As early as the 12th year of Meiji (1878), the question of direct shipments was mooted in the Cabinet, and resulted in the shipment of rice and silkworms' eggs. At this time it was not done on so large a scale as it has been within the last few years, and foreign merchants had some control of the business. The principle of direct trade is to ship goods to foreign markets independently of foreign assistance. This was not the case, however, as the export of rice was exclusively conducted by a certain foreign merchant. Although a few Japanese firms also engaged in the business, yet their transactions were insignificant as compared with the operations of the foreign firm. It would therefore appear that the above was not direct export in the proper acceptation of the word. This is the argument of the supporters of the enterprise, but some, however, think that so long as the goods are owned by Japanese it is direct export. We find that during the first period the Government advanced largely to the Specie Bank, which again made advances to merchants on the security of forest lands and plantations. Thus equipped with the necessary capital, the merchants exported commodities to foreign countries. The Government was content to receive 6 per cent. interest per annum from the Specie Bank, and the Bank charged the National Banks 8 per cent. These Banks then advanced money to the merchants at 10 per cent.

These loans were to be repaid after the goods had been sold in the foreign market, and the Banks and merchants alike rejoiced in the anticipated success of their venture. But when the consignments reached their destination all their arrangements were upset, for foreign merchants would not buy the goods except at a very low price. The longer the merchants waited for a chance to sell,

the heavier the charges became, until at last they were compelled to clear off the goods at a very great loss. In consequence of the loss made by the direct exporters, they failed to repay the advances made by the Banks, which in turn failed to repay the National Debt Bureau. The loss sustained by the merchants of Joshiu alone, amounted to more than 600,000 yen. If the losses made in the various provinces could be added together the sum would be enormous. As regards the second epoch, we find that the idea of recovering commercial independence greatly stimulated direct trade. The words "recovery of commercial rights" became the motto of every Japanese trader, and it was this that gave rise to the silk difficulty, the details of which need not be related here.

The Japanese combined to resist the aggression of the foreign merchants. The National Banks participated in the contest, and circulars were distributed throughout the provinces calling upon the people for support. This contest continued for over fifty days, when both parties saw the folly of their ways and came to terms. But the loss to the Japanese merchants was considerable. Coming to the third period under review, we notice that a certain merchant got into the market first and bought a considerable quantity of silk with the intention of exporting it direct. It is reported that he obtained an advance of 90 per cent. of the value of the silk, and that the whole or a portion of it has already been shipped. It is also said that, as it is most likely to show a loss, an officer of the Specie Bank will shortly be sent to look after the business. We are afraid that his journey abroad will not have any good effect. The above are the saddest results of the principal efforts to establish direct trade that we have seen. Nevertheless, we do not despair that we shall see direct export succeed, but we say that it is better to postpone it till the time is ripe. It is only to be expected that the export of silk when artificially forced by official means should be attended with such disastrous results as the above. We are sorry to see that the trade in tea and silk, which are the principal products of this country, are hampered by official interference, and are attended with loss year after year. We earnestly hope that the policy of interference with trade will shortly cease, and that a more liberal one will be adopted.

KANA REFORM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the "Biographia Literaria," I find the following:—"Within less than a century after Luther's death the German was inundated with pedantic barbarisms. A few volumes of this period I read through from motives of curiosity, for it is not easy to imagine any thing more fantastic than the very appearance of their pages. Almost every third word is a Latin word with a Germanized ending, the Latin portion being always printed in Roman letters while in the last syllable the German character is retained." No one, I fancy, will judge Coleridge's condemnation of this fantastic literature too severe. Possibly in the distant future our Japanese friends will agree that, *mutatis mutandis*, it applies with equal force to the present Japanese literature.

I am, Sir, &c.,
September 13th, 1883.

K.

SEIZURE OF THE "OTOME."

Letters were received in Yokohama on the 15th from Vladivostock, dated Sept. 8th, announcing the seizure, by the Russian authorities of Eastern Siberia, of the schooner *Otome*, the property of Messrs. Owston, Snow & Co., and having on board Mr. H. J. Snow, a gentleman well known in Yokohama, one of the owners. The officers and crew are thus composed:—Sailing-master, J. W. Nicolle; chief-mate and hunter, J. Gillam; second-mate and hunter, Harry Solomon; boatswain, Jos. Silva (better known on the wharf as "Portuguese Joe"); crew, seventeen Japanese.

On the 10th of August a party of men from the *Otome*, in charge of the second officer Solomon, were shooting and spearing seals on Behring Island. The sealing party was surprised by the islanders and driven to the beach, where the men took to their boats, leaving Mr. Solomon, who presumably was superintending the embarkation, in the hands of the residents. The boats reached the schooner in safety; and the vessel remained cruising for some hours in the hope of picking up the missing officer. The following day she was overhauled and boarded by the Russian steamer *Alexandra*, which transferred to her own board Mr. Snow, and the *Otome's* papers and guns, ordering the Captain of the schooner to follow in her wake to Petropaulofski, an order which had to be obeyed. Outside the port the two vessels were met by the *Kamschatka* which towed the *Otome* into harbor, where she was detained with four of her men to look after her. Captain Nicolle, Mr. Snow, and the remainder of the crew, were conveyed by steamer to Vladivostock, where they were on the 12th instant, and whence the master wrote to H.B.M. Consul here on that date covering a protest addressed to the Governor of Eastern Siberia against the seizure. We understand that Mr. Solomon is entitled to American protection. Mr. Snow, the owner, is English, and his vessel sails under the British flag. The capture was made, no doubt, under the regulations embodied in the following notification, issued by Mr. Pelikan, H.I.R.M. Consul on the 15th of November, 1881:—

At the request of the Local Authority of Behring and other Islands, the undersigned hereby notifies that the Russian Imperial Government hereby publishes for general knowledge the following:—

I.—Without a special permit or license from the Governor-General of Eastern Siberia, foreign vessels are not allowed to carry on trading, hunting, fishing, &c., on the Russian coast or islands in the Okhotsk and Behring seas or on the N.E. coast of Asia or within their sea boundary line.

II.—For such permits or licenses foreign vessels should apply at Vladivostock, exclusively.

III.—In the Port of Petropavlovsk, though being the only port of entry in Kamchatka, such permits of license shall not be issued.

IV.—No permits or licenses whatever shall be issued for hunting, fishing, or trading at or on the Commodore and Robben Islands.

V.—Foreign vessels found trading, fishing, hunting, &c., in Russian waters without a license or permit from the Governor-General, and also those possessing a license or permit who should infringe the existing by-laws on hunting, shall be confiscated, both vessels and cargoes, for the benefit of the Government. This enactment shall be enforced henceforth commencing with A. D. 1882.

VI.—The enforcement of the above will be entrusted to Russian men-of-war, and also to Russian merchant vessels, who, for that purpose, will carry military detachments and be provided with proper instructions.

A. PELIKAN,
H.I.R.M.'s Consul.

Yokohama, Nov. 15, 1881.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 14th.

THE GERMAN FLEET.

A semi-official denial has been given to the reported order to the German Admiral to concentrate a squadron in Chinese waters.

COMING TROUBLE IN SOUTH AFRICA.

Disturbances are threatened in South Africa, and many Boers are joining Cetewayo.

NOTIFICATIONS No. 14 & NO. 15 OF PUBLIC WORKS DEPARTMENT.

It is hereby notified that the transmission of official and private telegrams, to and from the Omori, Kawasaki, and Tsurumi stations on the Yokohama-Tokyo Railway, and to and from the Takatsuki station on the Kobe-Kiyoto line, is suspended from the 20th instant.

(Signed) SASAKI TAKATSURA,
Minister of Public Works.

September 18th, 1883.

It is hereby notified that a telegraphic wire has been laid between Kanazawa and Nanawo in the prefecture of Ishikawa, and another between Yonezawa and Koide in the prefecture of Yamagata, and that they will be opened for traffic on the 1st of October next.

(Signed) SASAKI TAKATSURA,
Minister of Public Works.

September 20th, 16th year of Meiji (1883).

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong. per P. & O. Co. Sunday, Sept. 23rd.
From America ... per P. M. Co. Monday, Sept. 24th.
From Shanghai, Nagasaki, & Kobe ... per M. B. Co. Thursday, Sept. 27th.
From America ... per O. & O. Co. Thursday, Oct. 4th.

* *Zamato* left Hongkong on September 18th. † *City of Peking* left San Francisco on September 4th. ‡ Left Shanghai on September 18th. § *Arabic* left San Francisco on September 15th.

THE NEXT MAIL LEAVES

For America ... per P. M. Co. Sunday, Sept. 23rd.
For Europe, via Hongkong ... per M. M. Co. Sunday, Sept. 23rd.
For Vladivostok, Kobe, & Nagasaki ... per M. B. Co. Sunday, Sept. 23rd.
For Kobe ... per M. B. Co. Monday, Sept. 24th.
For Hakodate ... per M. B. Co. Tuesday, Sept. 25th.
For Shanghai, Kobe, and Nagasaki ... per M. B. Co. Wednesday, Sept. 26th.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 6 a.m. and 1.30 p.m., and KUMAGAI at 9 a.m. and 4.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2; First-class, yen 1.20; Third-class, yen 60. The distance from Ueno to Kumagai is 38 miles.

SUNDAY CHURCH SERVICES.

Christ Church : 11 a.m. and 5.30 p.m.
Union Church : 11 a.m. and 8 p.m.
Roman Catholic Church : 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokyo : 11 a.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 14TH, 1883.

Observatory of Daigakuji, Moto-Fujiicho, Hong, Tokyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
--- represents velocity of wind.
--- represents percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 22.4 miles per hour on Tuesday at 3 p.m.

The highest reading of the barometer for the week was 30.142 inches on Friday at 9.27 p.m., and the lowest was 29.671 inches on Wednesday at 3 p.m.

The highest temperature for the week was 84.3 on Wednesday, and the lowest was 58.3 on Thursday. The maximum and minimum for the corresponding week of last year were 83.0 and 60.0 respectively.

The total amount of rain for the week was 3.223 inches, against 1.489 inches for the corresponding week of last year.

It has been found that the freight cars on the Tokyo-Kumagai railway could not carry the amount of merchandize sent in for transmission. The directors, in consequence, have had to borrow six cars from the Railway Bureau. The construction of new cars is being pushed forward.

The expenses of H.E. Ito and suite during their tour abroad, amounted to yen 55,000.

The officers of the American man-of-war now lying in Yokohama will shortly be received in audience by His Majesty the Mikado.

Tattooing has become very popular in China, and the services of skilled Japanese have been secured. At the time of the Restoration it was abolished in Japan, and those who practiced the art lost their livelihood. It will be a matter for rejoicing to them that China opens a new field for their employment.

The total amount of exports and imports at all the open ports for July last were as follows:—Imports, yen 2,773,281.91; exports, yen 2,666,480.89; excess of imports, yen 106,801.02; The customs revenue from various sources, was yen 128,411.35.—*Hochi Shimbun*.

LATEST SHIPPING.

FREIGHTS.

During the past week we have had the new Union steamship *Selebria* from London, and the *Strathmore* from Antwerp and Glasgow, with general cargoes. For New York the *Strathleven* and *Galley of Lorne* are advertised for the 26th instant and the *Benarty* with quick dispatch. For London the *Cardiganshire*, expected about the 26th instant, will probably be dispatched very shortly thereafter. Coastwise, no change can be reported, everything being intensely dull.

ARRIVALS.

Gloaming, British ship, 1,498, R. F. Densmore, 13th September.—New York 15th May, 52,900 cases Kerosene Oil and General.—China and Japan Trading Co.

Niigata Maru, Japanese steamer, 1,097, John C. Hubbard, 15th September.—Hakodate 13th September via Oginohama, Mails and General.—Mitsu Bishi M. S. S. Co.

Galley of Lorne, British steamer, 1,384, Pomeroy, 16th September.—Kobe, General.—Smith, Baker & Co.

Kworio Maru, Japanese steamer, 482, F. Creighton, 16th September.—Yokkaichi 15th September, General.—Mitsu Bishi M. S. S. Co.

Selebria, British steamer, 1,992, S. Fowler, 16th September.—London via Hongkong 8th September, General.—Smith, Baker & Co.

Wakanoura Maru, Japanese steamer, 1,342, A. F. Christensen, 16th September.—Kobe 15th September, General.—Mitsu Bishi M. S. S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 17th September.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Hiogo Maru, Japanese steamer, 896, R. N. Walker, 18th September.—Kobe 16th September, General.—Mitsu Bishi M. S. S. Co.

Shima Maru, Japanese steamer, 800, 18th September.—Kobe via Yokkaichi, General.—Kiyodo Unyu Kwaisha.

Seirio Maru, Japanese steamer, 329, 19th September.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Tanais, French steamer, 1,750, Vaquier, 19th September.—Hongkong 12th September, Mails and General.—Messageries Maritimes Co.

Tsukushi Kan, Japanese ironclad, Captain James, 19th September.—England via Nagasaki 15th September.

Strathleven, British steamer, 1,588, C. W. Pearson, 20th September.—Yokosuka.—Adamson, Bell & Co.

Tokio Maru, Japanese steamer, 1,146, R. Swain, 20th September.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S. S. Co.

Tsuruga Maru, Japanese steamer, 780, Dithlefsen, 20th September.—Kobe 18th September, General.—Mitsu Bishi M. S. S. Co.

City of Rio de Janeiro, American steamer, 3,548, W. B. Seabury, 21st September.—Hongkong 14th September, Mails and General.—P. M. S. S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 21st September.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.

Kanagawa Maru, Japanese bark, 1,150, Eckstrand, 21st July.—Nagasaki, Coals.—Mitsu Bishi M. S. S. Co.

Strathmore, British steamer, 1,384, L. White, 21st September.—Antwerp and Glasgow via Shanghai 13th and Kobe 19th September, General.—Adamson, Bell & Co.

Sukune Maru, Japanese steamer, 475, Makiyama, 21st September.—Hakodate, 18th September, General.—Kiyodo Unyu Kwaisha.

Takasago Maru, Japanese steamer, 1,229, C. Young, 21st September.—Hakodate, General.—Mitsu Bishi M. S. S. Co.

Alex. McNeil, American ship, 1,088, T. F. Sproul, 22nd September.—New York 13th April, 37,600 cases Kerosene.—Smith, Baker & Co.

DEPARTURES.

Seirio Maru, Japanese steamer, 459, G. R. Nirei, 15th September.—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

Strathleven, British steamer, 1,588, C. W. Pearson, 15th September.—Yokosuka.—Adamson, Bell & Co.

Kashgar, British steamer, 1,515, W. J. Webber, 16th September.—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S. N. Co.

Wakanoura Maru, Japanese steamer, 1,343, A. F. Christensen, 17th September.—Kobe, Mails and General.—Mitsu Bishi M. S.S. Co.

Kworio Maru, Japanese steamer, 618, F. Creighton, 18th September.—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

Taganoura Maru, Japanese steamer, 448, Matsumoto, 18th September.—Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

Genkai Maru, Japanese steamer, 1,917, G. W. Conner, 19th September.—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

LATEST COMMERCIAL.

IMPORTS.

During the week there has been a fair current business in Yarns, but there has not been so much demand for Shirtings, and the Market closes very quiet. Other Goods call for no special remark. In Metals, there has been a fair business but with no improvement in prices.

KEROSENE.

Sales during the past week consist of 12,000 cases Devoe at \$1.60 and 7,000 damaged cases at auction, realizing from \$1.30 to \$1.40. Deliveries during the same period have been 28,500 cases. Stocks consist of about 781,000 cases in fair hands of sold and unsold Oil.

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.60 |
| Comet - | 1.59 |
| Stella - | 1.50 |

SUGAR.

With little or nothing doing, prices have undergone no change.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$7.50 to 8.00 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.50 to 4.60 |

EXPORTS.

SILK.

Business has continued on the same scale with but a day or two in which little was done. Sellers are disposed to be current, and again 700 piculs have been settled during the week under review at rather under previous rates. Arrivals are plentiful, and Stock of all kinds is now 4,200 piculs. Export to date is 6,523 bales, against 6,592 bales at same date last year, and the French and American mail steamers leaving 23rd have about 1,000 bales engaged. Coarse book Silks from Sodai and Yechizen districts have once more appeared, and are enquired for at prices which should prove remunerative to the producer.

Hanks have been freely taken the last few days at a reduction of \$5 to \$10. We note Tomiyoka at \$517 1/2, Shinshiu \$515, Omama \$510, and Chichibu and Annaka \$490. The demand continues, and prices tend in favor of buyers.

Filatures.—These show some weakness, although Settlements have been plentiful on basis of Nihon-matsu \$650, Rokosha \$640, Tokosha \$637 1/2. (A second parcel nearly all green color since done at \$630). Good Shinshiu kinds \$620, Koshu \$600, and Mino and Hida \$580.

Re-reels.—These find buyers for the better kinds. Fan chop \$620, Tortoise \$615, and Five Girl \$610. Common kinds neglected.

Kakedas.—Better kinds offered at a reduction of \$10; lower sorts command late rates. Hamatsuki, Sodai, Yechizen, and Taysam kinds generally are strong at full rates.

| | QUOTATIONS. |
|--------------------------------------|--------------|
| Hanks—No. 1 1/2 - | \$515 to 525 |
| Hanks—No. 2 (Shinshu) - | 510 to 520 |
| Hanks—No. 2 (Maibash) - | 505 to 510 |
| Hanks—No. 2 1/2 - | 480 to 490 |
| Hanks—No. 3 - | 450 to 470 |
| Hanks—No. 3 1/2 - | 420 to 440 |
| Filatures—Extra - | 640 to 650 |
| Filatures—No. 1, 10/13 deniers - | 630 to 640 |
| Filatures—No. 1, 14/16 deniers - | 630 to 640 |
| Filatures—No. 1 1/2, 14/17 deniers - | 610 to 620 |
| Filatures—No. 2, 10/15 deniers - | 600 to 620 |
| Filatures—No. 2, 14/18 deniers - | 600 to 610 |
| Filatures—No. 3, 14/20 deniers - | 570 to 580 |
| Re-reels—No. 1, 14/16 deniers - | 610 to 620 |
| Re-reels—No. 1 1/2, 14/17 deniers - | 600 to 610 |
| Re-reels—No. 2, 14/18 deniers - | 580 to 590 |
| Re-reels—No. 3, 14/20 deniers - | 560 to 570 |
| Kakedas—Extra - | 620 to 630 |
| Kakedas—No. 1 - | 590 to 600 |
| Kakedas—No. 2 - | 550 to 560 |
| Kakedas—No. 3 - | 520 to 530 |
| Hamatsuki—No. 1, 2 - | 480 to 490 |
| Hamatsuki—No. 3, 4 - | 460 to 470 |
| Sodai—No. 2 1/2 - | 440 to 450 |

TEA.

The activity in our Tea Market reported in last issue has been well sustained throughout the interval, and about 2,650 piculs have been settled, comprising mostly Medium, Good Medium, and Fine sorts, with some lines of Finest and Choice Teas. Market at the close has a strong upward tendency for Teas grading above medium. Total arrivals for the season are 134,809 piculs, against 143,103 piculs at the same period last year. Estimated Stock in Yokohama is about 4,600 piculs. The American bark *Mary Winkelman*, sailed for San Francisco on the 18th instant, took 13,072 packages Tea for California; the pounds will be given in our next report. The British steamers *Galley of Lorne* and *Strathleven* are on the berth for New York, via Shanghai, China ports, and Suez Canal. Both are expected to leave this port on the 26th instant. The steamship *Bewarty* (to arrive) is advertised to follow at an early date. Rate of freight is 45 shillings per 40 cubic feet. The overland rates for Teas via San Francisco remain as previously reported.

| | QUOTATIONS. |
|---------------|--------------|
| Common - | \$ 9 & under |
| Good Common - | 11 to 13 |
| Medium - | 14 to 16 |
| Good Medium - | 17 to 20 |
| Fine - | 22 to 25 |
| Finest - | 27 & up'ds |

EXCHANGE.

A fairly large business has been done in Private Paper during the week, and the demand for Bank Bills has been above the average. During the last few days rates have remained steady, and they close firm at the following quotations:—

| | |
|-------------------------------------------|--------------|
| Sterling—Bank Bills on demand - | 3/8 |
| Sterling—Bank 4 months' sight - | 3/8 1/2 |
| Sterling—Private 4 months' sight - | 3/8 1/2 |
| Sterling—Private 6 months' sight - | 3/9 |
| On Paris—Bank sight - | 4/64 |
| On Paris—Private 6 months' sight - | 4/75 |
| On Hongkong—Bank sight - | Par. |
| On Hongkong—Private 10 days' sight - | 1/2 o/o dis. |
| On Shanghai—Bank sight - | 7 1/2 |
| On Shanghai—Private 10 days' sight - | 7 1/2 |
| On New York—Bank Bills on demand - | 89 |
| On New York—Private 30 days' sight - | 89 1/2 |
| On San Francisco—Bank Bills on demand - | 89 |
| On San Francisco—Private 30 days' sight - | 89 1/2 |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|---------------------------------|---------|
| Monday, September 17th | 118 1/2 |
| Tuesday, September 18th | 118 1/2 |
| Wednesday, September 19th | 118 1/2 |
| Thursday, September 20th | 118 1/2 |
| Friday, September 21st | 118 1/2 |
| Saturday, September 22nd | 119 |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c. is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SM. SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

FOR SALE, a SMALL "CLYMER" COLUMBIAN PRINTING PRESS.

For Price apply to the MANAGER, *Japan Mail* Office, No. 72, Main Street, YOKOHAMA. Yokohama, May 1st, 1883.

NOTICE.

THE "JAPAN DAILY MAIL" is now the largest newspaper published in Japan. The paper is issued every morning and immediately delivered in the Settlement and Bluff.

A new rate of charges for Advertisements has been devised on a very moderate scale, and the Paper has a good and increasing circulation.

The "JAPAN DAILY MAIL" is the principal Morning Paper published in Yokohama in the English language, and is delivered at places of Business during Office Hours on the day to publication. Advertisers will therefore see that the "JAPAN DAILY MAIL" offers unusual facilities for public announcements.

OFFICE, 72, MAIN STREET, YOKOHAMA. Yokohama, 1st May, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPTEMBER 29TH, 1883.

WEEKLY NOTES.

THE prospects of an unusually plentiful harvest, and the exceptionally low price of rice, warrant us in looking forward to considerable exportations of that staple in the near future. The condition of the agricultural classes in Japan is very different to-day from what it was three or four years ago, and this continued fall in the value of rice will not improve matters, however welcome a fine crop may be. On the other hand, since the causes of the fall are currency contraction and a gradual advance toward conditions which will render the resumption of specie payments possible, there is nothing in the prospect that need alarm us. A large export of rice would, by bringing specie into the country, greatly facilitate the only measure which can restore Japan's foreign commerce to a sound basis. In view of this contingency it might be worth the Government's while to consider whether consignments of rice sent to London on account of the Treasury are the best means of realizing specie for the reserve fund. It is the opinion of shrewd business-men that public sales in Japan would be a more profitable and far less hazardous method of disposing, in part at all events, of the stock destined for foreign

markets. Rumour says that transactions undertaken on Government account during the past season were not as successful as they might have been had not incompetent or reckless foreign agency been substituted for the methods previously employed. However this may be, it seems pretty plain that by inviting public tenders for the stocks of rice to be sent forward Japanese financiers would be enlarging their field of operations in a way that could not fail to be beneficial. There would be no obligation to accept any tender. The Government might reserve to themselves the right of shipping the staple on their own account if the offer made on the spot were not sufficiently advantageous. There is not much in past records to recommend the system hitherto pursued, and it may be confidently asserted that, if circumstances compel the Government to engage in commerce, the more openly and expeditiously their transactions can be conducted, and the fewer agents they employ, the better will it be both for their own reputation and for the pockets of the Japanese.

WE learn from a Japanese newspaper that Mr. Sudzuki Kawanichi, secretary to the Japanese Legation in Paris, who disappeared from his post several months ago simultaneously with the disappearance of a considerable sum from the Legation funds, has recently given himself up, and is now on his way to Japan under police escort. Mr. Sudzuki's story is not without elements that enlist pity. It appears that, finding he had overdrawn his account to the extent of some five thousand francs, he was persuaded, in an evil hour, to try and recoup that amount by transactions in stock. The inevitable consequences were fresh losses and new speculations, until at last the deficit in the fund, became so large that the unfortunate defaulter saw nothing for it but flight. Presumably Mr. Sudzuki carried away sufficient funds to support him for a time, but the exact amount of his defalcations is not publicly known. It is stated at seventy-five thousand francs by the journal which reports Mr. Sudzuki's return, but we believe that a hundred thousand would be nearer the truth. Belgium is said to have been the refuge of the Secretary during the period of his disappearance from Paris.

Apropos of the unfortunate affray which took place recently between Chinese opium smokers and the Japanese police in Nagasaki, it may be well to correct a false impression apparently prevalent that the Nagasaki police alone are

armed with swords. The truth is that, in accordance with a recent proclamation, the police throughout Japan now carry these weapons. We believe that the immediate cause of this innovation was the murder of three or four constables by a band of thieves near Tsukiji, but it had been evident for some time that the police must be provided with a better means of defence than a club, inasmuch as the lawless characters they had to deal with were generally armed with daggers, sword-canes, and concealed weapons of various sorts. There is not apparently much to choose between swords in the hands of Japanese, and revolvers in the hands of European, police, but the trouble is that police are a comparatively new institution in this country, and one is inclined to doubt whether they are yet thoroughly conversant with the first duty of a peace-officer, namely, self-restraint; or whether they have entirely disabused themselves of a notion that the office of constable involves the performance of magisterial functions. This Nagasaki affair comes at an unfortunate time, because the charges of cruelty preferred against the police in connection with the Fukushima conspiracy are still fresh in the memory of the public and still await refutation or investigation. We learn, however, from the vernacular journals that two of the men recently condemned for participation in this conspiracy are soon to be tried on another charge, that of libelling public functionaries, so that the facts of the case will doubtless be thoroughly sifted at last. Meanwhile we observe that five policemen in Osaka have each been sentenced to six months imprisonment with hard labour and to a fine of ten yen for ill-treating prisoners. A few judgments of this sort would soon teach the police that in adopting new codes of criminal procedure the Government had no intention of suffering the spirit of their reforms to be defeated by barbarous agents.

THERE seems to be little doubt that the policy of France towards China has recently undergone a marked change. The appointment of M. Pâtenôtre, formerly chargé d'affaires at Peking, to represent the Republic in China, is the last, and not the least significant, of the events which indicate this modification. M. Pâtenôtre's policy is understood to be based on the lines laid down formerly by M. Bourée, and adopted, so far as we can judge, by M. Challemel-Lacour at the recent negotiations with the Marquis Tsêng. M. Tricou thus disappears from the arena of Orien-

tal politics, and his exit will be universally regarded as a new promise of peace. We do not question his diplomatic talents, but they seem to run in a groove not parallel with the interests of Europeans in the East. At all events his mission to China has been little short of a fiasco. His programme of menace and bluster only had the effect of eliminating him altogether from the controversy. That astute old statesman, Li Hung-Chang, finding that to continue the discussion in China involved the introduction of such a thronomic element, changed the *venue* to Paris, where, under the able management of the Marquis Tseng, affairs soon assumed a healthier complexion. The horizon is not yet quite clear, but with M. Challemel-Lacour at Vichy and M. Tricou under orders for home, things look decidedly hopeful.

THE *Statistical Gazette* says that the number of officers in the various Government Departments in 1881 was 39,615, while the number in the various cities and prefectures was 38,625, making a grand total of 78,240. The same authority puts the aggregate salary of these officers at 1,077,970 *yen* per mensem, which gives an average of something less than fourteen *yen* each per month; or, at the rates of exchange then ruling, about £19 per annum. If these figures be correct the salaries of Japanese officials are small enough, though their numbers are respectable.

THE scheme of dredging Tokijo Bay within the forts at Shinagawa seems to be again seriously contemplated. We have heard so much of this during the past three years that the rumour arouses little interest; but on this occasion it is to be observed that the prospectus of the Committee appointed by the Tokijo Municipality to report upon the work, recommends a plan so inexpensive and yet apparently so effective that the chance of its being carried out are not so remote as they used to be. Briefly stated the plan consists in uniting the two channels by which the waters of the Sumida River traverse the distance between its mouth and the forts. Of these channels the principal runs in a tortuous line along the shore from Hama-goten towards Shinagawa, while the so-called Eastern Channel trends eastwards and passes out between the second and third forts. It is proposed to divert the waters of the former into the latter, by which means a minimum depth of six feet at ebb tide and eleven feet at the flow will be obtained. Vessels of more than a thousand *koku* burden, and ships of four or five hundred tons will thus be enabled to reach the Sumida River. If this project be carried out, it will doubtless add largely to the prosperity of Tokijo, though it will still leave much to be desired.

PROBABLY no year in the present century can show such a terrible record of catastrophes as 1883. The accounts from Ischia and Batavia are sufficiently appalling to hide all minor disasters, yet those whose resources bear any reasonable proportion to their charitable impulses

will do well to read the story of the desolation wrought by the recent floods in the country round Peking. A memorial has been forwarded to the throne by the Governor and Governor-Adjoint of the Metropolitan prefecture, and its harrowing details are thus epitomized by the *North China Herald*:—

No fewer than thirteen departments and districts reports that the postal roads are flooded. At Tung-chou the river experienced a sudden rise of more than ten feet, which caused a dangerous overflow; the Peking Canal also burst its banks, while at San-ho the mountain torrents rushed down with such violence that the country for miles around was transformed into one vast lake, overturning houses and drowning the inhabitants by scores. Two rivers, the Yün Ho and the Wu Ho, broke bounds, and joining their forces were transformed into one overwhelming flood, covering the country with a huge sheet of water as far as the eye could reach. A similar disaster occurred elsewhere, and terrible were the stories of death and misery which now began to come in from all sides. There is a city of the second rank called Pao-ti Hsien, the situation of which is peculiarly unfortunate at such seasons, as it is the meeting-place of numerous rivers. At this point of convergence all these streams rose above their embankments, which, in spite of the strenuous efforts of the inhabitants, were soon carried away by the force of the waters. Numbers of villages were soon submerged, and all the crops in the neighbourhood entirely ruined. With as much haste as the circumstances permitted, enquiries were set on foot, which elicited the fact that the wholesale destruction of crops and annihilation of villages by no means represented the entire mischief done. Whole families, consisting of scores of people, seeing nothing but death before them, lashed themselves together with ropes in order to avoid being separated, and to ensure their all being drowned together. Many of the petitions that are now pouring in are for aid to the living to bury their dead; others ask for food, others for shelter, some again for the means to go away to less dangerous regions as soon as the floods subside. The memorialists say that so piteous a disaster has not occurred for the last fifty years. A Tao-t'ai who has lately returned from Tientsin to the Capital adds his testimony to the truth of these sad tales. Starting on the 6th of August, he says that the floods were then so high as to make it quite impossible to tell whether his boat was in the channel or no. He further makes the startling statement that "hundreds and thousands of villagers congregated on the banks of the river, besieging his boat, which was stopped more than twenty times by their appeals for assistance. Each party came clamouring with its tale of woe, until, says the Tao-t'ai, the pitiful sights he witnessed and the stories of sorrow he heard were more than he could bear. The Memorialists conclude by urging the necessity of affording prompt relief, otherwise, as they point out, the Capital will probably have another invasion of starving refugees, similar to that which took place seven years ago.

It is announced that the new buildings for the principal police station in the Kanagawa Prefecture will soon be commenced. The site chosen is No. 3, in the first ward (*Ii-chō-me*) of Honcho-dori, and the cost of the building is to be twelve thousand *yen*. It is time that active steps were taken in this matter. The present Central Police Station was built many years ago, even before the issue of the Revised Penal Code, which was superseded by the Codes that came into operation on the 1st of January, 1882. The arrangements of the Station, the cells, &c., consequently represent executive conditions different from those now existing. At the same time a careful examination of the place shows that in many respects it serves its purpose very well. The cells, with the exception of those where drunken prisoners are temporarily confined, are spacious and airy, and the rooms for conducting examinations are conveniently disposed. The two lock-ups for the detention of foreign prisoners have more pretensions to solidity and comfort than the

other parts of the building, but what they gain in these respects they lose in coolness and ventilation. Recently, when some philanthropists undertook to champion the cause of certain sea-side Phrynes against the police, occasion was seized to ventilate a story about a naked lunatic who had been confined, it was stated, for several days, if not weeks, at the Central Police Station in a cell, nine feet by six, open to rain, wind, and sunshine. If any of our readers will be at the pains to visit this cell they will find that it is a small and comfortless place in truth, but that it is not open to the rain,—on the contrary, its chief fault is that it is not open enough—and they may also learn on enquiry that the man confined there was an exceedingly violent lunatic, whose chief idiosyncracies were that he declined to wear any clothes, tearing off everything put on him, and that he thought his mission upon earth was to be an incendiary. Indeed he did succeed once in shutting himself up with a kerosene-lamp, and reducing a side of his cell to charcoal before he was discovered. It is unfortunate but not inexplicable that special arrangements do not exist for lodging and maintaining these sort of characters on a comfortable scale. We believe, however, that the Kanagawa Prefecture is not provided with a lunatic asylum. Madmen whose violence brings them into conflict with the myrmidons of the law, are only confined at the Police Station until their friends come to remove them. The nude incendiary in question appears either to have been without friends or to have made himself so obnoxious that nobody was willing to take charge of him. The police were thus obliged to keep him for several days, and, as no arrangements existed at the station for such a contingency, he did not fare as well as could have been desired. The treatment of lunatics and the establishment of lunatic asylums (*Futenbiyō-in*) are matters which have only recently begun to receive proper attention in Japan.

NOTES.

THE telegraph on Monday brought us welcome news. Perhaps the most favorable item is the intelligence of M. Challemel-Lacour's temporary elimination from the controversy. That Minister and his lieutenant at Shanghai have always seemed to us the most impracticable factors in the problem. It has been said of M. Challemel-Lacour that he is too clever to be the slave of his impetuous disposition, but though this may be generally true of his conduct in European politics, one cannot help thinking that the restraint he is obliged to put upon himself at home prompts a compensatory recklessness abroad. Certainly his treatment of China's claims, the just and the frivolous alike, has been unworthy of France, especially of republican France. The *Spectator* appears to supply the key to his Oriental policy when it recalls his ethical doctrine that "it is a great imperfection in a statesman to push mere conscientious scruples too far, and to be incapable

of sacrificing his moral delicacy to his aim." We may say with confidence that the attempts made at this end of the world to embroil Japan in a trouble which does not at all concern her, were not impeded by any excess of moral delicacy. Unless the public has been greatly misinformed, M. Jules Ferry would have adopted towards China a demeanour very different from that of his successor, and the fact that the negotiations have been entrusted to his charge implies a return to the much maligned policy of his former mouthpiece, M. Bourée. This result may chagrin some of the Jingoes whose voices have been so lusty of late, but it will be regarded with unqualified satisfaction by all moderate men. That France should successfully carry through her programme in Tonquin and bestow the blessings of prosperity and security on the whole of Cochin China, is a consummation to be devoutly desired, not more on behalf of the cause of civilization than for the sake of the benefits such a result would certainly confer on British commerce in the East. But if that programme could only be achieved at the cost of adding fresh bitterness to China's present mood, and casting upon all Western reputation in the Orient a general shadow of injustice, then, indeed, to pursue the scheme would entitle France to something very different from gratitude.

The reported recommendation of the French press that the expeditionary force in Tonquin should be a single command, may be read as a preface to the telegraphic information we published on Friday morning. That information was to the effect that, owing to a reverse which the French had sustained at the hands of the Black Flags as well as to the insufficiency of the forces at his disposal, Admiral Courbet had suggested the advisability of treating separately with the so-called "pirates of the Red River," and that this suggestion having been opposed by M. Harmand, the *entente cordiale* between the civil and military authorities was disturbed. The recommendation of the French press seems to indicate that differences of opinion had already arisen between the military and naval commanders,—an accident which, judging by English experience, might almost have been predicted. Up to the present there has been about the Tonquin campaign this peculiarity, that it has been essentially an affair of the two services. Army and navy have taken an equal share in nearly every operation, and it may be accepted as an axiom that when army and navy try to take equal shares in anything for any length of time, they invariably fall out. Possibly the language of the Paris journals does not admit this interpretation, but at all events Admiral Courbet's nomination to the sole command will be regarded as a wise measure in military circles; though, his recently reported relations with M. Harmand render the appointment less happy than it might have been. The idea of treating separately with the Black Flags does not immediately explain itself. It will doubtless be remembered, however, that by the

terms of the treaty recently concluded at Hué, France took upon herself the whole responsibility of sweeping away these brigands. She was of course entitled to claim the assistance of the Annamite forces, if she pleased, but it is doubtful whether French troops could derive much assistance, under any circumstances, from an alliance with such braves as those of Annam. General Rouet's contingent of Yellow Flags, under the command of Colonel George, appear to be working in a resolute, soldier-like way, but it has cost much trouble to lick them into shape, and we may be sure that a little of such warriors goes a long way. The task, then, which the French had to perform was to occupy sundry posts in the delta of the Red River and to clear away the pirates that infest its upper waters from Sontai to Laokai, while the troops available for this purpose numbered, approximately, 2,500 men, the remainder of the expeditionary force being required for operations in the neighbourhood of Hué. It is obvious that these means were totally inadequate to the proposed end. A considerable fraction of the little army had to be detached on garrison duty, and the rest was required to push inland from Sontai, entangling itself in a mountainous country and leaving behind it a line of communications more and more difficult to defend. We cannot be surprised that only the first part of this programme—the occupation of the delta of the Red River—has been accomplished up to the present. The attempt to push inland has of necessity been prefaced by an attack upon the positions occupied by the Black Flags between Hanoi and Sontai, but of the three attacks actually reported, though all are claimed as successes, not one has fully accomplished its object. The Black Flags seem to be just as strongly posted as ever. Under these circumstances Admiral Courbet may well think that instead of persisting in a war of extermination with inadequate forces, it would be wiser as well as more humane to recognise some of the rights which the Black Flags claim, as for example, the right to exist. We are unwilling to admit this hypothesis, for no conjuncture easily conceivable, could reconcile Frenchmen to the spectacle of a French Commander entering into treaty relations with a band of brigands and pirates. Nevertheless strange embarrassments do present themselves when men begin to build without sitting down to count the cost.

SIR HARRY PARKES has been welcomed with great enthusiasm in Shanghai. A Reception Committee, composed of various nationalities, was appointed to conduct the arrangements, and, as is usual in the East, failed to give satisfaction. No gun was fired nor any efficient measures devised to give notice of the new Minister's arrival, so that many persons who desired to be present were prevented from attending. A large number of the residents appear to have waited at the Mitsu Bishi Company's pontoon from the time the *Tokio Maru* was first signalled, until the long delay in her arrival sent them home wearied out. Never-

theless, about seventy gentlemen assembled finally at the wharf, and received Sir Harry with ringing cheers. After this an address was delivered by the Reception Committee, and Sir Harry replied in excellently chosen terms, laying special stress on the amicable sentiments with which he was inspired towards the Chinese. "I will not hesitate to add," he said in conclusion, "that while I shall steadfastly strive to protect the rights and interests entrusted to my care, I shall also earnestly endeavour to cultivate the most friendly relations with this Government, and I confidently trust that that feeling will be reciprocated, and that it will not fail to lead to beneficial results." It is to be hoped that these good intentions may not be defeated by circumstances. China's foreign relations are not in a happy condition, and to better them perceptibly something more than diplomatic tact will be found necessary. The Shanghai address of welcome alluded to that "interesting country" Japan and the "troublesome times" she passed through during the term of Sir Harry's Office, but it may well have occurred to Sir Harry himself, when the news of the Canton riots reached him five days later, that the problem he has to deal with now is very different from that which occupied his attention here. For many years it has been quite unnecessary to reckon with the anti-foreign factor in Japanese politics. We do indeed occasionally hear this or that real or imaginary proceeding of the Government attributed to the old spirit of hostility, and if the public were disposed to believe half the chimeras conjured up by professional growlers, it would follow that our tenure in Japan is of the frailest description. But even these perpetual exhibitions of abusive injustice fail to awaken any unfriendly rejoinder. Were it reported to-morrow in a Yokohama newspaper that foreigners travelling in the interior had been subjected to indignity on account of their nationality, we doubt whether the tale would be thought worthy of credence even by those gentlemen who make a trade of collecting, embellishing, and ventilating every rumour unfavorable to this country's reputation. Looking a little further, too, it will be seen that the history of our intercourse with Japan is not darkened by any incident comparable with the recent Canton riot. Never at any time have foreigners been made the object of a popular outburst. So long ago as 1865, we find it recorded in the English local journals that the feeling of hostility to Westerns, which from time to time found such fierce expression, was absolutely confined to the military classes and awoke no echo, however faint, among the people. But in China it is the people who are always ready to take fire: it is the people who stone and burn and kill, under provocation in itself so trivial as to be unanimously significant of the virulent disposition that finds such pretexts sufficient. Fifteen foreign houses wholly or partially burned, several others looted, and property to the value of a million dollars destroyed, all because a Portuguese watchman was the direct or indirect cause of a Chinaman's death by drowning—this

is a record that suggests some inconsistency between cause and effect. It is true that the demeanour of the official classes is more gravely courteous, but probably there is not a man of them who doubts that his country is a heavy loser by her foreign commerce, and truly there is some reason for this faith, seeing that China expends in the purchase of Indian opium every year more than half the whole amount she derives from the sale of her exports. Something like despair of the future steals over ones mind at the aspect of this colossal nation, with its hundreds of millions of units every one steeped to the lips in hatred of the "foreign devils." How long will it be before this giant prejudice falls to pieces under the tiny taps we are able to deliver here and there at the hem of his garments?

"EVERYTHING is now perfectly quiet," wrote a gentleman from Canton on the third morning after the riot, "but the beautiful little settlement has assumed, at the lower or eastern end, a sadly desolate and ruined appearance." There is between our settlement of Yokohama and the Shamien at Canton a certain affinity in that the antecedent conditions of both were equally unprepossessing. Few, even of the oldest residents, can recall the time when the site now occupied by the handsome houses, solid godowns, and wide streets of Yokohama was a mere tract of marshy ground, watered by numerous tidal creeks, remote from any of the great towns or villages of the empire as well as from the principal arteries of traffic, and presenting no favorable feature except its accessibility from the sea. But the Shamien, at first sight, was even worse. In 1857 it was "a mud flat typical of all that was filthy, unsavoury, and dissolute; covered with long, lowering decrepit sheds of wood and bark, tottering on grimy piles above the stagnant swamp, which constituted the most loathsome haunts of vice; whilst between and around these buildings crowded hovels inhabited by lepers, mendicants, and thieves of the most miserable class." Yet all this ugliness could not conceal the facts that it lay in immediate proximity to the Western Suburb, where the Chinese wholesale trade was centered, and where all the principal native merchants and brokers had their residences, and that it looked out on the broad deep channel of the Macao passage, whence the cooling breezes of the monsoon are wafted uninterruptedly in summer. Lord Elgin and his advisers appreciated these advantages sufficiently to choose the site in preference to any other, and after two years' labour and an expenditure of \$325,000—of which four-fifths were defrayed by the British, and one-fifth by the French Government—the mud-bank was converted into a habitable island. The competition for lots on the English portion was so keen at first that most of the original outlay was recovered, but the part assigned to the French Government found no purchasers. The importance of Canton as a trade centre never realized the expectations formed of it, but this did not prevent the embellishment of the Shamien,

which, with its splendid roads, banian-shaded bund, and superb prospect is certainly the most desirable of all the foreign settlements in the East. The correspondent of the *North China Herald* might well lament, therefore, the sacrifice it has suffered at the hands of Chinese roughs, more especially as it appears tolerably plain from the intelligence which has reached us, that but for the restraining influence of the Consuls, the foreign residents would soon have found means to drive out the cowardly mob of thieves and incendiaries.

On the 1st August the French Government sustained a defeat in the Chamber in relation to the connection of Saigon with Tonquin by a submarine cable, for which urgency was declared. M. Blancsubé, the Cochinchina Deputy, exhorted the Chamber not to ratify the Convention passed by the Government with the English Eastern Extension Telegraph Company for the laying of the cable in question. Everyone must approve the project, but no one could approve the installation of an English Company in a region that had become French. The Government, it was true, stipulated that half the employés should be French; but such a guarantee was absolutely illusory, and could not prevent breaches of confidence. The Minister of Marine had, more than once, had proof that the English were acquainted with his cipher. The colony of Cochinchina had offered for itself and Tonquin to pay half the subvention and to advance one-fourth the cost of providing and fixing the cable. A cable on French soil must be French.—(Applause.) The Minister of Marine, in reply, said the English Company had offered far better conditions than the colony. All the conditions of the arrangement had been closely scrutinised, and the Government must maintain their proposal. The Chamber divided, when the Government Bill was rejected by a majority of 218 to 183. The announcement of the numbers was received with cheers, mingled with expressions of disapproval. M. Blancsubé laid upon the table a motion for the establishment of a French cable between Cochinchina and Tonquin. This was sent to the Committee.

With regard to a rumour current here that the \$25,000 offered by the Government of the Straits Settlements to the fund being raised for the relief of the sufferers by the recent events in the Straits of Sunda, had been refused, we are informed that the Netherlands Indian Government has not only accepted this sum with thanks, but the necessities of the case are such that large sums are still required to carry out the scheme of relief intended.

From the *Annuaire de la Ville de Paris* for 1881, recently published, we learn how comparatively few residents in Paris are Parisian born and bred. Indeed, out of every 1,000 inhabitants only 322 are born in the metropolis, while 38 come from the other communes of the department, 565 from the various departments or colonies, and 75 from foreign countries. Other Continental capitals do not contain so

many foreigners as Paris; Berlin only possesses 13 out of 1000, and Pesth but 14. At the time of the census of 1881 there were in Paris 45,281 Belgians, 31,190 Germans, 21,577 Italians, 20,810 Swiss, 10,789 English, 9,250 Dutch, 5,957 Americans, 5,786 Russians, 4,782 Austrians, and 3,616 Spaniards. The German element has very largely increased since 1876, at which period they only numbered 19,024. It is most abundant in the outer arrondissements of the city, and particularly in the nineteenth. Then Dutch and the Belgians (the latter numbering but 34,192 in 1876) are found indiscriminately throughout Paris; the Swiss are powerful in the commercial localities; the Italians, who have almost doubled since 1876, in the eleventh and neighbouring arrondissements; while the English chiefly inhabit the eight, sixteenth, and seventeenth. Foreigners have, as a whole, increased from 119,349 in 1876 to 164,038 in 1881, and formed nearly a fifth part of the total increase of the city.

THE town of Haiduong, recently occupied by the French in Tonquin, is the capital of the two provinces of Haiduong and Kuan-yen. It lies upon the Taibing, a river whose general course is parallel to that of the Songkoi (Fleuve Rouge). These two provinces were governed by the Tung Duc, who had his official residence at the city of Haiduong. In the operations against this place the French took as their base Haiphong, which lies at the mouth of a northern branch of the Taibing. It was known that the Annamites had evacuated Haiduong and intrenched themselves in a new position on the opposite bank of the river. The expeditionary force was under the command of Lieut.-Colonel Brionval, and the general direction of the operations was entrusted to M. Marquis, formerly Administrator in Tanan. No opposition was encountered. Indeed, the Annamite troops had taken their departure three days before, and all the local officials having followed their example, the greatest disorder prevailed. It appears that not only the standing rice but also large quantities of stored grain have been destroyed by the floods, which assumed, this year, unparalleled dimensions. The prices of all necessities, especially rice, have risen largely in consequence, and no sooner did the citizens of Haiduong realize the fact that the Government's rice magazines were unguarded, than a general rush was made for the precious grain. The French were just in time to check this pillage. They succeeded, also, in finding most of the fugitive officials, and after re-instating them, the troops crossed the river and proceeded to attack the position recently occupied by the Annamites. Here some slight show of resistance was made, but after a few shots the enemy retreated. The expeditionary force was now re-embarked and carried to Kuan-yen, which was surrendered after a short parley. These operations have placed the French in possession of the whole Eastern portion of Tonquin.

Meanwhile the attempts to push northward up the Red River are not very successful. Another

sortie was undertaken from Hanoi on the 1st instant. Eight hundred French troops, accompanied by the contingent of Yellow Flags under Captain George, embarked at Hanoi on the 31st of August, and ascended the Red River to a place called Palan, whither they had been preceded two days before by a reconnoitring party consisting of three companies—one French and two Annamite. The point of attack was the village of Phong, which lies next the River Dai, a branch of the Red River. The French plan seems to have been to descend the Dai, so as to place themselves in rear of the village, and in this they were successful, though it appears doubtful whether anything was gained by the operation. Early on the morning of the 1st instant the assaulting column moved forward, its total force being about 1,500 men, the Annamite auxiliaries, of course, included. The enemy was discovered strongly posted at a village called Thong, which is surrounded by thick cover. The difficulties of the country seem to have been very great, and may be taken as an example of what the French have to expect in future operations. There was only one road, and that so narrow that to march by it the column was obliged to assume a formation eminently unfitted for the delivery of an assault. Under these circumstances there was no resource but to deploy the troops in the paddy fields on either side of the path, the result being that the men had to fight for hours up to their waists in mud and water. Despite these disadvantages and in the face of a galling fire, they pushed forward resolutely, and ultimately drove the Black Flags from Thong. The following day (2nd instant) the advance was continued to Phong, where no serious resistance was offered. The loss of the Black Flags in these affairs is not stated, but there appears to be no doubt that they fought with great courage and resolution, not hesitating even to engage the French at close quarters. Indeed, the correspondent of a Hongkong journal says that the French, after three days' fruitless fighting, retired to Hanoi, in consequence of the arrival of a second body of Black Flags numbering 5,000 men. We, however, follow the account of the French themselves. The casualties on the side of the expeditionary force were fifteen killed and forty-five wounded. Among the former were three or four officers. The immediate consequence of these operations is that the country north of Hanoi, as far as the River Dai, has been cleared of the Black Flags, but the French do not appear to have taken any adequate measures for securing this district against fresh incursions of the brigands. The attacking column retired on Hanoi after the capture of Phong, taking with it some twenty prisoners, who are said to have been slaughtered *en route*. It is probable that the disaster subsequently sustained by the French—according to our telegrams of the 20th instant—was the result of an attempt to push on to Chun-tei and Songtai. Until the latter place is captured and occupied the campaign against the Black Flags can scarcely be said to have commenced. Mean-

while it is asserted that the Chinese troops, fifteen thousand in number, who crossed the frontier at Mongkai, have not yet entered Tonquin, but are stationed at Chack-chao, a village separated from Monkai by a river only. The story that this force is intended to be employed against the Black Flags does not command credence. It will be remembered that the destination of the fifteen thousand was said to be Haiduong, a place which was never in the possession of the Black Flags, but which, as the chief town of the two northern provinces of Tonquin, there was every reason to defend against the French. If the Chinese really contemplated a campaign against the Black Flags, their obvious course would have been to march by the direct route—one of the only two respectable roads in Tonquin—to Hanoi. What seems more probable is that they have been moved across the frontier, not with any design of immediate employment, but merely as a menace, to be subsequently interpreted according to circumstances.

The stories of French successes in Tonquin lose nothing in the telling. *The Times* correspondent telegraphed to that journal from Hongkong, on the 22nd of August, the following message:—

Hai Ziuong, Tonquin, has been taken by the French. They captured 150 cannon and \$50,000 of Annamite cash. The Annamites fled in disorder into the interior. The place was taken by assault, the attack being so sudden and well conducted that the Annamites had no time even to spike their guns or carry away their treasure. An official despatch received in Paris confirms the news.

The truth is, as we have seen, that the Annamites had abandoned Haiduong two days before the French reached it.

THE more we learn of the operations at Hué, the more inexplicable by any of the ordinary rules of warfare does the disparity of the losses on the side of the victors and the vanquished appear. After the combat the French buried the corpses of seven hundred Annamites, and estimated the number of those already buried at four hundred. In addition to this, three hundred prisoners fell into the hands of the victors, who, in the course of three days fighting, had two men wounded! Yet we are told that these unfortunate Cochinchinese, who must have been slaughtered like so many sheep, fought "*avec un courage remarquable et digne d'un meilleur succès*." As to their courage, there can only be one opinion. If they suffered these terrible losses in fair fight, inflicting, all the while, absolutely no injury upon their assailants, it is difficult to know which to admire more, their pluck or their endurance. But it is difficult, also, to conceive that there can have existed any necessity for such a wholesale butchery.

We learn, from the *Saigon Independent*, that when the terms of the Franco-Annamite treaty were under discussion at Hué, after the capture of that city, the Annamites stipulated that special mention should be made of Annam's position *vis-à-vis* China. Accordingly a

clause was inserted declaring that neither France nor Annam should recognize in the future any claims of suzerainty which China might advance; France, on her side, undertaking to defend Annam against all attempts on the part of the Court at Peking to revive these old-fashioned pretensions. In consequence of this arrangement, Admiral Courbet is said to have issued orders that in case of the arrival of the Chinese man-of-war which was expected to appear shortly carrying a mandarin charged with the duty of investing the new King of Hué, she should be immediately attacked by the French squadron. We never believed that France had any just title to pursue her policy of aggression in Annam, but we could scarcely have supposed that her case was so hopelessly vicious as a recourse to such subterfuges implies. As for the story that an order so grotesquely unjustifiable was ever issued, we can only wonder that any one should be found credulous enough, or sufficiently careless of Admiral Courbet's reputation, to circulate it.

The Annamites were converted into a French mouth-piece in another matter also. They "demanded" that in the event of Vinh-Phuoc, the chief of the Black Flags, falling into the hands of the French, he should be executed, not at the place of his capture, but at Hué, under the eyes of the principal mandarins, and that a certain number of his followers should be executed at the same time. By this method, and this method only, said the repentent Annamites, can it be proved that Annam has for ever ceased to make use of such auxiliaries. No one will be disposed to deny this. After the Black Flags are executed there will be no danger of their future appearance in the rôle of Annamite allies. But if the French commander proposes to execute soldiers merely because they have the audacity to fight against him in defence of their own lives, his inhumanity will not be effectually condoned by the fact that he is obeying Annamite suggestions. The Annamites may have violated their treaty with France by making use of the Black Flags against her, but it looks a little like reversing the rules of propriety to kill the Black Flags for the sake of establishing Annamite repentance. We should think that the more reasonable step would be to kill the Annamites. For the present, at all events, we may be permitted to doubt that such barbarous designs are seriously entertained by French officers.

SOME excitement appears to have been caused in Hongkong by the arrival of the steamship *Afghan* from Swatow with cholera on board. It appears that though the *Afghan* came direct from the infected district, she was allowed to lie for nearly thirty hours in the harbour, openly communicating with the city. During that time four deaths occurred on board,—one European and three Chinese—after which, the officials, discovering her condition, caused her removal to the quarantine anchorage at Stonecutters' Island. Subsequently six more victims succumbed to

the disease, and eleven others were landed to be treated on shore. The *Afghan* had 600 Chinese passengers. She was ultimately permitted to depart for Singapore, whither intelligence of her condition doubtless preceded her, and where, we presume, she is now concluding her period of quarantine. Nobody seems to know, however why she was allowed to put to sea at all under such circumstances, unless, indeed, the medical men thought that the best chance of saving the rest of her people. It is also stated that another steamer, the *Kwang-tung*, direct from Swatow, was allowed to come at once to the wharf, and that the quarantine flag was not hoisted before her passengers had landed and gone their ways. Whatever these rumours may be worth—and we are by no means disposed to accept them without reserve—it is plain that Swatow has not ceased to be a source of apprehension, and that the time has not yet come for relaxing precautions in the case of vessels arriving thence.

THE amount of metal and coal produced from the various mines in the Empire during last year was as follows:—

| PRODUCE. | GOVERNMENT MINES. MOMME. | PRIVATE MINES. MOMME. |
|-----------------|-----------------------------|--------------------------|
| Gold | 50,256 | 19,456 |
| Silver | 1,286,869 | 1,136,414 |
| Copper | 88,174,000 | 1,149,632,000 |
| Tin | — | 3,112,000 |
| Lead | 35,112,000 | 34,073,000 |
| Iron | 157,248,000 | 2,655,813,000 |
| Steel | — | 253,220,000 |
| Antimony | — | 172,048,000 |
| Manganese | — | 31,540,000 |
| Sulphur | — | 466,881,000 |
| Kerosene | — | 992,621,000 |
| Coal | — | 192,588,335,000 |
| Clay | — | 5,492,821,000 |

THE *Maru Maru Shimbu* has a skit upon the patent medicine vendors and saké brewers who have now to pay increased imposts to the government. They are represented by two figures left prone upon a battle-field, and are supposed to be posthumously complaining that they have been cleft in twain.

WE read in the New York *Nation* that Judge Nelson has delivered an opinion in the case of a Chinese laborer, Ah Shong, which introduces a new complication into the working of the Act of 1882. Ah Shong, is a ship-carpenter, born in Hongkong since it became a British colony, and consequently a British subject. Judge Nelson holds that he is, properly speaking, a British and not a Chinese laborer; or, in other words, that "Chinese," as used in the Act, refers to nationality and not to race. "This decision exempts from the operation of the act the population of Hongkong (about 100,000), and will make it necessary for the officers of the Government to be cautious whom they exclude from our ports. The reasoning on which the decision is founded is very simple and conclusive. The Act was passed nominally to carry out certain treaties made by the Emperor of China. Now the Emperor makes treaties only with regard to his own subjects, and not those of Queen Victoria. Hongkong was clearly overlooked by the reformers who passed the

Anti-Chinese Law, and the decision makes the Anglo-Saxon future on this continent dismal indeed. There is nothing that the *Nation* can see to prevent the 100,000 Mongolian "lepers" who inhabit Hongkong "from coming over in a body and settling in our midst, and perpetuating here those disgusting habits of thrift, industry, and self-denial which have created such alarm among the statesmen of the Pacific slope."

WHAT'S in a name? Much more, often, than meets the eye; especially if the name be one interwoven with the history of a powerful State, or the possible symbol of a nation's policy. Its arrangement, expansion, contraction, or even its orthography, may possess a significance not readily suspected by the uninitiated. Diplomatic disputes are on record, the origin of which was the apparently trifling question whether a French monarch should be addressed as "Lewis," instead of "Louis." The great Corsican is suspected of having altered the date of his birth, in order to ultimately justify him in writing himself Bonaparte, rather than Buonaparte. Within the past few days a statement referring to a recent action of the Orléans leader, the Count of Paris, has been copied from foreign sources into Yokohama newspapers, in which it was noticeable that the prince was represented first as signing himself "Louis-Philippe," and afterward, "Philippe." The difference will seem unimportant to many, and possibly it is so; for it may be an accident of omission, or due merely to a typographical error. But if it should transpire that the word Philippe was deliberately used, in place of the more familiar Louis-Philippe d'Orléans, the change would have a serious meaning. Everyone is aware that the Count of Chambord's death has brought the head of the Orléans family into new prominence as a candidate for the throne of France, and that the old "Legitimist" party are now supposed to have transferred their support to the grandson of the last *de facto* king of the French. Some doubts have been cast upon this conclusion by the rumour that the Count of Chambord's will contained stipulations to which the Count of Paris could not subscribe, and that the late prince's choice of an heir would consequently fall upon one of the Spanish Bourbons. Considerable colour has been given to these doubts by the absence of any representative of the Orléans house, on the occasion of the funeral at Frohsdorf. The Countess of Chambord, acting, presumably, in compliance with provisional instructions left by her husband, decided that the Count of Paris should not be the "chief mourner" at the final ceremony. A circumstance so unexpected could not fail to disturb the confidence created by the renewal of friendly relations before the death of the Bourbon prince, nor to provoke fresh inquiry as to the sincerity of the alleged reconciliation. Whatever may be the subsequent action of the party representing the intimate feelings and ideas of the deceased, it will hardly be possible for the Orléans chief to maintain hereafter the absolute impassibility which has

characterized his course for the last ten years. He has shown himself desirous to win the favour of legitimists by every practicable means, and has even incurred the risk of much personal discomfort and of pecuniary loss, in order to take his stand as the acknowledged centre of all Royalist pretensions. Having gone so far, he cannot now give way before what seems only a posthumous manifestation of obstinate caprice. Even if his ambition were more sluggish than it is generally acknowledged to be, the well known energy of his wife would have its influence once more, as at many critical moments in the career of the family. If it prove true that the nearest relatives of the Count of Chambord are plotting to throw him aside, nothing will be more natural than to find him using every means in his power to baffle them, and make his own position secure. And here comes in the possible question of his adoption of a title which shall carry with it other suggestions than those of the name by which he has thus far been known to the world.

The hereditary hatred of "Legitimists" for the House of Orléans rests upon no fanciful basis. Treachery, cruelty, fraud,—nameless infamies which are only awaiting a convenient interval to take their place in history,—have loaded the Orléans line with memories too bitter to be easily stifled. It is true that no responsibility for these evil deeds attaches to the Count of Paris, individually; but he has indirectly profited by them, while living members of his family have been immediate gainers from atrocious crimes perpetrated by Orléanists upon Bourbons, hardly a generation since. It needs a life of constant care and discretion to preserve the present head of the Orléans branch from a share in the obloquy with which the Legitimists regard his predecessors. The very name of Louis-Philippe is a horror to the ultra-loyalists of the old school. This being the case, it may reasonably have occurred to that sovereign's heir, to consider the expediency of dropping enough of the grand-paternal patronymic to deprive it of its offensive peculiarity. That the point has been discussed, all students of current French politics are well aware. It happens that, if such a plan should be decided upon, two courses are open for selection. The Count of Paris may look forward to reigning as Louis XIX., or as Philippe VII. By signifying such an intention, at the present time, he would perhaps alienate the more devoted Orléanists, but it has commonly been observed that the majority of that party are less likely to be swayed by motives of principle or sentiment, than by material considerations. Those among them who are susceptible to delicate prejudice, might better reconcile themselves to Philippe, a name which has never been borne by any Bourbon, than to Louis, which has been the name of every Bourbon king but two—the first and the last. The question to be settled by the Count of Paris and his counsellors is whether such a concession as the relinquishment of the name of Louis-Philippe would be sufficient to

counteract the injunctions of the Count of Chambord's will,—whatever those may be—without producing an injurious effect in other quarters. Looking at these various contingencies, and having in view the uncertainty in which the Chambord succession is enveloped, speculation as to the precise signature attached by the Count of Paris to a family proclamation is not entirely thrown away. As we have remarked, one despatch says it was "Louis-Philippe;" another, "Philippe." We shall soon know which was correct.

To announce that he chooses to be known henceforth as Philippe d'Orléans is not necessarily to proclaim that he means to bestir himself more eagerly than before in pursuit of regal honours. It may, and probably would, indicate simply a resolution to identify himself thoroughly with the Bourbons, and to leave no room for doubt of his design to claim the inheritance on the broadest grounds,—as the son and heir of France; not of Orléans, certainly,—nor, exclusively of Bourbon. If powerful exertion were required to secure the crown, it is not likely that the Count of Paris would go far, of his own impulse, to win it. But he has active instigators around him, ever watchful of opportunities, and fertile in devices. Two of his uncles have all the ambitious tendencies of their father, and one of them, the Duke of Aumale, possesses a mine of wealth with which to support his projects. He has no children, and the money which came to him in a way he would be glad to forget, will be at the service of his house, whenever needed. The most animated of the Count's advisers, however, is said to be his wife, to whose inspiration is credited every forward step he has ever taken. Her persuasions, it is reported by those best entitled to belief, brought about the family reunions at Frohsdorf, beginning in 1873, and ending only with the Count of Chambord's death. To her is attributed the ingenious idea of mortgaging the greater part of the Orléans property in France, to nearly its full value, so that in case of confiscation by the Republic, the loss to the present owners would be comparatively small. It has even been whispered that the negotiations now declared to be in progress between confidential Orléans agents and Don Carlos,—negotiations which are talked about all over Paris, though withheld from newspaper notoriety, and which are presumed to have grown out of the discovery of awkward clauses in the Chambord testament,—are the fruit of her busy brain. But these are details of secondary importance. Perhaps the attitude and aspirations of the princes themselves do not count for much, when the frigid inertia of the principal figure in the group is weighed against them. But it is certain that if all who bear the name of Orléans could be united in one bold purpose, the rulers of the Republic would speedily find their attention fixed upon domestic objects of greater magnitude than the slaughter of a horde of wretched outcasts in Annam, or the ruthless extinction of a growing and promising civilization in Madagascar.

Among American telegrams to hand by last mail is the following, reproduced literally and verbally:

THE JAPAN EMBASSY.

WASHINGTON, August 31st.—The Japan Embassy has sailed for San Francisco in the steamer *Arabic* from Yokohama. It is composed of Nim Yung, I. K., nephew of the King of Corea, and Hong Yang Shill, son of the Prime Minister, and their suite, including Peyton Jourdan, a citizen of the United States, who has been appointed Foreign Secretary. Instructions have been given for free entry to their personal effects.

One knows pretty well here what this paragraph means, and yet the question obtrudes itself "why such astonishing carelessness on the part of an enterprising and lavishly expensive press?"

The answer is that the American press has outgrown its proper development. In its greed for news it swallows all and assimilates and digests little. Editors are bewildered in catching catch-words and forming headings. All copy that comes to them from their centres of information, in telegraphic form especially, is copy to be given to the printers *instantly* and without editing. For instance, in a long succession of despatches anent the trouble in Annam, Mr. Tricou is "Mr. Tryon." Admiral Pierre, of Tamatave fame, is in the same papers Admiral Asnières, Desnière, or anything that the combined perversity of telegraphist and compositor can construct out of a fortunately limited alphabet.

THE *Auckland Weekly News* is evidently a strong believer in the feasibility of silk culture in New Zealand, and the profits to be derived from its successful establishment in that country. In a recent issue it calls for the immediate planting of mulberry trees in every direction, and foresees the time when cocoons will be produced by the ton. The one thing to do at present, it says, it not to bother about prices or how to prepare the articles for market, but to plant the requisite trees by the hundred around every home in Auckland province, where the conditions of growth are suitable, "and the time will come when these will prove veritable mines of wealth—mines of wealth and comfort."

IN accordance with Notification No. 13 of the Privy Council, a 'Traders' and Merchants' Association (*Rengo-sho-ko-giyo Kwai*) has been established in Tokiyo under the presidency of the Metropolitan Governor. More than one hundred persons were present at the first meeting of the association. Mr. Yoshikawa explained that the expenses of individual membership would be small and the advantages many. The rules drafted are on the universal pattern adopted by Western trade societies.

THE culture of the silk-worm, and silk, spinning and weaving, were introduced into Spain at a very early date, and were formerly a source of great wealth to the nation. In the twelfth century one thousand weavers were engaged in Almeria in the manufacture of goods entirely composed of silk. Grenada was celebrated for its damasks and velvets. In Seville there were 60,000 looms working. Under the Moorish

king Aben Alamahr, who reigned in 1248 in Granada, it is said that Moorish silk goods were preferred to those of Syrian make. The observations made as to ancient Spanish weaving are confined, it is remarked, by the specimens of Moorish tissues of modern production which were exhibited in Paris in 1867. In these, geometrical ornamentation seems to have been carried out in much the same way as it was a thousand years ago. The decadence of this once flourishing industry was brought about by the destruction of many rich cities, and by the introduction of laws restraining luxury in dress. Spain suffers even at the present time from the short-sighted legislative enactments of the middle ages on this point.

We have received the August number of the *American Silk Journal*, a quarto magazine devoted to the interests of the American Silk industry. The opening paragraph refers to the invention, previously alluded to in the *Japan Mail*, of Mr. F. W. Sewell, Jr., a young New-Yorker resident in Lyons. His process is to reel silk automatically, and as he has received the gold medal of the Academy of Sciences, Belles-Lettres, and Arts of the sunny Southern French metropolis, we may conclude that he has successfully solved the problem he proposed to himself. The Lyons correspondent of the *Silk Journal* records that in presenting the medal the President of the Society said:—

You are aware, sir, that France is very hospitable, and receives with pleasure every new industrial invention.

She is pleased to encourage genius wherever found, and she makes no distinction of nationality and clime in awarding merit wherever it truly belongs.

Your remarkable discoveries for the automatic reeling of silk is of peculiar importance, especially to the great Lyons industry, of which Frenchmen are justly proud; and believing that your electric filature, though it may have been intended at first for the great nation for whom we have so much sympathy, may prove of universal benefit in reviving the drooping industry of silk, the Academy has awarded to your genius the recompense which was founded by Prince Lebrun.

So long as labor is so cheap and dexterous as it is in Japan, "automatic silk reeling" is not likely to become an important factor in the industry of this empire; but for American and many European countries it cannot fail to be a great boon.

Nor the least interesting event connected with the recent fight between Chinese residents and Japanese police at Nagasaki, is the action taken by the Chinese Coroner. It appears that an enquiry was held at the Chinese Consulate into the circumstances attending the death of Wai Egno, the man who was stabbed by the police, and that the Acting-Consul, in performance of his duties as Coroner, proceeded to empanel a jury of four Chinese, and to examine witnesses exactly as an European Coroner would have done. In the account of the inquest published by a Nagasaki journal, nothing is said as to whether an oath was administered either to the jurors or the witnesses, an omission which, having regard to the very complicated process of "swearing" employed in a Chinese Court, seems to imply that nothing of the sort was done. Indeed it may well be conceived that the Coroner, Mr. Koh Wan Tsin, was not well posted in the details of the ceremony he undertook to conduct, inasmuch as

Chinese judicial annals contain nothing that could have been taken as a precedent. Perhaps to this cause also may be attributed the singular fact that no attempt was made to procure any evidence beyond that of the Chinese engaged in the affray, directly or indirectly, and of the doctor who attended the deceased. Without the testimony of the police it was impossible for the jury to arrive at an intelligent understanding of the case, and we cannot help regretting that Mr. Acting-Consul Koh disfigured his otherwise excellent conception by an omission so fatal. His charge to the jury shows, however, that he was by no means in that condition of mental calm essential to the thorough performance of judicial functions. His speech, as reported by the press, was as follows:—

Gentlemen,—You represent the leaders of your respective societies, and I represent the Government of China here. What concerns you concerns me, and vice versa. When matters of great importance occur,—matters of life and death,—it gives you ample opportunity to shew your loyalty and patriotism. I am not surprised at the strong feeling of our people in Nagasaki, over the unfortunate young man's most cruel death. You attended the preliminary inquest, saw deceased's wounds, and heard the eminent doctor's opinion at the Hospital. You have now heard all the evidence as regards the origin of the murder, how deceased was slain, by whom he was slain, and with what weapons he was slain. You have furthermore heard the Doctor's report of the fatality of deceased's wounds and his opinion in regard to his death. Now it becomes my duty to command you to pronounce before this Court your opinion as to the cause of deceased's death.

The jurors doubtless understood what loyalty and patriotism had to do with their finding, but by outsiders the riddle is not so easily read. Much, too, as Mr. Koh's preliminary arrangements will be applauded by all admirers of that relic of barbarism, trial by jury, his notions of the language a coroner ought to employ, as well as of the value of evidence, will not receive equal commendation. That the dead man had met with a cruel and unmerited fate was sufficiently apparent to rouse the indignation of his countrymen, but "as regards the origin of the murder"—for such was the term used by the Acting-Consul—there was absolutely no evidence, except that of a Chinese who said that "whatever may have been the primary cause of the attack, he truly believed deceased was innocent and free from blame." It would seem, however, that the jurors were very staid and sensible gentlemen. Despite the Coroner's inflammatory address they confined themselves to a simple statement that "the deceased's death was solely caused by the two wounds inflicted upon his body by a detective and a police officer." On the whole, the proceedings at this inquest reflect much credit on the Chinese community of Nagasaki, and we only regret that Consul Koh's first essay in the direction of trial by jury should have been marred by some inefficiency and a slight display of intemperance.

NATIVE silk-men, says the *Echo du Japon*, yielding to an impulse "from above," are about to attempt once more to vindicate their commercial rights, "which no one has ever disputed," by direct export. Much harassed by the attempts at direct export made in 1879, 1880, and 1882,

many of the victims who had suffered, even to the extent of loss of their property hypothecated to schemers, swore that they would never again be taken in the same snare. Ruin was the lot of country producers and speculators, while the privileged corporations of brokers in Yokohama and Tokiyo realised the profits of their commissions on ventures to Lyons, Marseilles, Milan, and London. And in spite of these checks, and taking advantage of the large advances, 90 per cent. it is said, granted by the State, people are preparing, at the expense of new victims, to send heavy consignments of silk to all the markets of Europe and America. Our contemporary further states that already some foreign firms, competing for the confidence of native merchants, have sent some consignments on account of the latter; for it is now as ever the foreigners who, after having acquired, or rather believing that they have acquired, that confidence, impel the Japanese in this route of direct export, in the hope of being appointed go-betweens in large operations, which are generally disastrous to the proprietors of the wares, but always profitable to those that have nothing to do but receive their commissions. Thus foreigners naturally only think of deriving benefit from a situation which they have in part created; and for which they can hardly be blamed. "Each one for himself in this world!" But we any be perfectly convinced that they will only earn the temporary advantages of the trial consignments which have been confided to them, the account-sales that they deliver to their friends being but baits to present to future shareholders in some new *Kwaisha*, whose only aim is to dispense with the agency of foreigners. The Japanese, continues the French critic, being too little scrupulous and not sufficiently men-of-business to understand that foreign merchants consider the best part of their capital a reputation for honesty, represent them—the strangers—as acting faithlessly, rendering false accounts, and telling their dupes that, "even with the intermediary agency of foreigners they (the Japanese) will do well so long as they furnish the funds;" and then, with the usual loquacity of go-betweens, they dazzle and intoxicate with false hopes the wretches they are about, with malice prepense, to ruin. And still, says the French writer, nothing can hinder this fourth attempt at direct export which has not only been decided upon but has been virtually commenced. It only remains to await with patience the results, which for a time may injure foreign exportation hence to the already crowded markets of Europe and America, but which "indicating another calamity to Japan's commercial annals will perhaps put a stop to imprudent experiments, the result of pride and ignorance."

We presume that our French contemporary has good authority for the charges he prefers against foreign merchants, but we confess that we find some difficulty in endorsing his opinions. It was pointed out two years ago in the columns of this journal that direct trade was then the dearest object of Japanese merchants, and that the additional profits they hoped to realize by eliminating

foreign go-betweens were even less powerful incentives than a romantic ambition to establish Japan's reputation for independent ability. In this latter mood unprincipled speculators have doubtless found an excellent opportunity; but we believe that the losses Japanese merchants have incurred through enterprises in which foreign agency was employed are trifling when compared with the losses they have suffered by their own ill-advised attempts to be absolutely independent. The term "direct trade" as employed here is at best anomalous, but it becomes ridiculous when applied to a commerce conducted on the lines our contemporary indicates. Admitting the term, however, there are only two reasons why consignments sent forward through foreign agents on Japanese account should not be successful,—always premising that trade conditions are tolerably favorable—and those reasons are, dishonesty or incompetency on the part of the agents, and a failure on the Japanese side to prepare their goods properly. The former contingency we need not seriously consider, for if Japanese merchants have the misfortune to get into bad hands, they have to blame their own faulty selection alone. Foreigners who would conduct any business entrusted to them with the strictest integrity and in the ablest manner are to be easily found in Yokohama. The prime cause of the disasters hitherto incurred is that goods virtually unsaleable except at a loss are recklessly placed upon the Western markets, in competition with goods properly prepared and certified by experts of established reputation. Even if Japanese silk inspectors—to take an important example—were fully competent to sort and describe silk for export to America and England, their descriptions would be comparatively valueless in the eyes of a buyer who had not learned to trust them. It may be said that the way to win confidence is to prove that one deserves it, and that if Japan allows herself to be deterred, by fear of loss, from making the attempt, she must be content to be perpetually regarded as incompetent. That is indisputable, but we cannot help thinking that by persisting in her present courses she is more likely to deter than to invite confidence. In the case of her tea, she quietly follows a system which offers no premium whatever to individual effort, but on the contrary provides every facility for fraud and adulteration; while, in the case of her silk, she obstinately continues to send forward parcels so mixed and untrustworthy that an ordinarily prudent buyer is compelled to leave himself the widest possible margin for dishonest contingencies. Surely the Japanese ought to have discovered ere this that the way to conduct direct trade successfully is, not simply to exclude foreign agency because it is foreign, but to place the trade upon a basis so sound and trustworthy that its conduct will be easy to any one. The chief function of the foreigner at present is to eliminate abuses with which this country's commerce is encumbered by the Japanese themselves, and the first object of the latter, if they desire to be independent, is to correct those abuses. These things are so

plain that they resemble platitudes, but from the Japanese their truth appears to be still hidden.

A COMPETITIVE trial of skill in the concoction of sprightly libels would entitle certain Japanese journalists to a first class certificate. The Canton riots have supplied these gentlemen with a new occasion to instruct the public. They have discovered the full true and particular cause of that unfortunate affair, and half the population of Tokiyo is now in possession of the discreditable facts. Journalistic romancers being not less versed in the art of circumstantial interpolation than social Munchausens, the editor of the *Yomi-Uri Shimbun*, who is responsible for this newest *canard*, is careful to preface his narration with a scrap of ethnological information which constitutes the "circumstance" of his fable. At Canton, he tells us, there is a class of persons corresponding to the Japanese *I-ta* of former times, outcasts who are not allowed to intermarry with respectable citizens or to enjoy any rights of social equality. These pariahs are called *Tanko*, a term with which residents in China are familiar as the appellation generally applied to boat-people. The ideograph *tan* certainly has an abusive signification, and in Canton the name *Tanko*, as applied to the river population, refers to their supposed affinity with the aboriginal Miaotsze. These *Tanko*, the *Yomi-Uri* goes on to explain, are required to stand aside with bowed head when they encounter by the way anybody not of their own denomination, and generally to demean themselves in such a fashion that the world may be cognizant of their abject condition. Since the advent of westerns, however, the *Tanko* have enlarged their social circle. The "foreign devil" is fond of female society, and since no Chinese lass with any sense of self-respect will receive his addresses, he is fain to fall back upon ladies of the *Tanko* species. The fair ones thus elevated—as they themselves imagine, though to the true-hearted Celestial it is only a case of *similia similibus*—give themselves airs; walk the road as if they had a right to be there and in many other respects grow unbecomingly uppish. Conservative morality is gravely shocked by this public scandal, and though the general sense of indignation is held in check by an uneasy recollection of the sacrilegious dimensions formerly attained by European wrath, the *Tanko* damsels do not have a nice time of it when they go shopping in the city. They revenge themselves, however, after a fashion, by practising a doubly demonstrative strut and occupying twice as much road as usual when they take the air under the protection of their foreign consorts. It happened, the other day, that a hot-blooded Chinaman, shocked beyond endurance by the flippant bearing of one of these young ladies, reviled her pretty freely in the Cantonese dialect. She immediately interpreted the scoffer's language to her companion, who, being for his part, wont to comprise all Chinamen under the scornful heading "pig-tails," drew a revolver and shot the foul-mouthed person dead, with the intention, it

is presumed, of merely frightening him. The friends of the deceased were unreasonably inquisitive about this affair. They wanted to frighten the Englishman after the same fashion and see whether the shock would have a cogitate effect. But he flatly refused to enter into the spirit of the experiment, and even went so far as to offer \$300 to be excused. The Cantonese now became sarcastic. Three hundred dollars were all very well in the abstract, they said, but suppose a Chinaman frightened an Englishman to death with a pistol ball, would three hundred dollars smooth away the consequences? The other, construing this into a desire to proceed to extremities on a large scale, put himself in position to frighten somebody else, but the Cantonese raised a shout of "Ta-ta," and went for the foreign settlement at large. This is the version, full true and particular, of the *Yomi-Uri Shimbun*. Our readers will be glad to substitute the real facts for the fables they have hitherto credited.

WE have been asked to state that owing to an accident the Japanese music published in the June number of the *Chrysanthemum* was not accompanied by a historical notice which adds largely to the interest of the piece. It appears that the music is one of the classical Japanese airs, known as the *Imayo Yamato no uta*, which were only used at the performance of *Ō* festivals before the Mikado, and that it was composed at least 300 years ago. The Japanese are fairly familiar with it. Its adapter desires to call attention to the fact that by observing the slurs throughout, it may be sung as an 8 of 7-5 hymn time—to which use its historical associations offer no apparent objection.

A DISTRESSING tragedy was enacted at a foreigner's residence on the Bluff, near the Police Station last Wednesday evening at eight o'clock. The master of the house during a recent trip in the Hakone range had engaged the services of a waiting-maid from a well-known hotel. He being a comparatively new arrival in the country, was ignorant of her antecedents. She had barely been installed in his house when she was visited by a male fellow servant from the country hotel, who obtained in the master's absence an interview with her near the gate of the compound, where after a few seconds of stormy reproach he stabbed her to death with a kitchen knife, nearly severing her head from her body.

THERE has been established in Tokiyo a Japanese Society of Health with the object of promoting hygienic reforms throughout the country. The Committee, which consists of twenty-three gentlemen, includes the names of several well known senators and scientists; and judging from the prospectus which has been issued, the members contemplate devoting themselves to improvements not alone in the "medical treatment of the sick and care of the poor," but also in the food, clothing, and fashions of life of their countrymen. They recognise that social conditions are undergoing great

changes from the contact of a new civilization, and that occupations requiring more mental than physical labour are multiplying year by year in Japan. Under these circumstances they see that some effort is required to adopt improved systems of practical hygiene, and they justly consider that in such a matter the Government must not be left to work alone. Their programme, as stated by themselves, is "on the one hand to spread the knowledge of hygiene and public health, and on the other, to further the sanitary efforts of the Government, by discussing and by determining the best means for maintaining and improving the health of the Japanese people and for prolonging human life." The subjects which the Standing Committee is intended to investigate are:—

| | |
|------------------------------|-------------------------------------------------------|
| Public Health. | Infections or Contagious Diseases of Epidemic Nature. |
| Private Health. | Statistics. |
| School Hygiene. | Sanitary Legislation. |
| Prison Hygiene. | Fluctuation in Price. |
| Military Hygiene. | Demand and Supply of Commodities. |
| Naval Hygiene. | Civil Engineering. |
| Sanitary Police. | Industries. |
| Hygiene of Occupations. | Meteorology. |
| Hygiene of Mind. | Geology and Geography. |
| Medical Science. | Natural History. |
| Pharmacy and Materia Medica. | Charity. |
| Chemistry. | Cattle Epidemics. |
| Protection of Infant Life | |

The annual subscription is fixed at two *yen*, and the officers of the Society are not to receive any salaries. The movement deserves universal sympathy; and we trust that it may obtain an early and ample measure of success.

THE fire in the Miike Coal Mine is reported (yesterday) by telegraph to be unextinguished. Forty-two men, including convicts from the Government prison are missing; many others, half poisoned by choke-damp, are under medical treatment. Many horses employed in the mine have perished since they were dragged to the top of the pit.

AN article in the *Kagoshima Shimbun* deprecates fencing and other athletic exercises at the expense of erudition. So far good; but neither should the health of the body be sacrificed to that constant and poring study which is too much encouraged in Japanese seminaries and colleges to the destruction of many bright and promising intellects and lives.

WE have been furnished by the Clerk of the Course with a copy of the Nippon Race Club Training Regulations, which are as follows:—A plan of the paddock will be found in the Coffee-Room, and all stalls that have been allotted shall be considered private; further allotments can be obtained from the Clerk of the Course on written application. The outer course will be open every day from 5.30 to 8 a.m. and from 3 p.m. until dusk. The grass course may be opened at the discretion of the Clerk of the Course (probably several days in each week, weather permitting) and due notice thereof will be posted in the Coffee-Room. Special permission for trials may be granted during closed hours on written application to the Clerk of the Course. Riders on the course shall go left hand

to the outside rails, and if they wish to pass other riders they must give timely warning by calling out *Abunai* to those ahead, who, on hearing the signal, shall give place by drawing towards the outside rails. *N.B.*—So long as other riders are on the course it shall not be allowed to go the reverse way except at a walking pace. Members are warned of the risks attending dogs on the course, or loose about the paddock and enclosure.

Among the curiosities of official correspondence, the following letter of the United States Minister Resident and Consul-General at Bangkok deserves a leading place. It will certainly occur to those who peruse it that its distinguished author must have been labouring under some cerebral excitement quite disproportionate to a cause so paltry as the communication of Messrs. Muller and Leckie. But if any such cause existed, it has not been made public. The correspondence appears in the *Hongkong Daily Press* exactly as we reproduce it below, and to add, if possible, to the burlesque, Minister Halderman's eccentricities are paraded, not by the gentlemen who were made the objects of his biting irony, but by his own colleague, the United States Consul at Hongkong. Can it be that Minister Halderman and Consul Mosby are proud of this marvellous despatch!

THE CASE OF THE SARAH S. RIDGWAY AT BANGKOK.

The following documents have been handed to us for publication by Colonel Mosby, United States Consul:—

(Copy.)

Bangkok, 13th August, 1883.

To His Excellency General Halderman, Minister for the United States of America, Bangkok.

SIR,—We beg leave to bring to your notice that seven Scandinavians, sailors of the American barque *Sarah S. Ridgway*, and now lodged in a Siamese prison, have been seen working in the street in chains, and that they are now still in prison in chains, of which fact we have personally convinced ourselves.

We beg most emphatically to protest against such unworthy treatment of our countrymen, which does not appear to be justified by circumstances and which would not be tolerated elsewhere.—We have the honour to be, Sir, your obedient servants.

(Signed) W. MULLER,
Consul for Sweden and Norway.
C. S. LECKIE,
Acting Consul for Denmark.

(Copy.)

Legation and Consulate-General of the United States.

Bangkok, Siam, 20th August, 1883.

To Mr. W. Müller, Consul of Sweden and Norway.

MR. C. S. LECKIE, Acting Consul of Denmark, Bangkok.
DEAR SIRS,—Now that the law has taken its course and the deserters from the American barque *Sarah S. Ridgway* have been placed on board where they belong, I beg to formally acknowledge the receipt of your "protest" of 13th instant.

Had I addressed to you a letter protesting against your methods of buying and selling rice, fish, and logs, enforcing collection of debts due you, and of other practices incident to your business as traders and merchants, you would probably have left it unanswered, on the ground that I was interfering with matters exclusively under your control.

For like reason might not I, without discourtesy, have declined to answer yours?

As I court the severest scrutiny in this business, I make reply, with request that you send copies of my two despatches to your respective Governments.

By solemn Treaty stipulations between Denmark, Sweden and Norway on one side, and the United States of America on the other, concluded respectively July 11, 1861, and July 4, 1827, it is mutually provided, in substance, that the "Consular Officer shall be the

judge and arbitrator of differences between master and crew concerning wages and the execution of contracts, "without interference from the local authorities," and that deserters from vessels shall be arrested and confined in the public prisons "without interference" in order that they may be sent back to the vessel to which they belong.

I submit that the effect of your pronounced partisanship herein, is to encourage insubordination on ship-board, to thwart the execution of the law; is an unauthorized and offensive "interference" in the business concerns of a friendly Power, and is therefore a violation of the spirit, if not the letter, of the solemn compacts referred to.

I did not object to your posing as champions of refractory seamen, however humorous the picture might be, whether intended for audiences at Bangkok, Stockholm, or Copenhagen, but I had the right to expect, that if you had a grievance, you would personally submit it to me, before trying to bring discredit upon me or my Government.

You could not have regarded the grievance as a crushing one, nor was your love for "your countrymen," as you were pleased to jocosely call these deserters, intense, else you would have released them on a five hundred dollar bail bond, as you were informed you might do at any time.

If I represented gallant and chivalric Nations like Sweden, Norway, and Denmark, whose subjects were "in prison in chains for reasons not justified by circumstances and which would not be tolerated elsewhere," I would not be content with paper "protests," but I would seek to liberate them by all lawful means at my command, and failing in so easy a duty, I should expect censure, if not dismissal, at the hands of my Government.

It is charitable to assume that you arrived at conclusions from *ex parte* statements, after hearing but one side of the story—an easy matter though not always a just one for a Consular Judge—but I, who heard both sides, in an impartial investigation, had greater difficulty, in reaching, what I believed to be a correct judgment.

I will briefly state the facts.

Seven seamen shipped at New York on the 15th March last for twenty-four months on the American barque *Sarah S. Ridgway* bound for Bangkok and other ports. Arriving here they asked me to order their discharge, on the ground of cruel treatment, admitting that the vessel was seaworthy, food, water, and medical treatment satisfactory. The master, two mates, steward and cook, deny on oath the charge of cruelty, and say the crew were humanely and kindly treated.

The men were ordered to return to the ship and to duty. They refused.

On application of the master, charging them with desertion, I commanded the acting United States Marshal and Prison Keeper to arrest and safely keep them, and to place them on board whenever the barque might be ready to sail.

The Prison Keeper, without suitable accommodation at the American Consulate, tried to obtain some at the British and French Consular jails, but failing therein, placed the men in the new Siamese prison, kept by His Royal Highness Prince Putaret, where they received every needed care and attention.

One day, and only one day, by mistake, they were put to light work, not in the street as you assert, but in the Prince's compound. Light manacles were placed upon them to prevent their escape, the Royal Keeper refusing to be responsible for them unless so shackled.

When sick they received medical care and attendance from Doctor Gowan, the King's physician, who certifies, that "their imprisonment has not been accompanied by any hardship beyond the deprivation of liberty; that the prison is decidedly more comfortable than that of the British Agency; that the irons were light and not heavier than was desirable as precautions against their escape; that the food was of good quality and ample in quantity."

To be satisfied that their wants were regularly supplied, I personally visited them in prison, and found them well housed, well fed, and well conditioned. They acknowledged to me their excellent treatment and their personal comfort.

If these be the facts in a nutshell, and I know them so to be, why this tempest in a tea-pot?

I have gone into details, that you and your Governments may have assurance, that seamen of whatever nationality, coming here under the American flag, shall have my watchful care and attention.

Bad men as well as good men go to the sea from Scandinavia. We are told that Satan once lived in Heaven. For two weeks past it has been my duty to deal with deserters who are not good men, yet I have administered to them the law as I found it, in sorrow, not in anger.

I am not without hope that they, once beyond the

bad influences that surrounded them here, may become better men, better subjects or better citizens.

I want, Gentlemen, the good opinion of the Powers you represent, but I want more to *deserve* it; and to that end, regardless of clamour or "protest," I shall labour, whenever opportunity may offer.

Respectfully, (Signed) JOHN A. HALDERMAN,
Minister Resident and Consul-General
of the United States.

A CORRESPONDENT writing to the *China Mail* from Canton regarding the late troubles there says:—The work of destruction on Shamien, so far as it went, was very thoroughly done, and seems to have been carried out quite systematically. There can be little doubt that the main object of the rioters was plunder, as they could, if they had desired to do so, easily have killed those foreigners who were unable to escape from their houses before the mob began their work. The present misfortune has not come upon us entirely unexpected, although we hardly thought the people would attack Shamien. In our daily intercourse with the natives we could see a great increase of disrespect; in addition to our usual title of "foreign devil," we heard frequently the expression *ta-ss*, to kill. So long as our Consuls have not the power to protect us from the people we may look for such outbreaks. Some time ago, you will remember, two foreign families were, without having given any provocation, attacked at Sai Tsui Shan, and narrowly escaped with their lives. Representations were made, and all the satisfaction those concerned have received is contained in the Viceroy's reply to the British Consul's statement of the affair—"I will enquire into the truth of this statement." If this were the only case of the kind, it would be unfair to draw a general conclusion, but it is only one out of many. On the other hand the killing of a Chinaman is a most serious affair, and the Chinese expect the foreigner's head to be at once cut off. If this be not done, the Chinese must have their revenge, even to the burning of Shamien.—Twenty men have been captured by the authorities in the act of selling goods stolen from Shamien; but the wonder is that no more have been seized. With such a quantity of foreign articles in the city, it ought to be the easiest thing in the world to capture several hundreds of the rioters.—The British Consul says he will issue no passports for the six months to come.

An attempt is said to have been made, on the night of the 27th instant, to break into the strong room of the Bank of Japan. It was frustrated by the vigilance of the Governor and his servants; but the would-be burglars made good their escape.

According to vernacular papers the police of Osaka are vigilant in their efforts to bring to justice Chinamen, there resident, who are thought to be in the habit of kidnapping Japanese girls for sale in other countries.

The discharge of the Jews accused in Hungary of the "ritual murder" of a Christian girl, after their acquittal, seems to have been a pathetic scene. They were received by their wives and

children in the presence of an immense crowd at the prison gate; but one of the women, the step-mother of the boy who testified for the prosecution, had become quite gray at the age of twenty-eight. The boy refuses to go back to his parents, as well he may, after having tried to send his father to the scaffold, and remains in custody of the Government, which must be much puzzled about the best plan of reforming him. There could hardly be a better illustration of the ferocity of the race hatred with which the Jews have to contend than the fact that, in spite of the utter breakdown of the case, and of its extraordinary malignity and wickedness, the mob attacked the counsel for the defence in the street, and, when he escaped, tried to wreck his house.—*Nation*.

THE flag at the United States Consulate flies at half-mast in mourning for the death of Judge Jeremiah Sullivan Black a great jurist of Pennsylvania, who for many years has been prominent before the American social and political public. The deceased gentleman was for many years Chief Justice, and afterwards Secretary of State under Mr. Buchanan. Some of his latest utterances, in an interview with a *New York Herald* reporter, are extremely pithy. Speaking of Jefferson Davis, for instance:—

Shutting his left eye tight, a well known habit of the Judge, and looking at your correspondent for full thirty seconds, Judge Black deliberately responded:—"From the length of time occupied in preparing his defence of secession, and coming from a man who had been pre-eminent in shaping American history, I expected something worthy of a man who had filled the offices of Congressman, Cabinet officer, United States Senator and President of the secessionist Confederacy, but—" (here the Judge took a long breath) "the thunder is all in the index."

With reference to Mr. Black's opinion as to the coming presidency the writer in the *N. Y. Herald* says:—

Branching off from secession history your correspondent made a wide stride by coming down to what most interests the American elector—the next Presidency—and to his question, "Do you think the democratic party will nominate the old ticket?" Judge Black replied that he hoped not. He would rather see it reversed—Hendricks and Tilden. He believed that Tilden might fill the office of Vice President creditably, and Hendricks would make an admirable President; but his choice was Hancock, he was for Hancock inside and out, right and left and under all circumstances.

"If nominated again would Hancock run better than in 1880?" was asked by your correspondent, and the reply was, "He would have to run better to be elected." In alluding to the campaign of 1880 Judge Black was very severe on the newspaper correspondent who gave publicity to a statement respecting the tariff alleged to have been made by Hancock, but which the Judge characterized as a lie cut from the whole cloth. He was even more pungent in his remarks respecting Senator Randolph, of New Jersey, in advising General Hancock to make a written statement concerning that alleged interview on the tariff. "Randolph is a high tariff man, and that ought to have disqualified him from giving advice to a democratic candidate for President," said the Judge taking another dainty chew of "fine cut," made from the choicest of Lancaster county tobacco, and ending the sentence with the remark:—"No man can be a good democrat who believes in a tariff for protection, and he has no right to advise a democratic candidate for President."

"Will the republicans nominate General Arthur?" The Judge hesitated a full minute and then replied with an emphatic "No. If Arthur should be nominated he would not stand the remotest chance of an election."

Judge Black's remarks on the tariff question are momentous. When asked what in his opinion would be the position of the two parties in reference to the tariff question in 1884, he said he thought the republicans would straddle the tariff question, as they always have done; that they would endeavor to have the democratic party commit itself to the same prin-

ciples of protection as the republicans professed, their object being to get both parties in such a position that they could appeal to the people for their support on the ground of being better protectionists than the democrats; but their plan would not work. In speaking of the democrats the Judge said that they must meet the tariff question boldly—it has become too broad for democrats to attempt to straddle; they must declare for a tariff for revenue only, adjusted to meet the demands of the government administration with strict integrity and in the most economical manner. All internal taxes must be abolished, and in order to make up the amount now collected as internal revenue the tariff must be reduced. "For instance," said Judge Black, "we now collect \$1,500 a year on woollen blankets. Reduce the tariff to ten per cent. *ad valorem*, and we would collect \$25,000,000 in duties on imported blankets. The same thing applies to barbed wire, carpets, clothing and every thing the poor man requires to wear or use in his house."

THE accompanying table, summarized in the *American Silk Journal*, shows the total yield of cocoons in Italy during the last three years:—

| Year. | Amount of grain cultivated. | Total yield of cocoons in kilos. | Average yield of cocoons per ounce of grain in kilos. |
|------------|-----------------------------|----------------------------------|-------------------------------------------------------|
| 1880 | 1,710,390 | 41,674,109 | 24'24 |
| 1881 | 1,593,911 | 39,817,661 | 25'01 |
| 1882 | 1,336,452 | 31,623,112 | 23'66 |

The principal causes which affected the success of the yield of 1882 appear to have been Spring frosts, scarcity and bad quality of the mulberry leaves, and later, extreme heat when the worms were about to spin. The average price of cocoons in 1882 may be calculated approximately at the rate of 3 lire 70 cents. per kilo. for Japanese and other foreign breeds, and 4 lire 80 cents. per kilo. for Italian breeds. The total value of the yield, therefore, would amount to 128,845,738 lire, divided as follows:—

| | Kilos. | Lire Value. |
|-----------------------|------------------|-------------|
| Italian Cocoons | 10,747,022 | 51,535,705 |
| Japanese | 20,881,090 | 77,260,033 |

The condition of the silk trade during 1882 was not satisfactory; as, however, the fashion appears to be changing in favor of stuffs made entirely of silk, the future of the silk trade may, it is hoped, become brighter.

THE Shanghai Autumn Race Meeting will be held on the 1st, 2nd, and 3rd of November. A correspondent has kindly sent us a copy of the programme which comprises eight events for each of the three days.

CHINESE troops are still stationed near Sôul, and are said to be in better odor than before with the Korean populace.

A colony of Russian Jews have settled down in the State of Oregon, and are devoting themselves to agriculture. They have named their settlement New Odessa, and it is situated on the California and Oregon Railway, near Leland, in Douglas county. The *People's Gazette* of St. Paul's reports that the colony is likely to thrive.

The colonists are industrious husbandmen, and have already a flourishing trade in firewood, with which they supply the railway company.

MEMORIALS are said to have been addressed by the Japanese merchants of Yokohama praying for some Government measures that will steady the rate of exchange of silver and kinsatsu.

It is reported in the *Mainichi Shimbun* that the draft of the Commercial Code is completed, but that the law will not come into operation before the commencement of 1885.

THREE trading companies are reported to have been organized in Korea by members of the Government and distinguished citizens of high rank.

THE newly-appointed French Minister to the Court of the Emperor of Japan is Mr. Sinkiewitz, from 1873 to 1877 French Consul in Hongkong. He is expected to arrive here by the mail due on the 5th of October.

COMMENCING with the *Nagoya Maru*, which leaves here next Wednesday, the Mitsu Bishi mail steamers to Shanghai will be despatched at four p.m., consequently attention is directed to the alteration in the time of shipping cargo, signing, and so forth.

ACCORDING to the *Choya Simbun* the corpses of more than one thousand criminals, sentenced to death between 1869 and 1882, were handed over to medical schools for dissection.

THE *Fiji Shimpo* reports that the *Yechigo Maru* and two other war-vessels have been ordered to Korea.

It is rumoured, according to the *Fiji Shimpo*, that henceforward the offices of Privy-Councillor and Minister of State cannot be discharged simultaneously by the same person.

A SERIOUS riot is said by the vernacular papers to have occurred in the Mliike Mine on the evening of the 21st instant. Some of the convicts employed fired the mine with the result that about one hundred people were killed or injured. The conflagration is reported to be still unsubdued.

THE Chinese telegraph lines from Shanghai, which hitherto reached northwards only as far as Tientsin, have now been extended to Tung-chow, a town within twelve miles of Peking. Telegrams for the capital are sent forward from Tung-chow by courier.

THE steamship *Cardiganshire*, Captain Courtney from London, which arrived here on Thursday, encountered very heavy weather off Cape Gardafui, and in the gale a man was washed overboard and drowned.

MR. T. R. H. McCLATCHIE has been appointed H.B.M. Acting-Consul and Acting Assistant-Judge during the absence on leave of Mr. Russell Robertson, who sailed recently for San Francisco in the *City of Rio de Janeiro*.

THE LATE AFFAIR AT NAGASAKI.

AN affray which occurred at Nagasaki on the 15th instant between the Japanese police and some Chinese residents has excited much interest among the foreign communities at the open ports, and given rise to comment for the most part unfavourable to the Japanese. Up to the present the Chinese side of the case only has been placed before the public, but the evidence of the police, if not wholly untrustworthy, goes to show that the published version of the affair is so diametrically opposed to the truth as to deserve a description which we do not care to formulate. To understand the conditions under which the police acted it is necessary to refer to events which took place five years ago. In 1878 the Japanese Minister for Foreign Affairs informed the Chinese Representative in Tokiyo that, in order to prevent the use of opium in Japan, it would be necessary to invest the Japanese police with authority to enter the house of a Chinese resident and seize his smoking apparatus, &c., without waiting to procure a warrant from his Consul, provided they had trustworthy information of his malpractices. The Chinese Minister remonstrated against this exercise of authority, but the Japanese were unyielding in their assertion that no measure less expeditious or peremptory could suffice to prevent an evil against which they were determined to protect the people of their country at any cost. Finally a despatch was addressed by the Foreign Office to the Chinese Representative, in which this Government formally placed on record its resolution to pursue the indicated plan, basing its resolve and the right to execute it upon the first duty every government owes to its own subjects. To this despatch no answer was then, or has since been, made by the Chinese authorities, and their silence plainly justified the Japanese in pursuing the course contemplated. Instructions of the tenor indicated in the original despatch were accordingly issued to the police at all the open ports. It appears, then, that at 7.30 p.m. on the 15th instant, a detective, by name MINE SUSUMI, being on duty in Shintchi-machi, Nagasaki, observed and reported two Chinamen in the act of smoking opium in a house called SING-TAI, No. 24 Foreign Settlement. On receiving this intelligence the sergeant at the Police Station despatched four constables, with MINE as their guide, to arrest the smokers. The constables were armed with swords, as is the case with all Japanese police at present. The detective was unarmed.

On arriving at the house indicated, the police found two men smoking opium, and proceeded to arrest them, at the same time seizing their pipes and other apparatus. So far, we may accept the facts without question, but from this point the Chinese and Japanese accounts diverge so completely that it becomes necessary to consider them separately. Let us take the former first. It amounts to this:—A Chinaman, by name CHUN DAI CHUE, was smoking opium at about 8 o'clock p.m. on the 15th instant, when WAI EGNO, a lad aged 17, came in to pay an account of twenty yen. WAI was invited to take a pipe, but he had scarcely lain down and commenced smoking when four Japanese constables in uniform and two detectives in plain clothes, entering the shop, proceeded to possess themselves of the smoking apparatus, and to search for opium. CHUN DAI, according to his own account, "told the officers they had no right to come into his house and take away his property without a warrant from his Consul." Upon this they proceeded to arrest him, but he "resisted and was then thrust down on the floor until his face touched the ground, and was held in that position." He, therefore, saw nothing of what subsequently happened, but was of opinion that WAI EGNO offered some resistance to the proceedings of the police because his money was being taken. Whether or no this were the case, CHUN DAI presently heard the order given to "draw swords," and immediately afterwards his visitor WAI "cried out that he was slain." There were upstairs at the time three Chinese—observe that we follow always the Chinese version. Their attention was attracted by cries of "Murder! murder! murdered by the police." Running downstairs, they found the lad WAI "lying on the floor insensible." The new arrivals conducted themselves with uniform forbearance. One "asked what was the matter?" another "tried to ascertain the reason of the attack," and the third "tried to grasp the hand of a policeman to prevent him using his sword." The enquiry of the first was answered by a wound in the arm-pit, that of the second by two wounds; and the interference of the third resulted in a cut on the wrist. None of these men could say why WAI had been stabbed, but a Chinese, WOO MOA, who happened to be passing, deposed as follows:—

On the evening of the 15th day of the 8th month, about 8 p.m., I was passing No. 24, Shintchi, and saw the attack made upon the occupants of the Sing Tai store (Chinese), by four Japanese policemen in uniform and two detectives in plain clothes. I saw one of the detectives stab deceased in the chest with a dagger, whereupon deceased called for help and turned towards the door, but was immediately followed by one of the

police, who made a thrust at him with his sword, striking him in the back as he was in the act of fleeing. Deceased received two wounds from different officers. Whatever may have been the primary cause of the attack, I truly believe deceased was innocent and free from blame. I know that deceased was sent to No. 21 by his uncle, for the purpose of paying an account, —as it is customary for all Chinese to settle their accounts before the expiration of the 15th of the month,—and as the proprietor of the house invited him to smoke a pipe of opium, he lay down and placed his money (about yen 20) under the opium platter. When the police were seizing the opium apparatus, they seized the money also, which caused deceased to remonstrate and resist what he no doubt considered an illegal act, and while in the act of resisting he was most unmercifully killed. What I have said is true, and I have only dared to tell what I actually witnessed.

This witness, it will be observed, was not in the shop where the scuffle is said to have occurred. He was passing by; and in his original statement he declares his "true belief" that "whatever may have been the primary cause of the Police's attack," his countryman was "innocent and free from blame." Questioned further by the Chinese Coroner, the following dialogue took place:—

Q.—Was the front wound made by an uniformed officer?

A.—No; it was done by an ununiformed officer.

Q.—Did you see whether the wound was inflicted with a dagger or a sword?

A.—It was inflicted with a dagger.

Q.—Did you see how the second wound was made?

A.—I did; an armed policeman made a thrust at deceased's back as he was in the act of running away.

Q.—Do you know what caused the officers to use their swords and daggers?

A.—I think it was because when the officers seized the opium apparatus they found some money lying near, which they seized also, when of course an altercation arose, and in a moment later the police drew their weapons and used them freely.

WOO MOA, in his last answer, admittedly speaks from conjecture. He thinks that WAI EGNO tried to prevent the police from seizing his money, but of his own observation he can say nothing. Of one thing, however, he is quite sure, namely, that the first stab was inflicted by an "ununiformed officer," and the second by an "armed policeman." Now the ununiformed policeman,—i.e. the detectives—do not carry swords. It would appear, therefore, that WAI EGNO's first assailant must have taken one of his comrade's weapons to make the attack. This point, trivial as it seems, will presently be found to possess some importance.

Summing up the direct evidence, our result, then, is—that six policemen, four armed and two unarmed, entered a Chinese shop; found two men smoking opium there; seized one of them, threw him down and held him with his face to the ground; drew their swords and stabbed the other to death because he ventured to remonstrate against the confiscation of some money which belonged to him; and finally wounded three Chinese who, coming downstairs, tried to ascertain the cause of the disturbance and to stop it. It would be difficult to bring against any party of

officials a charge of more unjustifiable and violent conduct.

Then remain the testimony of two witnesses. The first, WAI'S uncle, deposed that at 8 p.m. he "*heard a disturbance in the street,*" and shortly afterwards was "informed that his nephew had been killed by Japanese policemen *in the house, No. 24, Shinchu.*" He "*ran to the scene of the disturbance* and found that WAI had been stabbed in two places." Here, for the first time, we hear of a *disturbance in the street*. It appears to have been a disturbance of sufficient dimensions to be audible at some distance. Here, too, it may be well to recall the concurrent testimony of the Chinaman who, on coming down stairs, "found WAI lying on the floor insensible."

The last witness is Dr. RENWICK. He said:—"On the evening of the 15th, about 8.45 p.m., I was called to see deceased, WAI EGNO. I found him in one of the streets of Sinchi, and seeing he was very ill, directed that he should be removed immediately to the hospital. There, on examination, I found he had sustained a wound one inch and a half in length, in front of the chest on the left side, from which the peritoneum was protruding about as large as a pigeon's egg. This wound was situated about two inches below the border of the tenth rib, and one inch from the median line. There was also a wound behind, at the lower border of the tenth rib. This wound penetrated the lung, and was the immediate cause of death. On the following day, I examined the corpse, and formed the opinion from examination that the two wounds were distinct. Deceased had evidently been stabbed twice, once in front and once behind. The latter wound gave rise to severe internal hemorrhage and emphysema, which resulted in death."

We learn here that WAI EGNO was *lying in the street* at 8.45 p.m. having been stabbed at about 8 o'clock. How did he get into the street? When we last heard of him he was lying insensible on the floor of the shop No. 24. We observe, too, that though these six policemen went to Shinchu with the express design of arresting two Chinese, they did not succeed in arresting anybody. How were they prevented?

Turn now to the story told by the police. Arrived at the shop, they found two middle-aged men smoking opium. Neither of them was WAI EGNO. These men they arrested, seizing, at the same time their smoking apparatus, but no money. The smoking apparatus was entrusted to one of the constables with instructions to carry it

at once to the Station, while the three remaining constables, assisted by the detective, followed with the prisoners. The party in charge of the latter had scarcely proceeded twenty yards when they were attacked by a mob of twenty or thirty Chinese, armed with clubs and various other weapons. In the scuffle that ensued, two of the policemen, a constable and the detective, were knocked down, trampled upon, and badly wounded. The detective, fearing for his life, as well as for that of his comrade who was lying beside him, succeeded in drawing the latter's sword from its scabbard, but the weapon was immediately grasped by the Chinese who tried to wrest it from the detective. Another constable seeing this, and thinking that, if the Chinese obtained the sword they would use it with fatal effect, struggled to the detective's side and endeavoured to protect him. Meanwhile, the third constable had hastened to the Station for assistance, and a sergeant and seven constables were despatched to the scene at once. These men, on their arrival, found the detective and one constable badly hurt, but the latter had recovered and sheathed his sword. The mob, carrying the rescued men with them, had begun to retreat, and an unsuccessful attempt was made to recover the prisoners. Finally, the Chinese consular constable appeared, and succeeded in preventing further violence on the part of his countrymen.

According to this account, the affray took place, not in the shop but in the street, and WAI EGNO was not one of the opium-smokers but one of their rescuers. That he had been stabbed in the scuffle there can be little doubt. The testimony of WAI'S uncle, who "*heard a disturbance in the street,*" and of Dr. RENWICK, who found the deceased "*lying in the street,*" tallies with the story told by the police, but does not tally with the story told by the Chinese. It is obvious that one or other account must be absolutely false, and in the absence of collateral evidence the public can only accept the version which seems more consistent with probability. In the one case we are asked to believe that six policemen, confronted by a lad of seventeen who remonstrated against the seizure of some money which belonged to him, drew their swords, by order, and stabbed the youth first in front and then behind as he was running away. Constables who could act thus must have been under the influence of a ferocious and unreasoning mania for bloodshed. In the other case, we are asked to believe that three constables and a detective, escorting two Chinese prisoners, were set upon by a Chinese mob, and their prisoners rescued, and that in the scuffle, two of the constables were severely hurt, three Chinese slightly wounded and one stabbed so that he afterwards expired. There can be little doubt as to which version will seem more probable.

MR. ITAGAKI ON HIS TRAVELS.

THE Liberal leader, Mr. ITAGAKI, has made his return from Europe the occasion for an address to his supporters, setting forth the result of his experiences and impressions in foreign lands. Mr. ITAGAKI is perhaps the most fortunate of all the statesmen who were associated in the great work of mediatizing the Government of his country. Those of his colleagues who have survived the perils created by their patriotism, now occupy offices more or less exalted, and, from a vulgar stand point, enjoy rewards such as seldom fall to the lot of political agitators. As reformers their efforts and achievements will bear to be judged by any standard, but time, as was inevitable, has begun to wear out the armour of their reputation. The nation sees them to-day sitting in high places erected by themselves, and public opinion, always ready to misconstrue and misinterpret, inclines to deem them too selfishly content with their personal good-fortune to be seriously concerned about that of their country. Mr. ITAGAKI has been happy enough to find himself in a position comparatively beyond the reach of these evil reports. His secession from the Cabinet eight years ago was the direct consequence of a question which, had it been solved according to his instincts, must have launched his country upon a career of perilous and profitless warfare. It is not on record that he differed from his colleagues on any fundamental points of internal policy, or that a desire to precipitate the progress of reform made his tenure of office impossible. But it so chanced that the moment of his retirement was eminently favorable to the latter interpretation, for it was the moment when the evil reports alluded to above first began to gather strength and substance. He was thus enabled to accept the rôle of a Liberal leader without seeming to be associated with either the supposed self-seeking of his old colleagues or the corrupt ambition of his new. Subsequently, during the Satsuma Rebellion, his neutral attitude showed him to be above the influences that sway ordinary agitators, and during the years that have since elapsed, his reputation both as a single-hearted patriot and an earnest reformer has steadily passed into an article of national faith. Nothing, therefore, can be more interesting to students of modern Japan than the impressions imparted to such a man by his first direct observations of Westerns and their ways, and the *Hochi Shimbun* deserves gratitude for the full, and seemingly

accurate, version it has published of Mr. ITAGAKI'S lecture.

It will doubtless occur to our readers when they peruse the translation which we produce elsewhere, that Mr. ITAGAKI does not confine himself to his own personal experiences. Now and then he makes manifest excursions into the regions of hearsay and political literature, the result generally being an unfortunate medley of error and prejudice. He is frank enough in his description of the bigoted conservatism of which even he was a victim in former times. Indeed, he could well afford to be frank, for if that conservatism was not true patriotism, it was at least the creed of all reputed patriots. But we are very much disposed to think that the notions he formed of the outer world when "books and rumour" were his only guides might compare not unfavorably with the notions he garnered on his eight months' tour. His education in "the age of seclusion" taught him that foreign nations contemplated nothing beyond their own aggrandizement, and that their political agents, in the guise of religious propagandists, went about plotting programmes of treacherous aggression. This false lesson he has now exchanged for a persuasion that "Westerns, in their dealings with the East, have arrogated to themselves the position of feudal nobles, treating Asiatics as their slaves;" that, while "boasting the possession of the principles of liberty and equality, they persist in the exercise of those principles of feudality for which they formerly expressed so profound a hatred," and that "they treat Orientals cruelly and contemptuously." To all this, as a concrete description of Occidental behaviour in the Orient, we have not a word to say. It is quite true that, in a majority of cases so large as to constitute the rule, the apparent treatment Eastern peoples receive at our hands cannot be reconciled with the principles we profess to take as our guides. But it is equally true, as Mr. ITAGAKI himself tells us, that "Occidentals in their native lands appear to possess characteristics quite distinct from those that mark them in the East," and that "at home they do not inflict wrong and injustice upon Asiatics, nor do they disregard all rules of right to advance their egotistical designs." Now with these two assurances in his mind—the assurance that the individual and collective characteristics of Westerns in the East are arbitrariness and overbearance, and the assurance that their individual and collective characteristics at home are exactly the opposite—Mr. ITAGAKI might surely have

arrived at an estimate more faithful to the truth than the one he laid before his party in Osaka. He might have seen that foreign relations with the Orient derive their character less from the disposition of those that direct them than from circumstances in a measure beyond control. The contact between the East and the West is not the outcome of a mutual *rapprochement*: it is brought about solely by the overflow of Western enterprise and energy. The so-called 'pioneers of civilization' are worthy descendants of the types that flourished in the Elizabethan era—men who are ready for the most part to be honest and honorable, but who have no tenderness for incompetence, nor any shadow of respect for those forms of humanity which their training and traditions have taught them to regard as semi-developed. Their virtues are all of the positive, if not of the aggressive, type, and they have neither leisure to contemplate, nor disposition to appreciate, the negative qualities, such as patience, self-control and serenity, which retrieve but do not hide the inertness, levity, and insincerity of Oriental character. What Mr. ITAGAKI sees in Japan, as well as what he saw on his recent tour, is the conflict of these idiosyncracies. Europeans and Americans do not deliberately adopt arbitrary and oppressive systems in their intercourse with Orientals. But neither do they come to the East with any intention of adapting themselves to the systems they find there. Their faith in themselves and in the civilization they represent is so firm that they cannot afford to be tolerant. What refuses to be reconciled with their notions, they condemn; what interferes with the pursuit of their purposes they trample under foot. Such conduct unquestionably offers many rude and repellant features, but Mr. ITAGAKI himself explains, if he does not justify, it, when he says that the Japanese "simply have to follow the example of civilized nations, in regard to politics, law, and science, adopting what they find perfect therein, and generally striving after perfection." Is it quite reasonable to expect that those who set political, legal, and scientific standards should treat as equals those who adopt them? Then, indeed, they would be furnishing another example worthy of universal imitation, but, at the same time, they would be accomplishing something beyond any previous achievement of human nature. This consciousness will, we imagine, mitigate the consternation of Englishmen when they hear their country called "the abuser of freedom" by the leader of Japanese

Liberals. England has contributed a larger share than any other nation to that overflow of enterprise and energy which inundates the Eastern Hemisphere, and it is not strange that Englishmen should consequently incur a proportionate amount of public criticism. But criticism so inaccurate as that of Mr. ITAGAKI can only convince those that desire to be credulous. As a contribution to history, he tells us that "Hongkong is a place under British jurisdiction, and that the Chinese residing there are registered as British subjects." But he tells us, also, that "a mere glance at the life of the Chinese residents proves how utterly indifferent they are to England's encroachments upon their territory;" that "they seem to regard the aliens as compatriots, and trade with them on friendly terms." This involuntary testimony to the true character of English government in the East is an amusing corollary to the proposition which precedes it. A political indifference which takes the form of intercourse so friendly as to suggest a common nationality contrasts strangely with the bitterly anti-foreign spirit that seems to prevail elsewhere in China, finding occasional expression in outrages such as that recently reported from Canton. Had Mr. ITAGAKI taken the pains to inform himself, he would have learned that the island of Hongkong is English territory, definitely ceded to Great Britain in 1842; that the Chinese residing there receive the full measure of British protection during their residence, and appreciate the privilege so keenly that their numbers grew from seven thousand, in 1842, to a hundred and thirty thousand in 1880, and that a village which at the former date consisted of only two hundred hovels and served chiefly as a resort for pirates, has now attained the dimensions of a thriving city with schools, established by the British Authorities and English missions, at which two thousand Chinese children receive education. These are not very cruel evidences of English oppression, nor will the histories of Ceylon, Singapore, and India be found better witnesses on Mr. ITAGAKI'S behalf.

But still, after all, it is a profitless and unnecessary task to vindicate Western reputation before an Eastern tribunal. We frankly admit that the traits of European character which are chiefly apparent in Japan may well convey an unfavourable impression to superficial observers, but it might have been hoped that Mr. ITAGAKI did not belong to the latter category.

Some valuable experiences he has evidently brought with him from the West. He has been able to contrast honestly what he left at home with what he found abroad, and to recognise the fatally petty, penny-wise-pound-foolish, spirit which obstructs the growth of Japanese commerce. He has been able also to discern the cruel disadvantages under which this country labours for lack of good roads and transport facilities in general, as well as to appreciate the imperative necessity of fostering a spirit of independent enterprise among the people. The old creed of his party—a creed which has received the emphatic allegiance of Mr. FUKUZAWA—that to obtain justice a nation must be strong enough to command it, seems to have laid firmer hold of him than ever, nor could any different result have been anticipated, seeing that the conduct of every Western nation is a practical endorsement of the principle. He does not make more political capital out of his experiences than might have been reasonably expected; nay, indeed, his language leads one to think that he is content to accept the celebrated Rescript of 1881 as a sufficient and satisfactory prospect of reform. It may be that among his newly gained experiences is a true perception of the education a nation must complete before it can hope to profit by constitutional forms of government. If this is the faith underlying his statement that the Rescript convening a national assembly seven years hence is a recognition of the country's needs, we may assume that political agitation is disarmed for the moment. Frankly speaking such a result is not desirable. Japanese bureaucrats are neither more patriotic nor less sensible of the sweets of Office than bureaucrats anywhere else. To keep them faithful to their promise is the function of their political opponents, not less than to educate the people for the reforms that promise contemplates. Mr. ITAGAKI appears to imagine that the chief aim of his party should be to remodel the form of his country's Government, thus falling into the unfortunate error of supposing that social conditions are the outcome of political institutions. But, on the whole, we may hope that his European tour will be found to have increased his influence for good, and to have inspired him with fresh zeal for a cause which deserves sympathy and support.

THE LATE PRINCESSES.

IT is not without reluctance that we recur to the sad events which recently threw this nation into mourning—the deaths of the two infant daughters of the EMPEROR. The little Princesses—who fell victims to the same malady within forty-eight hours of one another—were aged two years, and nine months, respectively. The elder, the Princess SHIGE, expired on the 7th of September, and the younger, the Princess MASU, on the 9th. During the past ten years seven children have been born to His MAJESTY and of these only one survives—Prince HARU, now in his fifth year. Of the two eldest, who were born in 1873, one lived only a few hours, and the other, not more fortunate itself, was also the cause of its mother's death. Three years afterwards the Princess UME died at the age of 18 months, and was followed to the grave the following year by her infant brother, Prince TAKE. This unhappy series of bereavements, while exciting the deepest commiseration and sympathy throughout the nation, ought to suggest reflections which in former days would scarcely have presented themselves and certainly might not have found expression. The enervating effects of Japanese etiquette are nowhere so marked as in the Imperial Household. It is true that the life of the EMPEROR himself has undergone a complete metamorphosis since the days when to put his foot to the ground or to show his face in public would have been an act of sacrilege. His MAJESTY now attends the meetings of his Privy Council, sits his horse at a review or takes his part in a hunting expedition with almost as little ceremony as an European Sovereign. But this happy change has not extended to the ladies of his household. The EMPRESS, indeed, no longer lives secluded. She holds her levées, distributes prizes at girls' colleges, encourages the silk industry by engaging in it with her own hands, and goes about so freely that the people of Tokiyo have become quite familiar with her beautiful face and winning ways. Unfortunately, however, the EMPRESS has no child. Those enumerated above were the offspring of the Imperial concubines (*Gontenji*), five in number, ladies selected from the highest ranks of the nobility and brought up according to the strictest codes of Japanese etiquette. What that imports is that from childhood to maturity every principle of sound hygiene is disregarded; exercise is unknown; rules of diet do not exist; all the healthier instincts of mind and body alike are suppressed. The

natural result is exceeding frailty of physique; frailty which, if it does not altogether deprive these ladies of a mother's joy, is, at any rate, transmitted to their children. Nor does the mischief end here. For while the EMPEROR and EMPRESS themselves are emancipated, for the most part, from the restraints that made the lives of their ancestors a dull mechanical routine of unwholesome seclusion, the infancies of the Imperial Princes and Princesses are still surrounded by influences fatal to healthy development, whether moral or physical. Etiquette provides for each a different establishment, and requires that the mother should live with the youngest; etiquette forbids that a Royal scion should be allowed any of the freedom which nature prescribes for infant happiness; etiquette goes so far as even to interfere with the functions of the nurse, the result being that the poor little infant, already half killed with care, derives its nourishment from five or six different sources in the course of a twelvemonth. A child of naturally robust constitution might endure even this treatment, but for a child so frail that the most favorable conditions could scarcely ensure its survival, the chances of arriving at maturity are one in a thousand.

In these facts is to be found a most interesting illustration of the nature of Japanese progress. Side by side with innovations which have freed the lives of the EMPEROR and EMPRESS, from the painful duress of antique fashion, may be observed an unreasoning conservatism which condemns the childhood of their successors to sit in the same stocks of punctilio. It is known that these unnatural systems of education will be found quite inconsistent with the conditions of the Princes and Princesses' maturity, yet the idea of modifying the former to suit the change in the latter does not appear to have suggested itself. The truth is that, among all the wonderful metamorphoses which foreign intercourse has effected in Japan, the household life of her people remains just as it was twenty-five years ago. In some respects, as, for example, simplicity and cleanliness, the advantage is not with Western habits; but, on the other hand, the custom of sitting and sleeping on the ground; the flimsy construction of the houses; the defective sanitary arrangements, and the total disregard of outdoor exercise, are defects which seriously impair the

national physique and inspire a fear that so long as the progress of reform is checked in this direction the Japanese will be handicapped almost out of the race they have entered upon so lately and with so much earnestness.

On the whole it might have been anticipated that the influence of Western example would penetrate latest into the domestic life of the Japanese. But the question that presents itself uneasily is—are there even yet any evidences of a change? Very remarkable has been the rapid growth of popular faith in European medical science. Rumour says, we know not how correctly, that the EMPEROR himself is still a believer in the practice of the old Chinese school, but if so, His MAJESTY'S fellow-thinkers are not multiplying. The days are past when the hesitancy of the public mind in this particular used to be expressed by the punning proverb:—*Isha ga ronjiru Wa-kan-ran*. Very rarely, indeed, do we now find a person among the educated classes who, in times of illness, hesitates to consult a student of Western medicine. Rarer still, however, are those who recognise that the chief function of medical science in the Occident consists in prescribing rules by observing which the use of medicine may be avoided. Among the upper classes the laws of nature are still everywhere subordinated to a code of conventionalities which can only be obeyed at the cost of health and strength. This is especially true of Japanese ladies. In their eyes nothing, for example, could be more vulgar or less rational than to take exercise for the sake of exercise. One can understand, indeed, that the connection between a mother's stamina and the physical, if not the moral, development of her offspring is apparently too remote to disturb speedily customs which have almost crystallised into instincts. But we cannot so readily reconcile Japan's quick appreciation of the arts and sciences we have been able to offer her with her almost total indifference to the conditions under which they have been cultivated. She shows no hesitation about multiplying her educational burdens a hundred fold, yet she is content to ignore the devices experience has prescribed for enduring those burdens. We wonder how much time must still elapse before reform takes this direction. Such untoward events as those which have saddened these autumn days ought to shock the nation out of its lethargy.

TRANSLATIONS FROM NATIVE JOURNALS.

MR. ITAGAKI ON HIS FOREIGN TOUR.

(Translated from the *Hochi Shimbun*.)

A meeting of liberals from the various provinces of Kwansei was held on the 20th of August at the Jiyutei Hotel in Osaka. Mr. Itagaki being present, some of the members requested him to expound his views on the condition of the European States through which he had travelled. Possibly he has already spoken on that subject while he was residing in Tokiyo; but we have not seen any account of a discourse from his lips. However, the lecture delivered at the Jiyutei Hotel, familiarises us with his opinions. Mr. Itagaki spoke as follows:—

Gentlemen:—You have kindly invited me to this grand gathering; and I hardly know how to thank you for the honor you have done me. As some return for your goodness, however, I will say a few words expressive of my pleasure in being able to praise the constant assiduity of the Constitutional Imperialists in spite of the dissolution of the party: on the subject of the enthusiasm of our fellow-liberals in Osaka: their zeal in crossing rivers and mountains in order to be present at this meeting; and, generally, your virtue in adhering to our principles of liberty. I am not eloquent; and your meed of commendation must needs be inadequately rendered by me. I believe that you have invited me with the idea that I am ever your faithful friend. My fear is that I have not all the qualifications necessary to realize your hopes; but since I have become imbued with some new ideas, during my tour in Europe, the result of my patriotism, I will expose them to you as some small return for your gracious consideration. I shall bring before you material for discussion, gathered during my travels, which I hope may be of use for the promotion of our own interests and those of our country. Should you think me mistaken in my employment of these data, in my deductions therefrom, or in their final application, I beg you not to hesitate to criticise me and help to rectify my errors. Possessed of small ability, I have lately travelled through England and France, with the result that my investigations into the conditions of these civilized nations have aroused in my mind many new impressions on abstract and concrete subjects alike. It will take me a long time to make you familiar with all these fresh sentiments of mine. When, from Tokiyo, I accepted your invitation, I pondered how best I might be able to make you some recognition of your generous behaviour. The thought occurred to me that it might not be amiss to lay before you some account of my foreign voyage, noting the most important impressions produced upon my mind, such as suggestions for the rule of our personal conduct, the education of our children, and the proper course to be adopted by the thirty-five million of our people. I have not prepared any scheme of my address, so the subjects upon which I may have to speak to you may be manifold; and I may happen to utter inadvertencies, redundancies, and ill-selected phrases. In such case I pray you to ask me any questions you please as soon as I shall have completed my discourse, in order to throw light upon anything obscure in it. As I have already stated, the materials upon which I have formed my opinions

are abundant. After my departure from Yokohama I traversed the ocean; and from the moment of my arrival in a port I devoted all my energy to the study of the customs and politics of the inhabitants. I am not acquainted with your past histories; but I must remind you that I, at least, was educated in the age of seclusion, while the reins of power were still in the grasp of the Tokugawa. Only after the restoration had I any opportunity of intercourse with the foreigners who had visited our empire. And then, not only did I decline to enter into any relations with them, but the social conditions of the time prevented me from relinquishing the ludicrous habits of yore. Books and rumour were the only sources from which I derived any idea of the conditions of the countries of Europe and the continent of Asia. Practical experience has since taught me that notions thus formed must be more or less erroneous. The first port where I landed was Hongkong, a place under British jurisdiction. The Chinese residing there are registered as British subjects. A mere glance at their life proves how utterly indifferent they are to England's encroachment upon their territory. They seem to regard the aliens as compatriots, and trade with them on friendly terms. They may occasionally complain of measures which they think encumber them in their toil for a living; but they are supremely lethargic as regards any political subject, just in the same way as the Japanese are careless as to the prosperity or decay of their empire, and limit their ambition to their own advancement whether in the fields of agriculture or commerce. It is strange that cruelty should be so frequently employed as it is by foreigners in their dealings with the Chinese. What vast privileges were formerly enjoyed by the nobility, but suppressed by the European peoples in their intense rage against tyranny! Have not those nations proclaimed that class oppression is the acme of injustice; that the mighty must not trample on the feeble? Yet they have imported the old masterful system into China, whose people they treat most harshly. Truly may it be said of them that, while they abhor despotism on the one hand, they adore it on the other. They have established in Asia a class, as it were, of nobles, enjoying special privileges, the while they proclaim they are a nation each one of whose members enjoys equal rights with the other. In other words, dealing with the East, Westerns have arrogated to themselves the position of feudal nobles, and treat Asiatics as their slaves. Governor Hennessy appreciated this, and as President of the Legislative Assembly proposed the admission of some Chinese to that body. The suggestion caused a great outcry in Hongkong among the English, who contrived to effect their Governor's recall on the ground of incompetence. England has long been counted the sanctuary of liberty. Seeing what we see, we may dub her now the abuser of freedom. Arrived in Saigon, I found that place under Gallic dominion. The territory is rich in fertile plains and is regarded by the French as a convenient gateway to the recesses of the Oriental Continent. In Singapore and Ceylon, both British-ruled Indian provinces, the feature that struck me as most characteristic in either island was the abjectness of the indigens, who live in a state of voluntary servitude. And, however patriotic and persevering some of them may be, they will be unable to remedy the evils consequent upon such a state of affairs; for people and parties are so classed as to render impracticable the adoption of any improvement. The dependence of the natives must augment instead of diminish; and there is no apparent pos-

bility of the decline of British influence. I regret to have to say that the natives of the two islands have to work hard as the slaves of English rulers. Incidentally it is worthy of notice that Ceylon is the birth-place of Shaka, and the focus whence has radiated the world's civilization; but, alas, naught remains to recall the ancient glory of the Immortal's country. Quitting Ceylon, I next touched at Aden, in Araby—a place which is best known as "Hell" by the inhabitants on account of the sterility of the soil and aridity of the climate. Nevertheless, as it possesses a convenient harbor, it is much frequented by such Europeans as propose to travel to Western or Eastern Africa or to Eastern Asia. Hence Aden is a place of great importance to Europe. We must observe from the foregoing to what extent Asia has been invaded by Europeans, who, seizing for themselves the position of feudal lords, employ the territories mentioned as fortresses whence they can command the services of Asiatics. Is not this to be deplored? Passing through the Red Sea and the Suez Canal, I attained Port Said at the Western extremity of the Isthmus. This place formerly belonged to Egypt, but is now a dependency of Turkey; and, notwithstanding, its social condition is far ahead of that of the Indian territories just referred to. Crossing the Mediterranean I came to Naples, which, I had been told some time ago, had lost its trade, fallen into poverty, and become a den of miserable wretches, through the tyrannous Government under which it formerly had groaned. But I remarked no Chinese types there: the harbor was crowded with mighty men-of-war: docks and batteries are of the solidest description; while the dwellings on the shore, scaling the sky, rival each other in grandeur, and present a view of incomparable beauty. Here we realize that we have, at length, entered a civilized country as we glance landward from our anchored vessel. Marseilles, when I saw it, I thought must be the centre of civilization. It is French; and, being open to all foreign commerce, ever presents an appearance of wealth and activity. Thus far, in my journey, of the material that I collected for consideration much tended to bring bitterness to my heart. To what do I specially allude? To the social conditions of some of the civilized nations. Boasting the possession of the principles of liberty and equality, they persist in the exercise of those principles of feudality for which they formerly expressed so profound a hatred, and treat Orientals cruelly and contemptuously. After all, this is the result of their inability to pursue a similar course in their own countries. Seeking the aggrandizement of their selfish interests they push their way to the East, where they attain their aims in defiance of reason and justice. As regards their sentiments toward Japan, the fact is that the middle and lower classes of their society are ignorant of her very existence, regarding all the yellow race generally as Chinese. In some respects this is not inexplicable. In times of old, our own people called all foreigners *To-jin* (Chinese of the *To* dynasty), while even now we style Europeans and Americans indiscriminately *I-jin* (barbarians). Hence there is an excuse for foreigners in European countries being ignorant of the position of Japan, the neighbor of that China which occupies the greater part of the area of Asia. Occidentals in their native lands appear to possess characteristics quite distinct from those that mark them in the East. At home they do not inflict wrong and injustice upon Asiatics, nor do they disregard all rules of right to advance their egotistical designs. But still, even

there, race differences create difficulties: religious differences promote a divergence of sentiment. Japanese are condemned as heathen by Europeans; and, in their turn, Japanese proclaim Christianity a vile cult. Even a superficial knowledge of our people manifests that they have not yet relinquished all the habits of their barbarism. Religion has great influence; and each sect adores its own creed, and despises all others. No wonder that religious discord obtains between nations. But, to return to Europe. Law, literature, and other attributes of enlightenment have there been brought to perfection; so much so indeed that our people can have no idea of their progress. Of all religions, Christianity is the most influential; and it is not altogether unreasonable that a nation believing in it should condemn those which do not. But the majority of the inhabitants of civilized countries profess Christianity, and say that they conduct their politics according to its doctrines, but they do not so; and, therefore the constitution of their society is imperfect, in which state it must remain, because the administration cannot be entrusted to one sage, but must be carried on in accordance with precedent, and step by step with the national progress. Politicians have to act in harmony with the wish of the majority of the people, not of a few intelligent persons but of the ignorant masses, which are mostly composed of the lower classes. And thus, even the more exalted members of society are unable to disregard the prejudices of race and religion, if they desire to please the vulgar. They must adopt a special policy with relation to the East; and, as many nations of Asia are still in a state of barbarism, they wrongly place Japan in the same category with them. I will proceed to illustrate this. Let us suppose the case of a barbarous State. Although it may possess, perhaps, a few wise men, it must still be called uncivilized so long as the mass of the people is sunk in ignorance. And whatever progress Japan may have made, and whatever wisdom some of her people may have acquired, she cannot escape the imputation of barbarism. But the progress of Japan will not alone suffice to bring about the revision of existing treaties. Europeans in the East devote their time and labor to the sole promotion of their own interests; and those who remain at home know nothing of the actions of their countrymen hereabout, save through what the latter say or write themselves and through the newspapers. For this reason their ideas on the subject are very inaccurate. Again barbarism is the characteristic of Turkey, Egypt, and Persia, coming Eastward from Europe. Before the revision of Turkey's treaties with the Western Powers is effected, we cannot hope for such a proceeding in Japan. Amendment of the conventions here [the lecturer refers specially to the abolition of extraterritoriality] would necessitate a similar measure in Turkey and Egypt. If I am not mistaken in my foregoing inference, it is, as will be seen, most probable that Japan will not be able to effect the revision of her treaties. Certainly no ordinary method will accomplish her object; and, therefore, she must adopt an extraordinary one. I will endeavor to show what that should be. I will premise that it is not of my devising, and will not have to be tested for the first time. We shall simply have to follow the example of civilized nations, in regard to politics, law, and science, adopting what we find perfect therein, and generally striving after perfection. We must first introduce extraordinary reforms into our Government in such a manner as to astonish foreigners, and at the same time enlist their sympathies. The constitution must

be so arranged that they will willingly abandon their claim to extraterritorial privilege. Our only alternative is so to strengthen our navy, and maintain a warlike spirit throughout the country, that we shall be able to hold our own with aliens and compel them to conclude treaties with us in the event of war breaking out between their nations and ours. I am fully convinced that existing treaties will never be revised until one of these plans of reform, civil or military, is adopted. I will show how it is possible to accomplish our ends by force. I have heard that in France there are 498 war-vessels, large and small, including 58 ironclads; in England 243, including 48 ironclads; in Russia 223, including 30 ironclads, which are divided into three fleets. As to Italy, it may be said that she is recognised as a fertile country of recent development, attracting the envy of other European States; while the populace appear to devote their best energy to the consolidation of the kingdom. A late Minister of Marine insisted upon the necessity of Italy possessing the mightiest man-of-war in the world, for the protection of the country; and the result was the construction of a vessel at a cost of more than ten million dollars. Italy has many other war-ships, large and small, and others are in course of construction. Yet when the Bill providing for the building of strong and large vessels was submitted to the National Assembly, it was strenuously opposed by one party of the House on the ground that, the country being a peninsula and requiring a long line of coast defence it were better to provide a number of smaller vessels than a few of extraordinary size and strength. However the majority approved the proposition to construct an enormous ironclad, and enabled the Minister to carry his project into effect. He resigned his post shortly after the decision of the Assembly, and was succeeded by one of his political opponents, who, nevertheless had to bow to the popular will, and have the ship decided upon constructed. In the meantime private opinion in certain places was strongly in favour of providing a large number of ordinary vessels in lieu of a small number of big ones. For myself, I am inclined to the idea that, as Italy is a peninsula, and surrounded by many great and powerful nations—a fact which necessitates vigilant measures of defence at numerous points—it would be well to provide several vessels of light build; and that, by contrast, a few ships of uncommon power should form the navy of our own country, inasmuch as our people can hardly be relied on for sea-combats, although their bravery and endurance would render them able to overcome any enemy that they could encounter on dry land. Our country is not adjacent to any powerful rivals; and even France and England could not land and manœuvre their troops with promptitude and ease here, at so great a distance from those countries, even though they may possess in the East their fortresses of Saigon and Hong-kong respectively. However poor Japan may be, it should not be impossible for her to purchase a few strong war-vessels such as those alluded to. And should our martial preparations be in that direction, so as to render us able to take part in a naval struggle, foreigners will respect our attitude and consent to the revision of our treaties. Failing such a plan, a blameless system of government must be organized, and a righteous constitution established, so that foreigners may be surprised, and thus compelled to approve our proceedings. Without one of the alternative measures here outlined, the amendment of the treaties is past hoping for. For we must admit that government

reform is impracticable, and a constitution on an European model unattainable, so long as the Empire is left in its present condition, without the rudiments even of a National Assembly. Is it then possible to encourage a warlike spirit by a system of naval extension? In reply to this question, we may state that our Emperor has already decreed the establishment of a National Assembly; and our people have made remarkable progress in knowledge. It would now, therefore, be impossible to control them by a despotic policy, and to compel them against their will to fight with foreigners. And if they would not obey the orders of their Government the latter would have to adopt coercive measures, which could only be carried out by the military or the police. Civil disturbances would ensue, to the exhaustion of our force by domestic strife, and its weakening against foreign aggression, while the same cause would necessitate the augmentation of the army and police forces, which could only be effected at considerable expense. While I was travelling in England I saw the volunteers under arms. This corps is composed of private citizens commanded by officers of their own selection. They present a very valiant appearance. Young and old, men and women, assemble to witness their manoeuvres, and hold them in the highest respect: obviously they are proud of possessing such a force. The volunteers are intended to protect the nation from foreign aggression: to maintain the constitution from internal peril; and generally to safeguard the entire populace. The system compels our admiration. If in Japan we could organize such a body we could reduce our standing army, save expense, promote harmony between Government and people, and extend our military organization for defence against peril from without. I am convinced that the civil and military systems should be linked together. During my stay in France I visited Mr. —, a man of high scientific attainments. He enquired what impression European institutions had produced upon me. I replied that, as my sojourn had been of very short duration, I was hardly qualified to form an opinion; but that I thought political progress had not been so great as that made in the standard of living. He remarked that I had struck the right nail on the head; and added that one of his friends had lately published a book upon the subject. As a rule the rich classes are well educated; and the working classes pull together and achieve great results. Their houses, food, and clothing are of excellent kinds. Farmers, manufacturers, and merchants are all men of high calibre. Even in remote villages you may see a volume of smoke ceaselessly issuing from some tall chimney towering above a factory. Wherever I went I saw fine houses, and met men of wealth and wisdom. I travelled along good roads solidly constructed to facilitate the transport of merchandise; and even where there is no natural water-way canals are cut for the same purpose. In short, human power has entirely vanquished, and applied to its own uses, the forces of nature. As regards politics, what ought to be left alone is officially interfered with. Municipal functions are usurped by the Central authorities. Political parties are moved by absolutely selfish motives. The French Chamber of Deputies voted the expulsion of nobles from that body. The British Parliament denied the right of one B. adiaugh to sit therein because he refused to take an oath. Such proceedings seem childish. In Japan the standard of living is very low as compared with political attainments. We have Assemblies in every rural district; and the whole Administration

is on the eve of improvement. But, I repeat, the standard of living is very low. In commerce our merchants are but peddlers, and we have no factories in the proper sense of the term. This is the result of want of coöperation between labor and capital. We have no big merchant or company. Falsehood is the favorite weapon employed by Japanese traders, who prey upon each other. Such a condition of affairs is nothing else than a barbarous fight. Our political progress has totally eclipsed our standard of living; and yet the latter appears to have been the outgrowth of the former—which result is the very reverse of the ordinary course of things. The influence of a bureaucratic government pervades all classes of our society; and its political system has depreciated the standard of living. How then shall we restore society after its decline? Some persons of ordinary intelligence say that the best plan consists in the encouragement of various industrial enterprises. I hear some such expression morning, noon, and night, but I do not concur in the opinion. To restore health to our decrepit society, and to place it in a fair road, it is necessary first to ameliorate the system of administration and abandon the policy of interference. It is in recognition of this that our Emperor issued his rescript, convening a National Assembly for 1890 and ordering the establishment of a Constitutional Government. If the work of improvement be thoroughly effected, and the evils arising from interference be removed, the activity and power of society will be increased, according as its members obtain a right to participate in the management of the political affairs of the nation. On the other hand, if we observe the march of politics in Europe we shall see that the wealthy classes often sacrifice their means to support the views of some able statesman, while the ignorant are willing to listen to the advice of the learned. In such circumstances it is easy enough to introduce reforms into the Government by the influence of society. Mr. —'s opinion respecting the amelioration of political evils bear also upon these points. He maintained that the nineteenth century was the era most favorable and mature for the adoption of improvements. Europeans are commonly disposed to risk their lives for the benefit of the community; and are generous in spending their money. This may, perhaps, be due to the conviction that the chance of gain exceeds that of loss. Japanese character is totally different. Japanese fail to realize that the promotion of the public advantage is really the advancement of their own; or that the protection accorded by society at large is much more valuable than that granted by a portion of it only. From all this I think it is clear that the introduction of reforms into Japan is extremely difficult. Our society is without influence. Should one even succeed in organizing a political party, the movement has no extension, and the members attain to no depth of intimacy. People seem to imagine that protection can only be obtained from the ruling classes; and both agricultural and commercial communities are utterly ignorant of the strength to be obtained by the union of capital and knowledge. They are content to act alone; or at best all the principal firms and manufactories are almost without exception under the ægis of the Government. Is it not matter of grave regret that our people should be satisfied with trumpery achievements, and remain ignorant that, with a little more exertion, they could attain much greater happiness than now falls to their lot? Some may remark, here, that it is primarily imperative to raise the standard of living, in

order to ensure any national progress; but this is but a superficial notion. As the political condition of the country is at the root of the evil, that must be amended first. Rousseau said that "the people are the belly of the body corporate, the Government is the head. If the stomach is healthy the brain will be cured." This is mainly true. Europeans with their strong stomach have cured the brain, and arrived at their present stage of constitutional development. In our own case the people have an unhealthy head which has deranged the stomach. Hence it is essential that the head should be first cured. In my opinion those who advocate, as the most important measure, the encouragement of industries are illogical. Our political system must be regenerated; for when the head is sound the stomach will be in health. In a word, good legislation will improve the standard of living. Therefore, it is my earnest hope that you will take the greatest interest in politics, exerting yourselves to comply with the wishes of our beloved Sovereign, and working upon the foundation whereon to build a good constitution. When that is completed we shall obtain treaty revision without further difficulty, and do away with the aggressive attitude of Europeans in the East.

THE IMPROVEMENT OF THE BAY OF TOKIO.

(Translated from the *Krisai Zasshi*.)

The proposed improvement of the Bay of Tokio is of great importance to commerce. The present prosperity of trade in the capital is due to the existence of this Bay, and so it must be the case in future too. If the improvement in question is so carried out that large vessels may effectually enter the Bay, and if it becomes unnecessary to resort to small boats for the transport of tea and other commodities to the great ships, it must necessarily follow that the proposal to construct docks in Shinagawa will be approved. But if we assume that the Bay is unfit for the anchorage of large ships, then it will become necessary to establish docks in the neighbourhood of Shibaura, by constructing dikes to deepen the stream of the branches of the River Tone. Either scheme may be adopted according to the use made of the Bay.

The report of a competent surveyor who surveyed the gulf shows that it may be arranged for the anchorage of fairly large vessels, the water being fourteen feet deep even at ebb tide. In the vicinity of the Yetai bridge, the depth is not less than twenty feet, and therefore if suitable measures are adopted to draw the water into the stream, it will not be a very difficult matter to maintain the depth always at ten feet. That the main outlet of this stream gradually becomes shallow must be due to the fact that it is divided into several branches so that the water cannot be kept constantly in any considerable volume. The river Sumida which flows through Riyogoku is divided into two streams at its outlet, near which the Hama Palace stands. The stream which flows along the land is called the main channel, and the other flowing eastward, is called the middle channel. The latter being shallower by two or three inches as compared with the former, the main channel is generally preferred for the entry or clearance of vessels. But since this channel flows in tortuous directions, there is great difficulty in passing it; and accordingly, when the work of dredging is to be carried out, it is advisable that the main channel should be closed to let its water run to the middle channel and discharge between the

second and fifth batteries. Thus the passage of ships can be effected without constant turns as is necessarily the case with the main channel, while there will always be abundant water. According to this scheme, the depth of water can be maintained at seven feet without dredging; nevertheless it is worthy of notice that the two channels referred to unite between the second and fifth batteries, with water to the depth of six feet at ebb-tide.

Therefore dredging is not necessary; but, passing through a space between the two batteries, we remark that the stream runs in two directions, namely westward and eastward, and the channel is therefore so shallow that vessels can hardly pass through it. In these circumstances, it is necessary to erect a stockade four hundred feet in length, so that all the branch streams may run to the channel between the first and fourth batteries. It must be noticed, however, that the channel which flows between these two batteries is not tributary to the river Sumida, but that the high tide which generally passes between the second and fifth batteries ebbs through it. The channel, therefore, becomes extremely shallow at intervals. If, however, the lower part of the river is made to flow toward this channel, the depth of water may be maintained at six feet, and ships may easily enter. The river Sumida, popularly known by the name of the Riegoku river, may be regarded as one of the best streams in the Empire, when we consider that the bed does not consist of sand and stones, and has remained without change for many decades. In the beginning of the epoch Meiji, the Naval Department dredged the river which since remains in its improved condition to this day. From these facts we may infer that when it is once dredged, it may be left without further dredging for many years. Should proper measures be taken to unite the other tributary streams with the channel, it is not impossible to maintain the depth of the water at more than ten feet, just as is the case with the neighbourhood of the Yeitai bridge and Ishikawajima.

The above is the prospectus on which the decision of the Tokiyo Assembly was based. It is generally calculated that, if the water is six feet deep at the ebb-tide, it will be about eleven feet at high tide. This being the case, the channel may be passed by Japanese vessels of more than a thousand *ton* burden, and by foreign ships of four or five hundred tons. Their draught may differ according to the nature of their construction, but it is generally believed that where the water is eleven feet deep, vessels of about seven hundred tons burden, like the *Shinagawa Maru*, can enter without difficulty. Should this be the case the passage will be easy for some of our fleet,—namely, the *Iwaki Kan*, 303 tons; *Mashun Kan*, 200 tons; the second *Teibo Kan*, 125 tons; *Raiden Kan*, 240 tons; *Chiyoda Kan*, 158 tons; *Settsu Kan*, 358 tons; *Ishikawa Maru*, 202 tons; *Hosho Kan* 184 tons. Thus our Navy would enjoy remarkable facilities.

The same advantage is afforded to our merchantmen. Hitherto ships have been obliged to anchor behind the batteries, on account of there being great difficulty in entering the Bay of Tokiyo. Boats have been resorted to for discharging cargo and transporting it to Shinagawa, or Shinbori, or Koamicho,—a distance of about three miles; and even this could not be done except when the sea was perfectly calm. Nevertheless, should we succeed in carrying out the foregoing scheme, vessels of more than a thousand *ton* and less than four hundred tons burden will be enabled to lie at anchor so near the land that it will not be necessary to have recourse to boats. If large vessels are enabled to

effect their entry to the channels, it necessarily follows that docks should be established at Teppodzu or at the extremity of Ishikawajima, for the channel between the Yeitai bridge and Ishikawajima cannot fail to shoal. Should we succeed in our scheme, it is most likely that Tokiyo will acquire the reputation of an Oriental emporium, and that not only will vessels swarm there, but we shall see innumerable docks constructed along the creeks. At all events, if ships of five or six hundred tons burden are enabled to enter the channel, it will not be a matter of great difficulty to undertake commercial transactions on a large scale.

Marine communication is far more important for an emporium than any facility by land. The Bay of Tokiyo appears to have lost its utility in some measure; but considered in regard to the means of transporting goods, it is recognized as affording greater facilities than the Tokaido and Nakasendo together. In the localities traversed by these roads, railways have been constructed, and it only remains to improve the Bay, should we desire to secure the prosperity of the commerce of Tokiyo. The fact that the gulf has become exceedingly shallow has long been mourned by the intelligent classes, and we have now to approve with great pleasure the decision of the Tokiyo Assembly in favour of dredging the Bay.

SPECIAL COMMISSIONERS TO FOREIGN COUNTRIES.

(Condensed from the *Fiji Shimpō*.)

We have recently commented upon the advisability of despatching Commissioners to foreign countries, and advised the Government to favor our scheme. Many letters have since been sent to us approving our notion, and the subject has been discussed before the Tokiyo Political Society. Therefore we will now consider it more at length. Successful enterprises are seldom achieved without great difficulty; and, as a rule, they are after all only partially successful.

[Following this line of argument, the writer comes to consider the scheme of sending special commissioners to Europe].

A man in Tokiyo looking at Mount Fuji or Tsukuba, may imagine that he is looking at an inverted fan with the beauty outlined of a virgin's eyebrow. The ascent at that distance appears as easy as climbing some grassy knoll; and he walks towards the mountain. When he approaches its base he finds that it is neither like a fan nor as beautiful as the ideal eyebrow. Rocks and stones obstruct his progress. He is whelmed in wonder at the real size of the mountain, and finds a parallel in human affairs, which at the distance appear easy of achievement, but when really dealt with are as difficult as mountains to surmount.

Officers of the rank of *shokunin* should be appointed to the special mission to foreign lands—gentlemen below the status of Ministers of State and Privy Councillors. These higher officials cannot be spared from their offices. If Councillors and Ministers are to be sent, then others should be appointed to discharge their functions, or their number should be increased so that there may be a certain number, say three, available for foreign travel. Some objectors may suggest, from their agricultural experience, that there should be a due rotation of crops, as for instance that where egg-plants were grown last year grain should be cultivated

this year. But this rule does not apply to politics and bureaux where officers require long training to be able to discharge their duties.

The writer then enters into the question of finance. With fifteen foreign commissioners salaried at *yen* 10,000 each the total expense to the country would not exceed *yen* 150,000. Even double that amount would not be excessive, provided that suitable representatives were obtained.

YOSHITSUNE.

The *Nichi Nichi Shimbun* has received the following story from an antiquarian. "The Chinese Emperor Genghis Khan is the descendant of Kurohangwan Yoshitsune the progeny of Seiya Genji. This is confirmed by a recent event which has led to the removal of any uncertainty. In the beginning of the Tokugawa régime, when the powerful warrior Sonseiko mustered a large army in the southern part of China and caused great trouble to the Chinese Government the latter sent a special envoy to Japan to communicate the fact that the ancestor of the Chinese Emperor was a Japanese, and that, therefore, intercourse between the two countries should be encouraged, and that relations between the Emperors of the two nations should be brotherly. The Chinese Government was rendered thus amicable by the fear that as Sonseiko's mother was Japanese, Japan would assist him in humiliating China. The Ambassador brought with him a letter and gifts, including a picture of the Japanese armour said to have been worn by Genghis Khan. A copy of this picture was preserved by the Bakufu, and was lately presented to the Imperial Household Department by the Tokugawa family. The *Akita Nichi Nichi Shimbun*, in a recent issue, has published the following account from the pen of Mr. Komatsu, a Confucianist, concerning the same story:—In the course of my researches into old books, I found the Kokugaku Bogu, by Mori Sukeyemon and the Zensho Shusei Zenbu (consisting of ten thousand volumes) published in China. In the era of Horeki, a Chinese, by name Wo Shobu, brought them hither where they have since been kept. Of the numerous volumes in question, one hundred and thirty books had the title "Shukan." This series contains the autograph preface of the Chinese Emperor Yoseitei, in which he declares himself to be a descendant of Minamoto Yoshitsune (Gen-gi-kei or Genghis Khan). This remark a Chinese scholar named Chinrio Goshimpu had seen, but regretted that he did not see the title "Shukan." He recorded the fact in the Keirin Manroku. Ito Rankiyo and Chi Keiki (a Buddhist priest) record in their works that, in May of the third year of Meiwa, the new edition of "Zusho Seisho" was brought to Japan. It consisted of nine hundred and ninety-six volumes, and was revised by Tensho-hoshi. Thirty volumes were "Shukan" and in the preface to the thirteenth volume, the Chinese Emperor Kauriu describes himself as a descendant of Genghis Khan. I have communicated this fact to the Shibunkwai in order to ask the opinion of its members. Mr. Gamo wrote to the Chinese Minister, who has denied any lineal connection between Minamoto Yoshitsune of Japan and King Gen of China. But my belief is fully confirmed by the account recently published in the *Akita Nichi Nichi* in which reference is made to the Kiushiu Resho-den. There is no doubt in my mind that Kin Gen corresponds with Yoshitsune."

JAPANESE NATIONAL CHARACTERISTICS.*

In perusing histories written by Europeans, I have often come across the expression "the gorgeousness or splendour of an Asiatic," or "the despotism and self-indulgence of an Asiatic." It is true that the Asiatics referred to are those that are found on the west side of the river Indus, and therefore the Asiatic found on the eastern side of the Himalayas is not included. Nevertheless the characteristic mentioned above is common enough east of the Dardanelles. East of the Himalayas we find a number of different countries whose inhabitants do not belong to the same race of human beings. It is not surprising that in these countries national characteristics should vary considerably. But yet, speaking generally, where despotism prevails, and the inhabitants are unable to escape its effect on their minds, their national characteristics are a result of this form of government, and a state of things is established similar to that instituted by Sei in the Shin province (of China) in ancient times, in which honours are heaped on the upper classes to the depreciation of the lower.

This has been the case with us. For the space of 2,535 years the royal line of Jimmu Tenno has furnished us with Emperors, who have succeeded each other in regular order, age after age, and the people have looked up to their rulers with profound reverence and have looked upon themselves as slaves. The spirit of servile submission has been worse here than in China. Since the middle ages for nearly 700 years, we have all been subjected to military rule, our people have fallen into the hands of the warlike retainers of the *daimyos*, and the whole country has been split up into feudal territory; during the whole of this time the spirit of the servility has been nurtured, retainers have had their retainers, and slaves their slaves; swash-bucklers have gone swaggering about the country, lording it over the classes beneath them, and farmers, merchants, and mechanics have been liable to be cut down at any time. The national government all this time was nothing more or less than military government. Is it surprising then that the minds of the people have become imbued with a spirit of obsequiousness?

Since the abolition of feudalism and the institution of the new régime these has been an immense improvement in the mode of conducting the government, and the people have gradually become accustomed to the new order of things; yet seeing it is not long since the new form of government was adopted, notwithstanding the fact that those in power have inclined more and more to the side of leniency in their dealings with the people, and that popular opinion is on the side of liberty, it is not surprising that our people should not be able to return all of a sudden to that spirit of freedom which is the normal condition of the human mind. If the revolutions which history records are to be a guide to us in this matter, we cannot expect this change to take place rapidly. The old men are no lovers of change; and as for the young men a change in outward appearances only seems to satisfy them.

We cannot say that this spirit of obsequiousness is to be traced to the influence of the Government alone. There are two other causes which have

helped to add to its intensity. One of them consists in a transition which has taken place from the view expressed in the 'Shinju' of Confucius, to the tenets of the school of Tokugawa Mitsukune. The other consists in the sentiments and principles expressed in such works as the *Sanju ichi monji* of Keijin Yajori of Osaka, being replaced by the teaching of Norinaga's *Ginyojin-gaigen*.

We may say then that one cause for the obsequiousness of the native mind not improving is historical, and is to be traced to the nature of those charges which have taken place in the Government; and that another is rational, consisting in a thorough permeation of the minds of our people, with teaching and principles whose tendency is in the direction of obsequiousness. By means of these influences, then, the spirit of servile submission has become a confirmed characteristic of the popular mind, and it is not to be supposed that a change for the better can take place all of a sudden. We may say, then, that this characteristic is one of those national traits of character which is partly moral and partly political in its nature, and that the effect it has upon the mind is to lead men to remain quiet under oppression and to look upon themselves as the slaves of those who are set in authority over them.

Beside the afore mentioned characteristics there is one that may be called a local peculiarity. Whether indeed it does take its origin from the nature of the soil I am not able to say. Without, however, claiming to do that which at present, owing to the obscurity which enshrouds its origin, it seems to be very difficult to do—give this trait in the national character a suitable name—I shall for the present designate it as a local characteristic. Speaking of the national characteristics in a general way we note that there are two things which are conspicuous as national peculiarities. One is fidelity: the other, complaisance. It was the spirit of fidelity as we may see by referring to history, that kept our ancestors from committing the cruelties that were perpetrated in China; though it cannot be denied that there have been some exceptions to this, such for instance as that of the Yoshitomo family, when members of the same household were warring against each other.

Again the spirit of complaisance (notwithstanding the fact that there have been such men as Ashikaga Yoshinori) has preserved our people from doing things that have been done in China. If these two characteristics be looked for in every man we meet, they will not be found. Yet, if we speak of our characteristics in a general way, these two good qualities will be found, as a rule, in the hearts of my fellow-countrymen. Motoori Norinaga refers to the spirit of complaisance in those lines of his. "If any ask what is the nature of the Yamato native mind, say his like the mountain cherry tree whose fragrance in the summer time fills the balmy morning air." Here we see how Norinaga looked upon the spirit of which I am here speaking as one of the most marked of our national characteristics. Apt indeed is the illustration he makes use of. Although fidelity and complaisance are virtues which when found in their integrity are most excellent, yet the abuses to which they are liable are numerous, and the extremes to which they may be carried worthy of serious consideration. To speak more minutely fidelity carried too far leads to cruelty. So that if, ride by side with the two words fidelity and cruelty, we place the words cleverness and stupidity; there are times in which stupidity will be found in

combination with faithfulness, and these will be times in which cleverness will be found in combination with cruelty; yet as a rule it is only when those who possess this virtue are uneducated that it degenerates into folly.

The opposite of complaisance is obstinacy. If we put these two words one over against the other, and if we put under these two words power and right, and write easy to lose or difficult to lose, alongside of each, placing the character for easy on the side of complaisance and the character for difficult on the side of obstinacy, (in doing this we shall be arranging the characters as they usually are arranged), it will appear that the nature of complaisance is to lead those who possess this quality, to lose their power and forego their right; Yet at the same time the same quality assists them in gaining other rights in the place of those they have lost.†

These local peculiarities of which I have been writing are closed allied to and dependent on these characteristics, which I have designated moral and political; and it is by a combination of the two classes of qualities that what is called the National Character is produced.

Now where there is a despotic Government, if there are people to serve under it, the people hold in high esteem the despotic Lord and look upon themselves as slaves. If a spirit of complacency characterizes their daily conduct, and fidelity is manifested in the performance of their duties, what state of things can better suit the purposes of those who are interested in maintaining in its integrity a despotic government? This is just how things were in this country until very recently. In these days the spirit of fidelity was manifested by Samurai, who shewed their gratitude for the blessings inherited from their progenitors, by killing their enemies; and there were men who rushed into battle regardless of consequences and threw away their lives in noble style whilst fighting against their enemies. But as for the farmers, merchants and mechanics, they thought it quite useless to make any resistance to the will of their superiors. As the saying goes, "a child's cry and a Daimyo's are alike unreasonable, and alike incapable of being overcome."

Although it has been the virtue of our illustrious Emperor that made the great work of introducing a new form of government an easy matter, yet the spirit of submission in the people conducted very considerably to the smoothing of difficulties that lay in the way of its institution, and caused it to be received with respect when it was actually inaugurated.

Although, then, the national spirit of which I have been speaking was, under a despotic government, a most excellent thing, on the commencement of Foreign Intercourse and the loosening of that cord (of despotism) with which the people had been bound so long, on the dawn of the age in which physical strength had to give way to intellectual power, it could no longer hold its ground. It was followed, as Fukugawa has pointed out, by a spirit of listlessness and lethargy. And now, in attempting to establish anything of the nature of a representative form of government, there is no greater difficulty to compete with than this spiritless condition of the people.

Recurring again to the spirit of servile submission to authority, which characterizes so many of our

* Translated from a book entitled 西先生論集 a collection of the writings of Nishi Sensei. 1st edition, 1830; 2nd edition, 1882.

† The original is somewhat obscure here, but clearer than the translation owing to the dexterous use made of Chinese characters, which help the reader to apprehend the author's meaning.

people, I would illustrate my meaning by a reference to the human body. And I would remark, that the condition to which I refer is not the condition of one who possesses a body in its normal state, strong and robust as it is received from nature, but rather the condition of some rich man's child who has been brought up in retirement, where in some grand palace he has strutted about at ease with his long sleeved coat and his fine trousers. So long as such an one lives in retirement with ample means to fall back on, he may do very well, but if there comes a time when his emoluments are taken away, and an age in which he is obliged to use the pickaxe and handle the plough, at such a time it is very doubtful whether the body that has been so carefully protected, so voluptuously nurtured, will stand the work it is called upon to accomplish. No! it must have been supplied to it, and its limbs be strengthened till they become stout and robust, before it can attain to that normal state of health and strength that nature designed it to possess.

Whilst then the national spirit is on the whole just as I have represented it to be—speaking generally it is the chaos, as 莊子 Soji (Chuang Tse) represents it, that is not carved into order; and in the carving of this chaos into order, (even if as Soji says it dies in 7 days), in the restoring of our people to their normal state of health and strength, the great instrument to be made use of is instruction in law. On this subject I have a great many ideas which lie in their undeveloped state within my brain, but rather than prolong a paper, which already too much resembles the long rambling discourse of one who is unskilled in the art of speech, I will defer its discussion to some future occasion.

† The passage referred to will be found at the end of the section called 應 王's translation of which will be found on p. 97 of Balfour's 'Divine Classic.'

NOTIFICATION No. 40 OF THE PRIVY COUNCIL.

It is hereby notified that a Branch of the Imperial Household Department has been established in Kiyoto.
September 22nd, 1883.

SANJO SAN'EYOSHI,
First Minister of States.

MAIL STEAMERS.

SUNDAY CHURCH SERVICES.

Christ Church: 11 a.m. and 5.30 p.m.
Union Church: 11 a.m. and 8 p.m.
Roman Catholic Church: 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyō: 11 a.m.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 21ST, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyō, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
--- represents velocity of wind.
--- percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 9.9 miles per hour on Monday at 3 p.m.
The highest reading of the barometer for the week was 30.81 inches on Tuesday at 9.27 p.m., and the lowest was 29.847 inches on Friday at 6 a.m.
The highest temperature for the week was 84.5 on Friday, and the lowest was 59.0 on Wednesday. The maximum and minimum for the corresponding week of last year were 79.0 and 59.4 respectively.
The total amount of rain for the week was 0.120 inches, against 1.716 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Fares are:—Special-class (Separate Compartment), yen 2; First-class, yen 1.20; Third-class, sen 60. The distance from Ueno to Kumagai is 38 miles.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, September 20th.

FRANCE AND CHINA.

M. Challemel-Lacour has informed the Ministry that negotiations are progressing favourably with the Marquis Tseng, and that the French Government has resolved upon continuing a conciliatory policy.

The Marquis Tseng and the French Ambassador to England have gone to Raiter (?), in order to confer with Lord Granville.

London, September 21st.

The Marquis Tseng and M. Waddington have returned to Paris.

The Minister for Foreign Affairs, M. Challemel-Lacour, has been granted leave of absence, and Jules Ferry has been appointed to conduct the negotiations to a conclusion. This is generally looked upon as an indication favourable to peace.

London, September 22nd.

THE FRENCH IN TONKIN.

The French Press unanimously recommend that the expeditionary force in Tonquin should be a single command.

Another reinforcement, numbering one thousand men, has started for Tonquin.

It is announced that Admiral Courbet has been appointed to the sole command of the entire expeditionary forces in Tonquin, and that General Bouet has been superseded.

THE DISTURBANCES IN CROATIA.

The disturbances in Croatia have been quelled, and the measures taken have had the effect of quieting the disaffected districts.

London, September 23rd.

RIOTS IN CROATIA.

Croatian peasants, numbering about six hundred, assembled at Parkasevaz, demanding the separation of Croatia from Hungary. The rioters were dispersed by the military, many being killed and wounded.

London, September 24th.

FRANCE AND CHINA.

In consequence of rumours to the effect that China had secretly determined to adopt an unyielding policy, the French Press have assumed a hostile tone, and emphatically urge the necessity for continued reinforcements to Tonquin.

London, September 25th.

AFFAIRS IN MADAGASCAR.

It is reported that the Hovas have retaken all their positions on the North-west coast of Madagascar, except Majunga.

London, September 26th.

FRANCE AND CHINA.

The French newspaper *Temps* publishes an article in which it states that, under the influence of England, the Chinese Government has proposed the annexation by the French of Annam as far as the Red River, China to annex the remainder and Tonquin. The counter-claim of the French is that they retain the whole of the delta.

LATEST SHIPPING.

FREIGHTS.

For New York, via Suez Canal, and China and Japan ports, the steamships *Galley of Lorne*, *Strathmore*, and *Benarty* were despatched on the 26th instant, leaving that berth vacant for the time being, but with little inducement for others to occupy it. For London we have the steamship *Cardiganshire*, and the British bark *Sagitta*, the former taking cargo for Hamburg, and the latter for Havre. The French 3-masted schooner *Louise* is chartered to load at Kobe for New Zealand. Coastwise rates are somewhat higher but not yet tempting, and no suitable vessels are on offer.

ARRIVALS.

City of Peking, American steamer, 3,129, Berry, 23rd September.—San Francisco 4th September, Mails and General.—P. M. S. S. Co.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Baron Rosen, Russian Chargé d'Affairs, Hon. Louis Greville, Rev. and Mrs. F. M. Price and child, Dr. and Mrs. Crews, Mr. and Mrs. Coe, Mr. and Mrs. Boggers, Mr. and Mrs. Ogasawara, Mr. and Mrs. Goldsborough and 4 children, Mr. and Mrs. Iwayama, Rev. and Mrs. Longdon, Mr. and Mrs. Petersen, Mr. and Mrs. Arikawa, Mrs. Simpson and child, Madame Monton, Mrs. Takeye and child, Mrs. Winn and 2 children, Miss Winn, Miss MacMillan, Rev. P. D. Bergen, Rev. V. C. Hart, Rev. J. B. Ost, Dr. Zacharia, Captain Yoshikawa, Messrs. Bergen, M. Cumming, Jantzen, W. B. Thomson, W. Kolling, I. Twombly, C. A. L. Dunn, D. Jackson, W. Cance, P. De Lobel Maley, J. L. Lyett, F. M. Platt, H. Budler, T. R. Rogers, G. Goward, T. Walsh, M. Ginsburg, Lang, S. G. Sheppard, W. Irving, Shimamoto, Ito, Nojim, and M. Kobayashi in cabin.

Per Japanese steamer *Seirio Maru*, for Yokkaichi:—7 Japanese in cabin; and 71 Japanese in steerage.

CARGOES.

Per French steamer *Godavery*, for Hongkong:—Silk for France, 504 bales; for England, 17 bales; Total, 521 bales.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain A. F. Christensen, reports leaving Kobe on the 21st September, at 6 p.m. with light south-westerly and south-easterly winds and cloudy weather to Oo-sima; thence to port light north-easterly winds and cloudy weather. Arrived at Yokohama on the 23rd September, at 6.05 a.m.

The Japanese steamer *Taganoura Maru*, Captain Matsumoto, reports leaving Yokkaichi on the 23rd instant, at 7 p.m. with fresh breeze to Rock Island; thence to port light breeze and fine weather.

The Japanese steamer *Niigata Maru*, Captain John C. Hubbard, reports leaving Hakodate on the 25th September, at 6 a.m. with fresh northerly winds and fine weather throughout the passage. Arrived at Yokohama on the 27th September, at 8.15 p.m. At Hakodate the British bark *Still Water* was loading for San Francisco, and the British ship *J. V. Troup*, from Yokohama, arrived at that port on the 23rd September.

LATEST COMMERCIAL.

IMPORTS.

We have a very quiet week to chronicle, sales for Yarns amounting only to some 400 bales, and prices are generally weaker. In Shirtings, too, there has been a very dragging Market, sales amounting only to some 5,500 pieces, and the Market is very quiet at the close. In other Goods, there has been but little doing, and Metals have been quiet.

COTTON YARNS.

| | PER PICUL. |
|-----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium - | \$25.00 to 25.50 |

IRON.

| | PER PICUL. |
|---------------------------------|----------------|
| Flat Bars, ½ inch - | \$2.50 to 2.90 |
| Flat Bars, 1 inch - | 2.30 to 2.90 |
| Round and square up to 1 inch - | 2.80 to 3.00 |
| Nailrod, assorted - | 2.35 to 2.60 |
| Nailrod, small size - | 2.35 to 3.15 |

KEROSENE.

Sales during the week amount to 33,000 cases, and deliveries to 22,000 cases. The Market shows a slight improvement, and sales have been made at quotations. The *Alex. McNeil* arrived on the 22nd, but has taken her cargo on to Kobe. Stocks amount to about 760,000 cases.

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.65 |
| Comet - | 1.59 |
| Stella - | 1.55 |

SUGAR.

Trade during the past week has somewhat revived, and may be described as of moderate dimensions in Brown sorts, which has reduced the Stock in hand to something less than 30,000 bags. But little doing in White, and no quotable alteration has to be made in either kind, though the following rates are firm.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$7.50 to 8.00 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.50 to 4.60 |

EXPORTS.

SILK.

Business has continued on a large scale at, speaking generally, lower prices. An attempt was made by one large operator to break down rates but with only partial success. Settlements for the week are 750 piculs with a fall of \$5 to \$10 on Hank sorts, and \$10 to \$20 on Filatures and Re-reels. Arrivals come in freely from the country, and Stocks are increased to quite 4,500 piculs. Japanese show some anxiety to keep moving, and if buyers are not too eager, we may see still easier prices. Telegraphic news from Europe and America are not very encouraging, the plentiful and cheap supply of Italian Silk keeping Japans in check.

Export to date is 7,654, against 7,014 at same date last year.

Hanks have been settled in quantity on basis of *Tomiyoka* \$505, *Omama* \$495, *Shinshu* \$510, *An-naki* \$480, *Maibash* \$475, *Techiu* \$470, and *Hachiji* \$450.

Filatures have been weak and irregular for anything below the best chops. Best *Shinshu* 14/16 den. has been done at \$640, Good *Shinshu* \$600, Good *Koshiu* \$580, *Mino* and *Hida* \$570 down.

Re-reels are not much in favor at the moment. *Matsushirosha* reported at \$590, and Medium kinds \$580 to \$585.

Kakedas.—But little done in these, prices nominally in favor of buyers. A parcel of Chocho noted at \$600.

Hamatsuki and coarse kinds in fair demand at slight reduction on late rates.

| | QUOTATIONS. |
|----------------------------------|--------------|
| Hanks—No. 1½ - | \$505 to 515 |
| Hanks—No. 2 (Shinshu) - | 500 to 510 |
| Hanks—No. 2 (Maibash) - | 495 to 505 |

TEA.

During the week now under review, business has continued on the same basis as previously reported, Settlements reaching about 2,945 piculs. The better grades have attracted most attention, and Teas with quality have commanded full prices. Receipts have been comparatively small, and Stocks are now reduced to 4,200 piculs, against 5,400 piculs last year. Market at the close is pretty firm at the undernoted quotations. The *Pacific Mail* steamship *City of Rio de Janeiro* despatched on the 23rd instant, carried Tea as undernoted from this port:—53,231 lbs. for New York, 53,310 lbs. for Chicago, 4,000 lbs. for Portland, Oregon, 210,684 lbs. for California, and 82,229 lbs. for Canada. The *Mary Winkelman* which sailed on the 18th from here, for San Francisco, took 537,195 lbs. Tea for California. At present there is no Suez Canal steamer on the berth for New York. The next mail steamer for San Francisco is advertised to leave on the 6th proximo, taking Tea at 2 cents per lb. gross for the Eastern States and Canada, and at \$9 per ton of 40 cubic feet for San Francisco.

| | QUOTATIONS. |

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKE, DORE & Co., Corbet Court, London, E.C.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

YOKOHAMA: SATURDAY, OCTOBER 6TH, 1883.

MARRIAGE.

On Monday, 24th instant, at the Methodist Chapel, No. 221, Bluff, the Rev. JAMES BLACKLEDGE, A.M., Professor of Hebrew and Greek in the Tokiyo Anglo-Japanese College, to Miss KITTIE TRENT, of Janesville, Wisconsin, United States. The ceremony was performed by the Rev. A. S. MACLAY, D.D., assisted by the Rev. D. S. SPENCER.

BIRTH.

At Tokio, on October 1st, the Wife of the Rev. HUGH WADDELL of a Daughter.

WEEKLY NOTES.

THE vernacular press has published what purports to be the text of a Convention recently concluded between Japan and Korea, embodying trade regulations which are to come into force from the 1st of November next. As might have been expected, rumours of this Convention had been in circulation for some time, especially in Shanghai, where a local journal, declaring that the new tariff had been fixed on a five per cent. basis, devoted a leading article to the subject, chiefly, as it appeared, with the object of proving that, since Japan had now forced "the Koreans to accept the very terms against which she was fighting herself, it would no longer be possible for her to persist in her attitude of remonstrance except at the cost of her reputation for consistency. Such an argument, though fair enough in the abstract, becomes exceedingly frivolous when judged by the international practice of this nineteenth century. If to be consistent were an important item in the programme of a country's conduct, few Western States could show a respectable record, and least of all Great Britain, who suffers her own colonies to impose protec-

tive tariffs, and yet sends her ships and soldiers to force virtual free trade upon independent Oriental States. No, in truth, the less said about political consistency the better. The times are not fitted for the practice of such an expensive luxury. The Shanghai journal's intelligence excited some curiosity at this side of the water, though it must be confessed that every one who understood anything of the real circumstances of the case, gave little if any credence to the story of a five per cent basis. China, as we explained at the time, was the stumbling block; not Japan. It could not be expected that the latter would willingly agree to concessions amounting practically to discrimination in the former's favour. This would have been the inevitable result of subjecting goods imported from Japan to duties from which goods imported from China were exempt. The whole of Korea's import trade, whatever it might be worth, would have been thrown into Chinese hands, while the revenue derived by Korea from her customs dues would have remained the same as before. It did not seem likely that Japan would place herself in such a quixotic position, while, on the other hand, it seemed equally unlikely that, by hastily concluding a convention on the existing Chinese basis, she would lay herself open to misconstruction of the nature outlined in the Shanghai journal's comments. It would appear, however, that Korea's anxiety to procure some practical recognition of her right to a voice in the solution of a problem so nearly concerning her has prevailed over other considerations. A tariff has been fixed on lines which closely resemble those which Japan herself is supposed to have accepted as the result of treaty revision. The exact terms, however, are still somewhat obscure. The *Yiji Shimo*, which professes to give the text of the Convention, says that the import duty on liquors, perfumes, fancy-goods, musical instruments, clothing, &c., is to be 30 per cent., but we have reason to believe that the figures given by the *Nichi Nichi Shimbun* are more correct. The various duties (*ad valorem*) are as follows:—

| EXPORTS. | |
|-----------------------------------------------------------------------------------------------------------|--------------|
| Gold, silver, bullion and gold-dust | Free. |
| Ginseng, prohibited except by special permission, but if carried by Koreans themselves to Japan | 15 per cent. |
| All other merchandise | 5 per cent. |
| IMPORTS. | |
| Dyes, shittings, lawns, silks, <i>Yajiaru</i> (a species of Chinese silk), and Japanese <i>Sude</i> | 8 per cent. |
| Velvets and carpets | 10 per cent. |
| <i>Shiru</i> and <i>Domo</i> (varieties of Japanese silks) | 15 per cent. |
| Copper, iron, and other metals, ornaments, clocks, playthings, &c. | 20 per cent. |
| Articles of food | 5 per cent. |
| Kerosene | 5 per cent. |

American influence has obviously been brought

to bear in fixing the last item, but Korea may count herself fortunate in having been persuaded to a concession which will have the effect of adding immensely to the comfort and productive power of her people. On the whole, the tariff seems moderate and fair. Korea wants to derive a revenue from her Customs, and these rates are not too high to defeat her purpose. Japan's share in the arrangement is very creditable to her. Under her Korean treaty of 1867 she enjoyed the privilege of free trade with the peninsula, and she might, not unreasonably, have persisted in exercising that privilege at least until Korea's new treaty friends had distinctly formulated their programme. In consenting to take the initiative, she has practically acknowledged that so far as her creed, at any rate, is concerned, international relations ought to be conducted with some regard to the changing circumstances of those concerned. It remains to be seen, now, whether Her Majesty's Representative, who is said to be *en route* for Korea for the purpose of negotiating a "practicable" treaty, will obtain, or seek to obtain, better terms than those embodied in the Japanese Convention. Sir Harry Parkes will doubtless bring to the negotiations an earnest desire to give due weight to Korea's immediate interests, and his large experience will enable him to frame a treaty free from the objectionable features of the existing document. But his chief duty will be to obtain a distinct definition of China's position *vis-à-vis* her tributary. Unless that point is finally disposed of, we can be tolerably certain that England will not be included among the Hermit Kingdom's new treaty friends. If the King of Korea is nothing more than a Chinese Viceroy, it would be farcical to place him on the same level with European Sovereigns. There may be some difficulty in unravelling the tangled skein of the Middle Kingdom's relations with its most important tributary, but Sir Harry Parkes is equal to the task, and it is exceedingly fortunate that he is in a position to take charge of the negotiations. We do not expect much from Korea's foreign trade, but every body who desires the preservation of peace in this part of the world must be anxious to see a conclusive adjustment of problems that may at any moment assume a seriously embarrassing completion.

ADMIRAL WILLES' reply to the Chairman of the Hongkong Chamber of Commerce, when the latter remonstrated against the former's manner of disposing of the China squadron, has provoked some severe criticism. It cannot be denied that

the Admiral has an undoubted right to dispose of the squadron under his command as he thinks fit, but events have proved that his method of disposing of it is liable to be condemned by circumstances. When English residents of Canton, driven out of their houses by a mob of native incendiaries and other ruffians, find themselves obliged to take refuge on board a Chinese gunboat, it may fairly be concluded that there is a screw loose somewhere. If the truth were known it would probably be found that, in the days immediately following the Canton riot, a very large number of messages flashed along the wires before the China squadron became an accessible reality to Her Majesty's Representative in Peking. The public has been accustomed to consider that the strength of a squadron in foreign waters is calculated with some reference to the number of the points it has to guard. A general who is required to garrison a town thinks first of the number of sentries he will have to post. His estimate would be entirely changed if he knew that the chief function of his troops would be to manoeuvre in the neighbouring country and leave the town to shift for itself. But these simple principles appear to have lost their application in Chinese seas. The British squadron confines itself to demonstrative duties. It cruises about from place to place, making, no doubt, a very goodly show, but trusting chance, chiefly, to lead it where its presence is required for the protection of British life and property. We do not pretend to pass judgment upon the Admiral's arrangements in this regard. Doubtless he has good reasons for keeping his ships together; but it is unfortunate that events should have proved so unpropitious for the prosecution of his programme; unfortunate that his squadron should have been cruising in the extreme north of the Japanese seas at the very moment its services were required in the south of China, and unfortunate that the tone of his letter to the Chairman of the Chamber of Commerce should be such as to aggravate, rather than to mitigate, the public dissatisfaction. A Shanghai contemporary describes the letter as neither satisfactory nor courteous, but we doubt whether the fault was entirely on the Admiral's side. Possibly our historical knowledge is deficient, but we have never before heard of an official communication directly addressed to the Admiral or General on the China station by the Hongkong Chamber of Commerce. The Governor is surely the proper correspondent of the Chamber. Certainly he would have been a few years ago, when his titles included that of naval and military Commander-in-Chief. The Admiral may have felt that he was arraigned before a tribunal which had nothing to do with him, and when he politely told the Chamber to mind its own business, his impatience was natural, though, as events have proved, discretion would have been the better part.

WHEN post office officials apply funds transmitted through the post to defray the current expenses of the office, the advantages of this

mode of conveyance become problematical. The post office in Kiukiang Road, Shanghai, seems disposed to take this liberal view of its rights. At all events, a Chinaman who recently sent \$5 in a letter to his wife at Ningpo was surprised to receive from his spouse, some fourteen days afterwards, a remonstrance against his remissness in supplying her with funds. He accordingly repaired to the post office, and asked what had become of the money he had handed in to be sent to his wife. The answer was that the dollars had been temporarily appropriated to minister to the wants of the office, but that they should be returned so soon as funds were plenty. The person aggrieved is said to have been so unreasonable as to put the matter in the hands of the police.

No one can have failed to notice the remarkably moderate tone of Sir Harry Parkes replies to the addresses of welcome he has received in China. Speaking, on the 16th ultimo, to a deputation of the foreign residents of Chefoo, he said:—"I am sure you will remember that it is only by showing to the Chinese that their and our interests are not antagonistic, but are mutually advantageous, and that we are not working for our own prosperity alone, that we must try and get them to grasp the same ideas regarding our interests that we ourselves entertain. Our line of conduct towards the Chinese should be to pull together with them and to bear with them, and not to try and force anything on them. This is the best way by which we can hope to induce the Chinese to look favourably on our wishes. We must not forget, however, that the great secret of success is patience. The Chinese mind needs expansion, and until we can bring this about by mild persuasive measures we can have very little hope for the prosperous development of this country's resources. I am glad to see your remarks that 'impartial and conciliatory' views on all questions between Chinese and ourselves are amongst the chief means of dealing successfully with such matters; and I am pleased to find that you give me credit for being animated with feelings of impartiality and conciliation, which I am happy to say is the case, for our policy is essentially a conciliatory one. This makes me hopeful of being able to assist you in furthering your interests, though I feel I may not be able to achieve any brilliant successes on my own merits, following as I do in such able footsteps as those of my predecessor, as I said the other day at Shanghai. I have already said that patience is necessary, and I trust that you will also have patience with me, and that you will give me credit for always doing my best for your advantage, though I may not be able to attain this end as promptly as you might desire; for you must be well aware that things do not always advance in China according to our ideas. It may not be at once, and we must not expect too great things; but if not in our time, our successors may derive the benefit of our efforts." It is interesting to contrast this language with the sentiments formerly attributed to Sir Harry

by his professed admirers in Japan. "Mild persuasive measures," patience and reciprocity of interests, do not remind us vividly of the programme he was supposed to pursue here; neither have they much in common with the spirit that animates the avowed champions of this community.

A MEETING of the Land Renters was held on Monday at the Chamber of Commerce Rooms for the purpose of discussing a document forwarded for their information by the Minister for Foreign Affairs. The document was in the form of a letter addressed to the latter by the Prefect of Kanagawa in reply to a memorial which the Land Renters had sent to the Foreign Representatives in the summer of 1882. A report of the Meeting will be found elsewhere in our columns. It was not largely attended, and with an amount of modesty not usually characteristic of such assemblies, it declined to regard itself as representative. The election of a Committee to act on behalf of the community was accordingly left to be decided by universal suffrage. The Prefect's letter to the Minister of Foreign Affairs had previously been published in the local English newspapers, a proceeding which gave rise to some criticism. It may be presumed, however, that the permission of the Minister for Foreign Affairs, to whom alone the letter as well as the right to make it public belonged, had been previously sought and obtained. The Meeting betrayed some desire to engage in polemics, but beyond a murmured protest about certain heaps of stones that took up too much of the road to a very "old resident's" house, nothing practical resulted from this mood. Another gentleman read out a lengthy document which he had prepared by way of reply to the Prefect's memorandum, and the Meeting spent a great deal of time considering whether, having failed, from a variety of causes, to follow the reading of this reply, they should sanction its publication by the local press. It was finally decided that no more convenient course presented itself, and the public, having since had an opportunity of perusing the document, are amused to find that it describes as "barbarous and arbitrary" the idea of delegating to the Prefect of Kanagawa powers which are possessed and exercised by every police magistrate in Great Britain. In most societies there are to be found one or two individuals whose zeal outruns their reasoning capacities, but it is more uncommon to find reasoning societies represented by such individuals. There was yet another very old resident who proposed that the press should be requested to abstain from making any comments on the matter before the Meeting, but fortunately for this would-be foe to freedom of speech, the Meeting was otherwise occupied at the moment, and before its attention was disengaged, the old resident took his departure. In the cause of consistency, for which we entertain some respect, we are glad that circumstances were unfavorable to the development of this muzzling design, because it so happens that the gentleman who

conceived it had made himself conspicuous at a public meeting two years previously by roundly condemning a precisely similar proposition formulated by somebody else. These, however, were mere incidents. The principal resolution adopted by the meeting embodied a thoroughly sensible, in fact that only sensible, course, and there seems at last to be a perceptible chance of getting this weary municipal question satisfactorily settled.

BARON ROMAN R. ROSEN, His Imperial Russian Majesty's Chargé d'Affaires in Tokiyo, has been gazetted Consul General and Political Agent at Phillipolis, whither he proceeds at the end of this month. Baron Rosen's service in Japan dates from 1871, during nearly four years of which period he performed the duties of Chargé d'Affaires. It has seldom been the good fortune of any Foreign Representative to earn such a reputation as Baron Rosen will leave behind him both in official and social circles. He has succeeded in winning the hearty friendship of those with whom he has been associated diplomatically, not less than of those who have been happy enough to know him privately, and we sincerely hope, for the sake of the better relations which will sooner or later be established between this country and the West, that the routine of the Russian service may one day permit his return, in a more responsible capacity, to a country where the high qualities of his character and intellect will always be remembered.

NOTES.

THE meeting of land-renters held on the 1st instant at the Chamber of Commerce Rooms adopted a resolution which sheds upon the municipal prospects of Yokohama the first glimmer of light they have known for many years. To remedy the abuses which unfortunately flourish in this settlement nothing is wanting but the establishment of a friendly and unofficial channel of communication between the foreign residents and the Local Authorities. It is known that the latter are honestly anxious to meet the views of this community, and, as Mr. W. B. Walter justly pointed out in moving the resolution, there are evidences, especially since the appointment of the present Prefect, that the spirit of reform has found practical expression. It is extremely difficult, if not absolutely impossible, for the Local Government to achieve anything satisfactory so long as it is without the co-operation of the foreign community, and certainly it has not hitherto enjoyed that co-operation. But the appointment of a Committee empowered to consult with the Prefect and to offer such suggestions as may from time to time be necessary, will immediately have the effect of bringing both sides into useful contact, and will enable the community to feel that they are not entirely unrepresented in the management of affairs which so closely concern their comfort and well-being. Twelve months ago, when advocating a modified form of the same

plan now about to be put into execution, we expressed our confidence that "the Local Government is not so unreasonable as to underestimate the value of foreign assistance; that it is ready and willing to profit by that assistance, and that what we want is some non-Consular link between ourselves and it. The Permanent Committee, now to be elected by the suffrages of the whole community, will supply that link, and we feel convinced that it constitutes the only middle way out of the deadlock into which municipal affairs had apparently drifted.

THE party of the Constitutional Imperialists has come to an end. Its decease had long been anticipated, not from inanition, but because there really was no reason for its existence. Of all political parties formed recently in Japan—and truly their name is legion—not one included in its programme any principle that required to be combated from the platform of constitutional imperialism. With exceptions so rare as to be quite insignificant, everybody in Japan desires the establishment of a constitutional form of government, and everybody, without any exception whatsoever, desires to preserve at least the outlines of the Imperialism which is supposed to have existed here eight centuries before the Christian era. The Constitutional Imperialist Party consequently represented nothing more than an ebullition of thoughtless enthusiasm. Somebody, we believe it was Mr. Fukuchi, editor of the *Nichi Nichi Shinbun*, bitten by the universal rabies of party-making, thought that officialdom, like every other agglomeration of co-actors, must be represented upon the political platform, and in pursuance of this fancy laboured to unite a coterie of controversialists who had no sooner assumed the shape of a party than they found themselves without the sympathy of those they professed to represent, and unopposed by those they volunteered to defy. So they only held together long enough to accomplish a decent demise.

If the Constitutional Imperialists needed proof of the fact that any attempt to defer the hopes held out to the nation by the Imperial Rescript of 1881 would receive no official support, they have probably found that proof in the recall of a Japanese Plenipotentiary, whose sudden and unequivocal expression of conservative views placed him entirely beyond the pale of his colleagues' sympathy. We may be wrong in associating the two events—the access of conservatism and the retirement of a well known diplomatist—but we only echo common report when we say that the publication of a political brochure by a Japanese in Washington, and the recall of its author, stand to one another in the relation of cause and effect. The pamphlet is closely reasoned; and every page contains evidence of deep and earnest thought, but its conclusions find no endorsement in Japan. The writer says that "it has not been his intention to argue against parliamentary institutions, or to endeavour to prove that Japan would be wrong in adopting them;" but that "he has merely at-

tempted to show that their adoption now, or even for a number of years to come, would be a mistake and would work more harm than good." Among thoughtful men he will find many fellow-thinkers. Indeed, we cannot doubt that exponents of his doctrine may play a very useful part in the political progress of this country. But he is out of sympathy with his time. All classes in Japan, officials not excluded, are resolutely bent upon introducing constitutional forms of government, and those that attempt to stem the tide of popular resolve must be prepared to be swept aside unceremoniously.

A RECENT investigation into the practice of adulterating teas for the American market throws considerable light upon the methods of the New York manipulators. It is demonstrated that all the precautions prescribed by the prohibitory laws of the United States are virtually unavailing, for the reason that the large dealers in that country are quite as much in the habit of mixing extraneous substances with the leaf in their own warehouses, as of ordering spurious importations directly from Asia. The disclosures were connected with a seizure of several hundreds of chests in New York city, on the 22nd of August,—the goods having been brought from the East by the steamships *City of Tokio*, *Pembrokeshire*, and others. Seven hundred half-chests of "Japan tea dust" were condemned as unfit for use, and the condition of the entire lot was such as to call for a more minute scrutiny into the usages of the trade than had previously been instituted. The Government inspector procured, from one of the principal merchants, numerous samples of the materials used in "preparing" tea for the market,—not the stuffs mixed in with teas of lower grade, but that which the dealers declare to be necessary, in order to give the leaf the appearance which purchasers prefer. These adulterations were shown to consist chiefly of gypsum, soapstone, and Prussian blue. With respect to the last-named article, the merchant positively stated that it was a powder brought from Japan, the composition of which was a secret belonging to this empire; but the analysis proved it to be the ordinary poisonous Prussian blue of chemistry. The drugs, as arranged for mixture with the teas, were found to contain in some instances five per cent., and in others ten per cent. of this active poison. The Government agents report that no less than five prominent New York houses habitually colour and adulterate their tea after receiving it;—a practice which renders the sanitary act of Congress inoperative, since the United States law applies only to spurious goods imported from abroad. To meet the new evil, action should be taken, and, it is hoped, will be, by the State Board of Health.

Three days after the exposures consequent upon this seizure and examination, an article appeared in a leading New York newspaper avowedly defending the methods of the principal tea merchants, and protesting against official interference therewith. The "packers"—as

there are called who manipulate the goods subsequent to their arrival in America,—claim that their processes “do not injure the tea, but on the contrary actually benefit it.” But they do not go to the length of asserting that their proceedings are inspired solely by the desire to improve what passes through their hands. It has become necessary, they say, to subject the leaf to treatment that will give it the colour, body, etc., which customers demand. Really good and sound tea, in its natural state, they affirm, is not beautiful to look at, and they must therefore supply the required azure tint, richness and lustre, by interjecting more or less deadly mineral substances. But they deny that any dangerous effect can be created by the small proportion of colouring matter introduced. One well known “packer” desired to have it published that he would drink, at a draught, everything of a deleterious nature that could be extracted from half a chest of manipulated tea. In speaking thus, he referred only to higher grades, and not to the utterly worthless wares which are often offered for sale. Without reference to these latter, however, the acknowledged transformations produced in so-called wholesome goods are of a character to excite no little astonishment among devotees of the cheering cup. “Teas not highly enough coloured to suit dealers are brightened up a little, by the use of soapstone and Prussian blue or indigo.” “In case a darker colour is required, some kind of black is used.” “All of the packers stand ready to impart to the teas any colour that may be desired,” or to “give them a little more style.” An example of the *modus operandi* was exhibited in presence of a reporter for the *New York Times*, at the establishment of Olendorf & Co. Taking a package of Japan tea “of a beautiful green colour,” Mr. John Olendorf ordered his clerk to “carry that upstairs and have it made into a basket-fired Japan.” The metamorphosis was promptly wrought, and so were many others, not less apparently marvellous to the uninitiated. They were all explained and described without hesitation or apology, including the mixture of cheap and high grades, and the “freshening up” of goods damaged by water and otherwise, so that they should present the aspect of a new importation. To the unskilled reader, it is by no means easy to draw the line between the transactions which the packers declare perfectly legitimate, and those which they repudiate as dishonourable. They do not even seem to shrink from the imputation of taking tea that has been once used, recolouring it, and putting it upon the market again. Certain practices, however, they consent to regard as irregular. The “Ping-suey” fabrications, they admit, ought to be excluded from America as they are from England. The use of gravel, iron, and brick-dust, in adulteration, is conceded to be improper. An “ingenious trick” said to be played by Chinese and Japanese sharpers is also viewed with disapprobation. “Inside each leaf tightly rolled in, is placed a minute grain of sand, the object being to increase the weight. . . . In one half-chest examined at the Government laboratory, there was a sufficient quantity of

these bits of gravel rolled into the leaf to add two and a half pounds to the weight of the half-chest.” After perusing these significant reports, it is impossible to refrain from expressing the profoundest commiseration for the tea consumers of the United States. What with the alleged, and practically undisputed frauds in the countries where the herb is grown, and the acknowledged “treatment” in the countries where it is used, the chance that drinkers will ever taste a pure article is about as remote as the likelihood of their knowing it, if they do by a series of lucky accidents obtain a genuine specimen. Finally, the most curious of all these curious facts is that “Japan tea,” pure or otherwise, is an article almost unknown to retail trade in America. It cannot be found anywhere on general sale, east of California, we are informed, although millions of dollars’ worth are imported into the United States each year.

We understand that His Excellency Sir Harry Parkes proposes to visit Korea for the purpose of concluding a treaty with that country. H.M.S. *Sapphire* left here for Kobe to pick up Mr. W. G. Aston, and thence to Shanghai, where Sir Harry will embark.

It appears from dispatches sent to Washington, by General Foote, that the position of Minister to Korea is burdened with greater hardships than are usually attendant upon diplomatic offices in new and unknown lands. Apart from the rigours of the climate, which is marked by great extremes of heat and cold, and against which the rudely built houses of the country afford slight protection, the place of residence assigned to him is incommodious and disagreeable in the last degree. It is surrounded by hovels and “in the midst of filth.” Probably the best native dwellings are equally objectionable, and the Envoy feels the necessity of contenting himself with what is considered satisfactory by the authorities of the State. These latter, however, are insensible to privations which bear with severity upon persons of European or American habit and experience. Fuel, he reports, can be obtained only with much difficulty, no wood being available for that purpose but pine boughs; and everything in the shape of food, excepting the barest necessities of subsistence, has to be brought from Japan or China. Priority of intercourse, in a case like this, is rather dearly purchased, and it is to be hoped that the isolation to which General Foote and his family are now doomed may be speedily ended by the arrival of colleagues from other powers. The difficulties of his post are in some respects greater than those which Mr. Harris, first foreign representative in this empire, was compelled to endure. That gentleman’s periods of solitude,—relieved only by the presence of his Dutch interpreter,—were more prolonged, and his opportunities of communication with the outer world were far more irregular as well as more infrequent; but he found a certain compensation in the manifold attractions of the country and its people, which we fear would be

vainly sought in the coarser and less genial associations of the neighboring kingdom. There has been no time, since Japan was known to the West, when the condition of the loneliest exile here would not be tolerable, at least; whereas the discomforts of Sôul appear to be almost entirely without palliation.

THE monster monopolists of the United States are gradually attracting the attention they deserve. A London journal, so the telegraph informs us, has been reading them a pretty little lesson, to which there is not the remotest chance of their paying any attention. The warnings addressed to them by the press of their own country are considerably more direct and outspoken, as for example, when Mr. Jay Gould is informed that “if he persists in making himself a mere lightning rod, a popular thunder storm is not unlikely to knock him over.” The simile is a little slipshod, but its import is unmistakable. There are among Mr. Jay Gould’s countrymen persons who profess to see in him the very prince of philanthropists. By them his curious operations on that celebrated Black Friday when so many of his friends became acquainted with the perils of misplaced confidence, are declared to have been motivated by a desire to render Wall Street as unpopular as possible, and thus deter many enterprising men from that maelstrom of dishonesty—stock-gambling. In the same same way his stock-watering operations are said to have been caused, not by covetousness, but by a desire to awaken the public to the consequences of such work; while, again, his stern attitude towards the telegraph operators when on strike is described as a courageous effort to put a final period to such inconvenient demonstrations, even at the cost of presenting the corporation, of which he is the chief, “as an arrogant, unscrupulous organization, defiant of the public, calmly confident in the power of the money it has extorted by operations no better morally than those of the professional highwayman, and as indifferent to the rights of the men and women in its service as though they were cattle.” It is a delicate problem to determine where honesty ends and knavery begins in the use of the moral and physical agents which a speculator can command. The ultimate purpose of all trade enterprises is to secure a monopoly. Every commercial advertisement which appears in the daily journals bears witness to this fact. From the chemist who patents his newly invented tooth-powder to the newspaper which claims for itself specialities no rival can boast, all have the same object—to secure a maximum share, if possible the whole, of public custom. We cannot see that Mr. Jay Gould’s performances are more culpable than the deceitful puffs of the highly moral journalist or the exaggerated eulogies of the ingenious mouse-trap inventor. Indeed we believe that Jay Gould made his debut in the latter capacity, and if he has since then learned to ensnare not mice but the dollars of the multitude, it is simply because he is more competent, not less scrupulous, than his fellows.

A TOKYO JOURNAL tells us that news from New York indicates a constantly increasing demand for the finest qualities of Japanese porcelain, as well as for screens, umbrellas, and so forth. We observe with interest and pleasure that, although the first effect of their introduction to Western markets was to persuade Japanese artisans to exchange their patient, painstaking habits for a hasty, unconscientious style of work, the necessity of stimulating Occidental taste is beginning to recall them to the old routes. The reaction is most visible, perhaps, in the wares of Kaga. The old *Ao-Kutani* porcelain—i.e. a milk white porcelain decorated with rich, lustrous enamels in green, blue and yellow—had become, until quite recently, a thing altogether of the past. It seemed hopelessly beyond the power of the modern Japanese Keramist to reproduce even a poor imitation of the beautiful enamels in the preparation of which his ancestors excelled. But of late a wonderful improvement has been effected. Among recent exportations to America there have been some specimens of *Ao-Kutani* ware, which, so far as quality and manipulation of enamels are concerned, will bear comparison with the best works of the past century. The porcelain itself is still somewhat crude and chalky, but this defect is not irremediable. Altogether, when we consider the exquisitely delicate enamelling upon copper, the rich and elaborate works in inlaid iron, the beautiful embroideries and textile fabrics, as well as the finespecimens of lacquer and ivory ornamentation that find their way Westward at present, we are disposed to think that there is no longer any reason to lament the vitiation and decadence of Japanese art.

AN OHIO judge was recently required to deliver judgment in a somewhat peculiar case. namely—whether a gentleman incurably addicted to profane language is entitled to the use of a telephone. It appears that telephonic science is not yet fully abreast of popular expectation, and the consequence is that, when people are most impatient for an answer to some question transmitted along the wires, they are least likely to be speedily satisfied. Thus when the telephone came into general use its first effects upon general morality were very shocking: Staid old gentlemen, who had never before been known to raise their voices above a courteous monotone, appeared to have all their principles upset by the newly acquired ability to discharge whatever verbal missiles they pleased at the head of an invisible *vis-à-vis*, and were heard across the wires swearing lustily at the operators at the central station for keeping them waiting, for asking the same question over and over again, or for interrupting them in the middle of important messages. This access of profanity was not without excuse. A man might be pardoned if he suffered his gorge to rise when, after he had finally succeeded in "getting" the Central Station and asking to be put in communication with a certain individual, he heard, not the well known voice with which he desired to hold converse, but the indifferent tones of an operator repeating,

"Well! Well! What is it? What is it? What is it?" *Contretemps* of this nature, as well as the not unfrequent episode of being interrupted in the middle of a conversation with a friend by an operator's interjection of "Hurry up! hurry up! Aren't you through yet?," have so thoroughly upset the public equanimity that a perfect storm of invective often blows in the Central Station. The thing became so bad that subscribers were finally warned that swearing over the wires would no longer be tolerated, and that any infraction of this rule would be followed by the removal of the instruments from the offices of those so offending. To this warning, though often repeated, a certain subscriber declined to pay any attention, and a demand was finally made by the Company for the instrument which had been placed in his office. The demand was refused, and the subscriber brought suit to compel the Company to continue the customary service. The Judge, however, sided with the guardians of morality, and in delivering judgment against the plaintiff said:—"The telephone reaches into many family circles, and it must be remembered that it is possible, from the peculiar arrangement of the instrument, that a communication intended for one individual shall reach another. All communications, therefore, should be in proper language. Moreover, in many cases the operators in the exchanges are refined ladies, and, even beyond this, all operators should be protected from insult." The instrument was accordingly removed, and the nimble-tongued subscriber learned that though the privilege of private profanity was not denied him, electricity was no longer available as a medium for spreading his invectives among the community.

MR. CONSUL PEIXOTTO reports from Lyons to the U.S. Government some interesting details of the silk-consumption of Europe, where the condition houses of Europe received and passed in the year 1882, 7,617,157 kilograms of silk; in 1881, 8,594,023 kilograms; in 1880, 7,196,986 kilograms. Dividing these figures by countries, the following is the statement for the past three years:—

SILK CONDITIONED IN EUROPE DURING THE YEARS 1880, 1881, AND 1882.

| COUNTRIES. | 1880. Kilograms. | 1881. Kilograms. | 1882. Kilograms. |
|------------------|---------------------|---------------------|---------------------|
| France | 3,281,754 | 3,654,733 | 3,272,970 |
| Italy | 2,374,004 | 2,826,323 | 2,494,797 |
| Switzerland..... | 784,737 | 1,157,652 | 949,478 |
| Germany..... | 622,288 | 791,888 | 766,070 |
| Austria | 95,614 | 121,275 | 95,693 |
| England..... | 38,589 | 42,152 | 37,249 |

Total..... 7,196,986 8,594,023 7,617,157
Thus it appears that the general depression of trade during 1882 has affected all countries, though in different degrees. The falling off between 1882 and 1881 has been, for—

| COUNTRIES. | QUANTITY. Kilograms. | PER CENT. |
|------------------|-------------------------|-----------|
| France | 381,763 | 10.4 |
| Italy | 331,526 | 11.7 |
| Switzerland..... | 208,174 | 18.0 |
| Germany..... | 25,818 | 3.2 |
| Austria | 24,672 | 20.0 |
| England..... | 4,913 | 11.6 |

Total..... 976,866 11.03
Austria and Switzerland seem to have suffered

the largest decline, while Germany has been favored, owing to the precedence she has taken in the production of low-priced silk goods—especially for velvets and mixed tissues. Switzerland has not escaped the general depression, and apparently suffered even more than France. These figures, however, are but apparent figures, if regard is had to the fact that Lyons, as a raw-silk market and seller of organzine silks, supplies very largely foreign places, particularly Germany and Switzerland, enjoying thus an exceptionally favorable distinction over silk centres. This is fully proved in consulting the reports of the French Custom-house, which furnish the exports as well as the imports of the country. But Mr. Peixotto concludes that of European countries, France has suffered most from recent depression in the silk-trade.

THE construction of railways in America appears to proceed with undiminished vigour. During the first six months of the present year 2,500 miles were added to the enormous net-work which is rapidly spreading its meshes over the whole of the United States. This, too, in spite of unusual climatic difficulties, an exceptionally long winter having deferred the commencement of the work until late in the spring, while diluvian rains subsequently obstructed its progress. Statisticians calculate that the total additional mileage constructed during the year will be 8,000 miles, against 11,700 in 1882, 8,230 in 1881 and 7,075 in 1880. Nothing conveys a better idea of the enormous resources of the great Republic and of the industrial activity that prevails there, than the fact that during four years 25,000 miles of iron-way will have been constructed. The average cost of the 2,500 miles completed between January and June was \$25,000 per mile, and the aggregate outlay \$62,500,000.

"ONE does not carry one's country on the sole of one's shoe" said Danton, when his friends advised him to pass the frontier in order to escape the scaffold which was in preparation for him. But patriotism, like religion, seems to grow weaker as the centuries come and go. Doubtless the explanation of this is to be found in the fact that superior education, scientific and political, enables men better to appreciate the disadvantages of dwelling in lands where oppressive laws interfere with personal freedom and material interests, while improved facilities of international communication permit them to exercise a latitude of choice unknown in former times. Still when one recalls the fact that since 1870 the United States have received from Europe a number of immigrants equal to the whole population of Ireland, one cannot help thinking that human nature has changed since the days when Collins wrote of fairy bands that sing the knell of dead patriots, and forms unseen that ring their dirge. Descending from these speculations, however, to unromantic arithmetic, we note that the United States received from Europe last year 592,234 immigrants, while the corresponding figure for

1882 was 770,422. The countries which contributed these numbers were as follows.

| | | |
|-----------------------|----------|----------|
| England | 1882-83. | 1881-82. |
| Ireland | 79,852 | 81,697 |
| Scotland | 63,720 | 76,252 |
| Austria | 19,612 | 18,763 |
| Germany | 10,517 | 20,089 |
| Italy | 191,693 | 249,161 |
| Norway | 31,715 | 32,066 |
| Sweden | 21,849 | 28,466 |
| Canada | 35,596 | 64,776 |
| Other Countries | 64,971 | 93,629 |
| | 73,849 | 104,623 |
| | 592,323 | 770,422 |

This decrease is easily accounted for. Indeed it has been justly remarked that the number of immigrants America receives during any particular year is a fair index of her industrial and financial prosperity. At the end of the grand crisis of 1873-79 and after the resumption of specie payments, the condition of the States might well attract immigrants. Since then, however, a few clouds have appeared on the horizon; there have been comparatively poor harvests and industrial enterprise has lost a little of its impulse. Immigration has shown a corresponding decline. Nevertheless, the unprecedented fact remains, that between 1879 and 1883 the United States received 2,515,000 immigrants, and that during the nine preceding years their population increased by 2,355,000 from the same source. The relative increments of population from immigration and reproduction are shown in the following table:—

| Year. | Population. | Total increment. | Increment per cent. | | |
|---------|-------------|------------------|---------------------|----------------------|-------------------|
| | | | By immigration. | Total, immi-gration. | By repro-duction. |
| 1840... | 17,069,453 | 4,203,433 | 399,195 | 32.67 | 4.65 |
| 1850... | 23,199,476 | 6,128,023 | 1,821,975 | 35.87 | 9.68 |
| 1860... | 31,461,371 | 8,261,895 | 2,630,558 | 35.58 | 11.38 |
| 1870... | 38,478,871 | 11,117,499 | 3,281,148 | 22.63 | 7.25 |
| 1880... | 50,152,866 | 11,596,495 | 2,812,191 | 36.07 | 7.39 |

THE earthquake at Casamicciola has furnished some incidents of real life such as few romances can surpass. Two young ladies, ultimately rescued by a captain of Engineers, describe how one second they heard something like a roll of thunder, and the next, found themselves buried alive. The ruins of three stories formed over their heads a vault supported at one point only by the post of an iron bedstead. After hours of agony and suspense they heard the noise of people clearing away the ruins, but the sounds at one time approached, at another receded, and their cries of distress were powerless to penetrate the masses of masonry suspended above them. By and bye the younger, groping about in her tomb, found a pear and a prune, which she divided with her sister. This was all the two girls had to eat during three whole days. Probably, however, they slept a great part of the time, for when they were at last rescued the exclamation of the elder was:—"What a terrible thing it is to be buried alive for ten hours!"

The escape of Professor Bottini was not less remarkable. A widower with one child, he had spent a few weeks in Ischia, and was about to set out for Paris when the arrival of an old friend induced him to remain a little longer. On Friday he was passing the theatre with his child when the latter begged to see Punchinello, and the Professor promised to grant his request

on the following evening. The child did not forget this promise, and the father, unwilling to send it under the care of its nurse only, accompanied it himself. The play began at a few minutes past nine o'clock. Punchinello, in his rôle, had to break some crockery and cry out:—"Oh! poverell'a me! Oh! mamma mia! che disgrasia! Suddenly, changing his tone, but speaking always in dialect, he cried:—"U'tterremoto! u'tterremoto! allu mare! allu mare! The spectators fancied at first that these words were part of the play, but they were soon disabused. The petroleum lamps were thrown down, and the theatre was plunged in darkness. The professor clasped his child in his arms and remained quiet, though all the rest of the audience took to flight. The shock had been accompanied by a roll of thunder like the booming of a hundred big guns. It was followed by profound silence and a rain of dust from the ruins of the town. Large cracks were opened in the ground, one in the very floor of the theatre. M. Bottini remained in his place until the dawn of day. When he emerged from the theatre he was thunderstruck. Nothing remained of the town but a heap of débris. Of 27 persons with whom he had dined the day before at the hotel *Non Repos*, he alone was left alive.

A soldier of the 11th Regiment of Artillery persisted, despite the denials of his comrades, that some one was buried alive under a certain heap of ruins. Unassisted, he toiled for seven hours like one demented, until finally a woman's hand became visible. Just then an old lady arrived upon the scene. She reflected a moment, examined the débris, and finally cried out that the hand was her daughter's. The artilleryman did not need to ask for assistance now. His comrades ran up to help, and in a few moments the ruins were cleared away. The girl was still held, however, by her dress. It was caught between two blocks of stone which could not be moved without bringing down the whole ruin. So the artilleryman had to complete his task by undressing her. Another soldier, Corporal Curci, worked for several hours, head downwards in a hole he had dug himself. From time to time it was necessary to draw him out to restore the circulation to his limbs. All at once he shouted to be pulled up, a task which was accomplished with no little difficulty, since it was necessary to raise with him a beautiful young girl whom he had in his arms. The young lady no sooner found herself safe and sound than she threw her arms round the Corporal's neck and kissed him.

The case of the Bishop of Casamicciola, Monseigneur Mennella, was very sad. Not only was his position under the ruins known exactly, but several of his relatives, aided by a number of workmen, toiled to release him, guided always by his voice, which at one moment called upon them to save him, at another, directed them where to apply their tools. Always, however, when they seemed on the point of reaching him,

some new difficulty presented itself—now a solid block of stone that could not be moved, now a beam that supported a mass of crumbling débris, until at last the voice of the unfortunate man grew fainter and fainter and his dying groans told his family that they could only hope to recover his corpse.

Among many remarkable instances of the power of existing for days without sustenance and apparently with little suffering, none is more worthy of note than the case of two children rescued on the sixth of August, that is to say, on the seventh day after the catastrophe. They were aged nine and twelve years respectively; neither appeared to be much the worse for his long incarceration, and the younger had no sooner emerged from the ruins than he asked for some wine.

Victor Hugo's letter to the *Rappel* deserves to be reproduced as an example of the absurdities to which men can commit themselves whose whole life is a theatrical display. This is the letter:—

"Paris, 1er août 1883.
Je donne à Ischia mille francs.
La catastrophe d'Ischia est plus qu'une catastrophe italienne; elle est plus qu'une catastrophe humaine; elle est une catastrophe universelle.
Je me sens touché: J'envoie mon obole.
"Victor Hugo."

Among the romances of real life that of the wandering Canon of Tournay deserves a prominent place. In consequence of some political embroglio the Bishop of Tournay was deposed, several years ago, and sent into exile. About two millions of francs were stored in the episcopal palace at Tournay at the time, and the Bishop committed this money to the care of the canons of the cathedral, of whom Canon Bernard, the "wanderer," was the principal. The latter proceeded to stow away the coin after a novel fashion. He felt that no Belgian bank would be safe, and so he resolved to combine business with pleasure by setting out on a grand tour, and scattering the two millions in various banks of foreign countries, "here a little and there a little." Of course the prosecution of such a scheme involved travelling incognito, and so the Canon waited at the first foreign city he came to until his beard was grown sufficiently to disguise him effectually. Then he set out for Paris, and having deposited some of his golden burden there, he turned his feet westward, with his beard now fully grown and his sacerdotal cassock and sautaine exchanged for the variegated and fashionable toggery of a man of the world. In New York he left a few more bags of money, and deposited the last four hundred thousand francs in a Boston bank. Meanwhile, his absence and the contemporaneous absence of the contents of the episcopal treasury were much lamented by his brother canons, who took great pains to track him, even employing detectives for the purpose. The wanderer was finally betrayed by a photograph. Being a comely canon, he could not resist the temptation of having his likeness taken

in New York, and the consequence was his arrest at last in South America. He had not quite finished his tour, but his captors, paying no attention to this fact, carried him off rudely to Brussels. There his trial has just been brought to a conclusion such as was alone needed to cap his exploits. He has been acquitted, the court ruling that it could take no cognizance of his uncanonical behaviour in the fastnesses of America or any other foreign country, and holding that he had taken the money from the episcopal palace of Tournay for safe keeping and at the request of Bishop Rouseaux, its official owner. Canon Bernard has seen men and cities under strange circumstances.

THE rapid increase of wages in France is a subject which has justly attracted the attention of economists. In Paris the ordinary wages of a workman average, at present, from 8 to 10 francs per diem. It is of course reasonable that the labouring classes should share in the general prosperity of recent years, but in addition to this material, and therefore natural, cause, there seems to be another which is of a moral, and consequently factitious, origin. The establishment of the Republic, founded on universal suffrage, has disposed the inferior orders to exaggerate their pretensions. The "sovereign people" wants its civil list. It sets no store by starving sovereignty. But how are the limits of this disposition to be imposed? A nation can support a large monarchical civil list without any sensible inconvenience. It can even support an idle aristocracy, though the social organism is apt to be disturbed by the charge. But when the names of millions of workmen have to be borne on a civil list, the affair assumes a different complexion. Salaries being now twice or thrice as great in Paris as in the neighbouring provinces, the difficulty of supporting such a condition becomes daily more accentuated. Indeed, the ability of French industry to survive such a state of affairs is very marvellous. M. Leroy-Beaulieu has undertaken to explain that ability. He attributes it to abundant capital, and points out that the strain must sooner or later become unendurable. But the French workman does not study either *L'Economiste Français* or the *Journal des Débats*. He is content to go on drawing as many francs as possible every day and clamouring for more. Neither does he make a prudent use of his abnormal prosperity. Instead of employing earnings, which must be considered excessive, to secure for himself permanent well-being, he spends them upon ephemeral enjoyments. Salaries, however, do not fall, like cotton and silk, by quiet processes. Their descent is accompanied by an economical crisis, and it is that which French financiers are beginning to anticipate uneasily.

WE hear from Swatow that the recent disturbances in Canton have seriously impeded the amicable settlement of the now famous land question in the former port. It was reported some weeks ago that a conclave of magistrates,

together with one or two representatives of *Das Heilige Deutsche Reich* were too reconsider the claim of Messrs. Dircks & Co., *ex primordio*; but it now seems that the Viceroy of Canton has indefinitely postponed the solution of the Swatow difficulties until affairs in Canton shall have resumed a more peaceable aspect. There is no doubt, however, that the commotion at Canton and the real or pretended inability of the Chinese authorities to keep the populace within bounds will materially increase the difficulty of arranging the Swatow affair satisfactorily. The German Government has thoroughly endorsed the proceedings of its representatives so far; and there can be no question that it intends to protect the claims of Messrs. Dircks & Co. to the fullest extent.

A SONG which the good folks of Paris are singing *à propos* of the Suez Canal shows that the cholera in Egypt is not the only food for Continental slander:—

Je voulais bien, je voulais bien
Accaparer Suez et son isthme;
Et j'avais assez d'égoïsme
Pour ne voir de droits que le mien.
Je voulais bien! Je voulais bien!
Mais faire accord avec la France.
Sans déloyale concurrence
Ni procédés indécents:
Je voulais pas! Je voulais pas!
Non! Non! Non! Non! Je voulais pas!
Goddam! Je voulais pas!
Je voulais bien, je voulais bien,
Oublier les vieilles chicanes,
Pour le bien de mes caravanes,
Creuser un canal mitoyen.
Je voulais bien! Je voulais bien!
Mais reconnaître un monopole
Que j'aurais promis sur parole,
Sans sous-seings privés ni contrats?
Je voulais pas! Je voulais pas!
Goddam! Je voulais pas!

It is sometimes allowable to explain a joke, particularly if the joke is in a foreign language. Here, in a couple of stanzas of doggerel, the French satirist fixes a double-shot sarcasm at John Bull in the word *vôlais*. John is supposed to pronounce "*roulais*" so, and to convey the meaning that he "stole" or "wished," as the Parisian ear may catch the sound. Accepting this untranslatable pun, one may roughly render the gibberish thus:—

I wished, indeed, I wished, indeed,
To grab Suez and its isthmus;
Of rights that didn't concern "us"
My egotism had no heed.
I wished, indeed! I wished, indeed!
But act with France the way I ought,
Without disloyal after-thought,
Or procedure that smells of fish?
No! No! No! No! I didn't wish!
Goddam! I didn't wish.
I wished, indeed, I wished, indeed,
Forgetting former disputes vile,
Just for my navy mercantile,
A middle trench to speed.
I wished, indeed! I wished indeed!
And, though I'd sworn upon my dolly,
Shall I admit a monopoly,
Without signed contract? Not much, pish!
I didn't wish, I didn't wish!
Goddam! that's not my wish!

Among the prophets of evil, M. Paul Leroy-Beaulieu's voice is heard oftenest and loudest in France. He has been telling his countrymen lately that equality *vis-à-vis* the law, *vis-à-vis* public duties, no longer exists among them. It is not a question of favoritism which works in secret and with a shamed face, but of favoritism

which parades itself openly in administrative circulars. In old times the formula used to be, "if you want to be treated better than your neighbours, *montrez-patte blanche*:" To-day it is, "if you seek favours, *montrez des mains calleuses*." Ministers and councillors have fallen in love with industrial associations, and seek to stimulate them by every possible means. The evil of State interference in these matters seems to be quite forgotten. The Government puts its hands into the people's purses, and employs what it extracts to foster industrial associations under every conceivable guise. If Lassalle were to come to life again, he would surely choose France as his country. Such is the burden of M. Paul Leroy-Beaulieu's complaint, and it cannot be denied that his language is amply justified by a circular recently addressed to the builders of Paris by the director of the city works. The document opens by announcing that "the Administration will employ all its efforts to enable associations of workmen to undertake the works it has to carry out, whether by granting them additional facilities in the matter of audit, or by entrusting contracts to them on complaisant terms." This phrase can have only one meaning. Henceforth public enterprises are not to be put up to public competition, and entrusted to him that offers the best terms. If an Association of workmen offers to take the contract, discriminations will be made in their favour. Individuals need not hope to compete with them. "Favorable arrangements made with this design," continues the circular, would be illusory, if an Association, once admitted, did not receive continued protection and special treatment during the execution of the works undertaken by it." Nothing could be plainer than this, but it is further emphasized in the body of the circular, where certain privileges, some of them quite exceptional, some long claimed by all alike, are promised to Associations and to Associations only. In a word, the whole object of the document is the suppression of individual, and the encouragement of combined, enterprise. Henceforth competition will become impossible. The individual must yield to the Association, and when the workmen of Paris have combined in one vast partnership, they will be able to command their own terms. That is what the State is educating them to at the country's expense. Leroy-Beaulieu prophesies that French industrial enterprise will soon be tied to the apron strings of the budget as a child is to those of its mother.

AS MIGHT have been easily foreseen, the rash experiment of Captain Webb, who lost his life at Niagara, has brought forward numbers of candidates for the questionable honor he failed to win. Several professional swimmers have declared their readiness to undertake the feat of passing through the whirlpool, provided the enterprise can be made worth their while. A Boston newspaper reports that Mrs. Webb, the unfortunate Captain's widow, who is herself a fine swimmer, scoffs at the idea of any superlative difficulty in the task. After carefully

examining the scene of his adventure, she arrived at the conclusion that he was killed by striking his head against a rock, beneath the surface. Gazing critically at the supposed point of greatest danger, she remarked—"What? do you call that the whirlpool? Why, I would go in swimming there myself." This does not appear to have been spoken in bravado, nor yet in ignorance, for her knowledge of her husband's favourite pursuit is said to be thorough and practical. It is noticeable that Professor Tyndall, a recognized authority upon the physical characteristics of Niagara, though not, we believe an expert in natation, has stated his belief "that a strong, bold swimmer could get through the whirlpool," but he "feels satisfied that no man could live in the rough boisterous water of the rapids." But it is beyond dispute that Webb passed the rapids alive, and the best attainable evidence affirms that he waved his arm and wiped the water from his face just before taking the last dive,—which was at a point below the worst part of the whirlpool. The general theory in America now is that he was stunned, or perhaps instantly killed, by the blow upon his head, and thus the question whether a swimmer can make his way through the perilous passage still remains unsettled. There are, however, as we have said, plenty of applicants for the distinctions of solving the problem. One of these is a man named Bebril, who proposes first to send buoys and small rafts down the river, and afterward a figure constructed of wood and rubber, of his own size and weight. The progress of these he will closely watch, and take measures accordingly. He has already despatched an empty barrel on the same course, and he claims that this was never entirely submerged. Another competitor, named Rhodes, has announced his determination to attempt the feat, clad in a life preserving armor similar to that of Captain Boyton,—but it is understood that this undertaking will be forbidden by the authorities of Canada and of New York State. An extraordinary and incredible statement is published by a Niagara journal—with names and other details complete—of a dog having been sent not only through the rapids, but over the falls, just after Webb's fatal trial, and having returned to his master unharmed. In connection with this tough story, we may mention a legend, in which some are pleased to put faith, of a drunken Tonawanda Indian, who went over the Horseshoe Fall in his canoe, and who turned up the next day, extremely wet outside and proportionately dry within. Inspired by this ancient tale, an inventive genius of Toronto has advertised that he has prepared a silk bag, capable of inflation, inside of which he is ready to take the desperate plunge for a wage of ten thousand dollars. A less hazardous project is connected with a river craft to be built in rough imitation of the famous "Maid of the Mist," which was safely piloted down the river in 1861, by Joel Robinson. This mock steamer, sixty-five feet long and sixteen wide, will be pushed into the rapids, above Suspension Bridge, and allowed to take her own course to destruction, as soon

as a sufficient number of visitors shall have gathered at Niagara to render profitable the humble commemoration of the original achievement. Notwithstanding all that has been written about the utter impracticability of swimming the rapids and the whirlpool, we are strongly persuaded that it can and will be done; but not, perhaps, before many lives are sacrificed in an enterprise which has nothing to recommend it to public encouragement, and of which it is painful to believe that no official prevention is possible.

THE following conversation is reported to have taken place between two Land Renters of Yokohama:—

A.—In whose hands does the Municipal control of this Settlement rest?
B.—In that of the Japanese Local Authorities.
A.—What laws are those authorities supposed to apply?
B.—Japanese laws?
A.—Certainly not. By the exterritorial clauses of the treaties all foreigners residing in Japan are exempt from Japanese laws.
A.—Then the Japanese Local Authorities are required to enforce Western laws and regulations in governing the foreign Settlement.
B.—Certainly. We are amenable to no laws but our own in this country.
A.—You speak of the treaties. Do these documents confer similar rights on all the nationalities represented here?
B.—Unquestionably.
A.—I understand you to maintain, then, that English residents are amenable only to English laws and English tribunals; French residents to French laws and French tribunals; Germans to German, and so forth. In other words, no uniform system of law applies to all the nationalities in Yokohama?
B.—That follows inevitably.
A.—So that in addition to the anomaly of requiring Japanese authorities to execute foreign laws, we further require them to exercise seventeen different descriptions of laws within the limits of a town of six thousand inhabitants?
B.—You over-state the case. In their salient points those laws are virtually uniform. All contain similar provisions applicable to offences against decency and good order.
A.—Are, then, the complaints of inefficient municipal Government in Yokohama confined to these points?
B.—By no means. We complain equally of bad drainage and sewage, defective sanitary arrangements, faulty control of "all such matters as projections interfering with the thoroughfares, ruinous and dangerous buildings, lighting and watering of streets," absence of surveillance over taverns, and similar places of public resort and so forth.
A.—How are these matters regulated in Europe?
B.—By municipal laws and regulations.
B.—Do I understand you then to affirm that the Japanese Local Authorities are required to govern this Settlement by European municipal law?
B.—No. I make no such assertion.
A.—Yet you say, first, that foreigners in Japan are not amenable to any Japanese laws; secondly, that the municipal control of the Settlement is vested in the Japanese Local Authorities, and thirdly, that municipal control is exercised everywhere in the world by means of municipal laws. Does it not plainly follow, that the Japanese must either control us municipally without applying any municipal laws at all, or else apply the laws to which we are amenable, namely, European or American laws?
B.—The laws from which foreigners are exempted by the treaties are imperial laws. "Municipal law is distinct from imperial law. It comprises and is confined to a series of regulations for the health, peace, good order, and decency of a settlement of men."
A.—The Japanese Local Authorities, then, having the municipal control of the Settlement vested in them, are consequently endowed with the power of framing "regulations for the health, peace, good order, and decency of the Settlement?"
B.—Of course.
A.—And the Foreign residents are bound to observe those regulations?
B.—Without doubt.
A.—What methods are provided to enable the Local Authorities to enforce those regulations?
B.—They can prosecute offenders against them before the Consular Courts of their respective nationalities.
A.—Then the Consular Courts are competent to punish infractions of municipal law?
B.—I suppose so.
A.—Take the British Consular Court, for example. What municipal regulations is it prepared to enforce? Those of London, Liverpool, Dublin, Edinburgh, or Portsmouth?
B.—I am not prepared to say.
A.—You can tell, however, generally what law Her Majesty's Courts in Japan are competent to enforce.
B.—The common law of England.
A.—Does the common law of England comprise municipal law?
B.—Certainly not.

A.—Then there is no British tribunal in Japan competent to punish infractions by British subjects of the municipal regulations which the Japanese Local Authorities are expected to apply to British subjects resident in Yokohama?
B.—That seems to follow. But you must remember that Her Majesty's Minister has special power to make Japanese regulations binding on his nationals. Thus there need be no real difficulty.
A.—Have the Ministers of other countries the same power?
B.—One has I believe.
A.—But there are some sixteen nationalities represented in this community. According to your statement, fourteen of them are at liberty to respect or ignore the municipal regulations at pleasure. Let me refer now to your definition of municipal law. You say it is "a series of regulations for health, peace, good order, and decency." Take health first. I presume that to carry out health regulations you would exercise some hygienic surveillance?
B.—Of course. The municipality should be able to delegate to its agents "the right of entry into private compounds for necessary purposes of sanitary inspection, or to abate or remove nuisances."
A.—Are the Japanese authorities permitted to exercise any such right?
B.—No. They are not.
A.—I presume, also, that your municipality would have a Sanitary Board, whose regulations it would be incumbent on citizens to observe. Is that the case in Yokohama?
B.—No. But everybody is ready and willing to observe sanitary regulations.
A.—Indeed! Then why your "right of entry into private compounds for necessary purposes of sanitary inspection." But take a particular illustration. During the cholera epidemic last year, the Local Authorities, acting under the advice of a Board of foreign and Japanese physicians, laid down certain regulations with reference to the disinfection of buildings and the destruction of the clothing, bedding etc., of cholera patients. Was it possible to enforce those regulations in the case of foreigners?
B.—I suppose it was.
A.—And yet when a British subject died, his Consul confessed himself incompetent to authorize the sanitary police to enter the deceased's house and apply the regulations, the result being that the dead man's clothes and bedding were probably sold to assist in spreading the infection. Let us pass on, however. When you speak of "regulations for peace, good order, and decency," you refer of course to police regulations?
B.—Certainly.
A.—Then you think that exemption from Japanese police regulations is not conferred upon foreigners by the exterritorial clause of the treaties?
B.—I am not prepared to go so far as that.
A.—Yet you say that imperial law is distinct from municipal law, and you define the latter as "a series of regulations for health, peace, good order, and decency." To maintain peace, good order, and decency is the essential function of police all over the world. How then can you pretend that, while the performance of that function devolves upon the police authorities of Yokohama, the police regulations are not binding upon the residents of the Settlement?
B.—I cannot reconcile the two assertions, but I presume that when our various Governments procured for us the privilege of living in Japan, they made due provision against paradoxes such as your questions suggest. The admissions you seek to extort from me would amount to a confession that the Japanese Local Authorities are required to govern this Settlement without the power of making regulations for that purpose.
A.—That is precisely the farcical state of affairs at present existing.
B.—I do not believe it.
A.—Your incredulity does you credit.

STATISTICS published by the *Official Gazette* show that the transactions of the various Rice Exchanges throughout the Empire during the month of August amounted in the aggregate to 173,510 *koku*, the money value of which was a million and a quarter *yen*, approximately, while the brokers' taxes were 5,571 *yen*. In Japan, as elsewhere, the existence of these, or similar, Exchanges has been made the subject of considerable controversy, many persons holding that their effect is to enhance prices and to enrich a small coterie of gambling speculators at the expense of the general public. This opinion will not bear the test of serious examination. Apart from the fact that those who advocate the official suppression of such institutions are generally loudest among the opponents of governmental interference with the courses of commerce, it is certain that the Rice Exchanges have exercised a most beneficial influence by facilitating transactions in Japan's chief staple

and bringing surplus supplies within reach of empty markets. As for the general principle underlying the existence of these institutions, it may not be uninteresting to quote what Herbert Spencer says upon the subject:—"Another mistake, current alike among rich and poor, is that the speculations of corn-dealers are injurious to the public. So indignant are many well-meaning men at what they conceive to be a practice of intolerable cruelty, that it is scarcely possible to make them see how perfect freedom of trade is nationally advantageous in this, as in all other cases. Their anger blinds them to the fact that, were not the price raised immediately after a deficient harvest by the purchases of these large factors, there would be nothing to prevent the people from consuming food at *their ordinary rate*; which would end in the inadequate supply being eaten up long before the ripening of the next crop. They do not perceive that this mercantile operation is analogous in its effect to putting the crew of a vessel on diminished rations when the stock of provisions is found insufficient to last out the voyage. A somewhat serious error this for electors to labour under; especially as many of them would prevent the buying up of corn by legal penalties!"

MR. JUSTICE HANNEN's judgment in the case of Messrs. Cornes & Co. v. the *Selembrida* steamer is as follows:—"A peril of the sea was no doubt the *causa causans*, but the damage complained of was not directly caused by such peril, nor was it the natural consequence of the mischief which was caused by such peril. Upon this ground, I think the defendants must be held liable. There will be judgment for the plaintiffs, with costs assessed at \$25.00, inclusive of Court fees."

We read in an Italian journal that M. Vincenzo Ragusa, who, as our readers will doubtless remember, was engaged for some years teaching the art of sculpture in the Tokiyo Fine Arts School, has opened at his native place, Palermo, a museum of Japanese art. M. Ragusa explains that if the Japanese were captivated with what he had to teach them, he was not less charmed by what they, on their side, could show him of an art which may well be called the essence of refined and loving ideality. So charmed was he, indeed, that for many years he devoted all his spare moments as well as the whole of his savings to the acquisition of an abundant collection of Japanese industrial and artistic productions both ancient and modern. He was impelled, he declares, to this undertaking neither by any fatuous love of research nor yet by any love of exotic luxury, but above all and uniquely by the thought of the service he could render his country if he were the means of initiating it into the technicalities of an art so little known in Europe. To this end he brought back with him to Italy not merely a collection of inanimate objects, but also some living Japanese artists, whose works in lacquer, pottery and ivory are now on view at the *Musée Japonais*. The journal which describes the contents of this

museum thinks that a new field of industry is opened to Italy by M. Ragusa's conception, and urges the Government to come to his assistance. It appears that something has already been done officially for this patriotic speculator. The Custom House has been directed to admit his Japanese importations free of duty. But he wants still more substantial aid, and it is not improbable that he will find in Italy persons foolish enough to give it.

GERMANY was recently horrified by the suicide of Dr. Gans Edler zu Putlitz, professor of political economy at the University of Berlin, a young man whose remarkable attainments gave promise of a great future. It was at first supposed that the professor's brain had yielded to the unceasing pressure of study and speculation, but the suicide is now attributed to a different cause. Last winter, so the story goes, M. de Putlitz was at a restaurant in Berlin with some friends when the conversation happened to turn upon the subject of the Jews. The professor's party had nothing but fresh abuse for this much abused race, and some tolerably strong expressions had been used, when a gentleman, who was seated at the next table, came forward, announced that he was a Jew and demanded satisfaction of M. de Putlitz. The latter acceded at once, bidding the Jew name his weapons as he was the insulted party. The Jew explained that, being physically weak and also short-sighted, he would prefer the fashion of duel known in Germany as the "American duel." Two papers were accordingly put into a hat, the one blank, the other having the word "death" written on it. M. de Putlitz drew the latter, and was thus condemned to kill himself within a twelvemonth. He had a beautiful young wife, daughter of Count Flemming, the Prussian ambassador at Karlsruhe. He took her to Italy, and returning himself to Berlin continued to live as before, performing his academical duties and writing two pamphlets on political economy. One day he received intelligence that it was in contemplation to offer him the chair of political economy at the University of Halle. The following morning he was found dead in his bed with a bullet in his brain.

IN H.B.M. Court for Japan on the 5th instant, Mr. E. J. Moss sued Mr. M. Kirkwood for \$57. The claim was for restitution of money paid to release certain furniture which the plaintiff claimed was illegally detained. The facts of the case are:—Mr. Kirkwood some months since let a house to Mr. Cadwallader at a monthly rent of \$20. Mr. Cadwallader hired furniture at so much per month from Mr. E. J. Moss, and sublet the house and furniture to Mr. Archer. The change was reported to the landlord, who made no objection. Plaintiff saw what he thought to be the rent for the month of August, \$20, paid by Archer to Cadwallader, who said that he had handed it to Mr. Ford, defendant's landlord's agent. The payment of fifteen dollars to the latter was admitted; but rent at \$20 per month was due for the months of June, July, and

August, each, and \$15 paid was credited to the general arrears. There was a charge also of \$2 for advertisement of a house to let by the first tenant. The original agreement with the landlord was for a six months' tenancy, and the landlord, holding to the document and failing to receive the rent due, distrained. Mr. Moss's contention was (1) that the rent that he saw paid was for August, and (2) that Archer was only a lodger, and that therefore his (plaintiff's) furniture was exempt from distraint; but he could bring no evidence in proof. He remarked that, while he knew nothing of Cadwallader's being about to leave the country for a time, the fact was well known to Mr. Kirkwood, and the agent, Mr. Ford, and Mr. Moss thought it would at least only have been fair to himself to make him a participant in that knowledge. Mr. Kirkwood explained that Mr. Moss's only defence,—and that was inadequate,—would be under the Lodger's Act (which was briefly referred to and left aside as unavailing). With regard to Mr. Moss's remark that it would only have been fair or kindly to acquaint him with Mr. Cadwallader's intended departure, Mr. Kirkwood suggested that, in that case, the plaintiff would have removed his furniture, and he (defendant) would have lost his rent. His Honor, admitting the hardness of Mr. Moss's case, had no choice but to dismiss the claim with costs of Court.

Here opportunity may be taken to remind British tenants that their landlord has a legal right, without previous authorization from the Court, to distrain for arrears of rent. At the same time landlords, when driven to the harsh course of putting in a distress for their own protection, would do well to follow Sir E. Hornby's advice. That learned justice recommended landlords in the Far East in such cases to arm their bailiffs with the authority and seal of the Consular Court previous to taking possession, inasmuch as thus any breach of the peace would probably be avoided. The judiciousness of the counsel is as obvious as the ease with which it might be followed.

THE Normal School at Hongkong, established some years since by Governor Hennessy, has been closed. The leaders in the colonial press seem rather to rejoice at this; and presumably they know best the needs of the colony they represent; but outsiders are likely to deem the abolition of a training establishment for teachers a calamity.

One consideration, however, in this context, urged by the *Daily Press* is not without weight, and is even more catholic in its application than the writer chooses to make it. It is the difficulty of securing any efficient teacher in a language which is not to him a "milk-tongue." The objection is a valid one; but it is as applicable in France and England as in Japan and China. Our contemporary concludes a short article thus:—"The English language seems as difficult of acquirement by Chinamen, as Chinese is by Europeans. Even those of them who have had the advantage

of education in Europe or America generally speak English in a halting way and with continual grammatical blunders. All that can be expected of them, therefore, is that they should make themselves useful in assisting in teaching preparatory classes, but if the Government wishes to impart a sound knowledge of English to the boys attending the Government schools they will always have to maintain an efficient staff of English masters." We may add to this that English, of all languages, can very seldom, if ever, be taught efficiently by anyone who has not had the advantage of learning it from the time he began to speak at all.

THE Silk Association of America reports that manufactured silk to the value of \$3,806,951 was imported into New York in the month of August last, as against, in 1882, \$50,320,381: 1881, \$4,159,207: 1880, \$3,920,829; 1879, \$2,331,007. The summary of entries of silk manufactures in August, 1883, is:—Entered for consumption, \$3,170,754: entered for warehouse, \$636,197: total value landed in New York, \$3,806,951: withdrawn from warehouse, \$924,283: value placed on market, \$4,095,037. The imports of raw silk at the ports of New York and San Francisco in the month of August 1883 were 685 bales, value \$487,182. Imports of waste silk and pierced cocoons at the same ports were 27 packages, value \$9,896. The raw silk by steamer *City of Peking*, which arrived at San Francisco August 23rd, was forwarded by the Chicago, Burlington, and Quincy railway, and transferred for transit to New York to the Pennsylvania railway.

A PLEASING interchange of courtesies took place recently between the *North-China Daily News* and the *Shanghai Courier*. The latter has the sole privilege of publishing Reuter's telegrams in Shanghai, the *News* reproducing them subsequently with the ordinary acknowledgment of their origin. But the *News* also obtains special messages of its own, and these of course it takes full credit for. The *Courier* apparently disbelieved the genuineness of these special telegrams, imagining that the *News* simply purloined them. To bowl out its rival the *Courier* adopted the very unusual manoeuvre of publishing among the authentic telegrams an announcement that Mount Etna had broken out into eruption. The *News*, however, did not fall into the trap thus laid, for the fabrication was duly credited to the *Courier*, which had then to come out with an explanation of the whole affair. Truly a rather humiliating position, and a good example of "the engineer hoisted with his own petard."

CONSIDERING the extensive actual progress of railway work and projection of schemes for the entire final reticulation of the country by iron roads, Japan ought not to lose a single hint afforded her by the dearly-bought experience of other countries. M. Leroy-Beaulieu has come forward on behalf of the companies. In a recent article in the *Journal des Economistes* he declares that the growing hostility to corporations

is based on a delusion and is doing great mischief. He says that in Italy hostile legislation has ruined two great railroad companies since 1870 and has resulted in keeping foreign capital out of the country and in increasing its financial and industrial difficulties. In Spain, also, unwise government action is likely to prevent the construction of some four or five thousand miles of road, which have been projected and which are much needed by the country. If constructed at all, it will be only with the help of government subventions. In Paris itself the construction of a metropolitan railway has been indefinitely postponed owing to the vexatious course pursued by the municipal council. M. Leroy-Beaulieu further declares that France is worse supplied with street railroads than any other country in the world, owing to the heavy charges with which the municipalities load these enterprises. Affairs are at such a pass in some towns that the street railroad companies have been driven into bankruptcy by municipal exactions, and the tracks have been taken up because no one is found willing to take and use the franchise under the existing conditions. It is evident that governmental interference with railroads must be exercised with more care and wisdom than in the instances referred to, if it would not result in total failure. One point made by M. Leroy-Beaulieu has not much force in America, whatever may be the case in European countries. He insists that there is now no danger from the great corporations, for the reason that the shares are of small amount and are in the hands of many holders. The fact is otherwise in the United States, where single powerful individuals hold "controlling interests." The tendency also appears to be in the direction of greater concentration of the power of control in corporations everywhere.

THE *Vigilant*, paddle despatch-boat, Lieut.-Commander Maxwell, arrived here on the 1st instant, from Kobe, and the *Sapphire*, 12, screw corvette, Captain Fullerton, arrived the following morning, from Hakodate, and at eight o'clock saluted the port and the American flagship, which were duly acknowledged from the Kanagawa Fort and the *Richmond*.

H.E. MR. OKI, Prefect of this Ken, has left for Kobe, where he will preside at the ceremony of conferring prizes upon the successful competitors at the Tea Exhibition.

THE trial at Canton, of Logan, the Custom House officer, for shooting a Chinaman at Honam, is concluded. The jury found the prisoner guilty, and the Chief Justice, Sir R. T. Rennie, sentenced him to seven years' penal servitude.

A CURIOUS statistician has been making some calculations about the loquacity of French Deputies. He finds that of the whole number, 557, only 188 have taken part in the debates during the past eight months. Of the remainder, eight have spoken on purely personal subjects; 44

have mounted the tribunal for five minutes at a time to read out a report or some other document; 238 have never opened their mouths at all, and 79 have distinguished themselves by occasional cries of: *C'est faux! Allons donc! A l'ordre! La censure! On nous insulte!*

AMONGST the passengers by the *Arabic*, which arrived on Friday morning from San Francisco, we note the new French Representative His Excellency A. Sienkiewitz, suite, and family.

THE British Commissioner of the Amsterdam International, Colonial, and Export Exhibition has informed the China Sugar Refining Company of Hongkong that the Jury have awarded the Company a silver medal for their sugar.

FUJITANI and Otaka, two native residents of Naminohira, have been sentenced in the local Criminal Court of Nagasaki to six months' hard labour and a fine of *yen* 10 each, the former for receiving a quantity of rope from the boatswain's mate of the British steamer *Scotia*, knowing it to have been stolen, and the latter for concealing it upon his premises.

THE Russian men-of-war *Duke of Edinburgh*, *Skobloff*, and *Naisdnick* are in Nagasaki, where they will make a short stay.

THE Insatsu Kiyoku of Tokijo have received the highest award for their exhibits at the Amsterdam Exhibition in addition to the medal of honour.

MAIBARA SAJIMA, Clerk of the Court at Kobe, is said, while under detention on a charge of embezzlement, to have committed suicide by thrusting chop-sticks into his throat. There is an old Norse proverb to the effect that "Death must come if sternly summoned;" and no sterner summons to the dread monarch than that of the defaulting official can well be imagined.

THE *Audacious*, 14, double-screw iron armour-plated ship, Captain R. E. Tracey, (flagship of Vice-Admiral Wiles); the *Pegasus*, 6, composite screw sloop, Commander Bickford; the *Albatross*, 4, composite screw sloop, Commander Hicks; and the *Curacao*, 14, screw corvette, Captain Anstruther, arrived here on Wednesday from Hakodate.

MR. W. A. WOOLLEY, who was recently appointed Acting Vice Consul at Hakodate, returned from that port on Wednesday in the *Takasago Maru* to take up his appointment as Acting Consul at Hiogo, in place of Mr. Aston, who proceeds to Korea with Sir Harry Parkes.

MANY persons were awake on Thursday morning about three o'clock by a shock of earthquake, the oscillating motion at the commencement being rather severe, and the lesser vibrations that followed considerably prolonged.

THE *Mainichi Shimbun* reports that 150,000 bags of wheat have been already exported from Japan to China this year, realizing \$230,000.

THE PREFECT OF KANAGAWA'S
MEMORANDUM.

It is to be feared that the land-renters in Yokohama will not derive much encouragement from the memorandum of the Prefect of Kanagawa in reply to their memorial on the subject of municipal government. It is the old story repeated in a new form; another aspect of the seemingly hopeless deadlock into which our relations with this country have finally drifted. To our complaints of executive inefficiency the unanswerable answer is returned—no executive can be efficient if those it is required to control are at liberty to defy its authority. "Concede to us the power of governing and we undertake to govern satisfactorily." That is what the Japanese say, and the most conservative among us has no choice but to admit the justice of their rejoinder. But there is nothing novel in the contention. We have heard it, whenever our listlessness suffered us to be attentive, year by year since 1867. We have been perpetually assured that this impediment or that, created entirely by our jealous subservience to prejudices respectable for their own sakes but ridiculous in their results, paralyses the hands of the Local Government and renders it impossible for the Japanese either to do justice to themselves or to satisfy our proper requirements. Yet hearing this month after month and year after year, we find ourselves, to-day, no nearer a solution of the dilemma than we were when the first murmurs of discontent began to make themselves audible on the first day of this Settlement's existence. A result more discreditable to human ingenuity could scarcely be conceived.

But, perhaps, it is not quite true to say that we are no nearer a solution now than we were fifteen years ago. For we certainly have made one step in the right direction. The Prefect's memorandum puts us, for the first time, in distinct possession of the Japanese side of the question. It is always something gained to be assured that any remedy we may propose will not be rendered abortive, at the outset, by a false diagnosis of the malady.

What, then, is the Japanese contention? Let us examine it very briefly, so as to be sure how much must be admitted and how much may be rejected.

That the land-renters' surrender of the municipal control in 1867 disqualifies them, directly or by implication, to resume that control in 1883, is a position which cannot be maintained. The former action was avowedly necessitated by pecuniary inability. With twenty per cent. of the ground-

rents it was found impossible to carry on the municipality. The aggregate ground rents in 1866 amounted to about \$28,000. Thus the sum at the disposal of the municipality did not exceed \$5,600 per annum. Now, however, the ground-rents amount to \$60,000, and the land-renters ask for 75 per cent. of that sum, considering that the lords of the soil ought to be content with the remaining 25 per cent. Were these proposals accepted, the control of the Settlement would be resumed under financial conditions so different from those which compelled its abandonment in 1867 that results equally different might be expected.

Before passing on, it may be worth while to note what these proposals signify from a Japanese stand-point. The ground-rent is \$28 per 100 *tsubo*. Of this it is proposed to take \$21 and leave \$7 to the Government. Now the local land taxes in the Japanese Settlement amount to upwards of \$40 (48.80 *yen*) per 100 *tsubo*. Of this sum \$21 go to the Central Government and \$19 to the Local. Our title to be placed on a footing so much more favorable than our Japanese fellow residents remains to be established.

With regard to the much discussed question of unlicensed taverns, the record is little short of humiliating. It may have been unjust that foreign keepers of such establishments should be required to pay heavy fees from which Japanese were exempt. But it is equally unjust that a discrimination should be made in the former's favour. Since 1875 every Japanese publican has been obliged to pay a yearly license fee of 10 *yen*. Since 1874 every foreign publican has refused to pay any fee at all. And in this most indefensible position he receives the tacit support of the Foreign Consuls, who while their nationals loudly complain of the abuses connected with unlicensed taverns, effectually nullify the Local Government's attempts to license them. Truly it would seem as though this community were not credited with any reasoning or reflective faculties. Perhaps the Consuls consider that a fee of ten *yen* per annum would be quite ineffectual in the case of a foreign publican. Then why do they not say so? We are told that no answer has ever been received to the Prefect's proposal formulated eight years ago; nevertheless, during those eight years we have never ceased to reproach Japanese perfunctoriness!

The Consuls do not apparently measure the scope of their own arguments. If publicans in the Japanese Settlement ought to be placed on the same footing with publicans in the foreign Settlement, why not

all other classes of trades-people also? Where is the line to be drawn? We have seen that our Japanese fellow residents pay taxes amounting in the aggregate to 43 per cent. more than we pay ourselves. With this inequality existing, why should other things be necessarily equalized? If we claim the right to level down in one direction where the whole advantage accrues to ourselves, with what face can we claim the right to remain below the same level in other directions where the disadvantage is wholly on the Japanese side?

It is, however, contended by some persons that the imperfect surveillance exercised over taverns in the Japanese Settlement warrants an inference of the Local Authorities' incompetence to undertake the control of taverns in the Foreign Settlement. Observe where this leads us. Foreign publicans have refused to pay license fees since 1874 because Japanese publicans were then exempt. Japanese publicans, since 1875, have paid a license fee of 10 *yen* per annum. Yet we now accuse the Local Government of incompetence because, in addition to exacting from its own people a tax not imposed upon ours, it fails to discriminate still further to their disadvantage by subjecting the quality of their wares to a control from which the liquors sold at foreign taverns are entirely free. The only logical or fair inference to be drawn from the fact, if fact it be, that poisonous alcoholic compounds are sometimes sold by Japanese publicans, is that the doctrine of equality established—though neglected—by ourselves relieves all alike from efficient supervision.

Turning now to the Prefect's contention with regard to the registration of our Japanese *employés* and the expediency of conferring upon the police extended powers of search, it may be stated generally that the position we practically occupy is this: having delegated to the Japanese authorities the duties of protecting our lives, properties, &c., we also claim the right to prescribe how they shall perform that duty. In other words, we agree to be governed, but insist upon governing. Our *employés* are Japanese subjects, and it may be reasonably assumed that the Japanese authorities know better than we how to manage them. But even that assumption is denied, with the result that to be, or to be called, a foreign *employé*, is to be virtually exempt from control altogether. The Prefect tells us that there are about one hundred Japanese residing in the Foreign Settlement without having complied with the prescribed forms; that they "are the men who are engaged in [disreputable

trades," and that they are "enabled to escape beyond the reach of the law by reason of their alleged status as foreigners' employés." He tells us, further, that the privileges of the same status are enjoyed by many unlicensed prostitutes, receivers of stolen goods, and other bad characters, whom the arm of the law is powerless to reach. Now, broadly speaking, the foreign residents of this Settlement may be divided into two classes. The first, which is also the majority, consists of respectable householders who are ready and anxious to lend every possible assistance towards the maintenance of law and order; who would be glad to see their servants registered, and who, for the sake of knowing that their premises are not made a refuge for thieves and prostitutes, would even agree that the police should have access to their compounds. The second class, the minority, consists of men who, whether because these measures would be inconvenient, or because their prejudices forbid them to reason, or because they are too ignorant to understand, refuse to let their servants be registered, are ready to resist everything resembling police surveillance, and need no better pretext for evading or violating a regulation than the fact that it is of Japanese enactment. Which of these two classes is represented by the present attitude of this community?

Without following the Prefect's memorandum any further, we may now formulate the alternatives which present themselves for selection. They are these:—to confer on the Japanese authorities the additional power they require, or to assume the whole municipal control of the Settlement ourselves. What the latter course involves we have been told by Sir EDMUND HORNBY and Sir HARRY PARKES. It involves obtaining a charter, in the first instance, from the Japanese Government, and afterwards moving all the Treaty Powers to unanimous legislation. The time necessary to accomplish these steps has been estimated by the best authorities at from seven to ten years. The former course, on the contrary, can be immediately adopted. The Local Authorities ask for nothing that is unreasonable, nothing that need be in any respect irksome, and nothing that the Foreign Representatives are unable to concede at once. We have to choose, then, between working for ourselves and working for the next generation of foreign residents.

THE NAGASAKI POLICE AFFAIR.

A CAREFUL examination of the evidence given at the Coroner's inquest in Nagasaki on the 17th ultimo suggests some interesting reflections. The Chinese case, briefly stated, amounts to this:—that six Japanese policemen, four of whom were armed with swords, entered a Chinese shop where a man and a youth were smoking opium, arrested the man, by throwing him on his face and holding him down, stabbed the lad to death, and afterwards wounded three inmates of the house who attempted to remonstrate. Now it is to be observed that the admitted purpose of the police was the arrest of opium-smokers. But according to the evidence of the owner of the house, Chun Dai, the youth, Wai Egno, who was stabbed, was lying beside the former and both alike were engaged in smoking opium. Yet the police proceeded to arrest Chun Dai only. Again, Chun Dai himself says that he was thrown on his face and held down *because he resisted*. Wai Egno, on the other hand, was killed because—so the Chinese evidence says—he remonstrated against the illegal seizure of money which belonged to him. What we have to believe, then, is this:—that the police, coming to arrest opium-smokers and finding a man and a youth of 17 *in flagrante delicto*, arrested the man and dealt with his resistance by merely throwing him down and holding him with his face to the ground. But when the youth of 17, whom they were not trying to arrest, objected to the confiscation of his money, they drew their swords and stabbed him to death. Two inexplicable points present themselves here:—First, why did the police discriminate between two persons equally deserving of arrest? Second, why did they meet the resistance of the man by a simple exercise of unarmed force, while they punished the much more legitimate resistance of the youth by stabbing him to death?

Turn, now, to the evidence of the man Woo Moa. He was passing the house where the event is said to have occurred, and at the conclusion of his testimony he declared that he had "only dared to tell what he actually witnessed." Yet what he told was, that he saw Wai Egno stabbed in the chest with a dagger by a policeman not in uniform; that he saw him pursued and stabbed in the back by a policeman in uniform; that "whatever may have been the primary cause of the attack, he truly believed the deceased innocent and free from blame;" that "he knew deceased had been sent to the house for the purpose of paying an account," and that "being invited by the proprietor of the house to smoke a pipe of opium, the deceased had lain down and placed his money under the opium platter;" that he knew that "when the police were seizing the opium apparatus, they seized the money also, which caused deceased to remonstrate and resist what he no doubt considered an illegal act," and that "while in the act of resisting he was most unmercifully killed." All this Woo Moa declared to be true, adding that he "had only dared to tell what he actually witnessed." It will be

observed, however, that, according to this statement, deceased was both running away and in the act of resisting when he received the fatal stab. This discrepancy is, however, less important than the fact that despite Woo's avowal as to telling nothing but what he actually witnessed, his testimony consists chiefly of what he knew by hearsay. All that he *saw* was the stabbing of Wai Egno. His statements as to the money-paying mission; the accepted invitation to smoke opium; the placing of the money under the platter, and the deceased's remonstrances, were hearsay evidence. Indeed, he afterwards admitted that he only conjectured the cause of the stabbing. Yet this was the only witness who saw Wai Egno meet his death.

Next we have the evidence of three men who said that, being upstairs in Chun Dai's house and hearing cries of murder, they ran down, found Wai Egno "lying insensible on the floor," "saw that he was dying" "tried to ascertain the reason of the attack" or to prevent its repetition, and were all wounded by the police. Yet it appears that the three persisted in their remonstrances or other violent proceedings, for the trouble went on until "the Chinese Consular Constable came and stopped it." Stopped what? An assault by three wounded Chinese upon six Japanese policemen, four of whom had drawn swords in their hands and were using them freely! Unfortunately the evidence of this Consular Constable was not taken at the inquest, though the importance of his testimony was obvious. The Japanese police declare that he was instrumental in quelling the disturbance, but according to them it was a disturbance of a very different nature—namely, an attack by a Chinese mob armed with clubs upon three Japanese Constables and a detective, who were escorting two Chinese prisoners. The Chinese witnesses offered no explanation of the fact that the police failed to arrest anyone. Did the arrival of the Consular Constable prevent the Japanese from carrying off their prisoner Chun Dai, and if not, what prevented them? Their own story is that, while escorting Chun Dai and another man to the station, they were set upon, badly beaten and their prisoners rescued by a mob, of whom Wai Egno was one, and in support of this statement there are two important items of circumstantial evidence:—first that two of the police were severely injured, and second, that their prisoners were actually rescued or taken from them in some fashion. Were these injuries inflicted on the police by three wounded, unarmed Chinamen, who, according to their own story, confined themselves to remonstrance and enquiry, and was the interference of these three Chinamen sufficient to prevent six policemen from carrying off the prisoner they had arrested?

We may note here a curious point of contact between the Chinese and Japanese evidence. According to the former, Wai Egno received his first wound from a policeman not in uniform. Now the constables in uniform alone carried swords. We have to assume, therefore, that no sooner was the order "draw swords" given—an order prompted by the protesting attitude of a

youth of 17—than one of the detectives snatched a weapon from a comrade and stabbed Wai. This is perplexing, yet if we turn to the testimony of the Japanese themselves, we learn that the only attempt to use a sword was actually made by a detective. For when the detective Miné had been knocked down and was, as he supposed, in danger of his life, he succeeded in seizing the sword of a constable who was struggling at his side. It will, perhaps, be fair to infer, having regard to these statements, that Wai Egno did receive the fatal wound at the hands of a detective, but that the circumstances under which the latter became possessed of a sword were very different from those depicted in the Chinese story.

There ought not to be much difficulty, after all, in choosing between the two versions. The determination of one point would suffice to remove all doubt. Did the encounter, of whatever nature it was, take place in the street or in the shop? If the former, the Japanese version must be accepted: if the latter, the Chinese. The only evidence as yet published bearing upon this, is that of Wai's uncle and of Dr. Fenwick. The former said that he "heard a disturbance in the street," and the latter, that at about 8.45 p.m., being called to see Wai Egno, he "found him lying in one of the streets of Shintchi." But, as we have already pointed out, of the three Chinese who claim to have been in the house where the affray is said to have occurred, one declared that, on coming down-stairs, he found Wai Egno "lying insensible on the floor of the shop;" another, that "he saw deceased was dying," and the third, that he "rushed down-stairs and found the deceased in a dying state." If these statements be trustworthy, Wai Egno must have been carried out and laid in the street before Dr. Fenwick was called.

We trust that a thorough investigation of this affair will be held. Nothing could be less expedient than the habit which prevails in Japan of leaving everything unsifted. The public knows nothing as yet about the truth or falsehood of the charges preferred against the police in connection with the recent case of the seaman McCarthy; knows nothing of the truth or falsehood of the charges preferred against the police by the Fukushima conspirators, and seems likely to be left in equal ignorance with regard to this Nagasaki riot. The Japanese ought to have learned, ere this, that silence on their part is always construed into an admission of culpability.

MINISTERIAL CRISIS IN FRANCE.

Rumours are current in Paris that a Ministerial crisis is imminent, and differences are known to exist in the Cabinet.

A later account states that the Cabinet is only awaiting the assembling of Parliament.

MUNICIPAL GOVERNMENT.

The following document has been handed to us for publication by the Chairman of the former Committee of Land Renters:—

Kanagawa Kencho, December 1st,
15th year of Meiji.

MEMORANDUM IN REPLY TO THE MEMORIAL CONCERNING MUNICIPAL GOVERNMENT IN YOKOHAMA FORWARDED BY THE FOREIGN RESIDENTS OF YOKOHAMA.

Before proceeding to express my views with reference to the Memorial forwarded by the foreign residents of Yokohama, I deem it necessary to give a brief history of the development of the municipal government of this port.

At the opening of Yokohama and the settlement of foreigners in the delineated part of the town, the municipal control of the Settlement was undertaken by the foreign residents, the expenses thereof being defrayed out of a fund created by deducting 20 per cent. from the ground-rents payable by the foreign lease-holders to the Japanese Government. The arrangement was as follows:—the lease-holders paid the ground-rents to their respective Consuls, who, after deducting 20 per cent. for municipal expenses, transmitted the remainder to the Governor of Kanagawa. The lease-holders having, however, found that the fund thus raised was insufficient to meet the municipal expenses, and that they were unable any longer to continue the control in their own hands, convened a general meeting, at which it was decided that the practice of retaining 20 per cent. of the ground-rent should be discontinued, and that the Japanese Government (*i.e.* Governor of Kanagawa,) should be requested to assume control of the Settlement. Accordingly on the 15th July, 1867, a memorial embodying these resolutions was submitted by the foreign residents to the Ministers of the Treaty Powers, who after deliberation, forwarded to the Tokugawa Government a draft convention consisting of seven articles, signed by the Ministers for Great Britain, the United States, Prussia, and Holland, and bearing date the 28th October, 1867. This convention having been agreed to by the Minister Ogasawara Ikinokami on the 4th November of the same year, it was arranged in accordance with Art. I thereof, to establish a municipal office for the Settlement and to appoint a foreign director subordinate to the Governor of Kanagawa. But as there was at the time no person deemed eligible for the post, Mr. Dohmen, of the British Consular service, was appointed provisionally. Subsequently, on the 11th May, 1868, Mr. Benson, an American citizen, was appointed by the Governor to the post of municipal director with an office on the premises of the Saibansho. The principal duties of the municipal director were:—the direction of all executive measures affecting the Settlement; police matters; collection of ground-rents and taxes on houses of entertainment; issuance of title-deeds; determination of the boundaries of lots; repairs and cleaning of roads and streets; registration of Chinese subjects, &c.;—in short, the control of all executive measures affecting the Settlement. These functions were exercised under the orders of the Governor. The necessity for the establishment of such an office at the time, arose from the inexperience of our local authorities in matters of police, engineering works, &c.: but after a time, great improvements having been introduced into all branches of the local government, it was thought that the necessity no longer existed of continuing the special office of municipal director, and in consequence Mr. Benson was released from his duties, and the municipal Office was closed on the 30th June, 1877. This determination was duly communicated to the foreign Consuls who raised no objections thereto, while the British Consul in his reply dated July 4, 1877, expressed his approval of the arrangement, and since the date named, the business of the office has been conducted directly by the Kencho.

From the above brief history it will be seen, that from the opening of the port down to 1867, the municipal control of the foreign Settlement of Yokohama was in the hands of the foreign residents; that in the latter year the residents, through their

Representatives, requested the Japanese Government to assume control of the Settlement; that thereupon a municipal director was appointed to conduct all business relating to the Settlement under the orders of the Japanese authorities, and that, finally in 1877, the services of the said director were dispensed with, and the management of all affairs undertaken directly by the Kanagawa Kencho. It would appear, however, from the present Memorial that the foreign residents now seek once more to acquire that municipal control, which before they voluntarily requested the Japanese Government to assume. But I venture to think that by again assuming control of municipal affairs, the foreign residents would experience the same difficulties they before encountered, and I should add, the statements contained in the Memorial are for the most part unfounded, as I shall now endeavor to show:—

The complaints made in the Memorial with regard to police matters are, with a few exceptions, groundless, and can only be regarded as sentimental grievances. The Memorialists say that "in that portion of the town known as the 'Old Swamp Concession' there are numerous taverns, the majority of which are kept by foreigners and natives of the lowest class and character," and that "to these houses seamen are allured by various artifices, supplied with maddening adulterated liquors," &c., &c. In fact, however, there is at present not a single Japanese who keeps a tavern in that quarter, although formerly there were one or two; while there are a large number of such resorts kept by foreigners. Over these latter no surveillance can be exercised by the police, as it is practically impossible for the Kencho to interfere with the trade carried on by foreigners. It is at these shops that seamen become intoxicated, and then turn out into the streets to brawl and fight, to the obstruction of traffic. Although details will be given later on, I should here mention that in 1876, a correspondence took place between the Governor and the Swiss Consul-General, who was then chairman of the Consular Board, upon the subject of issuing licences to, and generally controlling, these grog-shops.

It is true that in various parts of the Settlement and on the different roads leading to the Bluff Settlement, there are some houses where may be found both prostitutes and receivers of stolen property. With regard to the women who ply their illegitimate trade on the roads referred to, it may be stated that as several arrests have lately been made, the number has been so reduced that the evil has now almost disappeared. But with the same class of women in the Settlement, it is found extremely difficult to deal, because they take shelter in the foreign grog-shops, the proprietors of which employ them to carry on their disreputable traffic. If such persons were found in the native town of Yokohama, they would immediately be arrested and punished; but this effective step cannot be taken with those who live in the foreign Settlement, and pass as persons employed by foreigners, because in order to arrest them, it is first necessary to obtain a warrant from the Consul of the employer's nationality, and it often happens that when policemen, after obtaining the warrant, proceed to make arrests, they fail to find the objects of their search owing to the long time spent in these preliminary formalities. The same difficulty exists in arresting the receivers of stolen goods, as many of them also are enabled to pass as employes of foreigners.

In order to secure better means of arresting persons of this class, a proposal was made to the chairman of the Consular Board in August 1877, to the effect that "the Governor should be furnished with a general warrant enabling the proper officers to enter freely into the premises occupied by foreigners of whatever nationality, when there is reason to suspect that offenders are concealing themselves therein;" and also that, "as the receivers of stolen goods, thieves, &c., are, for the most part, foreigners' servants or those who conceal themselves in the houses of such servants, the police should be allowed to enter the premises of foreigners, for purposes of investigation, and to take the names, &c., of the Japanese servants employed therein." An answer to this suggestion was received from the chairman of the Consular Board during the same month, saying that at the Consular meeting it

had been decided that with regard to the unlicensed prostitutes they "must decline to have anything to do in the matter," but with regard to the registration of servants it had been determined to publish a notification in a daily paper "recommending" the foreign residents to register the names of their native servants at the Kencho. As, however, it was apparent that this action of the Consular Board would be ineffectual, another proposal was submitted in September of the same year, in which it was suggested that arrangements should be made by which the native servants of foreigners might, when necessary in connection with any crimes or offences, be summoned or arrested directly by the Kencho or its police officers. But this proposal met with the same fate, the chairman stating in his reply, which was sent in October 1877, that the proposal was "inadmissible." For these reasons, it is extremely difficult to clear the Settlement of unlicensed prostitutes, receivers of stolen goods, and other bad characters who are living therein under the name of "foreigners' employees." With reference to the receivers of stolen goods alleged to be seen in the vicinity of the Hatoba, &c., I deem it proper to say, that as it was suspected that the "ragmen" were in the habit of buying stolen goods, a strict surveillance was kept over them for many months, and in consequence, they have now almost disappeared from the foreign Settlement. While it is impossible to say that none of these "ragmen" receive stolen goods, yet they buy nothing of any value, as their purchases are confined to old metal, clothing, empty bottles, &c., and their transactions are trifling when compared with those of persons who under the name of foreigners' servants carry on the same traffic.

The assertion in the Memorial that "the number of police employed is 'far in excess of that required'" can only be attributed to a want of knowledge on the part of the Memorialists as to the actual state of affairs. Previous to June of the present year, owing to the limited appropriation for police expenses, the number of policemen was absolutely insufficient, and great difficulty was experienced in getting the police work done by the force at my disposal. The grant has been increased beginning with the present (15th) fiscal year, and I trust that the police control of the foreign Settlement will for the future be thoroughly efficient.

The charges contained in the Memorial that the policemen's wages "are not only inadequate, but 'directly conduce to the corruption of the men,'" and that they "have connived at robberies" are statements which ought not to have been made without the clearest evidence. The policemen are mostly enlisted from among the *Shiokoku*, and are generally men of upright and honest character, and while it would be too much to say that there is not a single man of bad behavior among them, I am nevertheless in a position to declare that there has never been a single case in which the police "have connived at robberies."

It is alleged that "heavy cases of goods requiring three or four men to handle have been removed by night from warehouses bodily, and carried away without the knowledge of the police," and this assertion would, upon a superficial glance, seem to establish the charge that the police have neglected their duties, but what can be said if the employees of the firms, from whose godowns the cases have been removed are accomplices of the thieves? Robberies have also doubtless taken place without the connivance of such employees, but under existing circumstances even if the police were numerous enough to guard every house in the Settlement, it could not be expected that the corps would be as effective as required, because they meet with many difficulties in the proper discharge of their duties, arising from the fact that they are not clothed with any authority over foreigners. Indeed, under this condition of things, the mere increase of the police force would be ineffectual, unless they are given the necessary authority to discharge the duties. In any honest endeavor to suppress these crimes, the first requisite is to drive out the thieves, unlicensed prostitutes, and other bad characters now concealing themselves on foreign premises in the Settlement; but that can never be done, unless the police are empowered to enter the premises of foreigners for the purpose of arresting suspected persons. The places to which it is essential that the police should

have free access, both during day and night, when they deem it necessary, are as follows:—

Compounds of foreigners in the Settlements; inns of low class; bath-houses in Japanese style; shops where Japanese alone are carrying on trade, though claiming to be employees of foreigners; drinking saloons of low class; houses belonging to foreigners in which there may be living or employed as servants, females previously convicted of secret prostitution or persons previously convicted of receiving stolen goods, or of gambling.

Coming to that part of the Memorial which deals with the condition of roads, street drains, &c., it appears the Memorialists have entirely overlooked the actual state of things, and I am at a loss to understand what can be the real basis of their alleged grievances. Although much is said on the subject, and draft bye-laws, &c., for future management are given, yet I would point out that these are the very things to which the local authorities have long been directing their attention. Some of these works have already been completed, while others are now being carried out or are in contemplation. There is therefore, in reality, no occasion for recalling the attention of the local authorities to these subjects. Such a work as the construction of the main drains now being carried out in the midst of the foreign Settlement, ought to afford sufficient evidence of the earnest endeavors which the local authorities are making to ameliorate the condition of the Settlement.

The Memorialists state that "the Main and Water Streets in wet weather become almost impassable, while in dry and summer weather the dust is intolerable" &c., and that many of the roads "are in a most dilapidated condition" and "in bad weather traffic is seriously impeded," &c., &c. Now, with the exception of some roads on the Bluff which are being repaired, I venture to assert that there is not a single road throughout the entire Settlement which is in the state described. In the locality commonly known as "the Old Settlement," the roads and drains were not in the first instance perfectly constructed, and it is intended to thoroughly overhaul them. The extensive work of reconstruction and reparation of streets in that and other localities has very properly been deferred, until after completion of the works connected with the laying down of the new main drains and aqueducts, the former of which is now being carried out. For these reasons and these alone, the roads have not, for some little time past, been kept in perfect repair. In the ward generally known as the "New Swamp Settlement," all the roads and drains were strongly constructed before the locality was occupied as a part of the foreign Settlement, and the drains being built of stone and of sufficient capacity to meet the requirements of the district, it will not be necessary in the future to disturb the existing streets. These roads, &c., may therefore, be said to be in the most perfect condition. It will thus be seen that, with the exception of certain streets in the old Settlement there is not, in the Swamp or Bluff Settlements, a single road or drain which is in a dilapidated condition as alleged in the Memorial.

Extensive works cannot always be executed in a short time, and my intention is to carry them out by degrees. With this view, the work has now been commenced of reconstructing roads and laying main drains in that part of the Settlement bounded by the Bund from the Custom House to the Creek, thence to the Maida-bashi on the southwest side, thence running to the north along the Homura-road, and forming in extent about two thirds of the old Settlement.

This work is now in progress at an enormous expenditure of money. The drains are built of brick, and will not only be sufficient to carry off the rain water, but also the waste-water, and a proper allowance has been made for an increase in the population of this quarter. This work will be completed before long, and immediately thereafter the repairs of the roads will be executed, so that a very material improvement of roads and drains in this part of the Settlement may be said to be almost accomplished. However, the government having been urged to lay aqueduct pipes in the foreign Settlement, an investigation as to the method of carrying out the work is now being made, and it will doubtless be necessary to dig up

the roads once more during the progress of the work; but when all of these great undertakings have been completed, there will be no further cause for complaint, in respect of roads and drains in any part of the foreign Settlement. The cost of laying down the sections of the new main drains already in course of construction amounts to upwards of one hundred thousand yen, and this work, it should be observed, is executed for the exclusive benefit of the foreign Settlement. In the face of this fact, it appears scarcely reasonable to assume that any public works are neglected by the local authorities.

The statement contained in the Memorial that the drains were only constructed to carry off surface water, and that they have been used for sewage, &c., cannot be denied. It is a fact that the existing drains were built for that specific purpose alone, and not as receptacles for all kinds of refuse matter. It is also a fact that foreign residents and their servants make these drains receptacles for sewage of all kinds, or privately alter the course of such drains, thus causing them to be choked up, and rendered a source of danger to public health. Whenever such actions are observed, officials are despatched to the spot or communications made to the occupants of the premises. But my endeavors have generally been abortive as foreign residents decline to carry out the directions given, and raise all sorts of objections. If the foreign residents continue their present habits in this respect and persist in ignoring the regulations prescribed by the local authorities for protection of the drains, I am much afraid that the new drains, however solidly constructed, will not produce that benefit which they are designed to confer upon the foreign Settlement.

For the control of all such matter as "projections interfering with the thoroughfare, the practice of obstructing the streets," &c., "ruinous and dangerous buildings, walls, &c.; the cleansing of streets, dangerous materials, firearms, fireworks, *jinrikisha*" there are in operation complete regulations which both the local and police officials continually exert themselves to carry out. But as foreign residents habitually ignore and disobey them, such regulations can accomplish but little good, so far as the foreign Settlement is concerned.

The Memorialists truly say that "the local government do not consider street lighting as included in their duties." The misapprehension that any such obligation rests on the Kencho has probably arisen from the fact that street lamps are maintained in Kobe. No arrangements, however, similar to those which exist in Kobe respecting street lamps have ever been made for Yokohama. In the first arrangement for the residence of foreigners at Kobe, it was agreed that the expenses of street lamps should be defrayed out of the ground rent, and by virtue of this convention the Kencho in Kobe is probably under obligation to defray these expenses even to the present day. The reason why a distinction should be made between Kobe and Yokohama may be found in the fact that at the former port the ground rent is 100 *ichibus* or about \$32.15 per 100 *subos*, while at the latter it is only about \$28. In the absence of an express agreement it is difficult to discover upon what grounds the claim is based that the local government should light the streets. It is a custom, most peculiar to Japan but common, I believe, in most countries to defray the expense of lighting streets by means either of voluntary or compulsory subscriptions from the persons benefited. In the year 1870, certain foreigners applied to the Kencho for permission to establish a gas company in Yokohama. This circumstance, it may be proper to add, tends to show that at that date at any rate, it was not pretended that street lighting should be undertaken by the Municipality at the expense of the Government. The Kencho, indeed, gave support and protection in the first instance to the scheme of introducing gas into this town, but when the people had familiarized themselves with the management of the company, the Kencho withdrew its protection and left the entire matter in the hands of the people, who have since defrayed the expenses by means of public subscriptions. Such being the case in the native town, it cannot be denied that a still greater obligation rests upon residents in the foreign Settlement to bear this expense themselves. From 1871, when the gas company was established, and permission given to erect gas

lamps in the streets, until 1875, the streets of the foreign Settlement were lighted with gas. During the latter year, however, the foreign residents made some complaint and refused to pay their quota of the expenses any longer, and in consequence the gas company was, in 1876, compelled to cease lighting the foreign Settlement. An agreement was again made, it would appear, with the said company in 1881, for lighting the foreign Settlement at the monthly cost of 4 yen and 16 sen per lamp, and since that date every street has been lighted, excepting those on the Bluff where there are no gas lamps. The said cost may be higher than the rates in Europe and America, but by comparison it will be found that they are not higher than those prevailing in Hongkong and Shanghai where gas was introduced not long since. Any part of the Settlement of Yokohama may be lighted if the residents will pay the cost at the rate named.

The Memorialists say that "in the streets, and in various other parts of the Settlement, are numerous wooden houses or shanties, Japanese in every detail, openly occupied by Japanese tradesmen," &c. In answer to this charge I desire to point out that Japanese are permitted to reside in the foreign Settlement upon obtaining permission from the Kanagawa Kenrei, who is authorized to grant the necessary license after consultation with the foreign Consuls, in accordance with Art. III. of the "Regulations for the lease of lands," drawn up by the Kanagawa Bugiyo and the foreign Consuls conjointly. The Japanese who are residing within the foreign Settlement in conformity with the above conditions, are at present, 27 in number. But there are, besides, about one hundred who are so living without such permission, and those are the men who are engaged in disreputable trades. Many bad characters are to be found among them, but they are enabled to escape beyond the reach of the law by reason of their alleged status as 'foreigners' employes.' Furthermore, the houses occupied by those men are generally of poor construction and in a dirty state, but being built by foreigners, who lease them for their own benefit they cannot be brought under control. Under these circumstances, it is not surprising that most of the abuses complained of are to be found among persons living in the foreign Settlement, without the necessary permission. In order to keep these people under control, it is essential that a strict surveillance be exercised over the servants of foreigners, and the managers of servants' agencies; and it was for this reason that the proposed rules in that behalf were submitted to the Board of Foreign Consuls in July 1876 and again in August 1877, and, although indispensable, they have never been agreed to.

With regard to the maintenance of "ruinous dwellings, walls &c., dangerous to passers by," and "the erection of sheds obstructive to the public thoroughfare, or leaving goods on the streets," to which the Memorialists advert, I may be permitted to remark, that the grievances exist because of acts committed by foreigners or their employes in violation of the regulations, and are serious grounds for complaint on my side. In this and many other directions, it is surprising to find the foreign residents formulating complaints against the Kencho regarding the inconvenient consequences resulting from their own disregard of our laws. The local regulations provide that whenever it is desired to place timber, stones, &c., in front of houses, or to use a part of the road in connection with the erection of buildings, &c., application shall be made for permission so to do, and that on receipt of such application, the proper officials shall proceed to inspect the spot, and if they find no objection, permission may be granted for a fixed term. Notwithstanding these regulations, 37 foreigners have erected, without such permission, stone-steps at the entrances of their shops, &c., and more than 20 have built their upstairs rooms or verandahs to project into the streets. Many of these erections are, however, not such as seriously impede traffic; and with regard to those which are obstructive, the owners have been requested to remove them, but they have not, up to the present time, complied with my request, on the ground that the structures have been allowed to remain in their existing condition for many years. I might cite one notable instance, where the entire width of the sidewalk is taken up by a

sort of raised stone piazza, which the owner of the building persists in refusing to remove, and is supported in her refusal by the authority whose assistance has been sought to enforce the removal of the obstruction. Some time ago the building was destroyed by fire, and my predecessor deemed it an opportune moment to demand the removal of the piazza, but while a correspondence was passing on the subject between him and the authority above referred to, haste was made to reconstruct the building with its former objectionable projection.

I now proceed to deal expressly with the subject of the "taverns carried on without license." The control of these establishments was undertaken by the foreign Representatives in the Convention concluded between them and Japanese Government on the 4th November, 1866, Art. VI. of which, provides that the foreign Representatives "undertake to instruct their respective Consuls to confine within the narrowest limits compatible with public convenience, the number of licenses issued by them to their respective subject or citizens as sellers of foreign spirits or liquors, or as keepers of houses of entertainment within the foreign Settlement or within the port of Kanagawa," and further that "a copy of every license will be furnished by the Consul, as soon as it is issued, to the Governor of Kanagawa," &c. Beginning with May, 1868, a tax of \$12 was collected every month as a license fee from tavern-keepers, while those who made default in payment of the tax, and those who carried on the trade without taking out a license were duly dealt with by the police authorities. This practice continued until October, 1874, when all the grog-shop keepers refused any longer to pay the tax, alleging as the reason, that it was unfair for them to have to pay the sum, while the Japanese were allowed to carry on the same trade without taxation. The question was made the subject of correspondence with the Consuls, and ultimately it was proposed in a letter addressed to Mr. Brennwald, Swiss Consul-General and Senior Consul, in November 1875, that as a regulation had been made, which went into operation in February of the same year, whereby every Japanese liquor dealer was required to pay a yearly license fee of 10 yen, payable semi-annually, the foreigners should be ordered to pay a similar tax. *To this proposal no answer was ever received.* The Kenrei was about to address another letter to the Senior Consul upon this subject, when it was discovered that two British subjects, Lewis and Kelly, were selling articles, in the foreign Settlement, which were subject to national taxation. Correspondence was thereupon opened with the British Consul upon the subject in January, 1880. In September of the same year, under instructions from the Minister for Foreign Affairs to my predecessor, the whole matter was referred to the Department for Foreign Affairs.

The complaints made with respect to sanitary matters refer to:—the conveyance at improper hours of offensive matter, want of an efficient system of cleansing roads and drains, absence of system of watering the streets, accumulation of garbage within the private compounds of foreigners, &c. The causes which have given rise to these grievances I shall endeavor to explain briefly in their order.

In the native town of Yokohama, the hours for removing night-soil are from sunset to sunrise; but in the case of the foreign Settlement, scavengers were notified some time ago to effect the removal between 1 a.m. and daylight. Nevertheless, as the scavenging is done by contract between the scavengers and foreign residents, some of the latter have, undoubtedly to suit their own convenience, ordered the scavengers to call at other than the prescribed hours. This is the reason why the conveyance of night-soil through the Settlement sometimes takes place at improper hours. The Local Board of Health at a meeting held on the 9th August last, passed a resolution to the effect that the removal of night-soil in the foreign Settlement should be effected between the hours of 10 p.m. and 6 a.m., and that offenders against this rule should be punished as offenders against the police regulations. In future this recommendation will be strictly carried out. The system of cleansing the streets and drains now in force requires that the scavengers engaged by the Kencho shall go the rounds of all the streets twice

a day, cleansing the streets, removing garbage, &c. If, in spite of this, there is still garbage in the streets the fault must rest with those who throw it there, viz: foreigners or their servants.

As to the watering of streets, the chairman of Consular Board was requested in 1876 to cause the foreign residents to contribute one half of the expenses (the other half being defrayed by the Kencho) for watering streets. This request was, however, refused by the Consuls, on the ground that as the foreigners pay a large sum of money in ground-rent, the Japanese Government as owner of the land, ought to bear all the expenses. In making the above suggestion the Kencho was not unmindful of the fact that the whole expense of watering roads ought to be borne by the residents, and not by the Government, but considering that the watering would keep the roads in good condition, the Government declared its readiness to bear one-half of the expense. As, however, the request was refused by the foreign Consuls, the Kencho commenced, without further negotiation with them, to carry out its half of the work (i.e. watering once a day) in the year 1877, and this work has been continued during the past summer.

It is true that "garbage is sometimes accumulated in the private compounds of foreigners," and whenever observed the occupants are requested to remove it at once. But if the occupants are unwilling to carry out such directions, nothing further can, under existing circumstances, be done, as offenders claim exemption from all laws and regulations upon this and kindred subjects.

Although the application of sanitary measures differs in urban and rural districts, yet uniformity of action in this respect is a prime necessity where several districts are contiguous to each other, because precautions taken by some of them would be almost useless if no similar measures are adopted by their neighbours. While the foreign Settlement is in a sense separated from the native town, yet the two are connected by rows of dwellings, and I therefore deem it essential that the regulations upon the following subjects, which are now in force in the native town, should be made to apply as well to the foreign Settlement:—1. The sale of injurious, violent, or adulterated drugs. 2. Adulterated food and food unfit for use. 3. The removal of refuse matter. 4. The construction of water-closets, urinals, and drains. 5. Markets, butcheries, tea-firing-places, and factories. 6. Epidemic of infectious and contagious diseases. 7. Reports on all sanitary matters. 8. Reports from practicing physicians, as to the nature of diseases and the occupations, dwellings, ages, and sex of patients, recoveries, death, and duration of diseases. 9. The manufacture and sale of colouring matters for eatables, &c. 10. Reports as to the manufacture of drugs. 11. Reports as to the opening and closing of hospitals (official, public or private), poor houses, blind, deaf and dumb, insane, foundling asylums, and other eleemosynary institutions, and the number of inmates of such establishments.

Having detailed the existing state of affairs, it is proper that I should now show the reason why there is no necessity for the establishment of a municipal board as proposed in the Memorial.

As before stated, at the time of the opening of the port of Yokohama none of the branches of municipal administration in this country were so far advanced as they are at present, and consequently the municipal control of the Settlement was for the benefit and convenience of the foreign residents left in their own hands. The foreign residents, however, having found that, from various causes, they were unable any longer to continue the management themselves, finally in the year 1867, through their Representatives, requested the Japanese Government to assume control of the Settlement. Notwithstanding this, it would appear from the present Memorial that the foreign residents now seek once more to acquire that municipal control which before they voluntarily requested the Japanese Government to assume.

It seems, indeed, inconsistent for the foreign residents of Yokohama to conceive such a scheme as that embodied in their Memorial. Of their own accord, and presumably for cogent reasons they abandoned municipal control in the foreign Settlement at a time when the system of civil administration in this country was imperfect, and now they seek to resume it at the very moment when strenuous efforts are being made on the part of the

Kencho to introduce radical improvements in the administration of municipal affairs—efforts which would appear to be on the point of accomplishment—and which, in my opinion, remove any supposed need for the formation of a special board or committee for the municipal control of the Settlement, as proposed by the Memorialists. Moreover, the very difficulty that has heretofore invariably been experienced in arriving at unanimity of action, no matter how pressing the necessity, would in itself preclude the possibility of success attending the functions of such a board. Want of power has repeatedly been pleaded as an objection to the enforcement of measures that have been deemed necessary for the public good. If, then, power to enforce municipal laws and regulations is wanting, of what avail would be the deliberations of any executive board?

In conclusion, I have only to add that the urgent necessity for a "uniform and enforceable system of municipal government" is recognized by none more than by myself. The means to obtain this end are, however, not far to seek. It can be secured by applying the universally accepted rule that all the inhabitants of a country should be governed by the territorial laws and regulations.

That the foreign Settlement is at present without an efficient system of control is not the fault of the Kencho, but of those who not only claim exemption from the local administrative laws and regulations, but sometimes even place obstructions in the way of their due enforcement. If such obstructions be removed and the Kenrei enabled to enforce the Japanese laws and regulations over foreign residents, I confidently believe that the administration of the Settlement would be so improved, and the state of things generally undergo so complete a change as to give entire satisfaction to all the foreigners residing in this port—a consummation which I most earnestly hope, may soon be brought about.

Respectfully submitted,
(Sealed.) OKI MORIKATA,
Governor of Kanagawa.

To His Excellency,
INOUE KAORU,
Minister for Foreign Affairs.

In response to an advertisement, signed "A. O. Gay, Chairman" and countersigned "W. H. Talbot," a large meeting of residents of Yokohama met yesterday at 2 p.m. in the rooms of the Chamber of Commerce. The reunion was one which had been adjourned from the 27th of March, 1882, and was held "to discuss the question of Municipal Reform." There were present—Messrs. E. Whittall, Kirkwood, J. H. Brooke, J. R. Anglin, Ford, Barlow, E. C. Irwine, Grosser, W. H. Talbot, W. Loxton, A. O. Gay, Potter, St. John, Owston, Brinkley, W. B. Walter, Hegt, Townley, Diack, Gordon, J. A. Fraser, J. Helm, Alex. Clark, C. G. Wilson, W. Bourne, E. Abbott, J. J. Gargan, J. T. Molison, E. M. Neale, A. Weiller, Tom Thomas, P. Osborn and others.

Mr. J. O. Gay was unanimously voted to the Chair. Mr. Talbot, at the desire of the meeting, consented to act as Secretary.

The CHAIRMAN briefly alluded to the meeting of foreign residents on the 27th of March, 1882, when it was decided to forward in due course a memorial through the Diplomatic Corps to the Japanese Government, to which the letter that had been published from H.E. Oki Morikata was a reply. A rejoinder had been prepared by Mr. Talbot.

The meeting decided that as Mr. Oki's letter had been in the hands of the public through the press for a day or so, it was unnecessary to hear

it read, and proceeded to discuss the rejoinder. After some remarks from Mr. McDonald to the effect that the reply was full of statements—or mis-statements rather—Mr. Talbot and Mr. Gay remarked that those mis-statements were considered in the rejoinder, which, with the assent of the meeting Mr. Talbot proceeded to read. It is as follows:—

On the 27th March, 1882, a largely attended meeting of the foreign community of Yokohama was held to discuss the question of reform in the local or municipal government of the settlement. The meeting unanimously adopted a memorial setting forth the grievance complained of and suggesting a remedy. On the 13th of April following, the memorial was presented to the Corps Diplomatique through the Consular Board. On the 10th September instant, the chairman of the adjourned meeting received from the senior consul a communication covering a document styled "Memorandum in reply to the memorial concerning the municipal government in Yokohama submitted to the conference by the foreign residents of Yokohama through the delegate of Great Britain." This document purports to be, as its closing passages imply, a statement of reasons by Mr. Oki Morikata, of Kanagawa, for negating the prayer of the memorial. The adjourned meeting re-assembled on the 1st October and appointed a committee, and that committee, in the names of the community assembled at the meeting, to submit the following reply to the memorandum of Governor of Kanagawa:—

1.—The committee will first refer briefly to the last paragraphs of Mr. Oki Morikata's memorandum. He says:—"The urgent necessity for a uniform and enforceable system of municipal government is recognized by none more than by myself. The means to obtain this end are, however, not far to seek. It can be secured by applying the universally accepted rule that all the inhabitants of a country should be governed by the territorial laws and regulations." To this we reply, that the memorialists carefully refrained from touching upon the question of ex-territorial jurisdiction in other than general terms implying a knowledge of its existence. Their memorial embodied a request that would equally have been preferred to the Imperial Government were the territorial laws of Japan applicable to all foreign residents. The memorialists confined their prayer to the grant of those reasonable privileges which are accorded by the governments of all countries in Europe and by the United States to all congregations of men forming townships or cities of their own. As its name implies, municipal law is distinct from imperial law. It comprises and is confined to a series of regulations for the health, peace, good order, and decency of a settlement of men. Each community frames its own rules; and those rules are applicable only to the limits of the town or city in which the community dwells. In asking for the grant of what is virtually a municipal charter the memorialists were acting strictly within their rights as citizens, irrespective of the different laws which apply to them as individuals: and they must express their deep regret that a question so simple should be obscured and complicated by importing into it a matter purely and solely one for the consideration of the imperial governments of Japan and their respective countries.

2.—We say to the statement describing the formation and surrender of a municipal government at the opening of Yokohama, as follows:—"Yokohama was opened in 1859. Five years later the necessity of local control pressed itself upon the attention of the residents. Meetings were held. On the 7th March, 1865, a scheme was proposed and approved by a meeting; it was subsequently ratified by the authorities; a council was elected, and held its first meeting June 9th, 1865. This council had undertaken a task for the due performance of which it soon discovered its income to be inadequate. The Japanese authorities had consented to permit the council to receive 20 per cent. of the ground rent: this yielded about \$6,000. There were other sources of revenue derived from the taxation of taverns, &c., and the total income of the council was approximately \$10,000. The council further urged the adoption of municipal

regulations similar to those in force in Shanghai, but the foreign representatives failed to procure the necessary assistance and sanction of the Imperial Government of Japan. The want of funds and of enforceable regulations, left the council no alternative but to surrender a function it was impossible for it to carry out, and it ceased to exist in November, 1867, after an existence of two and a half years during which time it had performed services of admitted importance and value. These facts, which are confirmed in the second paragraph of Mr. Oki's memorandum, are at variance with the inferences Mr. Oki seeks to draw from them. He says:—"The foreign residents having found that, from various causes, they were unable any longer to continue the management themselves, finally, in the year 1867, through their representatives, requested the Japanese government to assume control of the settlement. Notwithstanding this, it would appear from the present memorial that the foreign residents *now seek once more to acquire that municipal control which before they voluntarily requested the Japanese government to assume.*" It seems, indeed, inconsistent for the foreign residents of Yokohama to conceive such a scheme as that embodied in their memorial. Of their own accord, and presumably for cogent reasons, they abandoned municipal control in the foreign settlement." We think the passages we have italicised to be, though perhaps unintentionally, misleading. The council of 1865-67 did not voluntarily request the government to re-assume municipal control, nor of its own accord abandon control of the foreign settlement. Its resignation was forced upon it consequent upon the utter inability to carry on the work with the funds at its disposal, and without the power to enforce the regulations it had made or found necessary to make. This important distinction between a compulsory and voluntary surrender of municipal rights should, we submit, be recognized; because it removes the allegation of inconsistency to which Mr. Oki seems to attach grave importance.

At intervals for many years after the suspension of the functions of the council of 1865-67, attempts were made to revive local self-government, but the obstacles were numerous and difficult to deal with. In the interval to 1877 there was a nominal chief of a municipality in the person of Mr. Benson, elected by the land renters. His office was abolished in 1877. In reference thereto, Mr. Oki says:—"This determination was duly communicated to the foreign Consuls who raised no objections thereto, while the British Consul in his reply dated July 4, 1877, expressed his approval of the arrangement." To this we urge, that the abolition of the office of municipal director was a most distasteful step to the foreign community, and a memorial dated May 19th, 1877, signed by the principal mercantile houses and leading residents, was forwarded to the Consular Board, stating that the proposed change in the municipal arrangements was, in the memorialists' opinion, very objectionable as tending to depose the community from all agency in matters intimately concerning themselves. With full knowledge of the presentation of this protest to the Consular Board we are unable to find justification for Mr. Oki's assumption that the abolition of the office of municipal director was acquiesced in by the foreign community or their consular representatives.

3.—We will now endeavour to deal with the substance of Mr. Oki's memorandum, in which he undertakes to show that the statements contained in the memorial of March, 1882, are for the most part unfounded. He alludes to various paragraphs in the memorial, and deals with them in this manner:—"The memorialists say that 'in that portion of the town known as the Old Swamp Concession there are numerous taverns, the majority of which are kept by foreigners and natives of the lowest class and character.' The 'unfounded' nature of this allegation, according to Mr. Oki, is supposed to be exposed in the passage immediately following that quoted, namely:—"In fact, however, there is at present not a single Japanese who keeps a tavern in that quarter, although formerly there were one or two; while a large number of such resorts are kept by foreigners. Over these latter no surveillance can be exercised by the police, as it is practically impossible for the

Kenchō to interfere with trade carried on by foreigners."

Continuing, Mr. Oki says:—"It is true that in various parts of the settlement and on the different roads leading to the bluff settlement there are some houses where may be found both prostitutes and receivers of stolen property. With regard to the women who ply their illegitimate trade on the roads referred to, it may be stated that, as several arrests have lately been made, the number has been so reduced that the evil has now almost disappeared. But with the same class of women in the settlement, it is found extremely difficult to deal, because they take shelter in the foreign grog-shops, the proprietors of which employ them to carry on their disreputable traffic." To arrest these persons Mr. Oki states that a warrant must first be obtained from the consul of the employer's nationality, and it often happens that when policemen proceed to make arrests, they fail to find the object of their search, owing to the long time spent in these preliminary formalities. The same difficulty exists in arresting the receivers of stolen goods, as many of them are also enabled to pass as employes of foreigners." We submit that, instead of proving the unfounded nature of the memorialists' charges, these admissions substantiate them. The remedy proposed is that "the governor should be furnished with a general warrant enabling the proper officers to enter freely into the premises occupied by foreigners of whatever nationality, when there is reason to suspect that offenders are concealing themselves therein; and also that, as the receivers of stolen goods, thieves, &c., are, for the most part, foreigners' servants, or those who conceal themselves in the houses of such servants, the police should be allowed to enter the premises of foreigners, for purposes of investigation, and to take the names, &c., of the Japanese servants employed therein." We cannot refrain from pointing out that the remedy proposed is objectionable in every sense: its application would mean the submission of the private houses and compounds of all foreigners to a species of police espionage which must inevitably bring the law into direct conflict with the people. In no civilized country does such a regulation exist; and it is impossible to conceive a civilized people that would tolerate a law at once arbitrary and barbarous. The proposition cannot be too strongly condemned, and we should fail in our duty to ourselves and our fellow residents were we to hesitate in making this opinion known to the Japanese authorities.

4.—In reference to the police, Mr. Oki says:—"The charges contained in the memorial that the policemen's wages 'are not only inadequate but directly conduce to the corruption of the men,' and that they 'have connived at robberies,' are statements which ought not to have been made without the clearest evidence." This remark must be dealt with on simple grounds. The first statement is based on the 'clear evidence' cited in the memorial, that the wages of the constables range from 7 to 10 yen per month; of the sergeants and inspectors from 15 yen upward. There is abundance of evidence obtainable that no respectable man (and the police are said to be enlisted from a superior class of the people) can maintain himself decently for less than ten yen per month; yet the average wages per capita of the 180 constables is yen 7.40 per month only. Where these men have families and dependents the difficulty is still greater; and in many cases the wives and female relatives of constables are compelled to seek employment in tea-firing godowns and other similar occupations. We re-assert that no police force can be efficient that does not consist of men adequately paid to place them above temptation, and to impress upon them the value of a position the slightest misconduct would entail the forfeiture of. Certainly, if Mr. Oki insists that the wages stated are not inadequate, it will be useless for us to prolong the argument. The second point, namely, that the police have connived at robberies, is unfairly stated on a partial quotation. The memorial reads:—"That the police have connived at robberies in the settlement the circumstances of these robberies seems plainly to indicate." This statement we confirm, for we hold it to be immaterial whether the thieves are or are not employes, or accomplices of employes, or

the foreigners from whose premises the robberies are effected. In any case the duties of the police are not affected, for it is reasonable to suppose that, if ordinarily efficient police supervision were exercised, the thieves, whether foreigners' servants or not, could not convey their spoil any distance without any detection, especially where the stolen goods are contained in cases and bales. Mr. Oki does not dispute the inefficiency of the police. He admits it, by saying:—"Even if the police were numerous enough to guard every house in the settlement it could not be expected that the corps would be as effective as required, because they meet with many difficulties in the discharge of their duties, arising from the fact that they are not clothed with any authority over foreigners." The suggestion is then made that to render the police efficient they should be "empowered to enter the premises of foreigners for the purpose of arresting suspected persons, and they should exercise this power during day and night, when they deem it necessary." On a similar proposition to this we have stated the insuperable objections that exist against its adoption.

5.—Mr. Oki is at a loss to understand the basis of the memorialists' complaints regarding the roads, streets, and drains. He states that "these are the very things to which the local authorities have long been directing their attention. Some of these works have already been completed, while others are now being carried out or are in contemplation." Such a work as the construction of the main drain now being carried out in the midst of the foreign settlement ought to afford sufficient evidence of the earnest endeavours which the local authorities are making to ameliorate the condition of the settlement." In reply to this, we would point out that the memorial was drawn up in March, 1882, and the work to which Mr. Oki alludes was undertaken subsequently. Mr. Oki, however, takes exception to the specific complaint that "the Main and Water-streets in wet weather become almost impossible, while in dry and summer weather the dust is intolerable," also that several of the roads 'are in a most dilapidated condition, and in bad weather traffic is seriously impeded,' and he says, in positive terms,—"Now, with the exception of some roads on the Bluff which are being repaired, I venture to assert that there is not a single road throughout the entire settlement which is in the state described." We shall not attempt to refute this assertion beyond referring to the evidence of the roads, streets, and drains themselves, and to add that the repairs to Main-street necessitated by the drainage operations are now (September, 1883) still incomplete.

6.—Mr. Oki then describes the extent of the work of "reconstructing roads and laying main drains in that part of the settlement bounded by the bund from the custom-house to the creek, thence to the Maida-bashi on the south-west side, thence running to the north along the Honmura-road, and forming in extent about two-thirds of the old settlement. This work is now in progress at an enormous expenditure of money. . . . The cost of laying down the sections of the new main drains already in course of construction amounts to upwards of one hundred thousand yen, and this work, it should be observed, is executed for the exclusive benefit of the foreign settlement." Upon this we feel constrained to say that while the memorialists gladly and spontaneously record their thankful acknowledgements for the work undertaken by the local government, they are disagreeably impressed with the excessive expenditure and the wholly inadequate results. The utility of the work now being undertaken at the extravagant expenditure of one hundred thousand yen may well be called in question: that it should have been commenced at all without the strongest and most urgent necessity seems inexplicable; and we make bold to say that had the local government been assisted by a committee of foreign residents this vast outlay would have been, in a great measure at least, avoided. The generosity is undoubted, but the question arises whether the outlay could possibly have been sanctioned by the rate payers. This community have no right to expect the liberality of the local government to be always exerted in their favour; especially in the performance of work the outlay for which they would not have borne themselves.

The memorialists' statement that "the drains

were only constructed to carry off surface water, and that they have been used for sewage," &c., is admitted to be correct:—but Mr. Oki says:—"It is a fact that foreign residents and their servants make these drains receptacles for sewerage of all kinds, or privately alter the course of such drains, thus causing them to be choked up, and rendered a source of danger to public health. Whenever such actions are observed, officials are despatched to the spot or communications made to the occupants of the premises. But my endeavours have generally been abortive, as foreign residents decline to carry out the directions given, and raise all sorts of objections."

Mr. Oki then says that "there are in operation complete regulations which both the local and police officials continually exert themselves to carry out" for the control of "all such matters as projections interfering with the thoroughfares, the practice of obstructing the streets, &c., ruinous and dangerous buildings, walls, &c., and jinrikisha. But as foreign residents habitually ignore and disobey them, such regulations can accomplish but little good, so far as the foreign settlement is concerned." To this we reply that no resident of the settlement has to our knowledge, had any intimation whatever of the "complete regulations" referred to, nor is any person acquainted with even their general tenor. How, then, is it possible for foreign residents to "habitually ignore and disobey" regulations of the existence of which they are profoundly ignorant? And we go further, and say that "projections interfering with the thoroughfare, the practice of obstructing the streets," &c., are more numerous and common in the adjacent Japanese settlements than in our own. In Honmura and Ishikawa, and the approaches to the bluff from the Maida-bashi and Kamenohashi in particular, thoroughfares between the foreign settlements on and below the bluff, yet within the absolute jurisdiction of the local government and where no foreigners reside, to habitually obstruct the lawful exertions of the police to carry out the regulations, every shopkeeper trespasses upon each side of the narrow ways, exposing his wares for sale on benches standing where the footway ought to be, and so reducing the space that carriages and pedestrians are frequently obstructed and delayed. With these interferences with the thoroughfare, and the reprehensible practice of persons drawing up hand carts, jinrikisha, &c., at each side of the street and leaving them for hours unattended, the police seem to have no concern. If, then, interferences with and obstructions of the thoroughfare are not checked in one portion of the settlement solely under Japanese control, would the authorities apply a different series of regulations to the foreign settlement?

7.—Touching the lighting of the streets, we are aware that a difference of opinion prevails; and we are not now prepared to discuss the question.

8.—In reference to the occupancy of houses and lands in the foreign settlement by Japanese, we venture to point out that the memorialists have not objected to the presence of those who have conformed to the regulations, and obtained the necessary consent to their tenancy; but they strongly protest against the unauthorized residence of Japanese. Mr. Oki says:—"There are about one hundred who are so living without permission, and those are the men who are engaged in disreputable trades. Many bad characters are to be found among them, but they are enabled to escape beyond the reach of the law by reason of their alleged status as foreigners' employes."

9.—The existence of "ruinous dwellings, walls, &c., dangerous to passers by, the erection of sheds obstructive to the public thoroughfare or leaving goods on the street," is admitted, Mr. Oki adding:—"The grievances exist because of acts committed by foreigners or their employes in violation of the regulations, and are serious grounded for complaint on my side." To this we must respond that the regulations, equally with those previously alluded to, are wholly unknown to the residents accused of their violation.

10.—The question of licenses for taverns is one with which we cannot now deal. The disgraceful condition of the liquor traffic in Yokohama is not denied, nor apparently can it be controlled in the absence of such regulations as a legally constituted municipality alone can enforce.

11.—Other minor matters are dealt with by Mr.

* The passages in this and subsequent extracts printed in italics will be specially referred to later on.

Oki, who alleges, as an excuse for their existence, that he cannot control "foreigners or their servants" who are responsible. With regard to watering the streets, one-half cost of which Mr. Oki states is borne by the Kencho, we add that under the arrangement which has existed for several years past, the watering is paid for by voluntary subscription on the part of the foreign residents, and we are informed by the contractor that he receives no contribution from the Kencho towards this object. We are certain that if foreigners refuse to contribute the portion of the street opposite their tenements is left unwatered. So careful are the contractors of this that Main-street, on a sunny day, presents a checkered scene of wet and dry intervals.

12.—The only other paragraph of Mr. Oki's reply we deem it necessary to specially notice is that on page 12, in reference to the accumulation of garbage in the private compounds of foreigners, and we do so because the reply is comprehensive and is the reason urged throughout for the positive inability of the local government to perform even the simplest functions of the municipality. Mr. Oki asserts that directions are given to remove the garbage; "But if the occupants are unwilling to carry out such directions, nothing further can, under existing circumstances, be done, as offenders claim exemption from all laws and regulations upon this and kindred subjects." We cite this assertion because it is urged throughout Mr. Oki's reply as reason, cause, or excuse, for every abuse complained of by the memorialists.

13.—Finally, Mr. Oki's reason for the non-necessity of a municipal board, as proposed by the memorialists, is stated on page 13 of his memorandum to be the inconsistency in the surrender by the community of 1867 of the municipal authority now claimed by the community of 1883. To this he adds, the foreign residents "seek to resume it (municipal control) at the very moment when strenuous efforts are being made on the part of the Kencho to introduce radical improvements in the administration of municipal affairs—efforts which would appear to be on the point of accomplishment—and which, in my opinion, remove any supposed need for the formation of a special board or committee for the municipal control of the settlement, as proposed by the memorialists." The pitch of this sentence, namely, that "efforts to introduce radical improvements in the administration of municipal affairs appear to be on the point of accomplishment," is unfortunately contradicted by the succeeding lines wherein Mr. Oki refers to the difficulty in arriving at unanimity of action, and the want of power to enforce measures deemed necessary for the public good. He concludes with the following words which, whether taken in conjunction with the context or by themselves, clearly indicate that the object and suggestions of the memorialists have been entirely misunderstood. He says—"If, then, power to enforce municipal laws and regulations is wanting, of what avail would be the deliberations of any executive board?"

14.—In response to the whole of Mr. Oki's memorandum we beg to say that the grievances set out in the memorial are one and all admitted to exist by the Governor of Kanagawa ken in which the foreign settlement is situated. Admitting the gravity of these abuses, the necessity for their removal, and candidly avowing that the urgent necessity for a uniform and enforceable system of municipal government is recognized by none more than by himself, Mr. Oki declares that the abuses arise from the causes italicised in the various quotations from his memorandum made here, and that these causes are the unlawful acts of foreigners and their employes in the commission of violations of municipal regulations, in sheltering receivers of stolen goods, and in shielding criminals from arrest and punishment by claiming them as their servants: and he further declares that the correction of these abuses is impossible while the Japanese authorities are powerless to interfere with trades carried on by foreigners, while foreign residents decline to carry out the directions given, raise all sorts of objections, habitually ignore and disobey all regulations, and claim exemption from all laws on this and kindred subjects. The remedy for this highly unsatisfactory state of affairs proposed by Mr. Oki is, that he should be furnished with a general warrant to enter the premises and

houses of foreign residents day or night on the mere suspicion that a person obnoxious to the police is harboured there: and furthermore, that all residents should submit to the universally accepted rule that all inhabitants of a country should be governed by the territorial laws and regulations.

Now to this we beg to say that the abuses complained of by the memorialists, the existence of which is admitted by Mr. Oki, are acknowledged by them to be due to the absence of uniform regulations and efficient police protection. They said in their memorial, page 3:—"The municipal laws of each country vary, and cases frequently arise where a British, American, or German resident may be coerced into compliance with his own law against a nuisance or obstruction which persons of other nationalities may commit with impunity." The abuses growing out of this want of system are then partially enumerated: and we are unable to see that Mr. Oki's retort that the abuses are committed by foreign residents themselves or their servants weakens the memorialists' contention that some sort of municipal control for the reform of these abuses by whomever committed, be he English, American, French, German, Chinese, or Japanese within the boundaries of the settlement, is urgently necessary. With the exception of the remedy proposed there are no material differences between the memorial and the memorandum in reply. The first declares the existence of abuses and the urgent need for their correction: the second admits the existence of those abuses and acknowledges the urgent need for their correction. The position therefore is this. The memorialists urge "the creation of a system of suitable regulations which, having received the approval of the Government of Japan and of our respective Ministers, may be enforced in a similar manner as in the neighbouring settlement of Kobe, or in Shanghai." They then anticipated the reply of Mr. Oki in these words:—"The Japanese government may, with propriety as before stated, urge that these abuses arise from the powerlessness of the local government to enforce municipal regulations upon the foreign community." The memorialists then suggested a remedy which, having clearly been misunderstood by Mr. Oki, may be briefly recapitulated here. A local board or committee was to be formed, to consist of the Kenrei of Kanagawa *ex officio* president, two Japanese nominated by him, and six foreigners elected to represent the seventeen nationalities, exclusive of Japanese, to which the residents of Yokohama belong. The board was to have power to draw up regulations and bye-laws for the good and thoroughly efficient control and protection of the settlement; to place those regulations and bye-laws before the Imperial Government with a memorial praying for their approval and ratification: in other words, praying the Government of Japan to grant a charter constituting Yokohama a municipal corporation. Armed with this authority, the committee would have made application to their respective Ministers to procure, if they did not possess it, the proper power to enforce the municipal regulations in the courts of their respective countries. The result would be a code of local regulations publicly made known to every resident, enforceable in the courts of the principal, if not all, the powers represented in Japan, and thus the "want of power for the enforcement of measures that have been deemed necessary for the public good," which Mr. Oki urges as his chief objection to an executive board, would be removed, and in its place a municipality with power of control and protection at least as efficient as that enjoyed by the admirably conducted and efficient municipality of Shanghai. The duties of this board would have been to cooperate with the local government: to bring before the governor the varied wants of the settlement: to assist and advise in matters where expenditure is necessary: to aid in carrying out a strict economy of administration: and finally, by accepting the responsibility, relieve the local government of the burden of complaint made against it, and the stigma of incapacity for control it is itself forced to confess. Such a board would create mutual good understanding: it would serve to bring Japanese and foreigners to a better appreciation of the mutuality of interest between them: and its formation is nothing more than the

same body of people would be justified in demanding were they altogether under the jurisdiction of the territorial laws of Japan.

If we read Mr. Oki's memorandum aright, his only reasons for urging upon His Excellency, the Minister for Foreign Affairs, the refusal of the prayer of the memorial, is that, because a municipality formed in 1865 and compulsorily discontinued in 1867 for want of funds actually necessary to carry it out, the community of 1883, occupying a settlement of at least double the area of that of 1865, have no right to ask for the restitution of a privilege they most unwillingly abandoned for want of an alternative: and that the true remedy is to submit to Japanese rules and regulations which the author of that remedy, Mr. Oki himself, declares to be impossible of execution.

15.—We, therefore, most earnestly beg that the question may again be laid before the Imperial Government of Japan for reconsideration. We respectfully submit that the memorandum we have had the honour to reply to, confirms in every particular the substance of the memorial presented to you by the foreign community in April, 1882: and that the reasons urged by Mr. Oki in opposition to the remedy proposed are unreasonable and illogical, and wholly insufficient to form a basis for the absolute refusal of the Imperial Government to accede to the prayer of the memorialists, either in its full or to a modified extent.

A long discussion ensued as to the propriety of printing the document. A few incidental points were alluded to in the course of the discussion—among others the item of the main drain, which is said in Mr. Oki's letter to have cost upward of *yen* 100,000. Mr. Talbot said that he had good reason to know that in Europe such a drain would not cost more than *yen* 30,000 per mile. This drain was not more than a mile and a quarter or a mile and a half in length. If there was such discrepancy in the prices of construction in Europe and Japan, what might be expected in the matter of road-laying, &c.?

Mr. THOMAS and some other gentlemen asked whether the paper read could be printed and circulated. The reading had not been quite audible to many of the gentlemen present. The Chairman suggested that it be printed, if desired by the meeting, but be not published. Mr. Brooke considered that, this being a public meeting, the papers read there were public, and proposed an adjournment of one week and the then publication of the document. Mr. Talbot suggested that a Committee be appointed to consider the best interests of the community in the matter. Some gentlemen behind said (among others Mr. Irwine) that they had not heard the purport of the document; and the question as to whether it should be published, and if so in what form, whether as the property of the press or as a pamphlet for private circulation was discussed with some vigor, the Chairman interposing and suggesting that a vote should be taken for a Committee to consider a reply, which should be delivered one week from the day of the meeting. Mr. MacDonald here made a remark about some heap of stones being left on the Bluff, and other gentlemen were heard to speak of cases of negligence on the part of the municipal authorities in matters of detail, when Mr. Talbot reminded those present of the prime object of the meeting, which was not to consider the mere question of grievances but the matter of whether we had "the abstract right to govern ourselves!"

Mr. W. B. WALTER thought that the present meeting was not sufficiently representative to decide such a question. He suggested that a ballot-box be placed in the Chamber of Commerce Rooms for the election of a Committee which should be empowered to act for twelve months and treat directly with the Japanese. Heretofore communication had been conducted through the Consular Board, which appeared to have broken down. Nothing was heard for a long time of any complaints, which were then found to have been shelved. Mr. Walter thought that the Kenrei would be glad to receive suggestions from such a Committee as he proposed. Since the appointment of Mr. Oki to the office of Prefect many improvements had been effected, and the speaker thought there was sufficient evidence that the Local Authorities were anxious to meet the wishes and satisfy the wants of the community as far as possible. The question of the number and constitution of the Committee and the qualification of the voters was then discussed. It was decided that all "land-renters

and householders" are eligible for election, and that the suffrage shall be free for all those who are registered at their respective Consulates. Thus, a resolution finally reduced to the will of the meeting was passed:—"A Permanent Committee of seven Land-renters and (or) Householders shall be elected to act as intermediaries between the foreign residents and the Japanese and foreign authorities." ["Foreign authorities" include the Consuls and not merely the Ministers of Treaty Powers].

The question of the publication of the "rejoinder" was again considered, and, indeed, debated at great length, Mr. Kirkwood desiring that it be published, a view that was endorsed heartily by Mr. Kingdon, with the understanding, at the special request of Mr. Talbot, that it was merely a draft submitted at the request of two or three gentlemen present to the approval of the community. In other words, after several amendments had been suggested or proposed, a formal proposition made by Mr. Kirkwood and seconded by Mr. Irwine was carried without

dissent, "that the document read be published as a reply, suggested by two or three gentlemen present, to H.E. Oki Morikata's communication."

It was finally determined that, the permission of the Chairman of the Chamber of Commerce having been already obtained, a ballot-box for the election of a Committee of Seven to confer, as before explained, directly with the Japanese and Foreign authorities shall be in charge of the Secretary of the Chamber of Commerce from to-day until Saturday at noon. Each voter must sign his name legibly on a ballot-paper, and vote for a ticket of seven persons, or be disqualified. At the termination of the suffrage the ballot-box will be opened by the Chairman of the meeting, Mr. A. O. Gay, in presence of scrutineers. Messrs. Wilkin, Whittall, and W. B. Walter are understood to have consented to act in the latter capacity.]

With a vote of thanks to Chairman and Secretary, the meeting adjourned.

NOTIFICATION NO. 32 OF THE PRIVY COUNCIL.

It is hereby notified that the treaty limits in Korea are revised as follows:—

October 3, 16th year of Meiji (1883).

(Signed) SANJO SAN'YOSHI,
First Minister of State.

(Signed) INOUE KAWORU,
Minister for Foreign Affairs.

STIPULATIONS FOR THE TREATY LIMITS IN KOREA.

Art. 1.—In accordance with the first clause of the supplementary treaties concluded by the Commissioners of Japan and Korea on the 31st of August in the 15th year of Meiji (1882) on the 17th of July (Korean calendar), the Governments of the two countries have agreed to extend the treaty limits in accordance with the recommendations of the Commissioners appointed by them.

Art. 2.—The treaty limits in question will be as follows:—In-chôn—the river Kokwa on the east; the harbour of Yosenkin on the north-east; and the island of Kokwa on the north. Wôn-san—Basokurei (a lofty mountain) on the west under the jurisdiction of Tök-wôn Fu; old Riuchiin on the south in the jurisdiction of An-byôn Fu; and Giyoka-choku on the north in the jurisdiction of Bunsen Gun. Pû-san—Kichô on the east; Kin-kai on the west; Meiko on the south; and Riysan on the north.

Along the boundaries of the districts mentioned posts will be erected in the presence of officers of the two countries, in order that the land-marks may be well established.

Art. 3.—The treaty limits to be extended in the 17th year of Meiji, Japanese calendar (1884), or in the year of Kinoye Saru (ape) Korean calendar, will be determined after due discussion between the Commissioners of the two countries; and the decisions arrived at will be embodied as supplementary provisions to the present agreement.

Art. 4.—Japanese are entitled to shoot anywhere within the treaty limits defined above, but they must abstain from shooting in the neighbourhood of dwellings, or where posts are erected by the Korean Government with a prohibitory sign.

Art. 5.—In case any Japanese should commit any act of violence, or proceed beyond treaty limits, the local authorities may arrest them and hand them over to the Japanese Consul, or detain them until the matter is reported to the Consulate and instructions are obtained thence. Persons so detained must invariably be treated with humanity. The period of detention must not exceed the time necessary for communication with the Consulate.

Art. 6.—In case Koreans commit acts of violence upon Japanese travelling within the treaty limits, the local authorities of the peninsula shall adopt measures for the protection of those assailed, and punish the assailants with the utmost rigor of the law.

Art. 7.—In case any Japanese shall fall sick or be belated while travelling in Korea, the inhabitants must provide for them either conveyance or lodging. Comprehensively speaking, all hospitality possible must be shown to the travellers, who will afterward be chargeable for the lodging, food, and conveyance required.

Art. 8.—The Korean Government will post the 4th Article and those following it, on the road side in the various towns and villages within treaty limits, so that people may be strict in observance of these treaty stipulations.

In witness of the validity of the above provisions, the Commissioners of the two countries hereto sign their names and affix their seals.

Japan, July 25 16th year of Meiji (1883).

Korea, June 22, in the year 492 since the opening of the country.

(Signed) TAKEZOYE SHINICHIRO,
Japanese Commissioner.

(Signed) MIN YÖN-MOK,
Korean Commissioner.

TRANSLATIONS FROM NATIVE JOURNALS.

DISSOLUTION OF THE CONSTITUTIONAL MONARCHIAL PARTY.

(Translated from the *Hochi Shimbun*).

The public is well aware that the creed of the Constitutional Monarchical Party is opposed to public sentiment. It is a matter of congratulation for the nation and its people that the party has been dissolved. Since it came into existence in March last year, it has been a laughing stock, and the butt of the public. It should however, be mentioned, for the credit of its members, that they, courageously despising public opinion, and indifferent to the dishonorable motives attributed to them, did not hesitate to dissolve when they found their objects too hard for attainment. Messrs. Maruyama (Editor of the *Meiji Nippo*), and Fukuchi (Editor of the *Nichi Nichi Shimbun*) were doubtless prompted to such laudable action by the conviction that it is impossible to oppose the progress of events. We should, therefore, be pleased. Political, like other parties, assume distinguishing names. We, for instance, have a radical and a progressive party. In France one finds imperialists and republicans. If the whole French nation were in favor of the former's policy no occasion would have occurred for the organization of the latter. A minority in the community is a stumbling-block. In a country like Japan where the people know no other public feeling than that of loyalty, the formation of a Monarchical Party is superfluous, the cause of a ridicule which may occasionally merge into hostility. Foreigners hearing of such an association would imagine that some of our people were hostile to the existing Government, and desirous of counteracting some projects which if effected would involve national disgrace. They would find it hard to realize that the party in question is an object of horror to the Japanese people, which boasts allegiance to an Imperial Dynasty reigning through countless ages.

In point of fact there is not one individual in the whole community who is dissatisfied with the imperial rule, whose beneficence is universally appreciated; and we may ask what effect the construction of a "Monarchical Party" could have produced upon the vulgar mind. It could only serve to undermine the national loyalty; and, seeing this we attacked the association with our utmost zeal. There was at last no course open to the leader of the party than to change its repulsive name or to abolish it altogether. The recognition of a fault and amendment are always honorable; and the delay in that honest method was probably due to lack of moral courage on the part of the members of the society, who, nevertheless, have now amply redeemed their errors by their dissolution. We take the opportunity now of reminding them that all political parties must have honest principles and act up to them. The programme of the Monarchical Party was ostensibly to uphold the dignity of the Imperial family and to secure the happiness to the people. Alas! What failure! Their ideas have terminated in innumerable troubles and complications. The attempted assassination of Mr. Itagaki is traceable to the indirect instigation of the Imperial party. The Fukushima suspects were originally embroiled with members of the same party, and the affair culminated in the arrest of the liberals and a rupture between the local Government of Fukushima and the inhabitants of the prefecture. This with other instances proves the accuracy of the assertion that the Constitutional Imperial Party endangered the welfare of the nation. Although their number was small and their influence meagre, yet they managed to infect a certain class, which, fearing some loss of fortune consequent upon the advance of civilization, have striven to check a progress which they say is the result of recklessness and temerity. Such people are ignorant of the fact that the standard of Japan's civilization is yet low, and look upon advancement with abject terror. The antidotes they would employ, are blinded by conservatism and procrastination. Their efforts are only productive of disorder and are contrary to what is in effect the popular will. We must elevate

our social standard by all means in our power. In the long run, we shall win a complete victory. In this belief we are more than confirmed by the collapse of the Imperial Party in spite of the aid afforded it by the Government. There is some apprehension, however, that the disorganization of the Constitutional Imperial Party is the harbinger of a general dissolution of all political parties by order of the Government. We are indispensed to credit the rumor. There is no reason why the Government should attempt to demolish political parties that do a great deal of good to the nation. In fine, no fear of the extinction of political parties need be entertained.

REGULATIONS OF TRADE BETWEEN JAPAN AND KOREA.

(Translated from the *Fiji Shimpo*.)

Below are given what are said to be the rules under which trade between the two countries shall be carried on. We do not, however, profess to state whether or not they have the approval of our Government:—

Section I. relates to the report of the arrival of a vessel.

Art. 1.—Within 48 hours (Sundays excluded) of the arrival of a merchant ship in a Korean port, the master shall exhibit to the Customs officials the Japanese Consul's certificate to the effect that he has lodged in the Consulate the ship's papers. He may then "enter" the ship (according to the rules now prevailing in the ports of all civilized countries) and deposit a manifest of cargo. In ports where there is no Japanese Consulate the master of the vessel shall personally deposit the ship's papers in the Custom House and comply with all the established rules.

Art. 2.—Any falsification of the manifest, with a view to defrauding the Korean revenue, shall subject the master of the vessel to a fine of *riyo* 300.

Art. 3.—Any mere error in the manifest may be corrected within a prescribed time without payment of any fee. Corrections having to be made beyond that period will each be charged for at the rate of *riyo* 20 for each day that mistakes remain uncorrected.

Art. 4.—In the case of goods being landed without having been previously entered at the Custom House, the master is liable to a penalty to the extent of two-fold the value of the goods.

Art. 5.—Any master neglecting to enter his vessel within the specified 48 hours of her arrival shall be liable to a fine of *riyo* 50 for each day of such negligence; provided always that the cumulated penalties shall not exceed *riyo* 300.

Art. 6.—All goods smuggled into Korea in Japanese ships shall be confiscated, and the master of the ship implicated shall pay a penalty of *riyo* 200.

Art. 7.—Vessels clearing shall pay all charges incurred before their clearance papers are issued. In the event of clearance being refused, the Customs authorities shall immediately inform the Master and the Consul of the reason of the refusal.

Section II. deals with entries by consignees.

Art. 1.—The owner or consignee of any goods must before landing them make entry of the same at the Custom House (with the usual correct descriptions of names, marks, numbers, and values). Invoices shall remain in the custody of the Custom House until the goods have been officially examined.

Art. 2.—The Korean Customs authorities may examine all packages so entered; but the examination shall be conducted without any expense to the importer. The examining officers shall replace the goods in their original position in the packages, and examination shall be made without any unnecessary and vexatious delay to the importer.

Art. 3.—An owner receiving goods damaged in transit may notify the fact to the Customs officials, and call competent and approved surveyors to attest the damage. The survey report shall be signed by the surveyors in presence of Customs officials. Equitable reduction of duty will then be allowed.

Art. 4.—Permits for the delivery of goods to the importer shall be issued as soon as duty has been paid.

Art. 5.—All goods intended for export must be

entered at the Custom House before they are put on board ship.

Art. 6.—Vessels must be cleared with forms similar to those observed on arrival.

Art. 7.—All merchandise embarked before it has been entered at the Custom House, and all prohibited articles, shall be forfeited to the Korean Government.

Art. 8.—Any person signing a false declaration or certificate with intent to defraud the Korean Customs shall be liable to a fine of *riyo* 100.

Section III. contains the regulations for the conduct of inspection.

Art. 1.—Customs officers shall be placed on board all vessels in harbor, and have control of the hatches. They are not entitled to demand anything; but they shall be treated with civility.

Art. 2.—No goods shall be discharged from any ship between sunset and sunrise. Any person who, without permission, shall remove any fastenings placed by the Korean officers, shall be fined *riyo* 50.

Art. 3.—Goods discharged from any vessel before entry at the Custom House will be confiscated.

Art. 4.—All packages made up with intent to defraud the Korean Customs will be confiscated.

Art. 5.—All articles liable to duty concealed in packages containing duty-free goods will be confiscated together with the packages and the remainder of their contents.

Art. 6.—All vessels conveying smuggled goods to any of the unopened ports of Korea are liable to confiscation together with the whole of their cargo.

Art. 7.—Opium is a prohibited article. Any one convicted of smuggling it is liable to a fine of *riyo* 10 for every pound smuggled.

Section IV.—Concerning tonnage.

Art. 1.—Vessels of more than 150 tons burden shall pay tonnage dues at the rate of *sen* 5 per ton: those between 150 and 100 tons, *sen* 2: below 100 tons *sen* 1 per ton.

Art. 2.—Vessels that land no goods, provided their stay does not exceed two days, shall not be subject to tonnage dues.

Art. 3.—Vessels simply calling at a port for supplies, and vessels in distress, shall not be required to furnish any manifest of their cargo. Should they, subsequently, desire to trade, they must make entry at the Custom House according to regulations.

Art. 4.—Vessels putting into a port for repair only may land cargo without payment of duty, provided due entry be made of their arrival. Goods so landed may be stored in the Customs warehouses subject to the usual charges. Violation of this rule is punishable by a fine of *riyo* 50. Any trade in goods landed as above described will be subject to the usual duties.

Art. 5.—Cargo may be transferred from one to another vessel in harbor and then conveyed to another Korean port without payment of duty, provided that the transshipment be made under the supervision of Korean officials and after permission has been accorded. Any violation of this rule is punishable by a fine of *riyo* 100.

Art. 6.—Due notice given to the Custom House officials, goods which have been once entered and paid duty may be transferred to any other Korean port free of further impost, within twenty-four months from the date of original entry.

Art. 7.—Vessels of war will not be required either to enter or clear at the Custom House, nor will they be liable to be visited by Custom House officers.

Section V. deals with the transport of native products in foreign bottoms.

Art. 1.—Korean vessels may transport native merchandise or foreign vessels, inasmuch as the native shipping available is insufficient. Thus for five years to come foreign vessels of all nations may be employed in the Korean coast trade, with option of prolonging the term.

Art. 2.—No duty shall be imposed on native goods transported (by foreign ships) from one port to another, after they have been duly examined by the Custom House authorities.

Art. 3.—All articles the property of native merchants and manufacturers shall be exempt from duty.

Art. 4.—If the interest of Korea generally, or that of any locality therein, requires protection, such protection shall be afforded. In this regard duties may be either diminished or increased. In either case, notice will be given four months beforehand.

Art. 5.—The Korean Government is at liberty to adopt at its ports such measures as it may deem most proper to prevent fraud and smuggling. Merchants are instructed to observe them.

Art. 6.—The Korean authorities shall provide all ports open to foreign trade with such buoys, lights, and beacons as may be necessary to improve and protect the navigation of the approaches to the open ports.

Section VI. gives a scale of duties.

Art. 1.—Duty free—foreign gold and silver coin; ship's stores; and passengers' personal effects.

Art. 2.—Export duty on general merchandize will be five per cent., with the exception of ginseng, the export of which article is prohibited.

Art. 3.—The import duty on drugs shall be 10 per cent., liquors, perfumes, fancy-goods, musical instruments, clothing, etc., etc., 30 per cent.

Art. 4.—Prohibited articles—Gun-powder, fire-arms, opium, and the like.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, SEPTEMBER 28TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Vertical bars—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 15.5 miles per hour on Friday at 9 a.m.
The highest reading of the barometer for the week was 30.25 inches on Friday at 10 a.m., and the lowest was 29.85 inches on Monday at 6 a.m.
The highest thermometer for the week was 74.0 on Wednesday, and the lowest was 56.5 on Wednesday. The maximum and minimum for the corresponding week of last year were 83.5 and 47.0 respectively.
The total amount of rain for the week was 3.62 inches, against 7.64 inches for the corresponding week of last year.

SUNDAY CHURCH SERVICES.

Christ Church: 11 a.m. and 5:30 p.m.
Union Church: 11 a.m. and 8 p.m.
Roman Catholic Church: 8 and 9:30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokyo: 11 a.m.

KEROSENE.

Sales during the week have been limited to 12,500 cases. Deliveries have amounted to 37,000 cases, including 17,000 cases for re-export to Nagasaki. Stocks of sold and unsold Oil now amount to about 723,000 cases in first hands. We quote:—

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.66 |
| Comet - | 1.61 |
| Stella - | 1.55 |

SUGAR.

With transactions on the smallest possible scale, and at the close of the interval absolutely no demand, no alterations can be made in previous quotations.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$7.50 to 8.00 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.50 to 4.60 |

EXPORTS.

SILK.

Business during the week has been active, and Settlements for that period reach fully 1,000 piculs. Prices have again declined all round, and Japanese seem inclined to be current at the reduced quotations given below. Arrivals are maintained, and the Market is now well supplied with all descriptions, the total Stock being about 5,000 piculs. Direct shipments on native account have been heavy both to Europe and America by the recent steamers. Export to date is 9,494 bales, against 8,294 bales at same date last year.

Hanks have enjoyed the predominance during the period under review, transactions totalling fully 600 piculs on easier terms than last reported.

Filatures have been currently saleable as the Market declined. Prices for these kinds are

irregular, some holders being more willing to meet the Market than others.

Re-reels of good quality have been taken to some extent, Five Girl (Maibash) realising \$502½. Common kinds not wanted at present.

Kokedas.—Very little enquiry and prices weak. Oshiu.—A parcel of Sendai averaging 2 to 3 has found a purchaser, but the better kinds from this district have not yet appeared.

Hamatsuki has been in less demand, some have been done, notably a crack parcel at \$495. Medium and Common are weak and lower.

Taysam kinds.—Some business in these; coarse Nagahama and Hachioji sorts finding buyers at prices ranging from \$410 to \$440. Sodai no transactions.

TEA.

The general demand reported in last issue continues, teas grading from Medium to Fine receiving more attention, operations being principally in these. Receipts keep pace with Settlements, and prices are well maintained for Teas of good quality. Settlements during the interval have been about 2,585 piculs, making a total for the season of about 135,777 piculs, against 142,592 piculs at the same corresponding date in 1882. Undermoted are the Tea shipments from the port since last weekly report:—The steamship *Galley of Lorne*, sailed on the 26th September, took 99,565 lbs. for New York, and 51,389 lbs. for Canada; and the steamship *Strathleven* on the 26th September 104,854 lbs. for New York and 9,188 lbs. for Canada, making a total of 265,996 lbs. Tea for both steamers. The British steamers *Selembria* and *Strathmore* are advertised to load for New York, but the rate of freight and the departures of the steamers are at present unknown.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Faker that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCTOBER 13TH, 1883.

MARRIAGE.

At the Cathedral, Hongkong, on the 28th ultimo, by the Rev. W. Jennings, M.A., J. A. THOMSON, Yokohama, to MARGIE, youngest daughter of the late George Cunningham Esq., Glasgow.

DEATH.

At 8 a.m. on the 10th October, at No. 4, Onoyecho, Ichome, Yokohama, NAKAYAMA YOSHIJIRO (formerly named Kôguchi) elder brother of Ota Choshiro.

WEEKLY NOTES.

THE week has been marked by a very heavy rain-fall and strong winds. The greatest quantity of rain fell on the 8th instant, the maximum fall being that registered at Wakayama—95 millimetres against 32 in Tokiyo. Osaka, Kiyoto, Sakai, Miyasaki, Kochi and other places were visited by a down-pour only little less violent. On the 7th instant, gales, more or less severe, were reported from all these places, and the crops in the prefecture of Miyé are said to have been much damaged. This inclement weather comes too late, however, to effect the harvest prospects seriously. An exceptionally favorable yield is still anticipated, competent judges being of opinion that the rice crop will be nearly thirty-five million *koku*. The

average annual consumption of rice in Japan, for all purposes, is estimated at thirty million *koku*. Doubtless this figure varies considerably with the nature of the harvest, and it is not unlikely that the plentiful yield of this season, combined with the exceptionally low prices already ruling, will have the effect of considerably increasing consumption. Against this probable increase, however, we have to set the fact that the yield of all other cereals is proportionately fine, so that everything justifies an expectation that Japan will have a large surplus stock on hand this year. This prospect has encouraged some curious speculation, amongst others an estimate that if only the restrictions imposed upon the use of foreign vessels for export purposes were removed, Japan might sell rice to the value of sixty-five million dollars! So she might, perhaps, if the people consented to put themselves on short rations and if—which is a very big "if"—purchasers could be found to take such a quantity off her hands. Truly there is a great deal of silliness written about this rice question. The fact is that until the present time the price of rice in Japan has been too high to leave any margin for export. The business is a most precarious one. The European market is small and shows little if any elasticity, while the experiences of those who have essayed the speculation under the most favorable conditions have not been such as to encourage renewed ventures. Experts say that the utmost Japan can hope to do is sell 500,000 *koku* of rice (70,000 tons) in Europe, and even that seems a sanguine calculation. It must be remembered, also, that only rice of the finest quality will do for the European markets, and that when we speak of a surplus of five million *koku*, probably not more than a fifth part of it satisfies that definition. There is, indeed, a market in China for second-rate rice, and the facilities of export to that country would be immensely increased by throwing open a few ports in the north and west. We see no reason why the difficulties that seem to interfere with this operation should not be easily overcome. Indeed there is no avoiding the conviction that a more liberal policy in these matters would be greatly to the advantage of the country at large, and signs are not wanting that the merchants of Japan are coming over to the same way of thinking. At the fall of the year, when large quantities of the staple must be sold to pay the land-tax, it would be a real boon to the people to open up to them a new market within comparatively easy reach, and the recent destruction

of Chinese crops, caused by the inundations of the Yellow River, make this season exceptionally suitable for the experiment.

DURING the week there have reached us two items of news which appear to contradict each other completely. The first came directly from the seat of military operations in Tonquin. It was a telegram dated October the 8th, and it said that negotiations had taken place between Admiral Courbet and the leader of the Black Flags, with the result that the latter had agreed to evacuate Sontai. The second was also a telegram, dated London October the 9th, which said that the Franco-Chinese negotiations were believed to have failed. Now at first sight the connection between these two pieces of intelligence is not apparent, but a little consideration shows that the latter is exactly the opposite of what we might have expected to receive immediately after the former. There can be no manner of doubt that China is, or was, fighting France by means of the Black Flags. To feel convinced of this it was not necessary to be told that many Chinese troops were enrolled in the ranks of the defenders of Sontai, and that the arms taken from the latter by the French bore the Chinese Arsenal mark. What the Peking Cabinet wanted was time, and it could not obtain its wishes otherwise than through the agency of the so called pirates. When, therefore, news arrived that the Black Flags, without sustaining any serious reverse, had agreed to enter into negotiations with the French, and finally to evacuate Sontai—the most important position in the delta of the Red River—what we should have expected to hear next was that the Marquis Tseng had concluded a satisfactory arrangement with M. Jules Ferry; whereas, on the contrary, we learn, the very next day, that the negotiations at Paris are believed to have failed. It will be remembered that we published, three weeks ago, telegraphic intelligence of the dissensions which had arisen between the French Civil and military authorities in Tonquin, and that the same telegram attributed the origin of the difficulty to a desire on one side, and an objection on the other, to treat with the Black Flags. Later details did not help to unravel this riddle. The telegram was explicit enough in attributing the conciliatory policy to the military authorities, but it confused Admiral Courbet with General Bouet. Judging from the news of the 8th instant, it would appear that it was the Admiral who favoured the idea of treating the Black Flags

as belligerents, and the General who opposed it. At all events the latter was no sooner relieved of his command than negotiations appear to have been opened with the pirates, resulting in their evacuation of Sontai. It is of course possible that the Black Flags may not have thought it worth their while to set the doubtful reward of loyalty to China before the advantages offered by the French. It is also possible that they may have obeyed Chinese instructions issued in the presence of a more hopeful prospect than the last Paris telegram indicates. But these are matters of conjecture. What is certain is that the French commanders must have been sorely embarrassed before they consented to negotiate with men whom they had denounced, and undertaken to treat, as pirates; and what may fairly be inferred is that China was a consenting party to the arrangement made by the Black Flags. In view of this latter inference the telegram announcing the failure—temporary, let us hope—of the negotiations at Paris, suggests an idea that some new difficulty has been created on the French side. But the truth appears to be exactly the opposite. Chinese intractability is the trouble. The Marquis Tseng has convinced himself, it would seem, that the French Ministry must either abandon its aggressive policy or consent to receive a crushing defeat at the next session of the Chamber of Deputies. In fact the Chamber will not vote any more money for Tonquin. With this prospect in view the Marquis has changed his conciliatory tone and put his demands into such a shape that their discussion proves too much for the equanimity of M. Challemel-Lacour and his colleagues. It is to be hoped that the Chinese diplomatist has not over-rated the situation, and that his conditions will not have the effect of strengthening the hands of the War party.

THE China Merchants' Steam Navigation Company have issued their annual Report. It is a much shorter document than the last and less satisfactory, though on the whole, having regard to the general dullness of trade throughout the year, any trading association which can afford to pay a dividend of 10 % must be counted decidedly fortunate. It is true that the dividend for the year ending June 30th, 1882, was 20 % but this contrast becomes less marked when we remember that the capital of the company is double what it was in 1881-82. New shares, to the value of a million taels, have been issued and readily taken up. The money thus obtained was to have been devoted to the purchase of new steamers, but it has only been partially employed in that way, the additions to the fleet being confined, so far as is known, to two steel vessels expected to arrive soon. This will bring the number of ships flying the Company's flag up to twenty-seven—a number which the Directors consider sufficient for the trade of the ports now in use. The Report shows that out of the million taels raised within the year under review, 210,000 were lent to the King of Korea, but nothing is said about the rate of interest or the nature of the security. The rumour is that this

money passed into the keeping of the Korean Vice-Minister for Foreign Affairs, Mr. Von Mollendorff, and that he keeps a very tight hold of it, confining its use, as far as possible, to the organization of a Customs Service.

In this context the following note from the *Manchester Examiner* will be read with interest:—

From 1880 to 1882 the French flag has gained to the extent of 50,000 tons, and foreign flags in French ports lost 345,000 tons of that foreign shipping trade which receives a bounty from the French Government. As Consul Segrave, however, points out, the bounties granted under the French mercantile marine law of January, 1881, only effect the navigation of France with her colonies and countries beyond the limits of Europe, and do not apply either to the coasting trade, the fisheries, or the navigation with European ports. As regards the latter trade the French still fall below their foreign competitors in their own ports to the enormous extent of four millions of tons, and, as Mr. Segrave clearly shows, there is certainly no immediate prospect of their bettering themselves. How costly is the system of bounties is shown by the fact that the builders of the new iron steamers for the line between Havre, Canada, and Brazil—the contract price for which is £72,000 a piece—will be entitled to claim from the State about £6,000 for each vessel, as well as a bounty of six francs for every hundred kilogrammes weight of machinery, boilers, capstans, windlasses, pumps, etc., put abroad.

ALL Europe seems to have been stirred with compassion for the sufferings of the people of Ischia. Every Continental journal contains intelligence of some concert, theatrical performance, bazaar, or other entertainment in aid of the unfortunates who have to mourn the loss of their friends and relatives as well as of their property. We understand that the amateurs of Yokohama have arranged to give a performance at the Gaiety Theatre with the same object, and there can be no doubt that their kind efforts will receive the hearty support of the community. The times are not favorable to liberality, but after all if Shanghai can afford to contribute a handsome sum to the Yellow River Flood Fund, Yokohama is not likely to be backward when Italians are concerned. In these matters we need not go farther than China for examples of munificent generosity. The sufferers by the inundations of the Yellow River are to receive Tls. 100,000 from the private purse of His Excellency Li Hung-chang and ten thousand suits of clothing from the Lady Li. Would that many of us were in a position to imitate the princely liberality of the Chung-t'ang.

THE events of the past fortnight have been described, with less reverence than truth, as the resurrection of the Land Renters. There was a time, within the memory of every tolerably "old resident," when the Land Renters were a very busy body. That was when they enjoyed the privilege of managing their own affairs. They managed their own affairs during two years, and have agitated for the right to manage them during twenty. But the agitation has been, for the most part, of a very perfunctory nature. It never had the air of real vitality, but rather conveyed the impression of a concession to public conscience. Some go so far as to say that but for the constant advent of new settlers unfamiliar with the difficulties which deterred the old,

municipal aspirations would have been finally chilled by the rebuff they received at the hands of the Doyen of the Diplomatic Corps in 1869. The Land Renters were then told that all the trouble they had taken to embody their wants in an elaborate series of regulations must go for naught, since the power to enforce those regulations could only be obtained by processes too lengthy and troublesome to be seriously contemplated. But the infusion of new blood has kept the old from utter stagnation. There has been a resurrection, and the question people are naturally asking is whether the resuscitated skeleton is likely to acquire flesh and substance, or whether it is destined to return to the spasmodic repose of its sometime sepulchre.

The point that presents itself at once as most remarkable is the analogy between the excuse offered by the Japanese for not governing us better and the reasons which confessedly induced the Land Renters to surrender the control of their own affairs in 1867. In both cases the same impediment is recorded—insufficient power. In the Japanese contention the insufficiency refers to administrative power alone; in the foreign, it is both pecuniary and administrative. "In order to avoid all farther discussion about the keeping of roads, drainage, cleansing of streets, and other municipal objects for which the Japanese local authorities had hitherto been held responsible,"* the Land Renters agreed themselves, in 1864, to secure those objects, and "towards the expense" of the undertaking it was arranged that there should be a deduction of 20 per cent. from the yearly ground-rents, to be paid into the municipal fund. After this deduction the sum paid by foreign Land-renters to the Imperial Government would have been almost identical with that paid by their Japanese fellow residents by way of land-tax alone. But the Japanese had to pay nearly as much again on account of municipal outlay and other taxes, whereas the foreigners attempted to carry on their municipality without paying anything more whatever. Naturally the funds at their disposal proved insufficient, having been expressly intended, not to meet, but to go "towards," municipal expenses. But there was another difficulty. No efficient regulations could be enforced. The municipality was not competent to enforce its own regulations. The Consular Courts were not competent to take cognisance of any municipal regulations whether foreign or Japanese, and the Foreign Representatives declared that they could only become competent by unanimous legislation on the part of all the Treaty Powers. In default, then, of funds, which they ought themselves to have supplied, and of authority, which they were unable to procure, the Land Renters surrendered their impossible functions, which they "called on" the Japanese to assume. The Japanese consented. They could not choose but consent. Yet they had no better reason to hope for success than their predecessors. Money indeed they could find—though no principle of fairness or propriety re-

* Yokohama Memorandum. December 19th, 1864.

quired that they should be more munificent to foreigners than to their own subjects—but so far as administrative power was concerned, they were actually worse off than the Foreign Land Renters. For the while the latter could count on the general co-operation of their nationals, the former had to anticipate chiefly opposition. No Government ever yet undertook such an impracticable task as that which devolved upon the Japanese in 1867. They allowed themselves to be persuaded that the intention of the Treaties was to deprive them of ability to preserve law and order in their own territories. For while it was contended that no Japanese regulations were binding on foreign residents, it was also officially admitted that no Consular Court was competent to enforce *any* municipal regulations whatsoever without unanimous legislation on the part of all the Treaty Powers. The Japanese, then, attempted to govern municipally without the power of either making or enforcing municipal regulations. Is it possible to conceive a greater farce? One knows not which to marvel at more—the extravagance of foreigners in arbitrarily assuming such an illogical and inconvenient attitude, or the *naïveté* of the Japanese in consenting to be thrust into such a grotesque and hopeless position.

Looking at these things from a practical point of view, one cannot but ask, “are matters, any better now than they were in 1867? Have these grotesque difficulties, the outcome entirely of our own unreasoning prejudice of race, disappeared; or is there any prospect of their disappearance?” We are disposed to answer in the affirmative, and we base our reply upon the recent appointment of the Committee of Land Renters “to act as intermediaries between the foreign residents and the Japanese and Foreign authorities.” Not that there is a hope, however remote, of the Committee accomplishing anything if it follows the lines indicated by the Memorial of 1882. We should be deliberately veiling our eyes from the truth did we pretend to discern any such prospect. It is universally known that the first object of the Japanese governing classes is to recover a portion of their jurisdiction over foreigners: it is universally known that Foreign assumption of their incompetence is the one obstacle to the accomplishment of their object; and it has been officially declared that the Treaty Powers, before consenting to legislate specially with a view to conferring municipal authority on this community, “might require to be assured of the inability or unwillingness of the Government of Japan to maintain order and cleanliness in those portions of its territories in which foreigners have been right to reside.” Does any one suppose that the Japanese Government will consent to a step capable of being construed after the fashion indicated in this despatch of the British Representative? The Japanese Government, is not unwilling to maintain order and cleanliness in the foreign Settlements; therefore, by consenting to surrender its municipal functions,

it would unavoidably expose itself to the alternative inference—inability. Is that likely? We think not, and we imagine that a committee of practical and prudent men will appreciate the unwisdom of persisting in a course which can lead to nothing but mutual recriminations and a worse deadlock than ever.

* * *

But what the Committee can accomplish, and what we believe it will accomplish, is to lead the community to a sound comprehension of the whimsical difficulties that have been created by foreign official jealousy, and to unite Japanese and foreigners in a hearty effort to remove those difficulties. Judged by the articles and letters that have recently appeared on the subject of municipal reform, some of the most active agitators in Yokohama labour under strange misapprehensions. Thus “in asking for the grant of what is virtually a municipal charter the memorialists,” speaking through their would-be representatives, say that they “were strictly within their rights as citizens,” and that they “confined their prayer to the grant of those reasonable privileges which are accorded by the Governments of all countries in Europe and by the United States to all congregations of men forming townships or cities of their own.” Unfortunately these statements are diametrically opposed to facts. In no part of either Europe or America are the privileges of municipally governing themselves conferred on congregations of men who are not controlled by the common law of the land. Municipal law may be distinct from, but it must always be subject to, the general laws of the State. Would that universally recognised relation hold in the case of the residents of Yokohama if they possessed a municipal charter? Again, in no part of either Europe or America are untaxed aliens admitted to the rights of citizens. Foreigners in Yokohama are not taxed. The contention that the wages we give our servants or the duties we pay on imported necessities can be regarded as taxes, is a fair example of the absurd subterfuges employed to conceal an unpleasant fact. The plain truth is that until we consent to occupy the status of law-abiding citizens we cannot set up any just claim to the privileges of law-making citizens. Then again, as another example of the whimsical misapprehensions that are gravely advanced, consider the outcry evoked by the Prefect’s claim that he ought to be “furnished with a general warrant enabling the proper officers to enter freely into the premises occupied by foreigners when there is reason to suspect that offenders are concealing themselves therein,” &c. In answer to this claim the would-be mouth-pieces of the community declare “that in no civilized country does such a regulation exist;” and that “it is impossible to conceive a civilized people that would tolerate a law at once arbitrary and barbarous.” But the truth is that such a regulation *does* exist in every civilized country, and that such a law *is* tolerated by every civilized people. Why should it be considered “arbitrary and barbar-

ous” to confer on the Prefect powers exercised by all the Foreign Consuls as well as by every police magistrate in Western countries? The Prefect only asks to be invested with a portion of the authority now possessed by the Consuls. It would seem, too, that those persons who publish letters in the local press have little idea of police duties. Do they suppose that when a London policeman finds himself near a house where he has reason to think a crime is being committed, he hastens off to get a warrant before attempting to enter? Certainly if he did anything of the sort he would be dismissed from the force for imbecility. The Japanese in this matter ask for nothing but the elimination of Consular impediments. They do not propose to dispense with any of the executive forms observed in Western countries, but only to facilitate the execution of the law by centralizing the authority now divided among fifteen or sixteen different sources. The terms “barbarous and arbitrary” do not apply to their proposition, but to the cumbrous system which foreigners persist in perpetuating, to the virtual paralysis of all executive efficiency.

* * *

These, and cognate misapprehensions will be removed by a closer acquaintance with the conditions of the problem. The Committee of Land Renters cannot hope to satisfy the gentleman who thinks that a good municipality would relieve him of the fleas that infest his couch, the odours that hang about his back-yard, and the whiffs of pickled *daikon* that come to him from his servants’ quarters. To be sure a foreign municipality “having the right of entry into private compounds for necessary purposes of sanitary inspection and to abate or remove nuisances,” might compel “Attar of Roses” as he calls himself, to keep his premises clean, and might recommend him to air his bed or employ some good insecticide; but with the *daikon* they could scarcely deal. The Committee, however, consisting, as it does, of earnest, practical men, will soon see, when it comes to devise a possible remedy for the existing deadlock, that neither Japanese nor foreigners can govern the Settlement until either the former take heart of grace and assert the authority which unquestionably belongs to them, or the latter induce their Ministers to cease from opposing arbitrary and profitless obstructions to the execution of every law emanating from a Japanese source. It cannot possibly be proved either by the text of the Treaties themselves, or by any inferential line of reasoning consistent with common sense, that the intention of those documents was to deprive the Japanese of municipal control over the settlements where foreigners reside, and to substitute nothing in its place. Nevertheless, that is the interpretation that has been put upon the Treaties. We believe that the Committee will presently recognise this, and that the next phase of Yokohama’s municipal history will be a hearty combination of foreigners and Japanese to effect a clearance of illegal impediments, and to obtain the rehabilitation of the only authority competent to exercise effective control

over this heterogeneous community. After that there will be little difficulty about the enactment of suitable regulations, and none at all about their enforcement.

NOTES.

THE arch apostle of æstheticism has been beguiled by the delightful recollections of his first sun-flower pilgrimage through the United States, into a second trial of his fortunes in that hospitable land. Nothing can exceed the good-nature of the American community toward those who supply them with amusement, in whatever form; and since it suited the author of "Ave Imperatrix!" to pose and be laughed at, it suited the public to laugh as amiably and tolerantly, as they could, and to gladden the inventor of a new school of buffoonery with more substantial rewards than a life-time of devotion to superficial transcendentalism would have ensured him at home. The unexpected effect of his success was to start him upon a course of practical literary work, and it is to launch the first result of this labor,—a drama of vast bulk and pretension—that he returns to the opulent West. His play, entitled "Vera," is founded upon the growth of "nihilism" in Russia, and although it failed lamentably on its original production in New York, it is pronounced by many a composition of high literary merit, and the actors concerned in it profess the utmost confidence in its ultimate acceptance by the theatrical world. This incident in the sentimental philosopher's career is of slight importance, but it serves to show how a touch of unlooked for, and perhaps undeserved, prosperity may sometimes stimulate meritorious effort in the most unpromising quarter. The last thing anticipated by anybody who took the trouble to follow the languid and indolent Oscar's movements, was to find him seeking a solid reputation by straightforward industry. And this is not the only change he has undergone. The tangled capillary festoons which Du Maurier rejoiced to reproduce in *Punch* have all been shorn away. The velvet breeches and the purple hose which, as he stood before the politely satirical audiences of New England, flapped lazily around his lower limbs like sails against their masts upon a breezeless day, cruelly revealing the degeneracy of the masculine human frame since the brawny days of Olympian development,—these have vanished from view, and been replaced by the latest revision of the pantaloons according to Poole. The bracing atmosphere of the Republic seems to be rapidly transforming him from the adumbration of a sickly and affected ideal, into a useful reality of creation;—in short, to be making a man of him.

COLONEL GORDON has addressed the following letter to the *New York Herald*:—

The Chinese in their affairs with foreign nations are fully aware of their peculiar position, and count with reason that a war with either France or another Power will bring them per force allies on the side of England. The only Power that could go to war with them with impunity is Russia, who can attack them by land. I used the following argument to them when I was there. The present dynasty of China is a usurping one—the Mantchou. We may say that it exists by

sufferance at Peking, and nowhere else in the Empire. If you look at the map of China, Peking is at the extremity of the Empire, and not a week's march from the Russian frontier. A war with Russia would imply capture of Peking and the fall of the Mantchou dynasty, which would never dare to leave it, for if they did the Chinamen in the south would smite them.

"I said, 'If you go to war, then move the queen bee—i.e. the Emperor—into the centre of China, and then fight; if not, you must make peace.' The two Powers who can coerce China are Russia and England. Russia would march without much difficulty on Peking. This much would not hurt trade, so England would not interfere. England could march to Taku and Peking and no one would object, for she would occupy the treaty ports; but if France tried to do so England would object.

Thus it is that China will only listen to Russia and England, and eventually she must fear Russia the most of all Powers, for she can never get over the danger of the land journey; but she might by a great increase of her fleet get over the fear of England. I say China, but I mean the Mantchou dynasty, for the Mantchous are truly hated and despised by the Chinese.

Any war with China would be for France expensive and dangerous—not from the Chinese forces, which would be soon mastered, but from the certainty of complications with England. As for the European population in China, write them down as identical with those in Egypt in all affairs. Their sole idea is, without any distinction of nationality, an increased power over China, for their own trade and for opening up the country, as they call it; and any war would be popular with them, so they will egg on any Power to make it.

My idea is that no colonial or foreign community in a foreign land can properly and for the general benefit of the world consider the questions of that foreign State. The leading idea is how they will benefit themselves. The Isle of Bourbon or Reunion is the cause of the Madagascar war. It is egged on by the planters there, and to my idea they (the planters) want slaves for Madagascar. I have a very mean opinion of any colonial or foreign community's views, though I own that they are powerful for evil. Who would dare to oppose the European colony in Egypt or China and remain in those countries?

Very truly yours,

C. G. GORDON.

The verdict of this remarkable man with regard to the political views of colonial and foreign communities in Oriental countries, is not novel. The same opinion has been expressed, though perhaps with less bluntness, by many renowned thinkers, and notably by Mr. Gladstone who, in one of the most brilliant of his recent speeches in the House, said:—"I have had much to do for a long period with a series of questions, and I am not aware at this moment of any series of great reforms which have been brought about by the courage and the wisdom and the foresight of the British legislature in respect of any portion of this empire, which reforms have had the favour and support of the resident English community." Whether or no men of the Gladstone, Bright, and Gordon type are mistaken in these notions, it must be confessed that their ideas are justified from point to point, in Japan's case at all events, by the utterances of the Yokohama local press. Gordon's statement that "any war would be popular with the European population," extravagant as it sounds in the abstract, is the only conclusion that could be formed by an impartial reader after perusing the articles published two months ago in this Settlement with regard to the London *Standard's* false version of Mr. Ito's views, and those published the other day with reference to the Nagasaki affray.

A long debated question in literary and antiquarian circles has been settled by the determination of the Vicar of Stratford-on-Avon to open the grave of Shakespeare, and permit an

examination of what may be found therein. Although the arguments in favor of and against this proceeding have been reiterated for years, the announcement creates as much sensation as if no discussion on the subject had ever taken place. The opposition to all projects of exhumation has been sustained chiefly by the well known lines protesting against disturbance of the remains. If it were accepted on all sides, as an undoubted fact, that Shakespeare really wrote the warning which is inscribed over his tomb, there is good reason to believe that his wishes would never be disregarded; but many critical investigators have adopted the conclusion, first formulated by De Quincy, that the stanza was picked up, at random, by those who arranged the details of the interment, and that it conveys no true indication of the poet's will. For some time past, a theory has been gathering strength, that disclosures of great interest would result from a careful scrutiny of the vault. Mr. Moncure D. Conway has taken considerable pains to demonstrate the possibility that important events of Shakespeare's life might be revealed, even by an external inspection of the coffins which he believes to be deposited together with that of the poet. Until the present time, however, no Vicar of Stratford has been willing to incur the serious responsibility of defying so general, and we may say so cherished, a tradition as that which commands the sacred dust to be left in perpetual repose. The desire to explore the premises can be attributed to no worthier motive than a curiosity which, to say the least, is unwholesome. The alleged purpose, indeed, is merely to measure the skull, and to photograph it if practicable, in order that the relative accuracy of the general portraits and busts in existence may be approximately established. This is perhaps the least respectable of the various reasons brought forward, at different periods, for violating the tomb. A better pretext is the proposition to transfer the ashes to Westminster Abbey,—though this, again, has little to recommend it to the judicious. Whether Shakespeare wrote the well known appeal, or not, it is reasonable to suppose he shared the feelings of his countrymen at that date, which would in all cases have been intensely opposed to the removal of a body for any purpose, from its prescribed resting place. Even in the present day, the propriety of allowing popular fancy to dictate the burial spots of eminent men, rather than their own expressed or presumed inclinations, is beginning to be disputed. The interment of Dickens in the Abbey, in contradiction to his recorded preference for Rochester Cathedral, is by no means unanimously approved; and the contention with respect to the disposal of Lord Beaconsfield's remains is fresh in public recollection. But it is highly improbable that the transfer of Shakespeare's bones will ever be proposed. The chances appear to be that the invaders of his grave will find nothing either to reward curiosity or to supply a basis for the imaginary honours of a removal from Avon side to the bank of the Thames. It is to be hoped that the Vicar's action will not

link his memory too closely with that of another reverend gentleman of Stratford who made himself inconveniently immortal by cutting down the mulberry tree of the New Place and razing the house to its foundations.

JUDGE POTTER, of the Supreme Court, Washington, has decided that under the anti-Chinese act a Chinese seaman is a "laborer" and that he is therefore prohibited from leaving his vessel to go ashore even for temporary purposes. This judgment is regarded as a correct interpretation of the liberal and creditable act which Congress distinguished itself by passing last year. The next generation of Americans will not be *laudatores temporis acti*. Their chief desire will be to forget their fathers' rendering of the United States' constitution.

• • •
This decision of Judge Potter was given in connection with an interesting case. A New York lawyer, Mr. Charles Meyers, was passing the British steamer *Pembrokeshire* in a boat containing some Chinamen, when a crowd of Chinese sailors on the deck of the steamer signalled the boat and complained that they were kept prisoners and brutally treated. The facts were at once reported to the Chinese Consul and a writ of *habeas corpus* was issued for one of the sailors Chung Asam. The captain of the steamer answered the writ, through his counsel, that he could not produce Asam in Court, since to land a Chinaman would be an offence against the Federal laws. The Court held that this was a sufficient answer and dismissed the case. But Mr. Charles Meyers had seen some terrible things on board the steamer. This is his story:—

The captain said that the crew had refused to work. He took me into a dark little room, where three Chinamen were in irons. Then he unlocked the door of another apartment and showed me the other twenty-one members of the crew. I could not breathe the air that came out of the door, it was so bad. I informed the captain that he must instantly release all the men and that if they did anything wrong it was his duty to notify the United States authorities, who allowed no sailing master to take the law into his own hands. The captain at once set the men free. "Hee Sing, the president of a Chinese Sailors' Benevolent Society in this city, acted as my interpreter. In obedience to my instructions he told the Chinamen to do their work and wait for the action of the courts. With one accord the men took off their shirts and pulled up their trousers, showing that their bodies were covered with horrible wounds. So terrible were some of the gashes that the sight sickened me. The men said that they had been beaten with irons by the officers of the vessel. The captain admitted this to be true, but claimed that he was absent himself when the beating occurred. Every one of the victims, however, declared that the captain was not only present but took an active part in the outrage.

With this knowledge Mr. Meyers was determined to leave no stone unturned to help the men. He accordingly applied a second time for a writ of *habeas corpus*, on the grounds that Asam, being a resident of Hongkong, was a British subject and therefore exempt from the United States' laws prohibiting the landing of Chinese upon American shores. The writ was granted, but before it could be served, the *Pembrokeshire* had sailed. Judge Donovan, who issued the second writ, explained that the charge of imprisonment could not have been sustained. The fact of Chung Asam being bound to the steamer for a

year by articles was a sufficient defence. "The captain had a right to forbid him from going ashore. It was not like the case of a vessel sailing under the flag of a nation which had a treaty under which deserting sailors would be arrested in the United States. England had no such treaty, and if the captain had let Asam go ashore there was no law under which he could be compelled to come back." It follows, therefore, that the unfortunate Chinamen were completely without redress. As British subjects their detention on board was not only legal, but in a sense, necessary; while as Chinese subjects, to let them land would have exposed the captain to fine and imprisonment. Under the circumstances nothing could be done but to warn the authorities at Hongkong, whither the vessel was bound. This step was taken by the Chinese Embassy at Washington. The story is almost incredible.

On the day of the great convulsions in Sunda Strait, violent and repeated explosions were heard, from ten a.m. till three p.m., throughout a broad space in Texas, U.S.A., two hundred miles square. No actual eruption is known to have taken place, but the inhabitants of each town in the neighborhood believed that some frightful catastrophe had occurred near at hand. The newspaper which reports these phenomena says:—"there is no local explanation known here, and many persons suppose there is a sympathetic connection between the disturbed region and the earthquake district in the Indian Ocean."

A PERSON who has had considerable experience in sea-otter hunting, contributes some particulars, probably not very new, to the *Hochi Shimbu*. He speaks from personal observation of the habits of the amphibia which live on and about the Chishima Group. The pairing time begins in the middle of November, and the young are born soon after the next vernal equinox. The animals build their habitations with wonderful skill in submarine caves, where they are comparatively safe from human aggression. On the tenth day after the young are brought forth the mothers take their offspring on their backs and enter the water to give the baby otters their first lesson in natation, carefully watching their movements, and taking them, not to matronly bosoms, but to backs, so soon as the youngsters begin to cry out from fear or fatigue. About ten days' practice from the first attempt makes the young creatures perfect in their art. The writer regrets the practice, prevailing among the hunters, of ruthless and indiscriminate slaughter of the species, careless of age or sex, and protests that, if the hunt is not regulated and controlled, the whole race of valuable animals must soon become extinct.

THE report of the British Controller in Bankruptcy for 1882 shows a continued increase in the number of insolvent estates administered under the Bankruptcy act. During the first ten years under the present Act the annual number of cases steadily increased from 5,002 in the year

1870 to 13,113 in the year 1879, from which it decreased to 9,041 in 1882. The figures show a decrease in the large manufacturing centres on the Yorkshire and Lancashire coalfields. The greatest number of insolvencies naturally occurred in the trades in which most persons were engaged, namely, among dealers in provisions and liquors, chiefly small grocers, but the most important fluctuations of increase and decrease during the period referred to have been in the clothing trades, including drapers, shoemakers, etc., and in the building trades, including carpenters, wheelwrights, bricklayers, etc., those classes having furnished nearly five-eighths of the whole decrease of 4,072 since 1879. While the number of bankruptcies last year decreased 14 per cent. there were 34 per cent. fewer liquidations by arrangement, and 30 per cent. fewer compositions. Under the present act, as appears from the figures, a general increase of insolvency produces a very small increase of the better class of composition, and a general decrease produces a very large decrease in their number. The opposite rule obtains with the worst class of compositions. An actual increase of the worst compositions occurred in the London bankruptcy district. Such facts as these afford the best possible justification of the determination of Mr. Gladstone's administration in pressing the recent bankruptcy measure through Parliament.

A VERNACULAR paper speaks of a wonderful cream-colored griffin lately bought by H.I.H. Komatsu-no-miya in Hokkaido. It is, perhaps, not too late to hope for its appearance at Negishi in November.

THE free-traders, says a New York journal, are not alone in their activity in relation to the still unsolved tariff question. The Metropolitan Industrial League has appointed a committee to attend the conventions of both political parties in the state of New York, and to urge upon them the adoption of a policy embodying the protection of American labor and the abolition of all internal revenue taxes. The committee is to advocate further the repeal of all burdens upon American ships and the awarding of all ocean mail contracts to the lowest bidder among American shipowners, the abrogation of all treaties that interfere with a practical enforcement of the Monroe Doctrine, so as to secure the removal of any obstacles that prevent the control by the United States of Central and South American trade, and the establishment of an efficient national bureau of labor statistics. The league is of opinion that an agreement of the parties upon these points would set at rest the free-trade question and prevent calamitous labor disturbances and derangements of business and industrial interests. There are, it will be seen, many influences at work to prevent a division of parties upon the tariff issue; and, judging from the recent utterances of party platforms, an evasion of the question is not unlikely to be the result. The attitude of the parties in the pivotal state of New York regarding the tariff is naturally

a subject of no little concern to both free-traders and protectionists, and the declarations of the conventions held there will be awaited with considerable interest.

READERS of the Yokohama local journals hear so much about the alleged but unproved brutality of the Japanese police, that, by way of diversion, it may be interesting to call their attention to the occasional performances of American constables. On the 3rd of September a coroner's jury in New York brought in a verdict to the effect that a citizen by name John Smith had come to his death by the blows of a club wielded by Officer McNamara. The evidence was that Smith, having lain down in a state of intoxication in the hall of a house which was not his home, had been given in custody to patrolman McNamara. The latter persuaded his prisoner to walk by "tapping" him on the feet and legs with his club, and the two then began a somewhat erratic course towards the lock-up. By and bye Smith recognised among the passers by an acquaintance, to whom he threw his coat and vest, apparently with the intention of fighting the patrolman, but the latter anticipated his purpose by a blow on the side of the head and another at the back of the neck which fractured his skull. Smith did not survive these visitations, and a New York journal thinks that "if Officer McNamara comes to grief for his misdirected muscular activity, perhaps the police authorities will teach other officers how to use their clubs—if they must use them—so as not to kill people."

Another case, which is still involved in some obscurity, shows that black-mailing is not unknown to policemen beyond the water. The details, so far as they are published, are contained in the following extract:—

Justice Williams, of Gravesend, yesterday issued a warrant for the arrest of Herbert Gray, a constable of the town of Gravesend, on a charge of extortion preferred by one Herman Tisch, of Coney Island. Gray was accordingly arrested, and, having waived examination, was held in \$1,000 bonds to answer.

In his affidavit Tisch declares that Gray came to him on or about August 5, and producing a paper, said that it was a warrant for his, Tisch's, arrest on a charge of keeping a disorderly house. This warrant, he says, Gray offered to pocket without making the arrest if Tisch would give him \$20. One half of this, he said, was for Supervisor McKane, the Chief of Police on Coney Island, and the other was for himself. Tisch says further that he offered \$5 at first, which Gray refused, saying that he must have \$20.

The complainant's story was corroborated by his wife and another witness who claimed to have been present when the demand for money was made, and the warrant was issued as a matter of course. Gray, while he sat in the court room awaiting the bonds, men that he expected, said:—"This is nothing more than a persecution, inspired by Supervisor McKane. He is Chief of Police by appointment. I am a town constable by election and hold my office for five years. McKane can't stand it not to be able to control everybody around him, and I am the only one he can't control. He professes that he is unable to get evidence of any gambling going on here on the Island, and he knows that I can get the evidence easily enough, so he wants to crush me. I'm going to fight this, of course, but it will be in a higher court than this, and as soon as this is settled I am going to show how easy it is to get the evidence as to gambling."

Supervisor McKane, being asked about the matter, said:—"It is very simple. Gray went to this man Tisch and got money from him by threatening him with arrest. The way I came to know about it was by learning that Tisch was keeping a disorderly house. I sent down and 'pulled' the house and arrested Tisch. His place was called the 'Cottage by the Sea.' When

arrested he told about Gray striking him for money and telling him that half of it was for me."

Here Mr. McKane's face grew very grave as he continued:—"When I heard that I was wild, for I've always prided myself on never taking any money from these ducks. So I got Tisch to make this complaint. Gray's offence is clearly enough proven, and if he can't give bonds he will have to go to jail."

"Isn't he the same man whom you accused of interfering with your plans to suppress gambling a while ago?" asked the reporter.

"Yes; he's the man. He has given us away several times when we have been ready to raid the gambling houses. He is in their employ and has been able to learn of our plans."

Further than this there were no developments yesterday, but it is expected that in the coming quarrel some light will be thrown on the question why gambling has gone on openly all summer in so many places on Coney Island.

SINCE the period of payment of the land tax was altered by Council of State Notification No. 14 of last year, the farmers will have to sell their rice not later than December, yearly, in order to pay their taxes at due date. Hence a depreciation in the price of the grain, and yet purchasers are by no means eager, in consequence of the tightness of the money-market at the close of each year. The farmers, contemplating further embarrassment, exclaim for an extension of the term of money payment of their taxes. A further decline in the value of the staple is predicted by some sharp-sighted individuals, who urge upon the Government a change in the present system of paying the land-tax, in order not to impose too grievous a burden upon the shoulders of the agricultural population. The *Choya Shimbun*, which publishes this version of the state of affairs in the matter of the husbandmen and the land-tax, adds that several Ministers favor a modification in the system of land-taxation.

A GLOWING account of the state of agriculture in Okinawa Ken is supplied to the *Jiji Shimpō*. The informant says that there is not an available patch of ground in these Riu Kiu Islands uncultivated. Even "precipices, ravines, and knolls," we translate literally, "are covered with verdure." Swine and fowl abound. There is a stall in front of every barn where the grain is dried at harvest time. An annual cereal fair is held, at the close of which prizes are bestowed upon those who give evidence of the best crops. There is, however, a reverse to the picture. The agricultural implements used are of ancient model; and the use of fertilizers is almost unknown. As all kinds of vegetables are cultivated within the same area, the farms when closely inspected have an appearance of being neglected. Irrigation is not understood; and, hence, when the natural supply of water fails, the earth is full of fissures, and vegetation languishes.

THE Koreans are said to begin to have a lively appreciation of the advantages of civilization. For instance, the Minister for foreign Affairs at Sōul has given in European style a banquet to the Japanese Minister. According to the *Hochi Shimbun* His Japanese Excellency did not appreciate Korean melodies. This probably is by the way, as is the information volunteered that Europeans residing in the Korean capital are not

greatly enamoured of its social delights. The Japanese Legation, they say, is not the gayest place in the peninsula. Pioneer sojourn in a new country is never without its drawbacks.

In reference to the case of Logan, now sentenced to penal servitude, a correspondent of the *Daily Press* reverts to fact that the revolver, said to have been used by him, was reported to have been handed to him by the *amah* living on his premises. "This woman," says the correspondent, "is not to be found, and a placard posted up in Canton offers a reward of \$400 for her head. I am not in a position to say whether this reward is officially authorised; the mere circumstance, however, speaks volumes as to the view the Chinese take of the lamentable collision."

ON Saturday last an interesting exhibition was held at the well known Maple Club (*Kōyōkwan*), Shiba. The occasion was the two hundred-and-tenth anniversary of the death of the celebrated painter Tani. After the arrival of Admiral Perry's squadron disturbed Japan's cultivation of æsthetic tastes, the memory of her great artists received as little reverence as their works attracted attention. Of late years, however, partly owing to the marked appreciation of Western critics, but chiefly because the spirit that had presided at the development of that ancient art needed only a very slight impulse to re-assert itself, the Japanese have gone back to their old love. The heirlooms bequeathed to them from the days of Yoshimasa, Taiko, Iyemitsu, and Kobori Masakazu, are no longer suffered to be hidden in godowns or to pass unnoticed into the hands of dealers, but are cherished with scarcely less reverence than in the times when the study of their excellencies formed an essential part of every gentleman and gentlewoman's education. The signs of this revival have been long discernible, but it is only now that the general public recognises them, and the recent exhibition in honour of Tani's memory was the first of the kind that has been held for many years. About a hundred and twenty pictures were contributed by various amateurs, notably by their Excellencies Inouye, Matsukata, Kuroda, and by Messrs. Kubo, Masuda, &c. Tani is in one sense the most representative of Japanese artists. His pictures exhibit a purity of tone and delicacy of conception rarely if ever seen in the works of his successors. Japanese connoisseurs classify all the works of their great masters under two headings, the characteristics of the first being beauty of tone and conception (*hinkaku ga yoi*); those of the second, faithfulness and force of delineation (*shasei ga yoi*). Of the former class Tani, Sanraku, and Sesshiu are the chief masters, while the latter is represented by Okiyo and the Kano School. The pictures exhibited on Saturday were not, perhaps, the very best specimens of Tani's art to be found in Japan, but they were certainly sufficiently excellent to remind the public how immeasurably the painters of the present day are separated from their predecessors.

sors. Indian ink drawings predominated—Taniu rarely used colours—and the visitor might have been a little wearied by frequent delineations of storks in positions which, though perfectly natural, are not familiar to the casual observer of the sacred bird's habits. There were also some charming landscapes as well as a few figure subjects executed with remarkable skill. It is said that this exhibition was the first of a series which will be held from time to time at the same place, so that the public may look forward to unprecedented opportunities of studying the best aspects of Japanese art.

SOME sinalogue, who with modesty disproportionate to his acquirements, is content that fame should recognise him only as "a well known resident," has published a very small volume of 22 little pages, called "A Pocket Book of Japanese Words and Phrases." The object of the work, as the preface tells us, is "to furnish, in compact form, for the use of strangers in Japan, a few of the words and phrases most commonly used by the Japanese with whom they come in contact." That is a praiseworthy object, and one which all of us desire to promote. We regret, therefore, that the usefulness of such a handy well-meaning little volume should be marred by two faults, the one of omission, the other of commission. The first is the want of a motto—a want which might have been aptly supplied by the familiar phrase, "I was a stranger and ye took me in." The second is a fault of arrangement. On the twenty-first page is a short vocabulary headed "Words, used by foreigners, but not Japanese." This caption should have been transferred to the fly leaf. Were these two corrections made, the Pocket Book would leave nothing to be desired. To convey a just idea of its excellence we cannot do better than transcribe a few of the phrases now happily brought within reach of the ignorant stranger:—

| | |
|-------------------------------|--------------------------------|
| I am sleepy | Nemui gazarimasu. |
| I get my bed ready. | Watashi ni nedoko shite okure. |
| How much more is this? | Kore wa mashta? |

It will be at once evident that the author of this work has done a public service in generously bringing his stores of knowledge within easy reach of everybody. He has been careful also, while supplying strangers with ready-made phrases modelled after the excellent types illustrated above, to construct his work so as to discourage, as far as possible, any rash attempts on the part of ignorant students to build up unnecessary sentences according to their own unfitted ideas. To this end much trouble has been taken to eliminate from the work anything resembling an explanation as to the use of particles, the order of words in a sentence, the endings of verbs, forms of negation, and other elementary points essential to independent speech. Suppose, for example, that a tourist, with this

Pocket Book in his hand, desires to say "I will go there." Looking out the words, one by one, he finds that "will" and "go" are omitted from the vocabulary, but "I" and "there" are given. Thus he finally gets the phrase "*watakushi achira*," and with the aid of a little gesticulation and a stout stick he can generally succeed in making this intelligible. Again, he wishes to express his intention of not accompanying a friend somewhere. In such a conjuncture speech is obviously superfluous. The desired intention can always be expressed by sitting down on the road and waving one's hands, or by some other simple demonstration. Here, therefore, the Pocket Book wisely intervenes to check needless garrulity and faulty syntax. The stranger searches the vocabulary; finds that "I will not" is translated by "*arimasumai*" and "come" by "*oide*;" says "*arimasumai oide*," and finding himself the object of universal ridicule, is deterred from resorting to words when he has limbs and features to convey his meaning. Purchasers of this latest guide to language must not be surprised, therefore, if the commonest aids are absent from the work. It is not intended to help anyone except its author and publisher.

KOREA, having been latest admitted into the comity of nations, has naturally lost no time in living up to the fashions that are universally recognised as best becoming international intercourse. Her first step was to run into debt; her next, to persuade somebody to bring a claim against her. Claims are a favorite and generally successful method of exploiting Oriental purses. Their apparent justice can be made to vary directly as the vigour with which they are pushed, and they further afford an excellent opportunity for initiating Eastern minds into the refined subtleties of Western equity. A United States' Representative in this country once wrote to his Government, that while there were many instances of gross outrages committed by foreigners against Japanese, there had not been one instance of a claim preferred in connection with them. His evident intention was to imply that this forbearance did the Japanese credit, but the true inference ought to be different. If a record were compiled of all the claims that have been preferred against Japan and admitted by her since the first opening of a treaty port, the shrewd practicality of Europeans and Americans, as well as their infinite sense of official responsibility, would be clearly established. It is, therefore, a matter for sincere regret that the first claim made upon the Korean Treasury should have proved unsuccessful. The claimant's disappointment will probably exercise a deterrent effect, and the Government of Korea will be prevented from learning by experience the full scope of its obligations. As for the claim itself, rumour professes to be accurately informed. The Governor of a certain city entrusted to a travelling politician of Sôul a document authorizing him to borrow a sum of three million dollars from any one willing to lend it. The document was an imposing affair, with vermilion

signatures and a seal several inches square. Its bearer made his first application to a Japanese statesman, who enquired what security it was proposed to offer. "Mines," was the reply. "What mines?" asked the statesman. "Any mines you please," the other answered. "You pay your money and take your choice. We do not yet know that our country possesses mineral wealth, but since we have gold-dust, there must be gold somewhere. It will be for you to make the necessary investigations." "Yes, but unfortunately strangers are not allowed to conduct geological surveys in Korea." "Oh, the King will make an exception in favour of anybody who lends us money." "But can one be sure that the King will always be in a position to make such exceptions? I remember that he was a prisoner in the hands of a rebellious faction not many months ago." This suggestion proved too much for the Korean's equanimity. He applied elsewhere, and fell ultimately into the hands of a ribboned recluse who meddles only with weighty schemes. The recluse proceeded to Korea, interviewed the Governor who had signed the document, and received assurances that the authority was unimpeachable. Thence he made his way to Sôul and repeated his enquiries. But the Cabinet at Sôul had, meanwhile, conceived a suspicion that the Governor meant to levy heavy transit dues on the millions for the improvement of his city. So they disavowed him. Then the recluse brought his claim—ten thousand dollars for his trouble and disappointment. True, he had come to Korea purely on a speculative quest, but that made his alternative *coup* all the prettier. The Koreans, however, have only one cash box, and the keys of that are not in their own keeping. Being unable, therefore, to satisfy the recluse's demands, they added to their list of foreign luxuries an unsettled claim.

PRIVATE telegrams received yesterday throw considerable light on the Franco-Chinese situation. It appears that France's home and foreign affairs are in such an unsatisfactory condition that much trouble is expected when the Chamber meets on the 22nd instant; and it is thought that there is little if any prospect of an appropriation for the Tonquin expedition being voted. A dissolution of the Ministry is expected, and under these circumstances the Marquis Tseng has changed his tone and assumed a less conciliatory attitude. Hence the deadlock in the negotiations, as reported by Reuter on Wednesday.

GENTLEMEN who are fond of expounding Scripture appear to be poorly qualified for the post of jailer. Intelligence from Alaska tells of two Indians, known as Steve and Boxer, who were incarcerated for clubbing a rum-seller to death. They were guarded by an easy going person of the name of Dennis, who took off their irons and went out, leaving them in company with a brace of revolvers and a testament. It was no doubt Mr. Dennis' intention that Steve and Boxer should devote themselves entirely to a

perusal of the latter, and his design so far succeeded that when he came back the Indians were busily studying the holy book. They had looked out a very difficult passage which they requested Mr. Dennis to explain, and while the good man, much pleased at these evidences of regeneration, was thinking out the most orthodox rendering of the verse, Steve and Boxer lodged two bullets in his back and left him to his studies. Another sanguine gentleman afterwards attempted to arrest them single-handed. They buried a bullet in his head and an axe in his back. They were then captured and lynched. It is thought that no more attempts will be made in Alaska to meddle with the souls of Indian murderers.

MR. JOHN SWINTON, assistant editor of the *New York Sun*, was recently called upon, by a Congressional Committee, for information respecting "the compensation of newspaper men." Mr. Swinton might very properly have refused to answer this inquiry, which was a sheer impertinence on the part of Senator Blair, his questioner, but he was in a confidential humor and showed the utmost willingness to satisfy the curiosity of the inquisitive legislators. "The pay that editors receive," he remarked, "depends on whether they are proprietors or employes. . . I know some who have annual incomes reaching \$500,000." Mr. Swinton might have enlarged his figures, if he intended to include men like Mr. Bennett, of the *New York Herald*. That gentleman calls himself an editor—though his room is the one normally vacant apartment in his establishment,—and his revenue is probably nearer one million than five hundred thousand dollars. Mr. Dana, of the *Sun*, who, while an owner is also an editor in the hardest-working sense, undoubtedly gathers in close upon \$500,000 annually. So does Mr. George Jones, nominal editor and actual publisher of the *Times*. But with writers, "as apart from the owners," said Mr. Swinton, "the salaries vary from from \$5,000 to \$25,000." He did not name the recipient, or recipients, of the greater amount. Possibly he referred to himself, and certainly no man is worthier of it. Possibly he had in his mind George William Curtis, of *Harper's Weekly* and *Harper's Magazine*, who is eminently deserving of the highest rewards that can fall to editorial labour. Any way, the extremely large salaries, in New York, are of comparatively recent origin. Horace Greeley, of the *Tribune*, was paid only \$5,000 up to the beginning of the civil war. Soon after, he received \$7,500, and later \$10,000,—owning, at the last, but four of the hundred shares into which the paper was divided. Mr. Dana, when managing editor of the *Tribune*, had only \$2,500; as had, also, Mr. S. H. Gay, his successor. Mr. Young (now U.S. Envoy to China) who followed Mr. Gay, received \$5,000. Mr. Whitelaw Reid, who followed Mr. Young, had first \$5,200, and afterward \$10,000. Now he is virtually sole proprietor, but the concern suffered heavy losses about the time of Mr. Greeley's death, and Mr. Reid's energy, com-

bined with other influences, has only recently started it upon a new career of prosperity. It will not for some time return to its place as one of the really wealthy journals of America. The example of giving handsome remuneration for good work was set by Henry J. Raymond, of the *New York Times*. About 1869 he offered L. J. Jennings, a correspondent of the *London Times*, \$10,000 to serve as his first assistant editor, but Raymond's sudden death interrupted the negotiation. John Bigelow, ex-Minister to France, assumed the literary control of the *Times*, on the terms offered Jennings, but his rule was brief, and the English journalist soon succeeded to the position. The payment of these salaries, then considered large, had a remarkable effect in changing the scale of compensation for the highest newspaper work,—partly owing, however, to purely accidental circumstances, too complicated to be here narrated. Not long after Bennett, the younger, entered the field of competitive munificence, determined to have it understood that the *Herald* could give better wages than any other newspaper,—which undoubtedly it could, being owned by a single individual, (whereas most of its rivals were the property of companies), and enjoying, at the same time, the largest profits of any New York daily sheet. Among his best paid writers were Mr. Young, \$15,000; Mr. Charles Nordhoff, \$10,000; and Mr. Ivory Chamberlain, \$10,000. Mr. Chamberlain is no longer alive, and Mr. Young is in China. Notwithstanding that these well remunerated *Herald* attachés were eminently entitled to all they obtained, no one would pretend that Mr. Bennett was actuated by any consideration of their merit or ability, in engaging them. They constituted a portion of his machinery for gaudy advertising, and it is an indisputable truth that from the moment of their absorption into the *Herald* editorial corps, their literary individuality was lost. Their handiwork could not be distinguished, in the page of leading articles, from that of the average writer at \$2,000 a year—which Mr. Bennett is said to consider an ample stipend for all his people, excepting the few whom he wishes to exalt for purposes of glittering notoriety. If Mr. Young chanced to be assigned to some special task, where his brilliancy of style or sustained descriptive power had free scope; or if Mr. Nordhoff was delegated for such substantial service as the massing together of sturdy, iron-bound facts, in logical cohesion,—then the side pages of the *Herald* would present features of which any newspaper might be proud. But it was never imagined that Mr. Bennett was proud of them, nor, if the general report may be credited, that he could experience any feeling besides distress at the idea that "one of his men" was augmenting or sustaining a personal reputation through the instrumentality of his (Bennett's) types, presses, ink and paper;—the pleasant fallacy of his life being that it is at bottom all his own doing, the out-growth of his fertile inspiration operating upon the elaborate mechanism which he controls. This, however, is a species of illusion not only common to,

but almost inseparable from, the consciousness of extensive resources and ungoverned power. Mr. Swinton mentioned, furthermore, that the reporters of the New York press receive from \$1,000 to \$4,000 annually. Concerning one important class, the correspondents, he said nothing. We may supply the omission by stating that correspondents whose services are given exclusively to one paper are paid from \$2,000 to \$5,000;—additional allowances being supplied in cases where systematic "entertaining" is understood to enhance the opportunities for collecting information. But correspondents who, like George Alfred Townsend, send letters from the great news centres to half a dozen newspapers, and whose facility is equal to their tireless industry, obtain larger emoluments, in proportion to their intellectual disbursement, than any other of the fraternity. All things considered, the journalists of New York are probably better paid, just at present, and for reasons of a curiously contradictory nature, than those of any other city in the world. The great establishments of London can afford a still more liberal outlay for their literary service, but they are not, as yet, obliged to be lavish, and until they see a necessity for doing so, they will hardly increase their expenditure in that direction.

THE experiment of sending a facsimile of the *Maid of the Mist* down the whirlpool rapids below Niagara has been successful. The following telegraphic account is given by the *New York Herald* under date September 6th:—

The imitation of the old steamer *Maid of the Mist* was sent through the Whirlpool Rapids below Niagara Falls this afternoon in the presence of 10,000 spectators. Excursions were run on all railroads centering at the Falls, both from the States and Canada. There was much criticism on account of the whole affair being turned into an advertising medium. It was said that the scheme was gotten up for the benefit of the hackmen and hotel keepers, but the advertising privileges of the boat were bought by a patent medicine dealer of Lockport. The little craft was rigged up to represent the original *Maid of the Mist* which was piloted safely through the rapids in 1861.

At twenty minutes past three P.M., Buffalo time, the boat was towed out into the stream and cut loose at about the point where Captain Webb started on his fatal swim. She went swiftly down the stream, and when reaching the rapids was dashed about like a small boat in a rough sea, but kept her course safely though careening and turning around several times. She reached the whirlpool in about three minutes from the time she struck the rough water. Then she floated around and gradually worked toward the Canadian shore, remaining in the whirlpool about twenty minutes. After reaching the shore she was secured and her flags taken off, after which she was pushed out into the stream and floated down the river some distance, when she was taken in tow by some boys and tied up at the Lewiston dock.

She was in perfect condition, with the exception that two boards on the inside of the wheelhouse were torn off. The boat used was an old scow and not very strongly constructed. The general opinion was that any boat fairly constructed could pass through the rapids without difficulty, but it proved nothing as to the power of any adventurous swimmer to accomplish the perilous feat.

A HOME paper states:—"During the firing of the artillery salute from the Cronstadt forts and ships, at the recent Imperial inspection of the Russian squadron on its return from the Pacific, one of the largest guns in Fort Milin, a 13-in. Krupp, burst." This may be true, but it is a very unlikely thing that 13-inch guns would be used for saluting.

THE steamship *Gemba Maru*, on her voyage from this port to Yokkaichi, encountered the full force of the typhoon on Monday last. The Captain states that he left Yokohama on Sunday, at 6 p.m., and made a rapid passage until near the entrance of Owari Bay, having a strong Easterly wind from Rock Island. At 9 o'clock, on Monday morning the typhoon struck the ship with full force, and it was found impossible to enter Owari Bay as the vessel became unmanageable, and was then close to the land. The ship's head was therefore put to the Southward, and every effort made to get off the shore. The wind and sea increased in violence until noon, at which time the storm was terrific, the sea making a clean breach over the ship, smashing in the pilot-house windows, saloon doors, &c., and carrying everything moveable about the decks overboard. Soon after this the wind hauled to the Southward, and the ship commenced drifting toward the shore between Toba and Matoya. Every exertion was now made to bring her up to the wind, and get her on the starboard tack, but all to no purpose, and seeing there was no room for wearing her round, it was resolved to cut away the foremost as the only chance of saving the vessel. This was done with all possible speed; and, after the ship had drifted clear of the wreck, the engines were put full speed, and at last her head came up to the wind and she went over on the other tack just in time to clear the shore. After this the vessel rode out the remainder of the storm in safety, and being relieved from the weight of her mast became more buoyant and shipped less water. At half-past two the barometer began to rise, and it was apparent that the worst of the storm was over. At 4 o'clock the wind had got round nearly West, and at 4.30 the ship was headed for her destination, arriving there at half-past ten. The Captain states that during the height of the storm the barometer vibrated very much, its lowest mean reading being 28.80. The seas rose to a tremendous height, but the ship behaved remarkably well, and her hull is not injured in the least. She made no water in her holds, but delivered her cargo (mostly sugar) in good condition, and brought a return cargo up from Yokkaichi.

THE Mitsu Bishi steamship *Taganoura Maru*, Captain Matsumoto, which arrived here this morning from Yokkaichi, reports that when five miles off Rock Island she fell in which a dismasted junk and towed her into Shimoda.

AN entertainment in aid of the fund to relieve sufferers from the Ischia disaster is projected. The performance will be given by amateurs in the Gaiety Theatre on the 22nd instant.

BAR-TENDERS in New York have received a useful lesson as to the advisability of concealing their ailments. Theodore Lindsay was bar-tender in the saloon of Peter Geraty. On the 21st of September the former's head ached so badly that he leaned over the counter and hid his face in his hands, complaining, at the same time, of the

racking pain. A gentleman called Michael Tobin, who was standing by, took up a mallet and fractured the bar-tender's skull. It is not yet ascertained whether the impulse of the act was resentment of Lindsay's impatience or a merciful desire to put him out of pain. In either case the moral for bar-tenders is obvious.

It is reported in the *Hochi Shimbun* that clouds of insects were lately seen in Mombetsu, Hokkaido, darkening the sky and proceeding northward across the Wakibetsu river. They are much dreaded by the farmers of the locality.

BUT little information with regard to affairs in Madagascar has reached us for some weeks, the latest being a telegram dated London, Sept. 25, which related that the "Hovas had retaken all their positions on the North-West coast of Madagascar except Majunga." Our information by telegraph in this issue in a measure confirms the last news received, with the addition that the "French position has become precarious."

NOTWITHSTANDING the depreciation in the value of silk, no serious fluctuations are noticeable in that of pierced cocoons. This, a Tokyo paper thinks, may be ascribable to the fact that the preparers of silk-worms' egg cards, regarding their past failures, have refrained this year from catering for the Yokohama market, and only produced as much as they deemed absolutely necessary for their domestic wants. Throughout the empire there are not, probably, at present, more than 3,000 bales of pierced cocoons. Finest qualities are, therefore, quoted at \$110; and there is yet a brisk demand for them. It is added that two Italian dealers who have lately arrived in this port anxiously await the arrival of further supplies from the producing districts.

TELEGRAPHIC information has been received here of the wreck of an American ship at Iruma-ura, on the coast of the province of Idzu, in Shidzuoka Ken. The report says that no lives have been lost, but in the telegram no clue is given to the name of ship or captain, for although both are mentioned, neither can be made to agree with any names known in these waters or expected to arrive here.

CAPTAIN MATSURA, H.I.J.M.N., has been appointed to the important command of the *Tsukushi Kan*, relieving Captain James, who brought this latest acquisition to the Japanese Navy from England to Yokohama.

It is reported in one of the Hongkong papers that Mr. Ng Choy, some time Acting Attorney-General of Hongkong under Sir John Hennessy, and now in the employ of the Chinese Government, has been selected by H.E. Li Hung-chang to fill the post of Assistant Superintendent of the Admiralty.

It is reported from Osaka that no business is doing on the Bourse there, and that the brokers complain bitterly of hard times. The stagnation is ascribed in great part to the operations of the

Chinese Exchange in Kobe, where fees of only sen 20 are charged on each yen 1,000 bought and sold.

A TELEGRAM has been received in Tokyo to the effect that negotiations have taken place between Admiral Courbet and the leader of the Black Flags, with the result that the latter have agreed to evacuate Sontai.

A HONGKONG paper sneers because "Sir John Pope Hennessy is reported to be concerning himself about sanitary matters in Mauritius." The *Ceylon Mercantile Record*, on the other hand, says:—"We are glad to hear that His Excellency the Governor is making a special study of the sanitary state of the colony, and *de visu*, which is a grand point. He has already visited many places with a scrutinizing eye."

HONGKONG papers report that the Viceroy in Canton has been calling troops to the City from all parts of the province, and that ammunition and other war material are pouring into the Bogue and other forts every day. It is said that there is quite a panic in the city, and that thousands of people are moving their families and household valuables into the country for safety. There is a proposition to dismiss the Chinese constables on Shameen and to employ Sikhs, as it is doubted if the fidelity of the Chinese constables could be relied upon in an emergency.

UPON the pedestal of the statue of Lafayette, unveiled at Le Puy on the 6th of September, these words are inscribed:—"I bring you a cockade that will make the round of the world." Remembering the feeling with which the enthusiastic Frenchman uttered this phrase, it is impossible to resist wondering what his emotions would be if he could witness the conditions under which the aforesaid cockade has made its way around the world so far as Tonquin in the northern and Madagascar in the southern hemisphere.

A PORTION of the Russian squadron, the *Duke of Edinburgh* (flagship), and the *Skobelev* and *Najednik*, arrived here yesterday, and exchanged salutes with the port and the two Admirals in harbour.

SIR HARRY PARKES arrived in Peking on the 27th ult.

M. TRICOU has arrived in Peking, but proposes to remain there only a few days.

IN H.B.M. Court on Friday, before N. J. Hannen Esq., Judge, Mr. Iwasaki Yataro, of the Mitsu Bishi Company, sued Mr. Mors Le Blanche, the English shipowner, for \$2,100 damages alleged to have been incurred through breach of a charter party entered into for the steamer *Pacavo*. Mr. Kirkwood appeared for the plaintiff, and Mr. Lowder for defendant. Judgment was given for plaintiff in the full amount claimed and costs of Court.

MUNICIPAL REFORM.

IF the document which was read at the meeting of land-renters on Monday last correctly represents the ideas entertained by a majority of this community on the important subject of municipal reform, further correspondence with the Local Authorities can scarcely lead to any useful results. We do not say this with any desire to minimize the value of work which displays much earnestness and must have entailed considerable labour. But the question is one that can lose nothing by unreserved criticism, and we shall not do the compilers of the document the injustice of supposing that they are in any sense averse to honest discussion.

Taking the paragraphs of the proposed rejoinder in their order, we find that the first is disfigured by an unaccountable misapprehension. The Prefect's memorandum says:—"The urgent necessity for a uniform and enforceable system of municipal government is recognized by none more than by myself. The means to obtain this end are, however, not far to seek. It can be secured by applying the universally accepted rule that all the inhabitants of a country should be governed by the territorial laws and regulations." Now it is beyond all question that the Prefect alludes here to municipal government and to municipal government alone.* He is speaking of nothing else. Neither his language nor its import appears capable of misconstruction. Further, in the very next paragraph of his memorandum, he writes thus:—"That the foreign Settlement is at present without an efficient system of control is not the fault of the Kencho, but of those who not only claim exemption from the local administrative laws and regulations, but sometimes even place obstructions in the way of their due enforcement. If such obstructions be removed and the Kenrei enabled to enforce the Japanese laws and regulations over foreign residents, I confidently believe that the administration of the Settlement would be so improved, and the state of things generally undergo so complete a change, as to give entire satisfaction to all the foreigners residing in this port—a consummation which I most earnestly hope may soon be brought about." In speaking thus the Prefect does but echo

* It may interest our readers to recall, in this context, a paragraph of a speech made by Mr. A. J. Wilkin at a meeting of Land Renters on April 8th, 1869. Mr. Wilkin said:—"They say they will fight for a Municipal Government for ourselves, or for the authorization of the Land Regulations. Would they get it? But let us seriously consider what this means. It means that the Japanese Government must give up certain of their territorial rights to a committee of foreigners."

the complaint of the memorial to which he is replying. In that memorial the defective condition of the municipality is attributed mainly to "an entire absence of any recognized code of regulations." Yet when the Prefect endorses this, and declares that if he were able to enforce the Japanese local laws and regulations the difficulty would at once be obviated, it is proposed to tell him that he has "obscured and complicated a simple question by importing into it a matter purely and solely one for the consideration of the Imperial Governments of Japan and the memorialists' respective countries:" that "the memorialists had carefully refrained from touching upon the question of ex-territorial jurisdiction:" that "their request would equally have been preferred to the Imperial Government were the territorial laws of Japan applicable to all foreign residents;" that "municipal law is distinct from imperial law:" that "it comprises and is confined to a series of regulations for the health, peace, good order, and decency of a Settlement of men," and that "it is applicable only to the limits of the town or city in which the community dwells."

If all this be admitted, some inconvenient deductions become inevitable. The municipal control of the Settlement was restored to the Japanese authorities 16 years ago. Are we to understand that during the whole of that time they have been required to govern the place without subjecting its inhabitants to any code of regulations whatsoever? Is it deliberately pretended that for sixteen years we have been parties to such a mad farce as that? If we deny the right of the Japanese Local Authorities to apply their own municipal regulations to the foreign Settlement and yet require them to exercise municipal control in that Settlement, the only possible inference is that they must enforce foreign municipal laws. But if so, what laws? Those of San Francisco, Chicago, Birmingham, Lyons, Venice, or Moscow? It is very true that "municipal law is distinct from imperial law," and it is precisely this distinction which proves that the treaties which have been construed as conferring upon foreigners in Japan exemption from the scope of the former, do not in any sense whatsoever refer to the latter. Either this is the fact, or the fact is that during the first six, as well as during the last sixteen, years of this Settlement's existence, the Japanese authorities are supposed to have exercised municipal control without the power of applying any regulations whatever. Exterritoriality has nothing to do with the question. It is not the Prefect

who has imported irrelevant matter into the discussion. It is those persons who, while acknowledging that municipal law and imperial law are totally distinct, and who while themselves confessing that the whole trouble is the absence of any recognised code of regulations, decline to recognise the only code that can be logically and properly applied to the seventeen different nationalities represented here.

The attempt made in Paragraph 2 to fix inaccuracy upon the Prefect reads very much like special pleading. The memorandum of the Kencho does not charge the foreign Land Renters with inconsistency merely because they desire to repeat an experiment which, sixteen years ago they elected to abandon, but because, having of their own motion surrendered the municipal control of the settlement "at a time when the system of civil administration in Japan was imperfect, they now seek to resume it at the very moment when strenuous efforts are being made by the Local authorities to introduce radical reforms." Surely it is a mere quibble to say that "the council of 1865-67 did not voluntarily request the Government to re-assume municipal control, or of its own accord abandon control of the foreign Settlement," when the plain fact is that a memorial was forwarded by the Land Renters to the Foreign Representatives, in July 1867, "requesting that the Japanese Government be called on to resume the control and management of the municipal affairs of the foreign Settlement of Yokohama." Whether this action was dictated by want of funds or want of power, it was just as much voluntary as is an official's resignation of his post when he finds he cannot perform its duties. Recriminations of this sort, if introduced into the Land Renters' reply, can only have the effect of promoting controversy and thus postponing a decision.

In Paragraph 3 we find it stated that the Prefect's admissions as to the difficulty of controlling immorality and dishonesty so long as the law remains inoperative against foreigners' employés, substantiate, instead of disproving, the memorialists' charges. No reason is assigned for this assertion, unless the objections urged against one of the proposed remedies be intended to serve as a reason. That remedy is, that "the governor (Prefect) should be furnished with a general warrant enabling the proper officers to enter freely into the premises occupied by foreigners of whatever nationality, when there is reason to suspect that offenders are concealing themselves therein." To this it is replied that "in no civilized country does

such a regulation exist;" and that "it is impossible to conceive a civilized people that would tolerate a law at once arbitrary and barbarous." The simple answer is that, on the contrary, such a system does exist in all civilized countries, and is tolerated by all civilized peoples. We need not go beyond London to find a city where every police magistrate has power to sign a search warrant. What the Prefect of Kanagawa wants is to be endued with the powers of an ordinary police magistrate, so that he may be relieved from the embarrassment of applying to one of a dozen different Consuls for authority to exercise the common functions of municipal Government. It is not in contemplation, we presume, to allow the police to make domiciliary visits to foreigners' premises whenever they please. That would be intolerable. But it is in contemplation to eliminate, as far as possible, the impediment of Consular interference. The compilers of this document appear to think that to entrust to a Japanese Prefect the discretionary authority exercised by every English Magistrate would be to lapse at once into a state of barbarism.

The Prefect, in his memorandum, justly rebukes the most improper assertion contained in the original memorial, namely:—"That the police have connived at robberies in the Settlement the circumstances of these robberies seem plainly to indicate." He says unequivocally:—"I am in a position to declare that there has never been a single case in which the police have connived at robberies." Yet it is now suggested that the memorialists should "confirm their statement." Is it necessary to disfigure a public document, bearing the signatures of a respectable community, by sweeping accusations founded on mere conjecture? Robberies precisely similar in character to those upon which these charges are based took place under the foreign municipality when the streets were patrolled by foreign constables. Yet we have never heard that the latter were accused of connivance. It does not seem to have struck the compilers of this reply that the insufficiency of the police force may have had something to do with the comparative immunity enjoyed by thieves. Since the numbers of the force were doubled, burglaries have almost ceased. As to the assertion that "it is immaterial whether the thieves are or are not employés of the foreigners from whose premises the robberies are effected," it is difficult to believe that the compilers were serious when they wrote it. No one can fail to see that such a circumstance, especially

having regard to the peculiar status of foreigners' employés in this Settlement, would materially affect the feasibility of perpetrating crime.

The contention with regard to the state of the streets, roads, &c., will be variously regarded. The Prefect tells us that "in the locality known as the Old Settlement" the roads and drains were not, in the first instance, perfectly constructed, and it is intended thoroughly to overhaul them;" and he also explains that "the extensive work of reconstruction and reparation of streets in that and other localities has very properly been deferred until after the completion of the works connected with the laying down of the new main drains and aqueducts, the former of which is now being carried out." Nevertheless it is proposed, by way of reply, to "refer to the evidence of the roads, streets, and drains themselves and to add that the repairs to Main Street necessitated by the drainage operations are still incomplete." The Prefect would simply answer this by referring to his previous explanation, which he might supplement by observing that extensive works require time for their completion; that the resources of the Local Government are not infinite, and that, according to their own admission, "this community have no right to expect the liberality of the local government to be always exercised in their favour."

The paragraph with regard to the drainage operations now in progress is curiously purposeless and contradictory. Forgetting, apparently, the capital that has been previously made out of the want of a good system of drainage, the memorialists say that "it seems inexplicable that the work" (of making drains) "should have been commenced at all without the strongest and most urgent necessity." If the necessity does not exist, the justice of complaining is not apparent.

But we shall not tax our readers' patience any further. We cannot doubt that this community will recognise the folly of addressing to the Local Government a prolix and lengthy document which can only have the effect of eliciting a similarly fruitless rejoinder. The problem now lies in a nutshell, and its solution will certainly be impeded if a fresh discussion is attempted of details virtually settled. It seems to us that the reply to the Prefect's memorandum may be very short and simple. After setting forth the community's acknowledgments of the attention their arguments have received, the signatories may proceed at once to note that, while the Prefect is at some pains to explain the causes of the muni-

cipality's unsuccessful administration, he does not deny the fact of failure, but admits that "the foreign Settlement is at present without an efficient system of control," and that he fully "recognises the urgent necessity for a uniform and enforceable system of municipal government." So far, therefore, there is an absolute consensus of opinion. Further, it may be frankly admitted that the Local Authorities are not charged with any incapacity over and above the difficulties inseparable from their peculiar position *vis-à-vis* the foreign residents. It has long been acknowledged that the mainspring of the dilemma is the impossibility of enforcing any system of laws however excellent. The community refuses to recognise, and the Consuls pretend that they have not the power to enforce, regulations of purely Japanese origin, while among the foreign Ministers one, or at most two, are competent to declare such laws applicable to their nationals. For nearly a quarter of a century foreigners have unwisely and arbitrarily interpreted the extraterritorial clauses of the treaties as conferring exemption from Japanese municipal and local, as well as imperial, laws, and have at the same time entrusted the municipal government of foreign Settlements to Japanese authorities. The inevitable result is a deadlock which both sides alike acknowledge and deplore. It is only when the remedy is in question that a divergence of opinion becomes apparent. The Japanese say:—"Give us the substance not the mere shadow of power, and we promise to satisfy your wants, but we cannot undertake to preserve law and order so long as obedience to our regulations is entirely a matter of courtesy." Foreigners, on the other hand say:—"We do not desire to dispute your ability to govern satisfactorily. But neither do we believe that a purely Japanese control can be efficient in this Settlement; for the simple reason that the community will not obey any laws which are not of its own making or which have not received its approval. Further, we wish to have a voice in the management of our own affairs. That is a privilege generally enjoyed by societies of free citizens in civilized countries."

To travel beyond these lines can only entail renewed controversy, and controversy is neither expeditious nor useful. We are not very hopeful that the Japanese Government will delegate to this community the desired authority, in whatever terms a memorial be couched. Sir HARRY PARKES, in his despatch to the Land Renters' committee, dated July 19th, 1867, said that municipal regulations framed by

the foreign residents "could only become law for the whole foreign community by unanimous legislation on the part of all the Treaty Powers, which, before engaging in such legislation, may require to be assured of the general concurrence of the community in the regulations proposed, and of the inability or unwillingness of the Government of Japan to maintain order and cleanliness in those portions of its territories in which Foreigners have the right to reside." It is most unlikely that the Government of this country will consent to take any step which might expose them to such an imputation, even were the time otherwise propitious for persuading them to divest themselves of a portion of their authority over the foreigners residing in their territories. Again, to any claim founded on the privileges of self-government generally accorded to communities of citizens in other countries, it may, and probably would, be replied that the peculiar position we persistently maintain in Japan deprives any such precedents of their analogy, and that when we consent to abolish race distinctions and to occupy the status of Japanese citizens, there will be no hesitation about according us corresponding rights. It may, and probably would be replied, that the rights of citizenship are not conferred on untaxed aliens in any part of the universe. Valid or invalid that is a rejoinder we have to anticipate, and the mood that dictates it adds largely to the difficulties of the situation. It will be for the community to consider the relative wisdom of engaging in a ten years' combat with these difficulties, or of developing the practical and sensible scheme outlined by the last meeting of Land Renters, namely—to obtain a voice in the municipal control of the Settlement by deputing to a permanent committee the duty of conferring with the Local Authorities and bringing to their notice any complaints the foreign residents may have to make.

THE ILBERT BILL.

THE story of the Ilbert Bill is full of lessons which cannot be disregarded by the foreign communities of this country. A few months ago that story was so disfigured by passion and prejudice that to consider it with impartiality was almost impossible. But the sense of justice which happily resides with Englishmen in their own homes has at last prevailed. A marked difference is discernible in the tone now adopted by the adversaries of the Bill, and it is openly admitted by men

who formerly denounced the measure, that were Lord RIPON'S policy submitted today to the judgment of the House of Commons, it would receive the support of a large majority.

This result does not at all surprise us. Discussing the measure when it first became a subject of keen interest to Englishmen all over the world, we said that no fault whatsoever could be found with the principle underlying it; that it was strictly consistent with the openly declared spirit of English policy in India for the past fifty years, and that the only charge to which it was fairly liable was one of untimeliness. This language is now echoed, almost *verbatim*, by the London *Spectator*—itself originally an opponent of the Bill—which says:—"Lord RIPON'S assailants have had the imprudence to attack the Bill on its merits, and not merely on the ground that it is a premature step in the right direction." It may be that public opinion would have been slower to recognise the truth had not "the indiscriminate fury" of Lord RIPON'S critics "provoked a host of champions into the arena;" but this is only another way of saying that men's attention has been directed towards the Bill with unusual energy. We are persuaded that the honest instincts of Englishmen would ultimately have asserted themselves, as they will also inevitably assert themselves in matters more closely concerning the interests of this community. After the QUEEN had solemnly promised in her proclamation of 1858 that her "subjects of whatever race and creed" should be "freely and impartially admitted to offices in her service;" after the administration of justice in civil cases had been exercised by native judges and magistrates over Europeans for nearly half a century; after the extension of native criminal jurisdiction over all British subjects throughout India had only been postponed by Lord DALHOUSIE'S Government, in 1849, till the preparation of the Indian Penal Code should be complete; after criminal jurisdiction over Europeans within the limits of the Presidency towns had been exercised for six years by native magistrates; and after the entire body of local governments in India, with the single exception of Coorg, had reported in favour of Lord RIPON'S proposed legislation, it was impossible to suppose that any outburst of race prejudice, however violent, could permanently postpone a measure in itself so wise and consistent.

It is, however, to the incidental utterances which the controversy has evoked that we desire chiefly to direct attention at

present. We shall quote a few of those utterances; without any attempt to throw them into a continuous form:—

It is perhaps a good thing that, from time to time, the veil should be lifted, and that one should be able to recognise the relations of the dark races and the white. On the European side is a haughty, insolent contempt, mingled with some fear and sense of insecurity; and these feelings, whenever met by resistance, break out into the fiercest wrath, and express themselves in savage and cruel action. • • • Such passionate outpourings as those sent home by the *Times* correspondent when Mr. Ilbert's Bill was first introduced, as the fierce and bitter speeches in Calcutta, as the elation of the native Indian press, go a long way to clear our minds of all cant, so that we recognise the relation of England to the subject races of India, to be one of conquered. • • • That native magistrates or judges would be unfair on Europeans, I think quite as probable as that Europeans would be unfair on natives. There is as much human nature in one class of men as in the other. I believe myself that the fear of this unfairness or partiality is an exaggerated fear. The native magistrate in any case in which Europeans were involved would be very careful indeed to behave in a judicial manner. All eyes would be upon him. • • • In those districts where there are very few scattered Europeans, and where, perhaps, there might be sent in the future a native district magistrate or judge, it is my conviction that it would be far better to run the risk (which I think a very improbable risk) of such alleged partiality, rather than that some isolated and solitary European, invested with all the prestige of his race by an ignorant peasantry, should fancy himself outside the pale of the law and superior to the Government official himself. • • • Another lesson might be learned from the passion with which the proposed measure, although of such a limited character, has been met. If it is unnecessary to pass a law which affects so few, why is so much vehemence shown against it? Does not the excitement show that some such law is urgently needed—that Europeans and Eurasians think that, to a very great extent, they can now do as they wish, and that they will not have such opportunities in future? In the violent speeches, the bitter taunts and insinuations that have signalled this controversy, is shown more manifestly than would well have been possible in any other way, how necessary it is for the English community to learn that India does not exist only for their benefit, and that the natives of the country are not to be considered by them as outside the pale of beneficent legislation. • • • Are the feelings, hopes, and aims of the millions and millions of natives to be as nothing before the aims, hopes, and feelings of the few Europeans resident in India? • • • The passing of the law will announce distinctly to England and to the world that a further step has been taken to carry out the principles of right and justice, and also to fulfil the promises of two generations of Indian administration. Every step taken to fulfil those pledges has been met with the strong resentment and opposition of Europeans in India. The history of the passing of the Black Act is well known. In 1849 and 1855 similar violent agitation put a stop to similar schemes for rendering Europeans more equal with natives before the law. In 1865, however, on the proposed abolition of grand juries, Sir Henry Maine had to face a similar storm, and he met it with firmness and success. But notwithstanding what has been done, throughout a century of conquest, the European has been everything and the native little or nothing, the European has begun to think that this is on account of his inherent virtues and of the vices of the native.—*Contemporary Review*. August.

The apparent justice and simplicity of the measure, and the nature of the replies received to the confidential circular issued to the local governments, might fairly have led the Supreme Government to suppose that the Bill would be received with no worse than temperate criticism. But, as is too well known, there arose from the non-official European community a protest which found expression in the wildest and most violent language, and, rapidly spreading over India, involved the Government in a tempest of denunciation and reproach, and roused the unhappy spirit of race antagonism in a measure not witnessed since the worst days of the Mutiny. In all cases of such legislation, from the passionate agitation against the first "Black Act" in 1856 onwards, experience has shown that the opposition of the European non-official community has to be encountered. Was the Government indefinitely to postpone legislation, which was already needed, and would every year become more pressing, because the opposition was likely to be violent and exaggerated? • • • As Sir Arthur Hobhouse has pointed out, the objection (that the proposed measure will affect the security of England's position in India) represents the whole underlying principle of one school of policy as regards our Government of India as opposed to the policy of another school. The former maintains that our rule rests on bayonets alone, and must be continued in that position to stand. The latter aims, so far as is practically possible, at absolute justice and equality to all subjects of the Empire alike, and at establishing our supremacy in the good will and affection of the natives of India by obtaining their confidence in our fairness and regard for their interests. Between the two conflicting theories there is no short mode of answer which can satisfy both, and each man must judge for himself which he will choose. • • • Let any Englishman of fair mind ask himself the question as if it were his own case, and not the natives'. • • • Are we, in the face of the ever rapidly increasing educated masses of India, without regard to our own good name and honour, to fall short of the assurances we have given, and to proclaim that, though no other fault can be found, the difference of race will not suffer a brown

man to be trusted as we would trust him if he had born of English parents?—*Fortnightly Review*. August.

The right hon. gentleman refers to the Government of India. I am glad to hear his speech in favour of the admission of the natives to office, but I am sorry to hear him, by hints and suggestions, convey an impression about the measures and policy of Lord Ripon which can only tend to weaken the hands of that nobleman. The right hon. gentleman says it is a very proper thing indeed to extend the admission to office to natives, but it has been mismanaged—the steps have not been taken at the right time; they have not been taken in the right manner; and, in consequence, the cause has been thrown back, and great attention ought to be paid to the sentiments of the Anglo-Indian community. Well, Sir, I have had much to do for a long period with a series of questions, and I am not aware at this moment of any series of great reforms which have been brought about by the courage and the wisdom and the foresight of the British Legislature in respect of any portion of this empire, which reforms have had the favour and support of the resident English community.—(Hear, hear.) I do not remember that the abolition of slavery had the support of those residents in the West Indian colonies whose opinions, from experience and knowledge, were undoubtedly of considerable weight. I do not remember that the establishment of a responsible Government in Canada and of that new system of relations with colonial institutions which has completely established harmony where before there was perpetual discord—(Home Rule cheers.)—I do not remember that that establishment of responsible Government and that introduction of political reform were treated in the colonies by those who, up to that time, laid claim to what was called the British party, and represented themselves as having a monopoly of loyalty—I do not remember they ever received those reforms except with opposition. In 1862 the Government of Lord Palmerston re-united the people of the Ionian Islands with those of their own race, of their own religion, of their own feeling and condition; but there was a British party there, and that British party from point to point resisted everything that was proposed for the benefit of the people. Sir, it is the same thing all over the world; and it is not because these resident English communities are made up of people who are worse than ourselves. Do not let it be supposed I have any accusation to make against them; but their position is less favourable than ours for forming a comprehensive judgment. They are doomed almost to narrow modes of examining these questions, and we are compelled to look over the course of history and over the surface of the world. They each of them look at themselves in relation to persons whom they feel to be in energy and certain practical effects inferior to themselves, and there is a tendency to indulge in a spirit of ascendancy which it is the business of this House and of this Legislature, and the business of a patriotic Governor-General with wisdom and with care, but with decision, to modify and to check. No evidence has come before me and none before this Government to convict Lord Ripon of any want either of courage or of discretion in this matter. It is true that there has been great resistance to Lord Ripon. If it is not impertinent, I may mention that I have a son in Calcutta who is a thorough approver of Lord Ripon's policy, and I am bound to say his report is that he is not certain whether he can find three other men in Calcutta who can agree with him.—(A laugh.) This is not the first time that such a state of things has existed. Go back to the time when Indian natives began to be entrusted with judicial functions; go back to the time when the liberty of the Press was enacted in India; go back to the period of Lord William Bentinck and Lord Macaulay, and you will find that the storm which has arisen in India, violent as it is, is less violent and less menacing by far than the storms which then arose. And so it will be in the future. You will go on—you will be compelled to go on; but I hope, what is more, you will be inclined to go on in the noble and upright and blessed work of gradually enlarging the Indian franchise. You will have to look this opposition in the face, and you will have to observe all the rules of circumspection and prudence in the measures you take; and no amount of circumspection and prudence will save you from that opposition. It will become milder from time to time. This Anglo-Indian community is made up of honourable and upright men. They may have their prejudices, and I think they have; but as they come nearer to the facts and look them more closely in the face they will begin by degrees to recognize they give to unreal dangers and to shadowy dangers an importance they do not deserve. Every step made in this direction is not only a step towards attaching to yourselves the minds of the vast population of India, but it is a step towards establishing between the different races of that country—between Europeans and natives—a degree of harmony which in former times did not exist. You have not to go back very far when any idea of any rights or capacity on the part of the natives of India was regarded as most unnatural and monstrous. Happily we have outlived that. But we have some other superstitions to outlive.—(Hear, hear.) We have a work before us in the performance of which undoubtedly the powers and capacity—the moral as well as intellectual capacity—of this country will be severely strained. I confidently believe we shall continue to go on steadily and steadfastly in that path, and I am persuaded that if we are enabled so to do we shall more and more, from year to year, realize the debt of gratitude we owe to those Governors-General of India, those eminent men of whom we have had many, who have fought and laboured hard among the crushing details of their high office to inculcate among their fellow-countrymen the broad principles of generosity and justice towards the vast population under their charge and rule.—(Cheers.) Those men have been the workmen, the most efficient and chief workmen, in building up that great and glorious

fabric of truly civilized society which it is our duty and task and high privilege to administer throughout the vast regions of the world.—(Loud cheers.)—Mr. GLADSTONE'S speech, August 22nd, in reply to Sir S. NORTHGOTE.

We do not pretend that any strict analogy exists between the questions awaiting solution in Japan and those to which the above extracts refer. It would be both impertinent and unjust to place the two upon the same lines. While India is a dependency of Great Britain—a possession concerning which the opponents of the Ilbert Bill do not hesitate to declare that, having been won by the sword it can be kept by the sword only—Japan is a free country, enjoying an unimpeachable title to all the privileges of national independence. This only can be said by way of comparison, that any arguments or inferences furnished by India's case in favour of abolishing race distinctions, apply with immeasurably greater force to Japan's. Are there, then, any such arguments?

If any one desires to answer this question impartially, let him consider what it is that opposes unrestricted intercourse between Japanese and foreigners to-day. Twenty years ago the reply would have been simple enough. Then it was the Japanese who held aloof. They either distrusted us or distrusted their own fitness to associate with us, and from that time until this, we have never ceased reproaching them with their want of liberality. But now it is we who distrust them. It is we who persist in preserving race distinctions; who even go so far as to confess that our people would certainly abuse the privileges we have long been asking for, and who are not ashamed to tell the Japanese that they would find it impossible to control us if they were permitted to make the experiment. For twelve years Japan has been importuning Western Powers to redeem their pledges by consenting to a revision of her treaties on the basis adopted towards all free states, and for twelve years we have opposed to her just demands the supercilious indifference of a combination of nations too powerful to recognise any principle but their own selfish convenience. There are many and grave abuses connected with the present exterritorial system, abuses so fatal in their effects that they actually render inoperative the commonest precautions for the preservation of law and order, and yet, while acknowledging this fact, Western States decline to restore to Japan the limited measure of jurisdiction which will correct those abuses—jurisdiction of which she has been wrongfully and arbitrarily deprived, and for which no substitute has been provided. Were that

limited jurisdiction restored to her, she is willing at once to remove, virtually, all restrictions upon foreign trade, travel, and residence. But certainly she will not, and ought not, to remove those restrictions upon any other terms. The language used by a remarkably able writer on the Ilbert Bill, is so apposite in this context that, with a few changes of name, it applies exactly to Japan's case:—

Let us take one of the large survey maps of India, and look at any district in the interior. Let there be marked upon the map the places where English magistrates qualified to entertain criminal charges against European British subjects are to be found. Let the means of, and the obstructions to, communication, such as great rivers, unmetalled roads, and so on, be shown. I should be surprised if an Englishman, accustomed to justice at his door, were not astonished at the distance and difficulties that intervene between any spot in the greater part of the country, and the only places where justice against a European British subject for a criminal offence can be secured. Hearing in mind that the High Courts alone can try serious cases, and that their original criminal jurisdiction over European British subjects extends to the remotest frontier districts, a by no means unfair parallel would be found in the hypothesis of an Englishman committing a felony in Caithness against a native of the county, and of redress being denied to his victim, except on the condition of his going with his witnesses to the South of England—performing the greater part of the journey on foot, but through a far wilder and more difficult country, without inns or lodgings. But not to take an extreme case, let me instance the province of Assam, where large numbers of Europeans are now employed in tea-planting. Suppose an English planter's assistant, in a fit of passion or drunkenness, half kills a native villager. If a charge is prosecuted, the complainant and his witnesses will have at the least to go to and fro over (in most cases) more than one hundred miles on foot or bullock-cart, and be kept away from their homes and work for several weeks while the charge is being investigated and tried. And if it be found to be a case for which a sentence of one year's imprisonment is not an adequate punishment, the unfortunate complainant and his witnesses, who have probably never been fifty miles from their native village, will be sent to Calcutta, some three weeks' journey. They are all the time practically in custody, themselves in charge of the police. What becomes of their cultivation, their home duties, and their affairs generally, during their absence—where they are lodged, and how they are treated, no one cares, and no one inquires. Is it to be thought that anything but absolute necessity, a case too serious to be hushed up by the police, will induce a native in the greater part of the Mofussil of India to bring a criminal charge against a European British subject?

And what is the answer made by Westerns to similar serious difficulties which prevent the opening of Japan under existing circumstances? Simply this:—"You may confidently count," they assure the Japanese, "on the respectability of all the foreigners who would visit the interior for purposes of trade under a passport system. The conduct of such foreigners would obviate the necessity of legal restraint." Thus in one breath the Japanese are told that foreigners admitted to the country without a passport system and under native jurisdiction would successfully defy all control; while in the next, they are glibly promised that a passport system and the absence of any jurisdiction whatsoever would effectually remove all necessity for control. This unlimited trust which we demand of Japan contrasts curiously with our own persistent resolve to withhold from her every mark of confidence. No wonder that she wants us to define "respectability:" no wonder that she wants to know whether the standard of eligibility for ungoverned trade and travel would include that section of the

Yokohama community which is represented by men that make it the business of their lives to parade their "haughty insolent contempt" for everything Japanese; to ventilate slanderous and bitter invectives against the country, its institutions, and its efforts; to heap foul abuse and lying taunts upon the head of every one that ventures to support the "broad principles of generosity and justice." Would the Consuls, whose irresponsible endorsement alone it is proposed to accept as a guarantee against the need of legal restraint, recommend for the privileges of trading passports these avowed despisers of Japanese laws and regulations, and if not, where would they draw the line? It is unfortunate that foreign residents who really stand in need of no legal restraint whatsoever, and who might derive benefit themselves as well as confer benefit on Japan did they enjoy the privileges in question, are debarred from enjoying them by the presence of a pestilential element which has taken, and is daily taking, the utmost pains to prove itself disqualified for any indulgence whatsoever. But in truth, this is the strongest, and not the least self-contradictory, feature of our present position. We assure Japan that we only ask her to give larger opportunities to persons who are in no sort of danger of coming into collision with the laws, and yet we decline to accept still larger opportunities for the sake of guarding a small class of violent and unruly characters against some hypothetical injustice. It is time that the saddle should be put upon the right horse, and the true cause of Japan's partial isolation recognised: it is time that Westerns should free themselves from those race prejudices for which they are ready to punish Oriental peoples with battle and bloodshed, and it is time to recognise the truth of Mr. GLADSTONE'S verdict, that "no series of great reforms which have been brought about by the courage, and the wisdom, and the foresight of the British Legislature in respect of any portion of the British Empire, have had the favour and support of the resident English community." Mr. GLADSTONE'S speech is not the only indication of the drift of the best public opinion in England. Sound and fair views are now generally in the ascendant, not only among Liberals but also among Conservatives, and if Japan is well advised, she will lose no time in appealing from judges blinded by local prejudices and selfish interests to a tribunal where to make her case understood will be to command justice.

THE SITUATION IN TONQUIN.

THE course of the negotiations conducted in Paris with regard to the Tonquin affair is beginning to be understood by the public. A cablegram to the *New York Herald*, under date September 8th, transcribes the following letter from the *Pall Mall Gazette's* Paris correspondent:—

When the difficulties between France and China on the Tonquin question began to get serious you published a report—which was perfectly correct—that everything would be satisfactorily settled by China withdrawing her troops from the frontier and France abstaining from doing anything that could offend or alarm China. But this *entente verbale* was not kept by France, and what made matters worse was the extraordinary behavior of M. Challemel-Lacour to the Marquis Tseng. As is now well known, the Marquis addressed several notes to the French Minister, of which no notice was taken; nor were the Chinese Minister's calls returned. All this seemed to indicate a desire to provoke China, and China replied by sending 30,000 men to Annam and by the Marquis going to London, after sending a verbal message to the French Minister for Foreign Affairs to the effect that if His Excellency wished to see the Marquis on public affairs he could telegraph his wishes to London. M. Challemel-Lacour became alarmed and expressed a desire to see the Marquis. The Marquis returned to Paris, but declined to call or even write to the French Foreign Office until M. Challemel-Lacour had explained his conduct. M. Challemel-Lacour now began to fear that if hostilities began the small French force in Tonquin might be annihilated before succour could arrive. Accordingly he took the rather weak course of going to the American Minister and asking him to assure the Marquis that he had taken offence when none was meant. This was done; but it did not satisfy the Chinese Minister, who, before resuming official relations with M. Challemel-Lacour, insisted on having his calls returned and his despatches answered. The French Minister gave in, but the relations between the two countries are not much mended. For, although the Marquis Tseng has given assurances that the Chinese army will not interfere with the French, I have my own private reasons for thinking that it has been sent there to supply the Black Flags with all they may want in the way of warlike material, and, under any circumstances, Chinese and French troops, face to face in Tonquin, are like a lighted match within a few inches of a ton of gunpowder.

The writer's statement as to China's military action seems exaggerated, though it is almost impossible to know the exact dimensions of the force which has been concentrated, little by little, on the frontiers of Tonquin. Among the thunderbolts launched by M. TRICOU at the head of the Grand Secretary Li, was an announcement that any movement of Chinese troops across the border would be regarded by France as a declaration of war. The movement has, however, taken place, but the promised interpretation is still expected. France has too much good sense to consider herself bound by all the extravagant utterances of her representatives abroad. The Marquis TSENG doubtless took care to afford the French Foreign Office the same explanation he is said to have given to the correspondent of the *Daily News*, namely, that the southward movements of the Chinese troops were

only necessary precautions to secure the frontier. But the Marquis is reported to have also told the London journalist that many Chinese had joined the Black Flags, though "China had no solidarity with the latter." This was a singularly frank admission, especially when we remember that the Black Flags have been proclaimed pirates by the French, and that certain Chinamen convicted of collusion with them are said to have been executed by order of French officials. If Chinese subjects are really enrolling themselves under the banners of the defenders of Sontai, and if not only does the Chinese Government refrain from issuing any prohibitory proclamation on the subject, but also the Chinese Representative in Europe admits the fact without disguise or apparent dissatisfaction, it becomes a nice question to determine by how wide an interval the two nations are separated from the reality of warfare. Further, it is evident that under such circumstances no approximate estimate can be formed of the resistance which the French troops may be destined to encounter in their attempts to carry the campaign beyond the delta of the Red River. Of late the Black Flags appear to have developed a peculiarity similar to that of Sir LAUNCELOT'S last adversary in the idyl—their strength goes on increasing as they combat, until from the few hundreds ambushed four months ago in the woods about Hanoi, they have grown into an offensive army of thirty thousand men. Each new failure to annihilate them has naturally magnified French statements of their force; but, on the other hand, their successes have not been less potent to attract adherents, and there is virtually no limit to the size their army may assume if it has all the southern provinces of China for a recruiting ground. The accounts of French victories have lost nothing in transmission, but they have been victories gained over Annamite troops only. Pæans appear to have been sung in Paris over the taking of Hué, and Haiduong, but it may truly be said that at neither of these places was there any real resistance. The bombardment and capture of the former cost the French two wounded men, while the Annamite official returns put the losses of the defenders at 3,200. In one sense, this was a brilliant affair; in another, it was a butchery. At Haiduong the invading force had only to march in and take possession. The enemy had evacuated the place two days before. Thus though the capture of the town was a substantial gain, not alone because of the warlike material found there, but also

because the position is one of the most important in the delta of the Red River, the operation was without significance as a military exploit, while it added to the embarrassment of the French by necessitating a fresh subtraction of troops from Hanoi, the real point of danger and difficulty. The plain fact is that the French, though invariably successful against the Annamites proper, have failed to make any sensible impression on the Black Flags. These occupy their old posts in constantly increasing force, and retain their hold upon the upper waters of the Red River more stoutly than ever. Thus China's game for the moment is a very simple one. Massing her troops on the frontier, by way of providing against Black Flag raids, she may fight France through the latter, holding herself ready either to sacrifice or support them as occasion serves. Meanwhile the French must perform await the arrival of large reinforcements before they can attempt any offensive movement. It is stated, on apparently trustworthy authority, that orders have been sent to Tonkin and other naval stations, to have transports ready, by the end of September, for the embarkation of 10,000 men for China; while, on the other hand, some persons profess to believe that if France sends any considerable reinforcement to Annam, China will at once declare war, and call upon England to fulfil her duty by closing her coaling stations to French transports. This would seriously imperil the safety of the troops already in Tonquin, but the probability that China will take any step so resolute is exceedingly remote. Her game, as we have said, will be a waiting game. At least two months must elapse from the present time before any decisively aggressive measures are undertaken against the Black Flags, and it is exceedingly difficult to suppose that the negotiations between the two Powers can be protracted throughout that period on their present comparatively narrow basis. The *Figaro* of the 8th of September says that the Chinese proposals are five, namely:—(1) The French protectorate to be hereafter confined to the Delta of the Red River. (2) China to open the navigation of the Red River down to Lao-Kay, which shall be the only point open to trade with Yunnan; the frontier at all other points to be closed by the establishment of a neutral zone, which shall be garrisoned by the Annamites. (3) China undertakes to prevent further incursions of the Black Flags. (4) The suzerainty of China over Annam is to be recognized by a mere act of homage, after which China will recognize the treaty of

Huê. (5) The French force of occupation is to be limited to 4,000 men. The geography of the *Figaro* seems to be slightly in fault when it speaks of opening the Red River down to Laokai, but the meaning is plain enough. China consents to make Laokai a dépôt for French trade with Yunnan, but intends to control that trade herself. These proposals amount pretty nearly to those embodied in the Bourée Convention. The clause with reference to China's suzerainty has obviously little import, and the other points might be conceded without much reluctance. But there might be, and, if report speaks truly, there is, a great deal of difficulty about the limits of the neutral zone. France is said to claim that its northern boundary shall be the twenty-second parallel of latitude, while China holds out for the nineteenth. A glance at the map will show that the former would give the French everything they want, while the latter would exclude them from the delta of the Red River, the occupation of which they have declared to be their principal object. The expedient of "splitting the difference" and adopting the twentieth parallel, suggests itself as a probable result, but this compromise is said to be not less distasteful to either side than the original demand of the other. Under these circumstances American mediation begins to be mooted. The Great Powers of Europe are said to be too much interested to arbitrate impartially, whereas the United States have nothing to lose and nothing to gain by the quarrel. The *New York Herald* applauds this project with a touch of magniloquent self-glorification that is very entertaining. "It is an idea," says that journal, "which presented itself to the mind of LI HUNG-CHANG, the RICHELIEU of China, at the moment when General GRANT paid his visit to Peking and when Japan was setting up a claim to the ownership of the Loo Choo Islands. The *Herald* promptly gave publicity to the views of LI HUNG-CHANG, and Japan lost little time in withdrawing her pretensions. So that the present appeal would not be without precedent, and would be likely, if made in a more formal manner, to be quite as effective with a powerful nation like Japan. We always stand on the side of peace. We are always ready—enjoying a peculiarly fortunate position on the map of the world—to lend assistance to those who are less happily situated. There may come a time when the United States will be accepted as the arbitrators of the universe."

If the "RICHELIEU of China" were to

read this, he might be disposed to suspect the big newspaper of ill-mannered irony. He has not found Japan's method of "losing little time in withdrawing her pretensions" so well adapted to his fancy that congratulations can be very satisfactory. The *New York Herald* may have some excuse for its ignorance of the facts that it was China, not Japan, which "set up a claim to the ownership of the Loo Choo Islands," and that it is Japan, not China, which possesses the islands to-day; but we are astonished that a leading American journal should be so wholly unacquainted with the recent history of its own country as not to know there never was any idea of invoking American intervention in the matter referred to, and that the Secretary of State for Foreign Affairs took some pains to record a written definition of the purely private capacity in which General GRANT consented to advise the Cabinets at Peking and Tokiyo. This by the way, however. The *Herald's* information may be more correct now. We trust it is, but we are disposed to think that something more than impartiality is required of the nation whose voice shall have weight in this matter, and that the very magnitude of Great Britain's interest in the issue fits, rather than disqualifies, her for the rôle of a peace-maker.

FRANCE AND CHINA.

FROM the chaotic mass of correspondence upon the Chinese question, published in European and American newspapers, it is difficult to obtain an accurate view of the relations between the contending parties. But by examining it in connection with details of unquestionable authenticity, which reach us from private sources, we are enabled to supply at least an outline of the situation. Considerable surprise has been excited by recent statements to the effect that the friendly offices of the United States Government have been, or are to be, invoked, by one or both of the disputants. These reports have been affirmed and denied with equal appearance of official formality. The fact is, that the services of the Washington authorities were besought, at a comparatively early stage of the proceedings by the rulers of China, who at that period professed a disinclination to entrust their cause to any other tribunal of arbitration. Whether they anticipated anything like an effective result from this operation, or merely hoped to gain time by momentarily distracting the attention of France, is an open question. It is certain that no such marvellous consequences as

those prefigured by the *New York Herald* were reckoned upon. The tone of LI HUNG-CHANG'S appeal to the United States Government showed conclusively that, in his estimation, a nation without a navy was incapable of practical interposition, and, at the best, could only be listened to with polite indifference. That his opinion would be verified in all cases where the United States were concerned, it would be injudicious to assert; but it proved correct in this instance. The American Government consented to mediate, under certain conditions, but the offer was politely rejected by France, on the grounds that nothing in the intercourse between that nation and China called for intercession from without, and that Annam was the only country with which a settlement was required. It is interesting to observe that this answer to the proposals from Washington was in exact accord with the spirit displayed in M. TRICOU'S negotiations with LI HUNG-CHANG; from which we may infer that it was the desire of the French Minister of Foreign Affairs to produce the general impression, for some little time, that China would really be looked upon as having no share in the controversy, unless some overt act on her part should compel France to regard her as an aggressor. Whether this attempt to conceal the true state of affairs was successful in Europe and America we cannot say, but it certainly deceived no one in China; and that M. TRICOU had little expectation of misleading those by whom he was surrounded, was shown by that gentleman's declaration—freely reported in diplomatic circles—that an indemnity would be exacted from the T'sung-li Yamen, no matter how pacific China's later course might be, as a punishment for the attitude she had taken at the beginning. This incident was hardly needed to prove the devious and contradictory character of the French proceedings, their inconsistency having been only too apparent at almost every turn. It may, perhaps, be considered a fortunate circumstance that no fixed plan of action has revealed itself; inasmuch as the offer of mediation, though once declined, may yet be accepted, if renewed by some European power. America will probably meddle no further in the business, but indications we not wanting that conciliatory proposals will be submitted from another quarter. Embarrassing as the position has grown, it cannot be pronounced hopeless so long as either party manifests an obvious unwillingness to push matters to a fatal extremity; and the prospect of a peaceful termination to the quarrel is undoubtedly fairer than when

the belligerent policy represented by M. TRICOU was in the ascendant.

It would be gratifying to believe that the dispersion of this particular war cloud—supposing that reason and moderation are suffered to prevail in Paris—might give promise of a genuine renunciation of enmities, and open the way for a frank and cordial resumption of confidence and good will on all sides. But we regret to find no basis for such a hope in the condition to which affairs have been brought. The French have kindled a fire in Eastern Asia, which, though its embers may be hidden for years, will not die out while the present generation of ruling statesmen survives, and may perhaps be handed down as a heritage, to be blown into flame when future Ministers feel themselves ready to take up arms against the disturbers of China's tranquillity. It is noticeable that, upon the announcement of the terms of France's treaty with Annam, a cry of indignation was heard from every Chinese Legation in the Western world. That it would be tolerated at Peking was denied with a promptness and unanimity which showed that, on this point, it was not thought necessary to await instructions from home. Its reception by the T'sung-li Yamen went far to justify this prediction. The angry temper which first declared itself at the time of LI HUNG-CHANG'S sojourn in Shanghai, burst forth afresh, and with a violence, on this occasion, which for a while defied the most earnest persuasions of prudent advisers. Nothing but the assurance, backed by convincing testimony, that a French force would be let loose upon Peking, and that, after the inevitable capture and pillage, indemnities would be extorted to an amount that might reduce China to a species of slavery, restrained the Government from declaring war at that crisis. The consciousness of inferior strength, and the conviction of certain defeat, prevented the outbreak of hostilities, but the feeling of hatred was only intensified by the necessity for repressing it. If reliance can be placed upon the judgment of keen observers, whose opportunities of penetrating beneath the surface of Chinese politics are exceptional, the rulers of that empire will never cease to yearn for revenge. The treaty, they now perceive, must be endured. Open defiance would be madness, and they will ostensibly submit, even to the length of discussing it and kindred topics, with a pretence of submissive composure. But they do not conceive themselves in any sense bound to respect it, and they are resolved to annul it, sooner or later, at

whatever cost. Years of preparation may be requisite, but the purpose of regaining their lost prestige, and securing redress for the degradations forced upon them, will never be relinquished. Their foes must pay the full penalty for the outrages they have heaped upon a long suffering and now implacable nation.

Such is the spirit, if not the language, of the governing officials of China at this moment. That we represent it correctly, the corroborative intelligence which we receive from various trustworthy sources, forbids us to doubt. To what extent their projects of retaliation may be carried, is an interesting problem of the future. They have threatened before, but never with such concord of vehemence. They have writhed under insult, but not in such open and avowed exasperation as now. There is no question of their sincerity, nor of their present resolve to make good their angry words. But Time is apt to take the affairs of empires, as of individuals, into his own hands. Even such resentment as that which animates the Court and Cabinet of Peking may fade into forgetfulness, or be diverted from its cherished object. The statesmen of China are mostly aged men, and their successors may decline to perpetuate the feud. Moreover, though the resources of the country are vast, and its power, skilfully concentrated, would be formidable, the reigning dynasty is not so firm as to justify extravagant faith in enterprises organized in its name. At the same times those who watch with attention the international developments of the Far East, and who measure the influences by which the external relations of China are controlled, will give due heed to the extraordinary and unprecedented excitement by which its rulers have permitted themselves to be swayed, and take note of how far their abnormal emotion will effect the serious events of coming history. To overlook this element in Chinese politics, for the next few years, would be to disregard a powerful, and perhaps an imperishable, factor.

NOTIFICATION NO. 12 OF THE AGRICULTURAL AND COMMERCIAL DEPARTMENT.

It is hereby notified that in case Koreans resident in Japan apply for shooting licenses and obtain them from the authorities, they must be dealt with in the same manner as the Japanese themselves.

(Signed)

SAIGO YORIMICHI,
Minister of Agriculture
and Commerce.

October 2nd, 15th year of Meiji (1883).

MUNICIPAL GOVERNMENT.

Yesterday afternoon was held a meeting of land-renters and house-holders of Yokohama on the subject of Municipal Reform which is now under consideration in Yokohama. The following gentlemen were present:—Messrs. A. O. Gay (Chairman), W. H. Talbot (Secretary), G. K. Dinsdale, Tom Thomas, E. Whittall, Ford, John Carroll, W. Loxton, J. Ph. Von Hemert, Grosser, Reynaud, Hegt, Wilkin, Gargan, Irwine, A. T. Watson, Neale, Dodds, Barlow, Jas. Fraser, E. G. Wilson, A. Clark, P. Osborn, W. B. Walter, Oppenheimer, T. Rose, N. P. Kingdon, Mitsuhashi, Evers, Lindsley, and others.

The meeting had been adjourned from Monday last, the 1st instant, until 3 p.m. yesterday the 8th. Owing, probably, to the stormy state of the weather, proceedings did not commence until fully half an hour after that time, when Mr. A. O. Gay took the chair and, having briefly stated the object of the meeting, already known sufficiently well to our readers, asked whether the minutes of the last meeting should be read.

It was unanimously understood that the minutes should be accepted as read; and then the Chairman announced the result of the ballot which had been open for the election of a Committee of "foreign land-renters and (or) house-holders, who should be appointed to act as intermediaries between foreigners and their own, and the local, authorities, the Committee to consist of seven members and remain in power for one year." In conformity with the decision of the last meeting, the ballot had been open from Monday morning until Saturday at noon last, when the box was opened by himself, in the presence of Messrs. Whittall and Walter, scrutineers. The result was:—Mr. A. O. Gay, 212 votes; Mr. W. B. Walter, 194; Mr. W. H. Talbot, 185; Mr. Reynaud, 164; Mr. von Hemert, 154; Mr. Evers, 153; Mr. Tom Thomas, 147. The next highest suffrages for other gentlemen were in the following order:—Messrs. Kingdon, Dodds, Lindsley, Fitz-Henry, Boyes, and O. Reimers. In addition to these, there had been scattering votes varying from one to eight, and five ballot-papers were unsigned, and so taken no account of; the total number of ballots taken was 219. The Chairman added that he hoped the community would not expect too much from the Committee that they had elected, and which had no legal status, but whose duty would be to confer with the Local Authorities and the Consular Corps. The Committee, he reiterated, he was sure, would do the best they could, and he repeated his hope that too much would not be expected by the community.—(Applause.) The Chairman concluded his address by asking if the meeting had any instructions to give to the Committee.

Mr. W. B. WALTER said that he had one suggestion to advance. The discharge of the duties of the Committee would involve expenditure which should be met by a subscription from land-renters and householders. For

instance, there would be expenses for advertising and printing, the reports of medical officers upon the sanitary condition of certain compounds, legal advice, and other things all necessitating certain charges. He would propose that a fund be raised, to be called the "Yokohama Municipal Fund," or some other name. Land-renters should pay at the rate of 1 cent per *tsubo* on the Bluff: $\frac{1}{2}$ cent per *tsubo* in the Settlement. No land-renter, however, having property in both sections, should pay more than \$10 for the whole of his lots. Mr. Walter added that such a provision should suffice for the wants of the present Committee, which might not last more than one year or two years. Subsequent provision would be for the consideration of the next Committee.

Mr. WALTER rose once more, to suggest that some arrangement be made between the Gas Committee and the new Municipal Committee for control of the gas-lighting of the Settlement.

Mr. WILKIN, on the part of the Gas Committee, thought that there would be no objection on the part of the latter to some such arrangement.—(Laughter.)

Mr. Walter's proposition being still before the meeting, and a suggestion having been made that a rider be added to it to the effect that "householders be invited to contribute to the Municipal Fund at the rate of \$1 per house," the whole was put in the form of one resolution, seconded by Mr. Thomas, and carried unanimously:—

That a fund be started to be called the Yokohama Municipal Fund, which shall be under the control of the Chairman of the Committee, that land-renters be invited to contribute thereto at the rate of one cent per *tsubo* for Settlement, and one-half cent per *tsubo* Bluff, lots held by them: provided always that no land-renter be asked to pay more than \$10 for all the lots registered in his name: that house-holders not being land-renters be asked to contribute to the fund \$1 per house.

Mr. WILKIN then offered a suggestion for the consideration of the meeting. He spoke of the bad condition of the roads, which he ascribed to the badness of the material employed. During the present weather they were almost impassable. In the time of Mr. Davis they had been constructed with hard metal and were generally in good condition. Since then, and apart from the drainage works, they had been constructed of soft material. Another point was that, during the dry weather, the cess-pools gave off a very offensive odour. If anything were wrong with the drainage the defects should be looked into. During the construction of the drains he had remarked that the pipes of communication with the main drains were L-shaped, a form liable to create obstruction. At any rate, a foetid odour was exhaled, which might produce most injurious effects upon the community.

Mr. W. B. WALTER remarked that there was yet another point for the consideration of the Committee, which was composed of French, English, Americans, Germans, &c. The Chinese had no part. He thought that it would be well for the Committee to invite, through the Guild or otherwise, the Chinese residents to appoint

one or two special members to coöperate with the present Committee.

After an interval of silence, the CHAIRMAN said that he thought that there could be no objection to the Committee communicating with the Chinese residents, as suggested. To do so was within the province of the Committee's functions, and in accord with what had been decided at a former meeting. Would any special resolution be proposed on the subject?

Mr. TALBOT thought it right to mention that, in accordance with a resolution passed at the meeting in March last year, he had communicated with the Guild, which, on behalf of the Chinese residents, had promised hearty coöperation in any scheme determined on by other foreigners.

Mr. GAY again asked whether any special resolution should be proposed on the subject, and, addressing Mr. Walter particularly, asked, "if he had one?"

Mr. WALTER answered: "No. He had only made a suggestion."

Mr. GAY, while explaining that he thought any communication with the Chinese quite within the scope of the Committee's functions, still asked if the meeting had any resolution to propose on the subject.

Mr. WILKIN wished to know whether the Committee desired any such instruction as would be implied.

The CHAIRMAN still remarked that the matter was at the discretion of the meeting; and, with a remark from Mr. WILKIN to the effect that he did not know how far the Chinamen's ideas on sanitary subjects would agree with the Committee's, and a reply from the CHAIRMAN to the same tenor as before, the matter dropped.

Mr. FORD suggested to the Committee the consideration of the better control of jinrikisha within the Settlement, and the licensing and inspection of public women, and insisted upon the inefficiency of the Police.

The CHAIRMAN said that these matters of detail would come within the consideration of the Committee.

The Reverend E. C. IRWINE wished to know what would be done in the matter of replying to the Governor of Kanagawa's communication.

The CHAIRMAN reminded the interrogator that, at last meeting, a resolution had been passed to the effect that the document then read was a "suggestion by two or three gentlemen present" for a reply; and added that it should devolve upon the present Committee to prepare and forward a reply.

Mr. FORD wanted to know about the maintenance of the bridges of the Settlement. As they were used by Japanese as well as by foreigners he would like to know whether foreigners were to be charged with the whole cost of keeping them in order.

The Reverend E. C. IRWINE returned to his question as to the manner of reply to the Governor of Kanagawa.

The CHAIRMAN repeated that the reply was within the scope of the functions of the Com-

mittee; but Mr. Irwine might propose a resolution on the subject to the meeting.

The Reverend E. C. IRWINE then proposed "that the Committee be asked to draw up a reply to the Governor of Kanagawa's memorandum, and submit it to the approval of a future meeting."

This was seconded by Mr. A. T. WATSON.

Mr. MOLLISON thought that this matter had been provided for by Mr. Brooke's resolution at the previous meeting.

The CHAIRMAN, referring to his minutes, said that the question was sufficiently met by Mr. Kirkwood's proposition "that the matter be left to the incoming Committee."

Mr. WILKIN then put an amendment to the effect "that the Committee be empowered to frame a reply and forward it to the Governor"—with a rider "that it be published with as brief a delay as possible."

This was seconded by Mr. WHITTALL, and, after a remark from Mr. FORD to the effect that the "delay" ought not to be of eighteen months duration, which provoked some laughter, was carried.

Mr. WILKIN remarked that, on reading the draft reply, he thought that one point had not met with sufficient consideration. It was not clear why, because the Governor pleads that the police have no power to enter foreigners compounds, they cannot deal with Japanese in the streets.

Mr. FORD asked whether the Governor could deal with the Gas Committee; and Mr. WILKIN mildly suggesting that, if he meant the "Gas Company" the Governor probably could; and Mr. FORD allowing that he meant the Gas Company, the meeting adjourned *sine die*, on the proposal of Mr. LINDSLEY, with four or five seconds.

TRANSLATIONS FROM NATIVE JOURNALS.

JAPANESE OFFICIAL STATISTICS.

(Translated from the *Choya Shinbun*.)

The *Tokai Shinshi* of the 25th of last month gives a statement of the number of officials in the service of the Government, their birth-place, and other particulars. The tables from which the information is derived were published in December, 1881, and therefore are not, at the present moment, to be received as perfectly trustworthy, on account of the intervening changes in the constitution and personnel of the Government. Official grades are three in number, to wit:—*Chokunin*, *Sonin*, and *Hannin*. The first number 124, the second 3,768, and the third 15,177. In addition to this, there are 7,052 officers of a "supplementary" class, 12,239 employes, and a certain class of functionaries who are entitled to the same treatment as other officials but are not accorded the relative rank. This class is called *jin*. In the *Chokunin* ranks, there are two of these officials; in the *Sonin* 141; *Hannin*, 985; and supplementary class (*Tugwai*) 127. The total number of officials in the service of the Central Government is 39,615. They are distributed in the various departments and paid as follows:—

buted in the various departments and paid as follows:—

| DEPARTMENT. | NUMBER. | SALARY, Yen. |
|----------------------------------------------|---------|--------------|
| War Department | 10,845 | 157,548 |
| Judicial Department | 5,408 | 97,029 |
| Public Works Department.. | 3,090 | 59,151 |
| Naval Department | 2,607 | 69,352 |
| Finance Department | 2,263 | 49,065 |
| Imperial Household Department | 924 | 22,925 |
| Home Department | — | 28,318 |
| Educational Department | 651 | 23,255 |
| Foreign Department | 338 | 38,099 |
| Agricultural and Commercial Department | 3,032 | 39,355 |
| Colonization Commission | 1,842 | 34,418 |
| Police Bureau | 4,845 | 51,321 |
| Council of State | 7,600 | — |
| Senate | 166 | 12,332 |
| Total | 39,615 | 8,621,183 |

The Senate has a larger contingent of *Chokunin* officers than any other establishment. Its fixed complement is thirty; of whom five hold office in other departments. Next in order comes the War Department which has twenty-eight *Chokunin*: the Council of State with twenty permanent *Chokunin*, and seventeen who duplicate their offices: the Naval Department has ten: the Foreign Department nine permanent, and three simultaneously discharging other functions. The Judicial and Imperial Household Departments respectively absorb nine and seven permanent *Chokunin*, and each one supplementary officer of the same rank. The last mentioned department employs, further, two officials enjoying the brevet of *Chokunin*. The Public Works Department has six *Chokunin*, two of whom are pluralists. The Finance, Educational, and Agricultural and Commercial Departments have each two regular *Chokunin*. The functionaries of *Sonin* rank in the services of the War, Naval, Judicial, Finance, Imperial Household, Educational, Foreign, Public Works, and Agricultural and Commercial Departments are 2,444, 536, 398, 57, 47, 45, 36, 35, and 23 respectively. The Colonization Commission and Senate have respectively 17 and 11 *Sonin*. In the provinces, there are 5 *Chokunin*, 83 *Sonin*, 5,084 *Hannin*, 847 *jin-Hannin*, 22,145 supplementary officers, 1,226 *jin* supplementary officers, and 9,240 employes, making a total of 38,713. The yearly salary of the provincial officers, is yen 4,314,456. The total number of officers in the service of the central and provincial Governments, is 78,328, and their annual salary amounts to yen 12,935,640. The revenue for the year in question was yen 71,441,715, of which the salary of officials absorb more than 6 per cent. The army returns show the number of our soldiers as 37,680. Thus we see that official civilians are twice as numerous as soldiers. Is this not matter of surprise? The *Tokai Shushi* (*Statistical Magazine*) does not give the exact number of district and ward officers who are paid by the local Treasury. They number 90,266, and their salary amounts to yen 4,085,616 per year. These numbers added to the amount of the State officials' salaries and their number make the totals yen 17,020,656 and 168,594. We learn from a trustworthy source that in 1882 the total number of officials was 41,806, and that their salaries amounted to yen 9,268,599. Thus, we note an increase both in the number of officials and their stipend. If the increase in the number of district officers to their original number were taken into account, the result would be surprising. The question naturally suggests itself:—Can this number of officers be reduced to curtail expenditure without impeding

the progress of public business? On this point we will defer judgment. In this context it may be interesting to compare the representative influence of the various provinces in the Government service:—

| PROVINCE. | CHOKUNIN. | SONIN. | PROVINCE. | CHOKUNIN. | SONIN. |
|-----------------|-----------|--------|-----------------|-----------|--------|
| Tokyo | 13 | 448 | Tochigi | 1 | 24 |
| Kagoshima | 26 | 376 | Miyagi | 1 | 48 |
| Yamaguchi | 18 | 488 | Aichi | 1 | 70 |
| Kochi | 10 | 216 | Yamanashi | 1 | 9 |
| Nagasaki | 10 | 210 | Gifu | 1 | 54 |
| Shizuoka | 7 | 261 | Nagano | 1 | 62 |
| Fukuoka | 3 | 118 | Shimane | 2 | 26 |
| Kyoto | 2 | 59 | Wakayama | 2 | 168 |
| Osaka | 2 | 50 | Tokushima | 1 | 45 |
| Hiogo | 2 | 68 | Yehime | 1 | 85 |
| Chiba | 2 | 74 | Oita | 1 | 43 |
| Tottori | 2 | 64 | Akita | — | 23 |
| Okayama | 2 | 78 | Kanagawa | — | 19 |
| Kumamoto | 2 | 123 | | | |

From the above table it will be seen that the total number of *Chokunin* is 129, the majority of whom belong to Tokyo. But as most of them come originally from Kyoto, Shizuoka, and other provinces they cannot be properly called Tokyo men. Yamaguchi, Kagoshima, Kochi, and Nagasaki contribute largely to the *Chokunin* ranks. But political influence is monopolized by the people of Kagoshima. Next in power come Yamaguchi (*Choshu*) men. The proportion of officials in every ten thousand of the population may be stated as follows:—Tokyo, 111; Yamaguchi, 38; Kagoshima, 31.4; other provinces 10 to 20.

DEPRECIATION IN THE VALUE OF COMMODITIES.

(Translated from the *Keisai Zasshi*.)

Nothing, at present, is more remarkable in the empire than the stagnancy in the condition of our trade. "Declining business" has become a household term. Silver once worth yen 1.80 is now quoted at yen 1.19, while the same quantity of rice as was formerly saleable at yen 11 or 12, will not now realize much more than yen 5. The rate of interest was some time since twenty per cent. it is now nine per cent. In fact all commodities have depreciated to the extent of thirty or forty per cent., and are still declining. Investigation has convinced us that there are three principal causes of this result, to wit:—(1) the reduction in the circulation of paper money; (2) the change in the time of the collection of local taxes; and (3) economy in personal expenditure with a view to still greater reduction in prices. But are these the only factors? We cannot definitely say that they are. As a rule appreciation in the value of merchandize is beneficial to its owners; but bad for the holders of its paper-money equivalent, and *vice versa*. Hence the labouring classes, receiving fixed wages should gain by any fall in the price of commodities. To illustrate this we may refer to the vernacular journals whereby we shall observe a remarkable decrease in the calendar of thefts, incendiaries, suicides, and abscondings. We might thus infer that workmen have profited considerably by the depreciation which we allude to in the cost of necessities. At least meditation on the subject would lead to that conclusion; but the actual facts are widely different. A fall in the price of commodities tends to diminish the demand for the labor which produces them. Question, for instance, the nearest jinrikisha driver. He will, doubtless, tell you much as follows. "You suggest that I benefit by the cheapness of my necessities; but I do not find it so. My customers among Government officers and students are few and far

between; and fluctuations in the value of goods will not increase or diminish the patronage that I have from them. With my supporters among traders and merchants, the case is different, and they are my best friends. Bad weather, for example, as far as they are concerned, should be my best time. But now all times are alike in this respect. My whilom patrons, thanks to the stagnation of their business, walk in fine weather when they think they should go somewhere, and when it is wet they stay at home." Carpenters find no request for their work, and in despair turn to jinrikisha-drawing. In the Urban division of Fukagawa, Tokiyo, alone, sixty such cases have occurred. What must it be in other parts of the capital? Again, rice-dealers anticipated that the fall in the value of rice would not fail to increase the consumption of that staple, as the poorer classes would, they thought, be enabled to purchase it. But the reverse has been the case. This may be due in some measure to the decrease in the population of the capital; but any such decrease is also traceable to the decline of trade. There was a diminution of thirty thousand in March last in the populations of the urban divisions of Kiyobashi and Nihonbashi, while country folk have virtually ceased to visit the capital on pleasure trips. Hence innkeepers purchase less rice than of yore. Without statistical vouchers, we yet propound these statements as facts.

Moreover, we are led to the conclusion that, in spite of the depreciation in the price of commodities, traders are impelled to suspend the purchase of stocks in consideration of the possibility of still further depression, while from similar motives their customers hesitate to buy anything. Stagnation has become the normal condition of all business throughout the empire. In corroboration of this proposition we will compare the relative quantities of rice imported into the capital between 1878 and 1883, according to the records of the Fukagawa granaries:—

| 1878. | | RICE STORED BAGS. | | RICE DISCHARGED BAGS. | |

From the above table it will be perceived that the import of rice into the capital has not at all increased this year, but otherwise. The highest import was from the various provinces in Kwanto. It is generally conveyed by land on horseback and sold direct to the rice-dealers by whom it is hulled. Sometimes it is carried by sea, in small vessels, and delivered to wholesale merchants residing along the river Kanda. In these circumstances it has been impossible for us to ascertain the exact quantity forwarded to Tokiyo, but it is generally believed that the rice thus transported forms two-thirds of the amount consumed there. It is clear, then, that only one-third of the entire quantity can be preserved in the Fukagawa granaries. Although the decrease or increase of the rice in these granaries cannot show with perfect accuracy the rice consumption of Tokiyo, yet a little inquiry may aid us in arriving at a knowledge of the general condition of affairs there. From authentic sources we learn that there are 3,600 dealers in the capital, whose occupation is to hull and clean the rice; while of wholesale merchants, who purchase the staple from provincial owners, there are also a considerable number. These dealers and merchants do not hesitate to make considerable purchases when prices show an upward tendency; but in case it falls, to say [its] present quotation, they do not buy more than what is absolutely indispensable for the supply of urgent demands. This is the reason why the sale of rice from the Fukagawa granaries is insignificant, in spite of its extraordinary cheapness. It is worthy of notice that in 1880, the farmers having in most cases declined to dispose of their grain, the rice then in the Fukagawa granaries in question was sold to the very last bag. This year the reverse is the case, for dealers in the capital have refrained from making large purchases, and the farmers are consequently puzzled to place their stocks. How can such anomalies occur? They may be ascribed in a great measure to the rich rice crops of the past few years. Reports have been received from various parts of the Empire announcing promise of an abundant harvest this year, and therefore the value of the staple is not likely to rise unless the country be devastated by some unexpected catastrophe, such as rain, tempest, or war. We have heard that the import into the capital last year was mostly old rice which has been in stock for at least three or four years. In normal transactions, old rice is cheaper than new; but at the present time it is purchased on the Rice Exchanges at a higher rate, even though it may be unfit for consumption. All these facts seem to show that during preceding seasons the farmers have stored large quantities of the grain.

The fact of paper-money having some time since reached a greatly enhanced value tended to develop improvident habits among the peasantry, who began to consume rice for their ordinary diet instead of corn & millet as before. Augmentation in consumption led naturally to increased production. Remembering that the rice produced even three or four years ago is still in store, we may presume that the quantity on hand throughout the empire will soon be very great. Thus, increase in the growth of this staple has an important bearing on the economic aspects of the nation, as according to the principles of political economy such increment cannot fail to enhance the value of the currency. Finally, we think that our arguments prove that the depreciation in the prices of commodities is traceable to the four causes above enumerated.

ORIENTAL LITERARY NOTES.

Esoteric Buddhism. By A. F. SINNETT, President of the Theosophical Society of Simla, India. Houghton, Mifflin & Co., Boston.

The author modestly claims in his preface, that, "The teachings embodied in the present volume let in a flood of light on questions connected with Buddhist doctrines which have deeply perplexed previous writers on that religion, and offer to the world for the first time a practical clue to the meaning of almost all ancient religious symbolism."

Haeckel's visit to Ceylon. By Prof. E. HAECKEL. S. E. Cassino & Co., Boston, Mass.

An interesting account of the author's visit to India and the Island of Ceylon during the winter of 1881. One of the most charming books of travel ever published. In readability quite worthy of being placed by the side of Darwin's "Voyage of the Beagle." With the power of minute observation peculiar to a great naturalist, Prof. Haeckel writes with a clearness and brilliancy of style very rare among German professors.

"The reader who finishes the book,—and few who begin it will stop short of the last page,—not only has a very clear notion of Ceylon, but also knows the German naturalist as well as if he had accompanied him."—*The Critic.*

Ten Great Religions. Part II. A Comparison of All Religions. By JAMES FREEMAN CLARKE. Houghton, Mifflin & Co., 1883.

Ten Great Religions Part I. has been before the public for some ten years. That was descriptive, but amid a great deal that was well put and clearly stated the author indulged in speculations which practical experience would very greatly modify. The present volume opens up the way for wider and even wilder speculations. The author says:—"We consider what is the idea of God in all religions, and ask how it began and in what way it was developed. In the same way we seek to trace other phases of the religious life, from their simplest beginning to their fullest outcome." And to some extent he appears to succeed. Does Chapter VI. indicate that in the evolution and transmigration of souls the author believes in a cross between Darwinism and Brahmanism? He maintains that the Buddhist Nirvāna is not annihilation but "interminable being," and he argues that Buddhists believe in a personal "human soul." To say the least of it, the *personality* of the Karma in which the Buddhists believe, is not above the region of doubt.

Proceedings of the Asiatic Society of Bengal. May and June, 1883.

Contains Papers on (1) Notes on the Nāgins, a Religious Sect. (2) Memorandum on the Superstitions connected with birth and precautions taken and rites performed on the occasion of the birth of a child among the Jats of Hushyārpur, in the Punjab. (3) A Visit to Kafiristan.

Archæological Survey of India. Published by authority of Her Majesty's Secretary of State for India in Council.

Archæological Survey of Western India, Vol. IV. and V. Vol. IV. is a Report on the Buddhist Cave Temples and their Inscriptions. Vol. V. Report on the Eleuva Cave Temples and the Brahminical and Jaina Caves in Western India. By Jas. Burgess, M.R.A.S., &c., &c. All these volumes are replete with plates and wood-cuts, the preceding ones dealing with Temples, Inscriptions, Dolmens, Caves, Snake-worship, &c., of Western India.

Udanavarga. A collection of verses from the Buddhist Canon, being the Northern Buddhist Version of Dhammapada, translated with notes by W. WOODHILL ROCKHILL. Trübner: London.

On the History of the Archaic Chinese writings and texts. By TENIEN de LACOUTERIE, M.R.A.S., Trübner: London.

The following New Volumes of Trübner's Oriental Series are probably now ready:—

The Laws of the Manu, a new Translation, with Introduction, Notes, &c. by A. C. BURNELL, Ph.D., &c.

The Six Jewels of the Law, with Pāli Texts and English Translations. By R. MORRIS, LL.D.

Buddhist Records of the Western World. Being the Si-yu-ki by Hwen Thsang. Translated by SAM'L BEAL.

The Aphorisms of the Sankhya Philosophy of Kapila. With illustrative extracts from Commentaries. By the late J. R. BALLANTYNE.

Records of the Geological Survey of India. Vol. XVI. Pt. 2. 1883, contains (1) Synopsis of the Fossil Vestebrate of India. (2) Note on the Bijori Labyrinthodont. (3) Note on a skull of *Hypotherium Antilopinum*. (4) On the Iron Ores, &c., of Jabalpur District, &c.

The China Review for May and June contains papers on Szech'uan Plants, The Canton Prisons, The Rapids of the Upper Yangtze, &c., Chinese Family Life, Chinese during the Tsin Dynasty, A.D. 264-319 (cont.), The Origin of the Arabic Numerals, Scraps from Chinese Mythology (cont.). These, with Notices of Books, Literary Intelligence, and a considerable list of Notes and Queries, make a very valuable number.

The Chinese Recorder and Missionary Journal. Shanghai, for May-June, contains Glimpses of Hainan, The Proverbs and common sayings of the Chinese, Jesus the Model Preacher to the Heathen, Szechuen Native Opium—A Review, Notes on the History of Suchou, &c.

Proceedings at Boston, May, 1883, of the American Oriental Society, contain a variety of critical matter, amongst other a grammatical investigation into the Japanese *nigori* of composition, by M.B.S. Lyman, of Northampton, Mass. Whether his position is a stable one or not, and whether he has added new light to Japanese Grammar, is a question. He maintains that "The change of *nigori* is not merely euphonic and to be made or not made at will, but has to do with the meaning also, and is obligatory." Again "when the first part of a compound indicates source, cause, possession, etc., the *nigori* is not used in the second, but "when these qualities are rather possessed by the second part of the compound, of which the first part indicates a subordinate or partial or occasional characteristic, the *nigori* is taken." He then tells us that the *nigori* is the result of an elided word, etc. Suffice it to say that the whole thing is moonshine, as well as the supposed derivation which he gives of *hidari* and *migi*, although probably drawn from Japanese sources.

Oesterreichische Monatsschrift für den Orient—for June contains articles on Commerce in the Persian Gulf, Eastern Asia's commercial position in late years, Condition of the Persian administration, China Grass, Politico-commercial Reflections, etc.

The number for July contains Oriental Manufactures, Agriculture and Colonization in the Philippines, the revolt in Sudan 1883, Letters of Enim Bey and Dr. Junker, Persian opium, Politico-Commercial Reflections, Railroads in China, Chinese Glass-industry, etc.

In the Land of the Lion and the Sun; or, Modern Persia: Experiences in Persia, 1866-1881. By C. G. WILLS. Macmillan: New York.

A Winter in India. By W. E. BAXTER M.P. Funk and Wagnall's: New York.

IN PERIODICALS.

"Scientific Progress in China and Japan," *Nature*: May 10.

"Libraries of Babylonia and Assyria," *Knowledge*: March 2.

"The Little World; a Story of Japan," *Blackwood's*: June. Same article in *Living Age*: July 7 and 14.

The Sacred Books of the East. Vols. XVII., XIX., and XXIII. Oxford and Cambridge Universities.

This series of translations under the editorship of Professor Max Müller was planned to contain 24 vols., and to be completed this year. Nineteen volumes are issued, four are "in the press," the remaining one will doubtless not be far behind. Of these twenty-three volumes, two are devoted to Mohammedanism, two to Confucianism, four to Zoroastrianism, the rest to Indian Brahminism and Buddhism. Why the Hindu Vedas should be omitted, is a fair question to be asked. One of the present three vols. contains the second part of Darmestete's translation of the Avesta. Another gives a Life of Buddha from a Chinese version, dating from the 5th Century, of a Sanskrit original. The third is a continuation of translations out of the Pāli of the Southern Buddhists, giving the regulations for the conduct of begging friars, with an occasional story to spice the weary round.

Sketches of Travel. By J. A. KENDIG, Chicago: Legal News Company.

MR. KENDIG has perpetrated a trot round the globe, borrowed much from better authors. He is generally silly where original. He is astonished in Japan at "the skew-eyed amazement" of the natives at "our all work and no play!"

India: What it can teach us. By MAX MÜLLER. Funk and Wagnall's New York.

The 'Anecdota Oxoniensis' is a collection, made public under the auspices of the University of Oxford, of 'texts, documents, and extracts, chiefly from manuscripts in the Bodleian and other Oxford libraries.' It is to appear in four series: Classical, Semitic, Aryan, and Mediaeval and Modern. The Aryan series was first set in progress, a year or two ago, by the issue of a petty Buddhist tract, edited by Max Müller from block-books collected from China and Japan; it was the first time that a Sanskrit text had been worked up on such a basis. A second part, just out of the press, gives another little Buddhist Sūtra, called the *Sukhāvatī-Vyāha*, a description of Sukhāvatī, the Land of Bliss. It is given in both a longer and a shorter form or version—the latter being reproduced from the Journal of the Royal Asiatic Society, where Müller first published it, in 1880. A detailed preface gives some account of the work and of the condition of its text (which is rather a sorry one), and presents a conspectus of the harmonies and discrepancies of five different Chinese versions of it, made between the 11d and Xth Centuries of our era. The preface closes with a history of the Shin-Siu or Pure Land sect of Chinese and Japanese Buddhists, who hold this treatise in especial reverence.

In a meeting called to consider the subject of "Morals in Schools" in Boston, a "Mr. Hale spoke of the Japanese, who do not teach arithmetic as much as we do, because it tends to make men sordid. They give more time to history and morals!" An alleged Moabite manuscript of Deuteronomy on leather leaves, copied 700 years B.C., has turned up, and is said to have satisfied eminent Hebraist experts. The owner, Shapira, a dealer of Jerusalem, notorious some years ago in connection with forged potteries, asks the British Museum \$5,000,000 for the manuscript, which has since been pronounced a forgery.—*Nation*.

Boletín de la Sociedad Geográfica de Madrid, for May gives the following Japanese statistics. (Miya) Shinto temples, 186,717; (Tera) Buddhist temples for Posthumous honors to the dead, 72,158; Shinto Priests, 14,213; Buddhist Priests, 57,793; Physicians, 34,419; Pharmacists, 6,841; Hospitals, 464.

ACCIDENT ON BOARD H.T.J.M.S. "RIUJO KAN."

A serious accident, which might have terminated in a terrible disaster, is reported to have occurred on board the *Riujo Kan* during her training voyage to South America. She crossed the equator on the 15th of January, and, following probably English naval custom, held high festival in honor of Neptune. According to a report which appears in the *Fiyu Shimbun*, masquerading and larking was carried on from 5.30 to 10.30 p.m. Most of the crew were then more or less tipsy, and went to sleep. At about ten minutes before midnight the terrible cry of "Fire!" was raised, and was followed by a tremendous explosion. Almost instantly the ship was enveloped in flames. Those who were below had no time to dress, and hurried on deck in their sleeping clothes. Dense smoke issued from the magazine. All attempts to descend into the hold were frustrated by the thick fumes which extinguished all lights the instant it was entered. At last the magazine was opened, and the signal lights were found to have become ignited to the great danger of the powder. Streams of water were directed upon the smoldering fire; but for some time it was believed by all on board that the ship was about to be blown into the air. It is added, in this account, that Captain Ito wished to give orders to abandon all attempts to extinguish the blaze, and for all hands to stand by to die with the ship; but was prevented from so doing by Lieutenant Dewa, who so contrived that the strenuous efforts employed by officers and men were successful and the fire was at length subdued. By half-an-hour past midnight all danger was passed. The disaster is said to have been caused by the ignition of some signals by friction. The effects of the men, provisions, and stores, were much damaged by sea water. All hands behaved well during the time of danger, and Captain Ito afterwards mustered the crew and congratulated them on their escape from a violent death and upon their presence of mind during a trying time. The rites of crossing the line were afterwards duly performed.

NOTES FROM JAPANESE PAPERS.

Messrs. J. Adzuma and S. Machida have been appointed Acting Consuls in Hongkong and Cheloo respectively.

A telegram received in the capital announces that the expedition to the island of Utsuriyo in Korea, where several hundred Japanese are said to have settled in contravention of official prohibition, sailed from Shimonoseki on the 6th instant.

Rumours have lately been current to the effect that, according to the suggestion of a certain dignitary, dockyards would be established in Kiushiu with a fund of five hundred thousand yen. We are now informed that the authorities have determined to construct docks in Nagasaki or in the prefecture of Fukuoka.

The chief exports from our country to Korea, realizing more than ten thousand yen, are copper, matches, tin, pewter, zinc, shirtings, satins, saké, lawns, camlets, figured satins, and kaiki; while imports mainly consist of ox-hides, gold dust, bullion, rice, beans, bêche-de-mer, bones, sea-weed, grass cloth, cotton, and silk fabrics.—*Fiji Shimpō*.

The number of visitors to the Ikawo hot springs from the 1st of June to the 30th of September last, was 7,379, including 35 foreigners.—*Fiyu Shimbun*.

The discovery of copper mines in Hayashidamura, Sakushiu, Shimane ken, is reported.—*Hochi Shimbun*.

The Nippon Bank has been ordered to exchange defaced or damaged paper money for new without receiving any fees.

An American vessel is reported to have been wrecked off the coast of Iruma, in Idzu, Shidzuoka Ken, on the 8th instant. Two officers were dispatched from the prefecture of Kanagawa to the assistance of the lost ship.—*Official Gazette*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, October 8th.

AFFAIRS IN MADAGASCAR.

News from Madagascar describes the French position as being very weak, and that the Hovas are displaying a great amount of activity.

Later information says that the French position has now become precarious.

London, October 9th.

FRANCE AND CHINA.

Franco-Chinese matters have been suspended, and negotiations are believed to have failed.

The following telegrams appear in the Shanghai papers received by the last mail:—

Hongkong, September 28th.

On the 18th instant the French troops marched from Hanoi to Phuhoi, where they found the intrenchments in complete order but deserted by the enemy. They scoured the country without finding any Black Flags, who have retired across the Dai to Sontai. The heads of Commandant Riviere and thirty Frenchmen who were killed in the ambushade of the 19th May were found here, but no trace discovered of their bodies. The French troops returned to Hanoi next day.

London, 29th September.

A crowded reception was accorded to Missionary Shaw on his arrival in London, when he narrated his illusage. The London Press calls for reparation.

Hongkong, 29th September.

The Viceroy of Canton is much displeased at the result of Logan's trial. He has drafted an application to Chief Justice Sir R. T. Rennie for a new trial, and has intimated that he can hardly be expected to be responsible for consequences in case of an outbreak, owing to that result.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Europe, via Hongkong, per M. M. Co. Saturday, Oct. 13th.*
From America, per O. & O. Co. Wednesday, Oct. 17th.†
From Shanghai, Nagasaki, & Kobe, per M. B. Co. Thursday, Oct. 18th.‡

* Godavery (with French mail) left Hongkong on October 7th.
† Oceanic left San Francisco on September 27th. ‡ Left Shanghai on October 10th.

THE NEXT MAIL LEAVES

For Kobe, per M. B. Co. Monday, Oct. 15th.
For Shanghai, Kobe, and Nagasaki, per M. B. Co. Wednesday, Oct. 17th.
For Europe, via Hongkong, per P. & O. Co. Thursday, Oct. 18th.
For America, per P. M. Co. Tuesday, Oct. 23rd.

The arrival and departure of mails by the Occidental and Oriental, the Pacific Mail, and the Peninsular and Oriental Companies, are approximate only.

TIME-GUN.

A time-gun is fired every Saturday from one of the Messageries Maritimes steamers at Noon.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, OCTOBER 5TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 49.7 miles per hour on Monday at 4 p.m.
The highest reading of the barometer for the week was 30.308 inches on Wednesday at 9.27 p.m., and Thursday at 6 a.m. And the lowest was 29.529 inches on Monday at 6 p.m.
The highest temperature for the week was 76.9 on Monday, and the lowest was 57.2 on Wednesday. The maximum and minimum for the corresponding week of last year were 72.0 and 47.0 respectively.
The total amount of rain for the week was 4.494 inches, against 3.448 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15,* 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45,* 6.00, 7.15, 8.30, 9.45, and 11.00† p.m.

Those marked with (*) run through without stopping at Tsuromi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 6 a.m. and 1.30 p.m., and KUMAGAI at 9 a.m. and 4.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2; First-class, yen 1.20; Third-class, sen 60. The distance from Uyeno to Kumagai is 38 miles.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 p.m., and 2.00 and 4.00 p.m.

LATEST SHIPPING.

FREIGHTS.

For New York, via ports, and Suez Canal, the steamship *Strathmore* sailed on the 9th instant, leaving that berth held only by the *Selembrina* which vessel arrived here yesterday morning to load. For Havre, and Hamburg, the German steamer *Iphigenia* sailed yesterday, and the steamship *Cardiganshire* for London, and Hamburg, on the 9th instant. For Havre, and London, the sailing vessel *Sagitta* is rapidly filling, and should sail on the 20th instant for Kobe to complete her loading. Coastwise little is doing, for Amoy the bark *Bride* was settled yesterday at, for the time, a fair figure.

ARRIVALS.

Bride, British bark, 300, Sutherland, 6th October, —Nagasaki 18th September, Coals.—H. MacArthur.

Seisho Maru, Japanese steamer, 210, Isoda 6th October,—Kobe, General.—Seiriusha Co.

Wakanoura Maru, Japanese steamer, 1,133, A. F. Christensen, 7th October,—Kobe 5th October, —Mails and General.—Mitsu Bishi M. S.S. Co.

Khiwa, British steamer, 1,419, P. Harris, 9th October,—Hongkong 29th September via Nagasaki and Kobe, Mails and General.—P. & O. S. N. Co.

Chitose Maru, Japanese steamer, 293, T. Kasuga, 10th October,—Yokkaichi 9th October, General.—Mitsu Bishi M. S.S. Co.

Niigata Maru, Japanese steamer, 1,096, John C. Hubbard, 10th October,—Hakodate 7th and Oginohama 9th October, General.—Mitsu Bishi M. S.S. Co.

Pensacola, American frigate, 3,000, Captain Henry Esben, 10th October,—Honolulu 2nd September.

Seirio Maru, Japanese steamer, 329, G. R. Nirel, 10th October,—Yokkaichi 9th October, Rice and Oil.—Mitsu Bishi M. S.S. Co.

Genkai Maru, Japanese steamer, 1,914, G. W. Conner, 11th October,—Shanghai and ports, Mails and General.—Mitsu Bishi M. S.S. Co.

Kworio Maru, Japanese steamer, 482, F. Crighton, 11th October,—Kobe 9th October, General.—Mitsu Bishi M. S.S. Co.

Duke of Edinburgh, Russian ironclad, 18 guns, 900 H.P., 4,600, Captain de Giers, 11th October.—Kobe 9th October.
Najednik, Russian corvette, 1,330, Captain Kologeras, 11th October.—Kobe 9th October.
Shobeleff, Russian corvette, 1,200, Captain Blagodareff, 11th October.—Kobe 9th October.
Hiogo Maru, Japanese steamer, 896, R. N. Walker, 11th October.—Kobe 9th October, General.—Mitsu Bishi M. S.S. Co.
Tourville, French frigate, 27 guns, 5,300, Captain Bose, 12th October.—Hongkong.
Selebria, British steamer, 1,992, S. Fowler, 12th October.—Kobe, General.—Smith, Baker & Co.
Gembu Maru, Japanese steamer, 670, F. J. Brown, 12th October.—Yokkaichi, General.—Kiyodo Unyu Kwaisha.
Taganoura Maru, Japanese steamer, 448, Matsumoto, 13th October.—Yokkaichi 11th October, General.—Mitsu Bishi M. S.S. Co.

REPORTS.

The Japanese steamer *Wakanoura Maru*, Captain A. F. Christensen, reports leaving Kobe on the 5th October, at 4.30 p.m. with light northerly winds and heavy southerly swell to Omaisaki; thence to port strong north-easterly winds and cloudy weather. Arrived at Yokohama on the 7th October, at 7 a.m.

The British steamer *Khiva*, Captain Harris, reports leaving Hongkong on the 29th September, at 1.36 p.m. with strong monsoon to Nagasaki; thence to Kobe through Inland Sea moderate head wind and fine weather, was detained four hours on passage to repair machinery; left Kobe at 3.15 a.m. on the 7th October, with moderate N.E. wind and cloudy weather to Kuki Saki; toward midnight of the 7th wind increased rapidly from N.E. to fresh gale with high head sea, barometer falling steadily; during the morning of the 8th wind and sea increasing and at noon blowing a hard gale with terrific sea, and frequent squalls of hurricane fury, ship taking much water on board fore and aft. Omai Saki was sighted shortly before noon which showed we had had an adverse current of 40 miles; at noon hove ship to until 7 p.m. when wind and

sea had sufficiently moderated to enable the course to Yokohama being resumed. Wind veering during the gale E.N.E. round southerly to S.W. Barometer readings min. 29.49 and max. 30.00.

The Japanese steamer *Niigata Maru*, Captain John C. Hubbard, reports leaving Hakodate on the 7th October, at 6 a.m. with moderate northerly winds and cloudy weather to Oginohama; thence to Inuboye Saki heavy north-westerly gale and heavy sea; thence to port light northerly winds and fine weather. Passed U.S.S. *Pensacola* off Kanon Saki.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Kobe on the 9th October, at 4 p.m. with light N.E. breeze and fine weather to O-sima; thence to port moderate easterly winds, and on the 10th, at 8 p.m. till arrival, moderate north-easterly breeze and rain. Arrived at Yokohama on the 11th October, at 11 a.m.

The Japanese steamer *Gembu Maru*, Captain F. J. Brown, reports leaving Yokkaichi on the 10th October, at 8.30 p.m. with moderate fine weather down Owari Bay to Kame-sima; thence to Rock Island fresh N.E. breeze accompanied by heavy rains; at Rock Island experiencing high sea with increasing wind and blinding rain: put into Shimoda for shelter at 2 p.m. on the 11th; left Shimoda on the 12th, at 8 a.m. with fresh N.E. breeze and cloudy weather to port. Arrived at Yokohama on the 12th October, at 4.30 p.m.

The Japanese steamer *Taganoura Maru*, Captain Matsumoto, reports:—On the way to Yokkaichi, when 5 miles off Rock Island, picked up a dismasted junk, and towed her into Shimoda.

SHIPPING IN YOKOHAMA.

 Roman Catholic Church: 8 and 9.30 a.m.
 English Church, No. 12, Sakaicho, Shiba, Tokiyō: 11 a.m.

LATEST COMMERCIAL.

IMPORTS.

We have had another extremely quiet week for all kinds of staples, the business done in English Yarns and Shirtings being almost nil. Other Goods have received but little attention. Metals have also been very quiet; in fact there seems nothing but stagnation in all classes of Imports.

COTTON YARNS.

| | PER PICUL. |
|----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium- | \$25.00 to 28.50 |

| Nailrod, small size - | 2.85 to 3.15 |

KEROSENE.

No business in Oil has been reported during the past week, dealers being unwilling to agree to the advance in prices now asked by holders. Deliveries have been 12,000 cases, leaving a Stock of about 711,000 cases. Quotations are nominally

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.70 |
| Comet - | 1.65 |
| Stella - | 1.60 |

SUGAR.

Business is at a standstill, and quotations are nominal.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$7.50 to 8.00 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.50 to 4.60 |

EXPORTS.

SILK.

The Market has been rather fitful during the week: alternate days giving small and large business in the staple. The total Settlements reach 750 piculs, and we cannot note much change in prices, although these may be quoted generally easy in favor of buyers; doubtless they would have experienced a decided fall, if a hardening *Satsu* Market had not made strong holders more determined not to sell at the moment. Arrivals are ample: Stock is over 5,000 piculs, with a good reserve up country to draw from. Export to date 10,240 bales, against 8,760 bales at same date last year.

Hanks have been freely sold at prices which, taking quality into account, are not much below last week's figures.

Filatures.—There has been some business doing in fine-sized Silks on basis of \$605 for 1½ to 2. Coarse kinds suitable for the American Market

have not been much enquired for and prices nominally are something easier: when buying commences for the *City of Peking*, prices will settle down. Some Hida and Mino sorts have found buyers at \$530 to \$570.

Re-reels are a dead letter on the week; the coming week may probably see some transactions.

Kakedas.—More doing in the Medium grades. Best are scarce, with small enquiry.

Oshiu.—Some more Sendai changed hands at \$500; Best kinds still absent from the Market.

Some coarse Nambu found a buyer at \$380 to \$400.

Hamatsuki.—Currently saleable at from \$490 (Best), to \$445 (Common).

Coarse Kinds.—Some few *Sodai* done at \$440, *Nagahama* \$400, and *Nambu* \$380 to \$410. There is a fair demand for anything decent in these descriptions.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1½ - | \$510 to 520 |
| Hanks—No. 2 (Shinshu) - | 505 to 510 |
| Hanks—No. 2 (Maibash) - | 490 to 500 |
| Hanks—No. 2½ (Shinshu) - | 490 to 495 |
| Hanks—No. 2½ (Maibash) - | 475 to 485 |
| Hanks—No. 3 - | 450 to 460 |
| Hanks—No. 3½ - | 430 to 440 |
| Filatures—Extra - | 630 to 640 |
| Filatures—No. 1, 10/13 deniers - | 620 to 630 |
| Filatures—No. 1, 14/16 deniers - | 620 to 630 |
| Filatures—No. 1½, 14/17 deniers - | 590 to 600 |
| Filatures—No. 2, 10/15 deniers - | 590 to 600 |
| Filatures—No. 2, 14/18 deniers - | 550 to 560 |
| Filatures—No. 3, 14/20 deniers - | 565 to 575 |
| Re-reels—No. 1, 14/16 deniers - | 600 to 610 |
| Re-reels—No. 1½, 14/17 deniers - | 580 to 590 |
| Re-reels—No. 2, 14/18 deniers - | 570 to 580 |
| Re-reels—No. 3, 14/20 deniers - | 550 to 560 |
| Kakedas—Extra - | 620 |
| Kakedas—No. 1 - | 580 to 590 |
| Kakedas—No. 2 - | 540 to 550 |
| Kakedas—No. 3 - | 520 to 530 |
| Oshiu Sendai—No. 2½ - | 490 to 500 |
| Hamatsuki—No. 1, 2 - | 450 to 460 |
| Hamatsuki—No. 3, 4 - | 440 to 450 |
| Sodai—No. 2½ - | 440 to 450 |

TEA.

Business has been greatly restricted during the period since our last Market Report, and Settlements only reaching to 790 piculs, comprised of the following grades:—Common 35, Good Common 135, Medium 105, Good Medium 170, Fine 220, and Finest 130 piculs. Arrivals have been on a fair scale, and Stocks increasing; in consequence prices are rather easier, and native holders are more willing to meet offers. The cargo of the Pacific Mail steamship *City of Tokio* despatched on the 6th instant, consisting 390,427 lbs. Tea from this port as follows:—For New York 26,097 lbs., for Chicago 88,411 lbs., for California 178,811 lbs., and for Canada 97,108 lbs. The British steamer *Strathmore*, which sailed from this port for New York, via ports, on the 9th instant, also took 69,966 lbs. Tea for New York.

QUOTATIONS.

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c. is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

YOKOHAMA: SATURDAY, OCTOBER 20TH, 1883.

WEEKLY NOTES.

THE circumstances attending the loss of the Mitsu Bishi Steamship Company's ship *Sumida Maru* on the 15th of June last have been investigated by a Marine Court of Enquiry held in Tokyo. The Court decided that "ordinary caution and attention to the rules of navigation would have saved the ship from the disaster which overtook her," and placed on record an opinion that "the Captain navigated his ship from the time of passing North Shiroshima in a most unseamanlike and irregular manner." The evidence of the Captain himself and of the Third Officer brought out the singular fact that although they were both on the bridge before and at the time of the accident, they either could not recollect or did not know the courses steered. Everything seems to have been done by guess work. All the distances were guessed and no cross-bearings were taken: the speed was guessed and no log was hoisted: the condition of the compass was guessed and it was never corrected by magnets: no allowance was made for the tide: the helm was starboarded at least four times to clear fishing junks, and yet the ship was never brought to the Southward of her course to make up for the starboarding, and finally from the time of leaving Nagasaki until the *Sumida* struck on the Black Rock, her speed was never slackened for a moment. With such a record before them, the wonder is that the Court were satisfied with a sentence of

twelve months' suspension of the Captain's certificate. Probably the motive of their leniency must be sought in a comparison of previous findings. It is very much to be regretted, for the sake of the high reputation hitherto enjoyed by the foreign staff of the Mitsu Bishi Company, that such exceptional incompetence or carelessness should have been proved against one of their Captains, more especially having regard to the confidence that officer's previous record had inspired. Public opinion will inevitably incline to a belief that the series of disasters which the Company has suffered during the past two years are referable to other causes than the ordinary perils of the sea. We sincerely hope that the pending investigations into the loss of the *Akitsu Maru* and *Kwariyo Maru* may have the effect of removing this impression. The season has been unusually unfortunate for Japanese Shipping Companies. The Mitsu Bishi has suffered most, but the Unyu Kwai-sha's history is not much brighter. Twice as many disasters would be less serious, however, could we be sure that they have not their origin in causes similar to those which operated in the case of the *Sumida Maru*.

At this season the pressure of hard times always begins to be felt most severely in Japan. The period for making the first payments of the land-tax is at hand, and the agricultural classes, looking forward to the necessity of selling rice to the value of fifteen million yen within the space of three or four months, do not fail to make their complaints audible. This year, especially, the low price of the staple alarms them. Speaking from the uneducated agriculturist's point of view, his land-tax is nearly double what it was two years ago, because, although its monetary amount remains unchanged, he must dispose of twice as much rice to obtain that amount. Another circumstance which increases the hardship in his eyes is that he always finds himself selling in a falling market. This is, of course, an inevitable result of the excessive supplies offered for sale at the close of the year, but prices are already so low this season that the prospect of their further depreciation creates unusual alarm, and from many quarters voices are raised once more in favour of a return, in part at any rate, to the old custom of receiving the taxes in kind. The Japanese agricultural classes have not yet learned to disassociate the Government entirely from the feudal aristocracy to whose wants and caprices alike they were formerly obliged to

contribute. Probably they never will learn to make this distinction until they obtain a share in the management of their own affairs. It is not surprising, therefore, that they should expect the Treasury to receive their taxes in whatever form suits their convenience best, not reflecting that any loss suffered by the Government must ultimately be borne by the people themselves, and that the largely increased cost of collecting the taxes in kind would simply take the shape of an additional impost. That false impressions upon these and cognate subjects should exist among the uneducated classes is, perhaps, unavoidable, but the vernacular press chooses a pernicious route when it undertakes to foster such delusions. An article which we translate elsewhere from one of the Liberal journals is a strange medley of error and confusion. The writer's notions about silver are almost grotesque. He appears to imagine that the value of silver has been depreciated, and he includes the precious metals in the catalogue of commodities whose fall marks the stagnation of trade. Nay, he even goes so far as to think that a plentiful harvest is in some respects a misfortune since it has the effect of still further cheapening rice. It is difficult to grasp the theories of such economists, and we doubt very much whether they themselves know what their standard of value is. But, after all, there is nothing new about these Japanese experiences. Every country has similarly suffered, and been proportionately unreasonable about its sufferings, at times of currency contraction. What the Government can do is to increase the facilities for paying the taxes as much as possible, through the agency of its newly established Central Bank, and to provide a new market for Japanese rice by throwing open some of the northern and western ports to direct exportation. China would certainly take a considerable quantity of grain off this country's hands at present prices if the cost of transport were brought within reasonable limits.

We understand that the Armstrong guns mounted in the Japanese Navy's latest acquisition, the *Tsukushi Kan*, have evoked universal admiration. They are breech-loading pieces made at the Elswick Factory, and the handiness and strength of Sir W. Armstrong's breech-loading contrivance have won the hearts of Japanese artillerymen. The only types of gun now used by the Navy of this country are the Krupp and Armstrong. The preference was rightly given to the former so long as it was the only officially

recognized representative of breech-loading heavy ordnance, but since England has abandoned her prejudice in favour of muzzle-loaders, her manufacturers have taken the leading place from which her theorists have never been ousted. It is not likely of course, nor indeed would it be wise, that Japan should entertain any idea of suddenly changing her armament. The Krupp gun is an excellent weapon. It is still believed by some experts to be the best in the world, and certainly the superiority claimed—with justice, we believe—for the Armstrong, is not yet sufficiently marked to warrant any hasty rejection of its rival. But we may reasonably hope that this country will appreciate the advisability of adopting the cheaper and at least equally good gun little by little as convenient opportunities offer.

LATEST advices from France seem to indicate that the public are beginning to recognise the real nature of the task upon which Mr. Challemel-Lacour has entered with so light a heart in Tonquin. That Minister is reported to be much exasperated against the press both of his own country and of Germany. He declares, not without reason, that it is much easier to command a majority in the Chamber than to control the newspapers, and that their irresponsible utterances help largely to complicate the situation. The press, however, intimates that the Minister for Foreign Affairs has deeper causes of chagrin than the indiscretions of French journals or the insolent polemics of German. The failure of the expedition which set out from Hanoi on the 13th of August with the avowed object of sweeping the Black Flags away and laying siege to Sontai, so unequivocally indicates the insufficiency of the forces in Tonquin, whatever their quality, that the Government can no longer conceal from themselves the extent of the difficulties they have underrated. The accounts sent home by the special correspondent of the *London Standard* are accepted in Paris as substantially correct. They show that the Black Flags not only have an immense numerical superiority over the invaders, but that they are also perfectly armed and well led. Eight, ten, or even fifteen thousand men, says the French press, can effect nothing solid against such foes. A *corps d'armée* of twenty-five or thirty thousand must be sent: otherwise failure is inevitable. This, however, is a programme so very different from that laid down by M. Challemel-Lacour originally that the nation recoils before the change—a programme which demands fresh sanction from the representatives of the people. M. Jules Ferry will consequently be compelled to convoke the Chamber in special session, as indeed he has promised. But he hesitates to do so, fearing that the overthrow of himself and his colleagues will be the immediate result. Writing at the end of August, the Paris journals foretold that he would postpone summoning the Chamber till October, and that in the meanwhile he would confine himself to despatching insignificant reinforcements to the seat of war. "And this," said a leading newspaper, "to be obliged to

retire in two months, all the same, with the prospect of bequeathing to his successors a burden still heavier than that which he has to bear himself at present, for the state of affairs on the banks of the Red River will certainly have grown worse by the end of October. Sad issue of a campaign undertaken with a levity which did equally little honour to the Cabinet that assumed the responsibility and to the Republican majority that approved the assumption with eyes virtually closed!" These forecasts have been justified by the event. They help to explain our recent telegrams and to show that after all China may be able to make better terms for herself than was ever anticipated.

ACCORDING to the *New York Sun*, the "World's Fair" at Boston is a failure. There is nothing new to see there but the art collection, and that is not by any means what was promised. Here is what the *Sun* says about the Japanese and Chinese exhibits:—

The Japanese exhibition, of which so much has been said, makes but a middling show. The articles which have been brought directly from Japan are the poorest. The porcelain is none of it very good. By far the best of the modern work is in metal. Silver and bronze, colored in various ways and heavily gilded in parts (this heavy gilding is referred to as "inlaying" on the explanatory cards affixed to the objects), are wrought into a variety of useful and ornamental things, napkin rings, goblets, trays, vases, &c. The exquisite neatness of the handiwork, the novelty of the designs, and the charming color in these matters make them equal to anything of the kind that has ever been done. A pair of small trays are ornamented with figures of the gods of wind and of thunder. The artist has seen the wind, for he represents it as rushing in the shape of a golden fish-tail out of the mouth of a silver bag, which the god carries on his shoulders. The divinity has the features of a wolf, and a savage and spiteful expression. The thunder god has a malignant human countenance and is shown as amusing himself by rattling a huge chain, which appears and disappears among the clouds. In each of these little figures the modelling is excellent, the expression natural and strong, and the color effect produced by the use of silver, gold, and various mixed metals surprisingly good.

Specimens of modern red and gold lacquer are as good in their way as the metal work. The art of carving small objects in ivory and hard wood seems to hold its own very nearly. In other things there is a great falling off; in none more than in porcelains and enamels. In these departments everything shown has been produced for the European or American market, and a great effort appears to have been put forth to make them as ugly as possible. Most of this work is inferior to French and American imitations of older and better Japanese wares.

The portion of the Chinese exhibit which is now spread about on shelves and in cases in its exclusive small room is better than the Japanese. The large objects, vases and so forth, are of poor enough quality, but not bad in form, and a collection of small cups, vases, snuff bottles, and the like, contains many good pieces of fine shape, richly glazed and delicately colored. No one was present, however, to say whether these were modern or antique, and the presumption is that they are, at least, moderately old. There are some fine pieces of jade, clumsily carved. Up to the present there is nothing of the more utilitarian character.

NOTES.

It begins to be reported in semi-official circles that the disagreement between the civil and military authorities in Tonquin had been apparently imminent for some time before its consummation was announced by telegram. Since the middle of September the military authority had obviously sunk to insignificance there—whether in consequence of orders from home, or from sudden umbrage and determination to throw all the responsibility upon the civil

agents, it is difficult to determine. At all events, certain business, trivial in itself but still sufficient to show "which way the wind blew," had been in progress in Japan for three months, on the strength of instructions emanating from General Bouet originally. Suddenly this business hung fire. General Bouet's name did not seem to inspire the same respect as at first, until finally his requisitions failed to command the services of those to whom they were addressed. After a deadlock of a month or so, explanations came that M. Harmand held control of the situation, and that his orders only could be recognised. It was the same with matters at Hongkong and Shanghai, until fresh directions were finally sent by M. Harmand and the hitch was removed. The business in Japan, as we have said, was of small moment, but incidentally to its conduct there was acquired a knowledge that affairs of considerable importance elsewhere were likewise interrupted, and that great inconvenience and loss were likely to be entailed. It was, indeed, hinted pretty plainly, that if disasters came to the French, this squabble, and the subsequent assumption of all control by M. Harmand, even in military details, might be held accountable. Possibly in this hint "the wish was father to the thought."

Nor the least remarkable contrast between the lower orders of Chinese and Japanese is the view taken by each of the virtue of foreign medical practice. The experience of European medical men in China is almost universal in respect of the general unwillingness of the natives to submit to foreign methods of treatment. Dr. Henry adds his testimony to that of his colleagues. Writing from Ichang, the remotest treaty port on the Yangtze-Kiang, he says:—"Natives have shown no willingness to entrust themselves to foreign medical treatment, save in trivial cases. When severe illness attacks them, they dread the supposed powerful effects of foreign drugs. Some cases of ague, stomachic ailments, diarrhoea, ulcers, etc., have been, however, treated with fair success."

It is not often that one reads of Japanese giving trouble to the authorities or the hospitals of foreign countries. An exceptional case is related by Dr. McDougall, of the Kulangsu Hospital, Amoy. As the author only treated the wounds to which he refers we are ignorant of the circumstances in which they were inflicted:—

Mada Sinnuskie, Japanese boarding-house keeper, admitted 28th January, 1883, was suffering from bullet wound of chest, with compound comminuted fracture of the clavicle. Shortly before admission the patient had been shot by another Japanese with a large revolver, which was fired at a distance of about 4 feet from his body. The ball entered about an inch below the middle of the left clavicle, and, slanting upwards, shattered that bone and wounded the lung. A good deal of hæmorrhage took place from the external wound. A frothy mixture of blood and air came through the wound, and the patient coughed up some clots. On admission, one hour after the accident, the patient was suffering much from shock. He was put into bed, and efforts at finding the bullet having completely failed, the external wound was dressed with carbolic lotion (1/40), the arm put in a sling and bandaged to the side, to keep the broken bone in position. The next day the patient felt better, and the effects of shock rapidly passed away. There was an area of

tenderness at the margin of the trapezius muscle, where the bullet might possibly be lying deeply seated, but as its position could not be fixed exactly, it was not considered expedient to cut down upon it. There was some emphysema of the subcutaneous areolar tissue of the neck and shoulder. The hæmorrhage ceased. On the third day the temperature had risen to 100°.4, but the wound looked healthy. From that date the patient rapidly improved, and was discharged from the hospital, at his own request, on the 5th February, but continued to attend as an out-patient. Before the middle of March he left perfectly well, the fracture had thoroughly united, and his arm was strong and useful. The only sign of the external wound was a small cicatrix. He had neither pain nor tenderness anywhere, and the position of the bullet all this time one cannot with certainty affirm.

Sato Kana, a Japanese female, aged 26, was shot on the same evening as the previous case. The revolver was fired very close to her body, and the bullet entered at a spot on the outside of the upper arm 1½ inch above the elbow-joint. Failing to detect the foreign body with a probe, the arm was put upon a splint and bandaged. Several attempts were made to find the ball, but without success. The patient left Amoy shortly afterwards. Her friends report that she does not now suffer in any way from her accident.

A NEW YORK JOURNAL SAYS:—

Mr. J. Stahl, United States Consul at Osaka and Hiogo, Japan, reports to the Department of State that the tea trade of Japan has gone from bad to worse until it has now become unsatisfactory both to the Japanese producer and the foreign exporter. Whether as a result of over-supply or of such deterioration in the quality of the teas shipped as tends to check consumption, the prices to which tea has fallen in the United States are ruinously low, and if some improvement be not effected this important commerce will be shunned by all who have anything to lose. Consul Stahl says:—The Japanese government, recognizing the gravity of the situation, is urging producers in this country to reform their methods of preparing the leaf, so as to furnish a better article for export, and thereby reduce the excessive supply. One argument employed toward this end is that the law lately enacted by Congress against adulterated teas will, if strictly executed, exclude much of the inferior stuff which has of late years passed in the United States as Japanese tea. It is highly desirable, in the interest of all concerned, that this law should so work, and its operation will certainly be watched from Japan with keen interest. If it excludes not merely that which is not at all tea leaf but also all teas falsified by artificial coloring, it will afford powerful aid to all, whether exporters or producers, who now deplore the decay of honest commerce through the success of such impostures on the ignorance of the consumer. It will be difficult to effect any reform in Japan while consumers in America seem to prefer sophisticated tea of a wholly unnatural color.

Mr. Stahl's view of the situation is not very hopeful. It is not easy to unmake a taste, especially when the operation has to be undertaken in so large a field as the United States. The limited and partial effect of the recently enacted law respecting adulterations is much to be regretted. Doubtless a good many dealers would have been considerably inconvenienced had entry been refused to the coloured stuff which is sent across the Pacific as pure tea, and there was, further, real danger in the possibility that American consumers, awakened to the impostures which have been practised upon them, should distrust all Japanese tea as sophisticated and unfit for use. But there are good grounds for apprehending that nothing short of a radical reformation of American taste will render effective the measures taken a few months ago by the Government and certain producers for protecting the reputation of Japanese tea. This is essentially a case where foreign agency, though temporarily advantageous, is working permanent injury to Japanese commerce. Whether the origin of the existing system is to be traced entirely to the necessity of correcting Japanese faults of pre-

paration, or whether the natural tendency of the age to adulterate everything is chiefly to blame, it is certain that the Japanese producer has well nigh lost all incentive to be honest and painstaking. For all that is known of him in the markets he supplies, he might as well be the bush from which the leaf is culled or the pan in which it is fired. If he could be fully convinced that the injuries the trade is gradually receiving from dishonest practices both in the provinces and at the treaty ports will bear their fruit in his own lifetime and render his labour profitless, he might be persuaded to follow better courses. But he is not wiser in his generation, and he has far less inducement to be honest, than those English manufacturers whose suicidal fraudulence Mr. Consul Hall had the courage to denounce in his last Trade Report. So soon as the leaves pass into the middleman's hands the producer's part in the transaction is ended. The foreign agent then steps in; imposes a heavy tax upon the staple in the shape of large charges for firing and preparing, and sends the tea forward in his own name, stamped with his own mark. Nobody will pretend that a permanently prosperous commerce could be conducted on such a basis. The Japanese do not figure at all in the transaction, while by leaving to others the work for which they are eminently fitted themselves, they not only deprive the staple of some of its choicest qualities, but subject it to what is virtually an export duty of twelve to fifteen per cent. For the sake of this most important item of Japanese commerce, it is much to be desired that consumers should insist upon tea being up to its natural colour, and learn to reject the falsified stuff which now passes as "green tea," a consummation which can be much assisted by a vigorous effort on this side to supply them with a really sound and good article.

THE inauguration of the statue of the Republic at Paris seems to have supplied the monarchical journals with a never-failing subject for sarcasm. Every day some lyrical couplet finds its way to the address of the figure. The Republicans, however, have no reason to complain. They were not backward themselves on the occasion of the inauguration of the statue of Louis XV., nor will any of the Royalists' recent refrains bear comparison with the verse which was found, one fine morning, attached to the base of the monarch's effigy, among the figures of Peace, Prudence, Fortitude, and Justice which adorn the pedestal:—

Oh ! la belle statue ! Oh ! le beau piédestal !
Les vertus sont à pied ; le vice est à cheval.

It seems strange that while French artisans are growing more and more unreasonably exorbitant in the matter of wages, all the conditions of the time should point to a reduced scale of remuneration for workmen. The greater the spread of primary instruction of the better class and the larger the number of schools that spring up for teaching designing, modelling, sculpture, and so forth, the more slender do the rewards become that offer themselves to labour skilled in these directions. This is the democratic aspect of

modern civilization. To know how to design is no longer a rare speciality : it will soon become as common as an acquaintance with the alphabet. Passing over workmen of exceptional ability and originality, we find a large class whose second-rate skill grows daily commoner and more abundant, and who have consequently less and less value. Another condition unfavorable to manufacturers of articles of luxury, is the constantly increasing dissemination and mobility of fortunes. People become daily less exacting and better content with those objects of *demi-luxe* which please the eye and are of facile production. These two considerations seem sufficient to show that the remuneration of workmen employed in art industries has a tendency to diminish rather than to increase, and that any attempt to raise it by artificial means is to compromise home productions in favour of foreign.

LET not Japan be discouraged in her efforts to develop her mining industries. She in not, as some of her self-elected critics would teach her, if not directly, by negative inference, the only country that has difficulties to surmount in the road to ultimate success in that respect. An Indian paper newly points this moral. All mining is at first beset with great difficulties. "In countries not opened up, or not under enlightened and progressive Governments, this is to be regarded as a normal condition of things. The past history of Australia and California, and the present history of Siberia, Mexico, and other countries, sufficiently illustrate this. But what shall we say of mining in India, a country that boasts of a civilisation dating from the time when Britons went about in literal war-paint, a mining history that goes back to no one knows when, and, at present, more than a century's rule of one of the most enlightened Governments on earth, when we find, as was exemplified lately, the mining district, which is also an old established coffee district, virtually cut off from its sources of supply by a fortnight's rain ? Broken down carts, draught-cattle and coolies killed from the want of shelter, and the impossibility of making progress on the infamously bad roads, are the characteristics that mark the highway within from five to fifty miles of the palatial residence of the Governor. We have all read of the dangers of a journey across the snow in Asiatic Russia : a journey from Ootacamund to Devalla in the burst of the monsoon is nearly, if not quite, equal to it in severity to man and beast. During the monsoon the dwellers at the mines could only obtain supplies with the greatest difficulty, and at almost prohibitive prices. When, "people ask," are we to get passable communications with the mining and coffee districts ?"

A FREQUENT mistake among foreigners who profess to know something of Chinese habits is that cremation is almost universal among the people of the Middle Kingdom. It is much more prevalent in some parts of the vast empire than in others—more prevalent in some counties of certain provinces than in others. In his

report on the health of Ichang, Dr. Henry gives a few details concerning the practice as carried on in this neighbourhood. Sometimes children are cremated. This is only done for superstitious reasons. Where several young children of a family have died in succession, the body of one of them is burned, supposition being that the ceremony will ensure the survival of the next child that is born to the family. The doctor witnessed last summer one performance of the kind. The body was simply brought to the open field in a box: some firewood was piled round it and set fire to. The absence of odour was remarkable. The books in which the subject of cremation in China is treated of, says Dr. Henry, only speak of the rite being followed in the cases of Buddhist priests and lepers. "It is hard to reconcile with the present almost universal practice of burial, or with the absence of mention of cremation in Chinese historical works, the repeated assertions of Marco Polo that the Chinese people, in every place he came to, were in the habit of burning their dead. In the neighbourhood of Ichang, out of the many Buddhist temples around, there is only one the inmates of which are burned after death. The manner in which the process is carried out is both efficient and æsthetic, and, moreover, it is not expensive—at least, the cost does not bear comparison with the large sums that the admirers of the practice in Europe are reported to incur." In the grounds of the temple there is a small dome-like edifice the interior of which communicates with the open air by only a small door. On a stone seat inside the dome the deceased priest is seated. A charcoal fire is built around him: the door is closed; and in a comparatively short time the process of combustion is complete. The calcined bones are collected and placed in an urn which is stored away in a dome-shaped edifice, similar to that in which the crematory process is conducted.

THE *Echo du Japon* had recently a note upon H.E. Mr. Sienkiewicz, the purport of which we translate. It is well known to most residents in the Far East that the newly arrived French Ambassador is no stranger in these regions. His Excellency's career is thus related by the *Echo* :—

Mr. Sienkiewicz has been Consul in China; and if our memory does not mislead us it was from the Hong-kong Consulate (for France) that he was called to occupy in difficult surroundings the position of Consul-General in Egypt, where he succeeded Mr. de Ring, who had just been sacrificed by Mr. Barthélemy St. Hilaire, then Minister for Foreign Affairs at the close of the Ring-Blignières conflict, in which our compatriots realized that the first-named personified the French: the latter the anti-French, system.

Succeeding under such conditions to Mr. de Ring, who enjoyed the affection and esteem of the French colonies in Egypt, Mr. Sienkiewicz, appointed on the nomination of the Minister for Foreign Affairs to the Chamber of Deputies, appeared to our countrymen likely to be nothing more than a mere tractable instrument of the policy of Mr. de Blignières.

Victim of this situation, Mr. Sienkiewicz was at first very coldly received: a spirit of hostility appeared to surround his person, the settlers waiting with distrust his earliest actions (in Egypt) to give judgment—definite judgment—upon what they might expect in view of French interests—the amount of protection that in their view the Consul-General might be able to afford them. This situation could only be prolonged with peril to

the dignity of the new representative in Egypt, as well as to the general interests of our Egyptian colonies.

Mr. de Blignières, Controller of Finance, was requested to confine himself to the financial portion of his duties, Mr. Sienkiewicz refusing to be his abettor or aider. By the frankness of his manners the sympathy that he inspires without any effort, and by devoting himself intelligently to the protection of French interests, the new Consul-General quickly succeeded in acquiring the confidence and respect of his compatriots.

Mr. Sienkiewicz was no stranger either to the change of Ministry which took place in Egypt in the month of September, 1881, or to the programme, presented by Cherif-Pasha, Home Minister, announcing the appointment of a Council of State, the prolongation of negotiations for the maintenance of international tribunals, the absolute reform of native courts, etc., and affirmed, finally the necessity of maintaining the European control which was the principal force of the Egyptian Government—a programme full of promises which was to destroy Arabi and the self-called national party—which Gambetta with his usual foresight wished in its origin to arrest by common action with England, who held off till the moment when, restored to freedom of action by the snail-like policy which triumphed with Mr. Freycinet, she could act alone. The Representative of France in Egypt was powerless against a Minister who, supported by the coalition of the "Rights" and the "Extreme Lefts," so benevolently sacrificed French interests in Egypt.

The present Minister has conferred an act of justice in promoting Mr. Sienkiewicz to the post of Minister; and we trust that the first despatch of the new Representative of the Republic will not have the object of asking for a change of post. He will be able to render good service here, and we hope that he will take away with him a happy recollection of many years spent in a country so picturesque and so interesting to study.

We are sure of being the faithful interpreters of the sentiments of the French colony, in bidding welcome to our Minister and Madame Sienkiewicz.

THE Civil Tribunal of the Seine has at last given a decision in the much-talked-of case of Mario Uchard v. Sardou, and the judgment constitutes a valuable definition of the essentials of plagiarism. Mario Uchard maintained that his drama of *Fiammina* had inspired Sardou's *Odette*, and that the one so closely resembled the other in all its most important details as to constitute a genuine case of *contrefaçon*. The Tribunal, after a careful examination of the two works, decided against Uchard, maintaining, first that though the subject in both cases was identical, it was borrowed from the common source of the sentiments and passions that agitate the human heart. Secondly, that when Mario Uchard elected to embody this subject in a drama, it was not competent for him to appropriate it in such a fashion that no one else might touch it afterwards. Thirdly, that since the idea which forms the basis of the piece remained at the disposition of everybody, it was perfectly lawful for Sardou to develop it afterwards, under the sole condition that he should produce a work bearing evidences of originality. Fourthly, that in a piece destined for representation upon the stage, a subject cannot be arbitrarily separated from other elements the union of which constitutes a dramatic work—as, for example, the conduct of the action, the development of the characters, the management of the scenes, the dialogue, and even the episodes. Fifthly, that two theatrical pieces, founded on the same conception, necessarily contain similar characters and analogous situations. Sixthly, that it is for the judge to determine whether the writer who has entered the field in the second place, has simply borrowed the work of his predecessor, or whether, in spite of inevitable like-

nesses, he has conceived and executed a work essentially original. Guided by these premises, the Tribunal found numerous and important differences between *Fiammina* and *Odette*. Notably, the character of Odette, the éclat of her crime, the scandal of her life after her fall, the cynicism of her attitude towards her husband, her audacity with regard to her children, give to her a personality entirely her own, and stamp the whole drama with an aspect of originality. Other points in the treatment of Bérangère's rôle, as well as in the episodes of the play, were held to distinguish it thoroughly from Uchard's work and to dispose effectually of the charge of plagiarism. Doubtless this decision is in strict accord with justice, but a little consideration of the lines laid down by the Tribunal shows that according to this judgment an author may trespass pretty freely on a rival's preserves before the law takes note of his dishonesty.

NOTHING is more significant of the popular feeling in Europe and America, as regards the French controversy with China, than the almost unanimous reprobation of France's action and attitude, by the press of the civilized world. It is next, impossible to find a word, outside of French journalism, in defense of the invasion of Tonquin, the subjugation of Annam or the defiance of China's claim to respectful consideration. Even the newspapers which acknowledge the friendliest feeling for the young republic, have nothing but reproof and warning for the course to which she has now committed herself; and we observe, with some surprise, that, by a large proportion of writers, the reckless enterprise is not only denounced as extravagant and unwarranted, but is regarded as foredoomed to certain failure. This result is predicted rather on the ground of difficulties which the French will encounter among themselves, both at the seat of hostilities and nearer home, than on account of China's power to contend successfully against a European enemy; although the opinion is expressed in many quarters that the Middle Kingdom will use this opportunity to prove that her spirit, her resources, and her material strength, have been undervalued; and she will make this struggle, if it is forced upon her, a test of her ability to maintain her position among the nations. This estimate of China's power to withstand a resolute onslaught on the part of France will hardly be endorsed by observers in this part of the world; but the arguments based upon French domestic complications and upon the folly of the whole undertaking in its political and economic aspects, are sound and forcible. It is a pity that France is in no humour to receive and be-influenced by them.

A GERMAN newspaper says that the Duke Ernest of Saxe-Cobourg is about to publish a work which has cost him six years of labour and which will place the world in possession of the most carefully guarded secrets of English and Prussian diplomacy since the Crimean war to the foundation of the new German Empire. The

Duke, being the brother of the late Prince Albert, who took an active part not only in British politics but also in the national movement which prepared Germany for the events of 1866 and 1870, finds himself the owner of a crowd of documents whose publication would be in the last degree inconvenient to the Courts of London and Berlin. The story goes on to say that the two Governments most concerned have taken various steps to check the Duke's literary proclivities, but without effect. The manuscript has already been sent to M. Lorenz, professor at the University of Vienna, and it is there, or in Switzerland, that the first volume of this work, as important as it is piquante, will appear within a month or two. The only ray of hope in the matter is that the Duke Ernest, though a sovereign Prince, is also a Prussian General. It appears that he has already known what it means to offend against Bismarck's notions of discretion, and that he had to expiate his fault by an elephant shooting expedition in Abyssinia. It is, therefore, thought possible that the sequel of the Arnim affair will be recalled to his memory if he persists in his present design.

In a Shanghai paper we read that a few days ago a cheque was presented by a Japanese at the Hongkong and Shanghai Bank purporting to be signed by Mr. Peter Maclean. The amount, fifty-six taels, was paid without the cheque being very closely examined; but the signature was afterwards discovered to be a forgery, the writing bearing no resemblance to that of Mr. Maclean. The matter was placed in the hands of the police, and on the cheque being shown to Mr. Superintendent Penfold, he at once recognised the writing as that of a German named Leiningen, who joined the police force a few months ago, but was dismissed for drunkenness after serving for only one month. Mr. Penfold, after verifying his suspicion that the writing on the cheque was Leiningen's, at once obtained a warrant from the German Consular Court and despatched Sergeant Mack to take the man into custody. Sergeant Mack succeeded in arresting Leiningen; and at the preliminary examination at the German Consulate, it was found that the cheque-book used by the forger had been stolen from Mr. England. Sergeant Mack succeeded in finding the Japanese who cashed the cheque, so that he is able to prove that the money was handed to Leiningen, who spent the whole of it in a couple of days. The cheque-book was also recovered.

From the Board of Trade Returns for the seven months ending on the 31st of July we gather the following facts and figures:—Of tea from China (including Hongkong and Macao) lbs. 59,698,271 against lbs. 69,004,483 in 1883, values respectively £3,039,681 and £3,566,932. This shows an import of 11½ million lbs. for June against 26½ million in 1882. From all countries the quantities imported amounted to lbs. 87,494,274 in 1883 and 92,458,723 lbs. in 1882, and the values to £4,719,193 and

£5,176,005 respectively. From British India there was a good increase, 24,532,919 lbs. in 1883, against 21,462,833 lbs. in 1882; value £1,506,150 and £1,497,869 respectively. The Home consumption was lbs. 98,491,275, against 93,841,731 lbs. in 1882. The re-export was lbs. 21,884,983 in 1883 against lbs. 17,177,975 in 1882. The quantity in bonded warehouse was on July 31st, 1883, lbs. 85,361,241 against lbs. 95,239,349 in 1882. Of Silk, the import from China of Raw was 1,822,621 lbs. in 1883, against 1,528,893 lbs. in 1882, values £1,047,913 and £1,209,318. The import from all countries was 1,853,544 lbs. against 1,997,810 lbs. in 1882; values £1,543,483 and £1,997,830 respectively. The import of Waste, &c., was 31,450 cwt. in 1883 against 27,147 in 1882, values £466,687 and £354,325 respectively; of Thrown 168,907 lbs. in 1883 against 225,203 lbs., values £175,172 and £275,477 respectively. The Import of Silk manufactures showed a value of £6,565,695 in 1883 against £7,021,190 in 1882. The value of the total Exports and Re-exports of Silk and its fabrics amounted to £2,279,043 in 1883, and £2,974,122 in 1882. Of Sugar, the Imports from China and Hongkong of unrefined were 103,182 cwt. in 1883 against 290,780 cwt. during 1882. Of Hides, the total Imports from all countries were 412,474 cwt. Dry in 1883, against 361,786 cwt. in 1882, and of Wet 314,600 cwt. in 1883 against 318,871 cwt. in 1882; of Leather from all countries 44,148,259 lbs. in 1883 against 45,808,340 lbs. in 1882. Exports from Macao and Hongkong of Cotton Manufactures show a decrease from 1882 of ten per cent. in quantity of goods and fourteen per cent. in yarn, and of ten per cent. in value of goods and twelve per cent. in value of yarns. The figures are 237 million yards, value £2,662,245 in 1883 against 262 million yards, value £2,972,965 in 1882. To Japan, they are 29.6 million yards against 35.7 millions in 1882. The total Export of Cotton Piece Goods to all the world had increased from 1,693 million yards in 1882 to 1,797 in 1883. Of total Piece-goods, including Printed, &c., 2,632 million yards in 1883 against 2,486 in 1882, value 32.5 million pounds against 31.7 million pounds respectively. China is placed second consumer in quantity and in value, for although exceeded by two presidencies in India, she, in her turn, exceeds all other countries. Of Yarn the shipments to China and Hongkong were 7.7 million lbs. against 9 million lbs. in 1882; to Japan 11.3 million lbs. in 1883 and 12.5 millions in 1882. In Yarns, Japan held fifth rank amongst Great Britain's consumers, as regards quantity, and was eighth in value. The Export of Woollen and Worsted Manufactures to China and Hongkong was 1,813,100 yards in 1883 against 2,340,300 yards in 1882, and of Worsted Fabrics was 6,577,900 yards in 1883 against 7,410,600 in 1882. To Japan, 395,200 yards of Woollen and Worsted Manufactures against 513,600 in 1882, and of Worsted Fabrics 2,876,300 yards against 1,930,000 in 1882. Of Lead, the Exports were 6,943 tons against 7,999 in 1882.

Of the Precious Metals the Silver exported was £385,905 in 1883 against £354,385 in 1882, whilst the quantity imported was £56,710 in 1883 against £33,398 in 1882; of Gold £173,276 was imported in 1883 against £120 in 1882, whilst none was exported in 1883 against £10,000 in 1882. The total value of the imports into the United Kingdom during the seven months of 1883 was £251,014,708 and £241,478,294 in 1882; of the Exports, £137,784,629 in 1883 and £139,653,508 in 1882 of British and Irish Produce.

The frequent interruptions of telegraphic communication between Europe and the Far East are mostly caused by the depredations of Chinese fishermen or pirates. We read that the last breaks were near Shanghai. According to a newspaper of that settlement, three breaks in the cables of the Eastern Extension, Australasia, and China Telegraph Company have been reported. The last break was a gap of about one mile and a half, that length of the cable, about 12 tons in weight, having been taken away by the robbers. It is certain, judging from the nature of the cuts in the cable wires, first made with heavy files and then by cold chisel and iron mallet, that the thieves were numerous, that they had acquired much skill in their modes of operating, and that there is a well planned organization to compass the robbery, the breaking up into the short lengths of the cable wires, and finally the establishment and regular supply of markets for the copper and steel wires. Our contemporary adds "it is to be hoped the Mixed Court will deal with the thieves and receivers very sternly, as the damage done by the robberies is enormous, and unless the sentences of punishment are severe the Companies cannot reckon on future immunity, but on the contrary, on the continuation of the thefts."

The development of sericulture in Hungary is remarkable. Thus, in 1880, according to official reports, the communes where silk-worm breeding was regularly carried on numbered only 100, and the persons engaged in the production of silk only 1,050, whereas last year the number of communes had risen to 426, and the number of producers to nearly 3,000. In 1880 the product was only 20,000 pounds of cocoons, and the following year in was 80,000 pounds. The Government has established a model school of instruction, and arranged for the attendance of village school-masters, who will thus be able in time to instruct their own neighbourhoods. The Government has also paid for nearly 30,000 mulberry trees, and is considering the advantage of setting others along the public roads and the open spaces owned by municipalities and communes.

A CURIOUS case of abduction has recently been dealt with in the mixed Court at Shanghai. A young Soochow Chinaman charged his brother-in-law with abducting his wife, a young and rather-good looking woman. Another Chinaman, was charged with having sold the woman

to a Shanghai brothel-keeper. According to the husband's statement, he missed his wife some days before; he had received information that she left with her brother for Shanghai, whither he followed her and found her eventually in a brothel, to which she had been sold for \$30. This statement was confirmed by the woman's evidence. The money was divided in about equal parts amongst the three accused. Magistrate Chén ordered the Chinaman who sold the woman to the brothel keeper to pay \$30 as compensation to the husband, a judgment which, says the *Mercury*, "would not exactly agree with the ideas of Western civilisation."

A "SLAVE OF DUTY," as Gilbert calls his model Pirate of Penzance, has been captured in Shanghai. He was sentenced some months ago in Soochow to a long term of imprisonment for robbing Tls. 4,000. He succeeded, however, in breaking out of jail. The Shanghai Taotai was instructed by the Soochow authorities to search in Shanghai for the robber, and detectives and runners succeeded in capturing him.

GENERAL SCHENK is not forgotten in the great metropolis. His scientific exposition of a fascinating game has won him, as fame goes, a popularity that has proved more than usually enduring. At least, the *Whitehall Review* says that:—A certain American Minister to London who preceded Mr. Lowell caused some fluttering in respectable bosoms by issuing for the use of his English friends a little volume containing the rules and regulations of the game of poker. That was a few years ago, when games like pucker, euchre, and seven-up were supposed to be the exclusive property of Bill Nye, Truthful James, and the other heroes of the verse and prose of Mr. Bret Harte. Things have changed since then. Euchre is quite a popular game in London; poker is now likely to be so, thanks to the efforts of Mr. Richard A. Proctor. Mr. Proctor, who seems to have acted upon the suggestion of Bacon, and taken all knowledge for his province, enlightens the readers of *Longman's Magazine* for September as to the method of playing the game dear to Roaring Camp, Poker Flat, and Sandy Bar. Those who had not the advantage of receiving from the aforesaid American Minister or from any other Transatlantic acquaintance a copy of its rules, may learn from Mr. Proctor all the mysteries of an amusement in which it is possible to lose more money than in perhaps any other form of gambling known to civilised man. Mr. Proctor is very severe upon bluffing, which he seems to regard as "one of the most portentous phenomena of American civilisation"; but, undoubtedly, bluffing is an integral part of poker, without which poker would scarcely be. Poker is not indeed a moral game, but the game which combines extensive gambling with morality has yet to be found.

PADRE DENZA, the Director of the Observatory at Moncalieri, expresses, in a letter to the Bishop of Ischia, the opinion, based on the

information thus far obtained, that no ulterior disasters are to be feared in Ischia for the present; and especially if the forces at work under Mount Epomeo continue to find vents in the two active *fumaroli* . At the same time he adds:—"We have, however, to do with capricious and uncertain phenomena which are still a mystery to science. They are matters which require close study, and I have recommended them strongly to de Rossi's attention." Prof. de Rossi, in his second report, a brief summary of which lately appeared in *Nature*, limits himself to the consideration of the many warnings that Nature gave of the catastrophe. His third report will treat directly of the phenomena connected with it. In the meantime he is emphatic in recommending to the Minister of Agriculture and Commerce the completion of that chain of observatories over all the volcanic districts of Italy, for the reception and consideration of the signs and movements noted in which the Roman Observatory was founded. Had that chain been at least more complete, and had the long-talked-of observatory in Ischia constituted a link in it, the Roman Observatory would have recognised the fact that the widely extended subterranean movement, manifested with augmentation during the ten days anterior to July 28, had its centre of greatest, most continuous, and most variously marked activity at Casamicciola, and would have given that timely warning of the approaching storm which might have saved many lives. But, he adds, there is a question as to whether such warnings should be given. The inhabitants of Albano might, for instance, have abandoned their houses in alarm, and have spent the night in the fields, had the extraordinary state of the Solfatara there been known publicly on the 28th. "To this I reply," writes Prof. de Rossi, "that the inhabitants of Casamicciola would also have spent the night in the open air, and many lives would have been saved." But it is evident, according to *The Times* correspondent, from de Rossi's first preliminary report, that there is but little enthusiasm in favour of a system of earthquake warnings, like the storm warnings sent across the Atlantic, being adopted in Italy, where in many districts the inhabitants depend chiefly on strangers for their existence. He does not hesitate to attribute to a selfish fear of frightening strangers away the opposition made to the establishment of an observatory at Casamicciola. It has now been ascertained that the signs of warning at Casamicciola were numerous, and well known to those most interested in concealing them. But the possibility of danger was ridiculed, and part of the performance in the theatre on that fatal evening was Polchinello flying from imaginary alarms of earthquake. Prof. Palmieri summarises his observations on the earthquake in Ischia as follows:—"A small or moderate earthquake causing immense disaster. The continuous wearing away of the soil by the hot subterranean springs is sufficient to explain the immense catastrophe, which has been enhanced by the very bad construction of the houses.

Some damaged by the earthquake of 1881 had remained without repairs. The disaster of July 28 will be recorded more on account of the enormous loss of life and property than of its seismographic importance."

L'Economiste Français, which is, and ought to be, one of the most moderate of French journals in matters of foreign policy, speaks of France's present situation in Europe and the attitude of other nations towards her with an amount of bitter resentment which recalls the old proverb:—"Quod antecedit tempus, maxima venturi suplicii pars est." Discussing, in its last issue, the unequivocal menaces recently uttered by the *North German Gazette*, and now said to have been directly inspired, if not actually penned, by Prince Bismarck, the *Economiste* then proceeds to interpret, in the following terms, the sermon which the English, by word and deed, are accused of addressing to France:—"Sea and land belong to us, the sun and the moon and everything in the universe. All that is supposed to be uninhabited under the canopy of heaven, and all that is peopled by barbarians, are ours by divine right. You Frenchmen want to establish yourselves at some paltry places in our neighbourhood. We do not find it convenient that you should do so. We wish to have elbow room, and we want plenty of space. We like to be at our ease, and all neighbours are in our way. Content yourselves with your 520,000 square kilometres in Europe and we shall be the best friends in the world. Not that we propose to take up the cudgels in your behalf if any one attacks you. That is not our habit. But if you give up all ideas of colonization; if you abandon to us the Suez Canal; if you contrive that we shall never encounter your flag or your nationals on any foreign sea or shore, we will entertain for you the most sincere sentiments of good-will. Retire within yourselves; curl yourselves up; sleep: *abstine et sustine*—that is the policy which becomes you." Meanwhile, with German menaces ringing in one ear and English in the other, the French are constrained to confess that the measure of success they have achieved in Tonquin is not very large. Their standard floats over Hué, but elsewhere the famous Black Flags, with their Chinese auxiliaries, oppose a powerful barrier to foreign conquest. "Under these circumstances what ought France to do?" asks the *Economiste*. "Humble herself before the threatening remonstrances of the *North German Gazette*? Receive with docility and gratitude the friendly councils of her dear sister beyond the Channel? Treat with the Hovas, recalling her squadron from Tamatave and giving a good indemnity to her victim, the missionary Shaw? Treat also with the Chinese Emperor and withdraw her troops from Tonquin and Annam? Such behaviour might not procure for her the maximum of dignity and prestige, but it certainly would procure for her the maximum of security. Her friends would then deign to pardon her, and to address her in future in that tone of slightly haughty and cold

indulgence that men hold towards converted and submissive sinners." It will be easily understood after this exordium that the financial journal condemns a submissive course as contrary to the present and future interests of France. The difficulties of her situation are admitted. So far as Germany is concerned, it depends upon herself whether her relations with her sometime foe shall remain peaceable for the next quarter, or half, century. True, no Frenchman can recall the conditions of the peace of 1871 without a pang, but this feeling, however natural, is held in check, and need never assume dangerous strength. As for the Republican propagandism charged against France by some monarchical countries, the *Economiste* altogether denies its existence, and says that the politics of foreign nations are matters of supreme indifference north of the Pyrenees. On the other hand, if the struggle of 1870 is to be resumed, Germany is reminded that it will take place under very different conditions. Her troops will have to encounter, not a paltry army of 250,000 men, but one of at least a million, well disciplined, fully trained, and supported by a continuous net-work of fortresses. It cost her one hundred thousand men to reach Paris in 1870 and 1871. It would cost her three hundred thousand to perform the same journey in 1883, admitting the possibility of performing it at all. If she is willing to contemplate that prospect, the *Economiste* does not compliment her prudence. Great Britain's remonstrances are treated by the French journal with equal hauteur. France need give herself no concern about them. Her mistake was that she voted only five millions and sent only 3,000 men to Tonquin. She should have voted ten millions and sent eight thousand men. Now she must vote fifteen millions and send twelve thousand. What she has to do is to occupy the whole of Tonquin and Annam in perpetuity, and to establish herself, equally permanently, at Tamatave and other points in Madagascar. The *Economiste* thinks that the first law submitted to the Chambers when they reassemble ought to be one providing for the formation of a colonial army, and that the funds now squandered on luxuries of home policy, such, for example, as extravagant educational arrangements, should be devoted to the maintenance of this force. "England," says the French journal in conclusion, "when she sees that we are determined not to give way either in Tonquin, Annam, or Madagascar, will become the best and gentlest of our friends; and Germany, when she finds us removed alike from enduring humiliation or offering provocation, will respect a people resolved not to attack anybody, but equally determined, without any distinction of political parties to resist to the last breath, rash invaders of her soil." This is jingoism of the most unadulterated description. It would be more respectable if it were less demonstrative. We find some difficulty in reconciling French aggressions in Cochin-China and Madagascar with the statement that she is "resolved not to attack anybody." But an abnormal

development of pugnacity is not conducive to logical reasoning. If this vertigo of colonization and conquest has extended even to Frenchmen whose lives are devoted to economical speculations and the consideration of arithmetical problems, it becomes impossible to doubt that the *North German Gazette* was right when it accused France of troubling the peace of the world.

THE *Temps* publishes the following extracts from a private letter, dated Peking, July 10, of a gentleman who has resided for 30 years among the Chinese:—"The Chinese Mandarins show great avidity after everything written about their country. Interpreters go every day to the tribunals to translate European newspapers. Detailed reports were telegraphed hither of those sittings of the Chamber in which Tonquin was discussed. I know that last week the Marquis Tseng sent a telegram costing upwards of 5,000 piastres" (25,000f.) The writer represents Li Hung-chang as being really favourable to peace, while Court intrigues are pushing him towards war. The preparations he is making are mere show, intended to satisfy them. Moreover, the country is in a rebellious ferment. He says:—"Prince Kung and the conservatives of his party know that a serious foreign war would be the signal for a number of outbreaks. It was said last week that the Empress herself had fears for the dynasty, and that despite her brother-in-law, she inclines towards peace."

MR. WALTER R. BROWN, writing in *Nature*, says:—"Referring to the paper read before the French Academy (as reported in your last issue) on copper as a preservative against cholera, it may be worth while to state that, when visiting the great copper mines at Fahlun in Sweden (probably the oldest and largest in the world) I was informed that cholera had never appeared there, and that so well was the fact known that on the last visitation of cholera in Sweden some members of the Royal family took up their abode in Fahlun to escape the disease. The atmosphere was there loaded with copper fumes to such an extent that not a trace of vegetation was visible on the hills surrounding the town; so that this really seems to confirm by experience on a large scale the theory alluded to."

WE learn from a private source that the *Takasago Maru* returned to Hakodate from the wreck of the *Akitsuishima Maru*, and reports there is but little chance of saving her. She brought the passengers and part of the cargo, the mails having been forwarded overland. The balance of the cargo was being landed, and it will all be saved. The *Akitsuishima Maru*, it would appear, went ashore at 5 o'clock in the morning, in tolerably clear weather.

THE proposed parliamentary legislation respecting the storage of petroleum in London has, during the recess, been followed by an "exhaustive inspection of all the places where petroleum is stored for sale or deposit," not only in London, but in the provinces as well. The *Pall Mall*

Gazette says of this:—"That such an inquiry should only now be undertaken, with a view to legislation, is a curious illustration of the precipitancy with which the late Petroleum Bill was introduced into Parliament. To propose to legislate one session and then to spend the recess in accumulating materials to prove the necessity for such legislation next session is a somewhat roundabout mode of procedure."

IN H.B.M. Court for Japan before N. J. Hansen, Judge, R. Garbaretta sued H. A. Towse for four months rent of No. 26C, Bluff, at \$20.00 per month. The defendant pleaded that he was not indebted. Plaintiff stated that he let the house to defendant in October, 1882, at a rental of \$20.00 per mensem. Defendant occupied the house from the 1st October, and plaintiff gave him notice to quit in January, as he could not collect the rent. Defendant left at the end of January. Defendant gave a promissory note for the amount, which had not been paid. Defendant claimed that the promissory note was payment, as it was endorsed by a person who owed him money. His Honour said that it was not usual to sue the endorsee; the promissory note not having been paid when due the debt for rent remained. The giving of the note and the endorsement did not exonerate defendant, and he therefore gave judgment for the plaintiff for the amount claimed.

M. J. KEARNEY was charged before T. R. H. McClatchie, Esq., Acting Assistant Judge, yesterday, with being drunk and disorderly. The prisoner acknowledged being drunk. A Japanese woman, who keeps a grog-shop, stated that the prisoner and another man came to her shop and created a disturbance; he was drunk. Acting Sergeant P. C. James said he took the prisoner in charge at 8.30 a.m.: he was very drunk. After hearing the evidence of a Japanese constable, His Honour sentenced the accused to three days' imprisonment.

MR. P. LARROUY, First-class Consular Chancellor, who for two years has filled that post at Yokohama has, says the *Echo du Japon*, been appointed to an important post in the Chancellerie of the French Minister for Foreign Affairs.

THE *Official Gazette* states since the 13th inst. a constant haze has pervaded the atmosphere of Sapporo, and that the sun and moon are of a blood-red colour. Clouds of ashes fall continuously. The phenomenon is ascribed to some volcanic eruption.

EIGHT deaths are reported to have occurred from the fire in the Miike Mine.

THE American ship *Chocorua*, which left Hong-kong for Iloilo in ballast on the 26th of September, has been wrecked in Mindoro Straits.

AN officer of His Imperial Majesty's Household has been despatched to Kashima, Hitachi, with orders to procure a number of falcons.

THE LAND-RENTERS OF YOKOHAMA.

THE contention that the foreign Land Renters of Yokohama are "strictly within their rights as citizens," in "asking for the grant of what is virtually a municipal charter," is an amusing illustration of the "loose talk" that too often usurps the place of argument among a certain class of this community. The Japanese are assured that they are only asked to grant "a reasonable privilege which is accorded by the Governments of all countries in Europe and by the United States to all congregations of men forming townships or cities of their own." Statements of this sort derive their strength entirely from their truth. If they have the misfortune to be false, they react injuriously on the general thesis of those that employ them. Now it so happens that in no part of the world is the right of voting or of taking part in municipal government enjoyed by aliens. Mr. JAY GOULD, or some other American millionaire, might take it into his head to invest his whole fortune in house property in London—it is scarcely a dozen years, by the way, since the right to own real estate in Great Britain was extended to foreigners—but until he became a naturalized English subject, he would be as completely debarred as a Krouboy or a Cabinde from exercising the "reasonable privilege" claimed here as a right. If this community has a sound case to take into court, why prop it up with flimsy buttresses which the most superficial knowledge of facts suffices to knock away? So far as the precedents furnished by Western countries are concerned, we have no *right* whatsoever to a voice in the municipal control of this Settlement. That may be an unpleasant truth, but it is truth nevertheless, and it cannot be alchemized into falsehood by throwing unsavoury epithets at the heads of those that utter it. Anybody might have foreseen, many persons did foresee, that when the Foreign Representatives, with one exception, arbitrarily elected to interpret the treaties after a fashion contrary to right and reason, the inconveniences of that false interpretation would ultimately be felt by their own nationals not less than by the Japanese. It is an uncomfortable place of repose, this bed of Procustes, upon which we find ourselves stretched to-day, but it is of our own making, and it must be of our own unmaking also. So far as foreigners are concerned, there would not have been much reason to complain if their Governments,

when depriving the Japanese of the power to preserve peace and order in the Foreign Settlements, had made some provision for assuming the function themselves. But they did nothing of the sort, America alone excepted. Her reasonable and just decision was that the extraterritorial clauses of the Treaties do not confer on her citizens, when residing in Japan, exemption from observing Japanese laws, but only from Japanese jurisdiction. It has been declared by the highest authorities in the United States that Americans living in Japan are bound to respect and observe every Japanese law and regulation which does not conflict with the provisions of the treaty. To United States tribunals is reserved simply the power of protecting United States' citizens against the infliction of penalties not sanctioned by the codes of their own country, or not consistent with the dictates of civilization. It may be well to consider how this isolated position of the United States affects the scheme embodied in the Land Renters' memorial of 1882. That scheme, we are told, contemplated "the grant of what is virtually a Municipal Charter," and we have the assurance of the Doyen of the Corps Diplomatique that such a grant, to be effective, must be endorsed by "unanimous legislation on the part of all the Treaty Powers." Would the United States consent to legislate in that sense? Could they consent, having already declared officially that the power to make regulations binding upon American citizens in Japan rests with Japan and Japan only? Never was there a more hopeless undertaking than that to which the Land Renters committed themselves last year. Not until the appointment of the present Committee, upon the lines wisely defined by Mr. W. B. WALTER, did there appear to be any prospect of escaping from the ludicrous dilemma brought about by the jealous arbitrariness of our Representatives in the past. We have confidence that the Committee will adhere strictly to those lines, and, above all, that it will avoid falling into the error of associating itself with any official element whatsoever. In connection with municipal affairs it can have no official capacity that is not conferred by the Japanese Government, and if it clothes itself with any such capacity, the result will certainly be failure.

FOREIGNERS IN JAPAN.

AMONG the various essays inspired by the now celebrated measures of the RIPON Government to remove the disabilities of Indian Judges, one of the most moderate and closely reasoned appeared in the August number of the *Contemporary Review*. It contains a remark which possesses much interest to foreigners in Japan. Replying to one of the arguments advanced by the opponents of the Ilbert bill, the writer, Mr. HAGGARD, says:—

Nor does the allegation that in foreign countries, such as China, Japan, Turkey, and Egypt, special tribunals exist for the trial of Englishmen, and that accordingly they might very well be left to exist in India, apply to the case of India. China and Japan, Turkey and Egypt are governed by different codes of law from those prevailing in England. Not only is the procedure different in their courts from the English procedure, but I believe that the punishments inflicted differ in very many respects from those which the customs of Christian countries permit. Naturally, therefore, a separate tribunal is claimed where possible. Again, the administration of China, Japan, Turkey, and, for the present, even Egypt, is not an English administration. British subjects might be imperfectly protected, if left altogether to the rigour of the criminal laws of those countries. It is right, therefore, for this reason, to claim in foreign countries of this class, a separate tribunal as the only method of ensuring the performance of justice. In a country like France, or Russia, or Spain, where the Administration can be trusted to do justice, on the whole, even though foreign, no special tribunals exist for Englishmen. In the event of injustice, the British Minister interferes."

The general gist of these comments is doubtless sufficiently correct to serve the purpose of Mr. HAGGARD'S argument. He might, indeed, have strengthened his case by adding that the existence of an evil in one place is no valid reason for perpetuating it in another. But being evidently quite unversed in the actual conditions, both legal and political, of the particular systems he attempts to extenuate, it was not to be expected that he should possess any knowledge of their consequences, or understand the abuses and anomalies which disfigure the administration of foreign justice in Japan at all events. With this part of the subject we do not propose to concern ourselves. Our desire is merely to note the reasons which, according to an unbiased English writer, constitute an excuse for the existence of separate tribunals for the administration of Western law in Japan. Those reasons are three. First, the code of Japanese criminal procedure is different from that of England. Secondly, the punishments inflicted differ from those which the customs of Christian countries permit. Thirdly, the administration, not being an English administration, British subjects might be imperfectly protected if left altogether to the rigour of the criminal laws, although this objection ceases to be valid in a country like France,

or Russia, or Spain, where the administration, "though foreign" can be trusted to do justice "on the whole."

With regard to the first and second of these points—for the two may obviously be included in one reply—we cannot do better than quote the words of well known jurisconsults whose criticisms of the new Japanese Codes have now been before the public for nearly two years. M. VAN HAMEL says:—

A penal code free from every reminiscence of an unprogressive, old-fashioned or cruel law, inspired by a liberal spirit, displaying a scientific sense, composed with a legislative art worthy of praise;—a code of criminal procedure which does not deserve, it is true, to figure in the first rank, and which does not open up any new horizons, but which nevertheless sanctions, in general, the grand principles of modern procedure, the irrevocable conquest of civilization and of justice;—such are the precious gifts which the Japanese Government has just given to its people; such are the works which it submits to the impartial criticism of European and American States in order to obtain from them the privilege of being placed on a footing of equality in matters of jurisdiction.

M. ESMEIN says:—

They are French institutions and French principles that the new Codes introduce into Japan. * * Scarcely now and then does some detail concerning measures or monies, some special incrimination or ethical trait, occur to remind us that we are in Japan.

M. DESJARDINS says:—

The French codes have served as models, but the compilers have sought to improve upon the works they imitated. Thus in the laws prepared for Japan we may find the means of perfecting our own.

These verdicts are final. They effectually dispose of the first two points advanced Mr. HAGGARD—points which have a just application to China's case, but no bearing whatsoever on Japan's.

With regard to the third contention, it may be summed up in one word—distrust. "In countries like France, Russia or Spain," we are told, "the administration, though foreign, can be trusted to do justice, on the whole." And why not in Japan, too? If it could be shown that there survive in this country any of the race prejudices which sway the whole Oriental policy of Western states; if it could be proved that her disposition is to behave towards strangers with harshness and injustice instead of treating them, whenever the occasion offers, with the utmost fairness, liberality, and hospitality, then indeed there might be some reason to apprehend the consequences of entrusting to her a small measure of the jurisdiction now imperfectly exercised by tribunals the majority of which do not even pretend to be competent. But nothing of the sort can be shown. In this matter it may truly be said that Japan is condemned without a trial. Residents of Yokohama assert that justice is difficult to procure in her Courts, and then, forgetting that their

experience is confined to civil cases, forgetting that to obtain justice in an English civil court it is necessary to be rich enough to pay for it, and patient enough to thread one's way through a labyrinth of useless technicalities and processes, persuade themselves that if they submitted to Japanese Criminal Jurisdiction they would inevitably become the victims of partiality and malice. There is absolutely no justification for such a fear. It is wholly the outcome of race prejudice. Newspapers whose existence depends upon the immunity they are enabled to enjoy under these faulty systems, may search out and embellish stories prejudicial to the reputation of Japanese constables, but the proceeds of this miserable and malignant occupation cannot blind foreigners to the fact, that, as an almost invariable rule, they receive only politeness and consideration at the hands of the native police. The public may be asked to believe that a half-tipsy American sailor is brutally maltreated under circumstances entirely contradicted by his own evidence, or that a Chinaman is wantonly stabbed in a sequence of events too improbable to be credited by any sober-minded person, but if this is the species of testimony upon which Japano-phobists base their case, they had better consult the home journals, in almost every number of which will be found some similar charge preferred against European or American guardians of the peace. "In Spain the Administration can be trusted to do justice," we are told, and the same must be admitted of Bulgaria, since the Administration there is actually trusted. Yet let anybody read the history of the Spanish Customs to-day, or the story of the way justice was administered by Spanish Courts in a recent case of collision between an English and a Spanish ship; let anyone compare the state of the Bulgarian criminal codes with that of the Japanese codes, and then say, if he can say conscientiously, that there is any just cause for discriminating in Japan's disfavour. Finally, there remains the argument that in asking for a small retrocession of administrative power, the Japanese actually offer us a foreign Administration. They offer to appoint competent foreign judges to try cases in which foreigners are concerned. Thus from first to last, every point advanced by the *Contemporary Review* in extenuation of exterritorial jurisdiction is shown to be invalid so far as Japan is concerned. What, then, is the difficulty? Simply this—race prejudice. The truth had better be admitted at once. Not yet has there been advanced by any writer one sound argument to prove that the wretched state of isolation in which foreigners live here to-day is attributable to anything but their own prejudices of race.

THE CANTON SHOOTING AFFAIR.

ON the 20th of September JAMES HENRY LOGAN, an out-door officer of the Chinese Imperial Maritime Customs, was arraigned at Canton, before H.B.M.'s Supreme Court in China, on a charge of having murdered one PAK WAH KING, at Honam, on the 10th of August. The testimony adduced by the prosecution, though conflicting in some respects, was unanimous with regard to the character of the accused. He was declared to be a quiet, peaceable person, not at all likely to create a disturbance. Throughout the trial his demeanour was invariably composed, and both in the moment of terrible suspense when the jury were about to pronounce their verdict, and during the passing of the sentence, his calmness was so imperturbable that those present in the Court House marvelled at his iron nerves.

Against this man, then, the following charge was formulated by the Crown Advocate, in his capacity of public prosecutor:—

The prisoner was proceeding towards his house, and on either side of the street were coolies sitting down waiting to be engaged in a tea hong. The prisoner has in his hand a stick, and as he passes along, he strikes first one coolie and then another with the stick, saying as he struck the first "one," the second "two," and so till he got to the fifth. The first four coolies make no remonstrance, but when he gets to the fifth that man asks what he means by hitting him: he says—"I was not annoying you, and why do you strike me in this way?" Logan then, it appears, became excited, and he proceeded to his own house and brought out the pistol. He was proceeding at this time from west to east, and the coolies were sitting close to his house. He went to his door, got a pistol, and came out again, coming back along the course he before followed, towards the west. The two other Europeans appear to have come out with him, and they chased the Chinese in the street. The Chinese, when they saw him coming out with firearms, ran in every direction, and got out of the way as fast as they could. He runs along this street towards the west and fires his pistol, and the bullet strikes a woman. Fortunately it does not kill her, but only wounds her. She did not know she was wounded until the people pointed out to her that she was bleeding from her back, and then she found she had a wound on her back. The prisoner, having fired the pistol, returns again from the west towards his own house, and he was followed by the woman, who was shouting out to him—"You have wounded me, heal me," and the coolies and other Chinese about also shouted to the prisoner—"Heal her," that is to say—"You have wounded her, and you must look after her recovery." The prisoner then became further excited, and the evidence it will be my duty to bring before you will show that he then proceeded to his own house and brought out another firearm—whether it was a pistol or carbine there seems to be some doubt, but that is immaterial to the case. The evidence will be that the firearm was given him by his boy, that he brought it out, and proceeded towards the east of his house,—the opposite direction to that which he had taken before, where the woman was wounded,—towards the cross-street which crosses the end of the street in which he lives. About half way, or rather less, between his house and this cross-street is a bridge, and it appears that when he got to the bridge he stooped down and deliberately taking aim, fired this pistol or carbine, with the result that a Chinese boy was killed, and that a Chinaman was wounded.

Behaviour such as that here charged against the accused compels a supposition of intoxication, temporary insanity, or a disposition so wantonly truculent as to amount almost to madness. LOGAN'S disposition was eminently peaceable. He was not

intoxicated. The affray happened between 6 and 7 o'clock in the morning, and he had been sitting since midnight playing cards with two friends, during which time the three men had shared six bottles of German beer. Further, it was conclusively proved that he was perfectly sensible. Thus the charge, as set forth by the Crown Advocate, assumes a *prima facie* complexion of great improbability.

The evidence, however, at once enables us to modify the whole of the first portion of that charge. Among the Chinese witnesses two only knew anything about the stick and the striking of the coolies. Of these two, one swore positively that the accused was not the man who used the stick: the other swore that he was. Among the foreign witnesses, one only could speak to this part of the affair. He swore that he was walking with the accused at the time of the disturbance; that neither of them carried a stick, and that the first notice they had of any trouble was seeing a comrade struggling with the Chinese in front of them. Thus the balance of testimony goes to show that LOGAN was not guilty of the preliminary violence charged against him by the Crown Advocate.

After this it becomes necessary to separate the evidence into Chinese and foreign, not with respect to credibility, but for reasons which will presently be apparent.

The Chinese story is that three foreigners, walking in the early morning in Honam, found a number of coolies sitting in the street waiting to commence work in a tea hong. One of the foreigners carried a cane, with which, having already struck a dog, he now proceeded to fillip the heads of the coolies. The latter, of whom there were five in all, made neither resistance nor remonstrance until the fifth man was reached. He put up his hands, and observed that there was no valid reason why he should be beaten, inasmuch as he was sitting passively by the road side. By way of reply he received a blow much severer than those administered to any of his comrades. Then without further reason or parley, the man LOGAN procured a revolver from his house, and after chasing the people westward, shot a woman in the back. The woman followed him and asked for compensation, a Chinese crowd, assembled in the street to the eastward, shouting encouragement to her the while. Then LOGAN had recourse to fire-arms for the second time. He exchanged his pistol for a short rifle of some sort; again chased the crowd, on this occasion in a direction opposite to that of

his previous escapade, until, reaching a bridge, he stooped, or kneeled, down, and discharging his weapon, killed a boy of twelve and wounded a man. Such was the tale told by the Chinese witnesses. From first to last they persisted in refusing to admit that LOGAN and his comrades had been in any way molested by the people or exposed to any peril at their hands.

This version is at variance with all reasonable probability. That Chinese were wantonly assaulted and even beaten by foreigners in the streets of Canton we could believe without much trouble. Unfortunately the spirit of the coward and the bully, though no longer tolerated even at public schools in Europe, too often finds unrestrained expression in the intercourse of Occidentals and Orientals. But that an Englishman, wholly unprovoked,—unless, indeed, the just and temperate remonstrance evoked by his comrade's barbarous treatment of a helpless Chinaman can be called provocation—should twice pursue a crowd of unarmed Chinese, men, women, and children, in different directions, and twice fire into their midst, hitting an old woman on the first occasion, and killing a child and wounding a man on the second; and that the Englishman conducting himself in this savagely wild manner, should be a man of hitherto uniformly peaceable and inoffensive disposition, sober, and so little liable to accesses of excitement that not even the culminating incidents of a trial where his life or death depended on the verdict could shake his composure—all this is a combination of circumstances which cannot possibly command credence among intelligent men.

The foreign version presents none of these difficulties. It is this. Three foreigners in the employment of the Chinese Customs, were returning from a friend's house in the early morning. They were not all walking together. LOGAN and JOHNSON were in the rear, side by side; NEILSEN was in front, alone. NEILSEN passed round a corner, and when his comrades came in sight of him again they saw him struggling with some Chinese. How or why this struggle began there was no evidence to show, but that it culminated very soon in the gathering of an angry mob, crying "Ta! ta!" and throwing missiles of various sorts, the testimony clearly demonstrated. LOGAN, crying out that they were about to be mobbed, procured fire-arms from his house; JOHNSON, seeing this, called to him not to use them. At this juncture a Danish subject, living close by, looked out of his window. He saw the

street full of people who seemed greatly excited, and were shouting loudly. The Dane no sooner showed himself than a stone as large as a man's fist was thrown at him, striking heavily on the masonry beside his door. Meanwhile JOHNSON was hurt by a stone in the foot, and picking up the missile he ran at the crowd, chasing them eastward from LOGAN's house. Another Dane, living next door to the former, saw JOHNSON assume the offensive in this manner, and noticed that he looked very angry and excited. Meanwhile LOGAN appears to have driven the mob away in a westerly direction and to have fired over their heads when he ceased pursuing them. The bullet struck an old woman and gave her a flesh wound in the shoulder, but the shock was so slight that she knew nothing of her hurt till the people told her. Then, according to her own account, she went "a long distance to the foreigner's house" and asked for redress of some sort. What happened immediately afterwards is not quite clear, but combining the Chinese and foreign accounts, it would seem that the mob—collected now on the east of LOGAN's house,—encouraged the woman and became once more very violent, whereupon LOGAN again advanced menacing them with his firearm. As to the nature of that firearm there was much difference of opinion. The Chinese witnesses were almost unanimous in their assertions that it was a species of rifle or carbine, and that it was handed to him by his Chinese servant. If this be true it would seem to show that the danger to which the foreigners were exposed was real enough to be recognized by others. LOGAN was next seen on a bridge to the eastward moving his weapon as though "he meant to make the Chinese think that if they came on he would fire at them." Ultimately he did fire, "over the heads of the people," according to his comrade JOHNSON's statement, but at all events in such a way that the bullet struck a boy, some forty-five yards away, and passing through his body, wounded a coolie who was standing beside him. LOGAN and JOHNSON now returned, quite ignorant apparently of the fatal event. Passing by the house of the Dane first mentioned above, LOGAN, in reply to an enquiry from the former, said that "he had been mobbed by a crowd of Chinamen who attempted to take charge of his house"—a statement which was corroborated by the subsequent discovery of a number of stones and half bricks scattered about his door, and by the marks of missiles on the wall outside.

Reviewing this evidence carefully, it

seems quite plain that what LOGAN did was done under the influence of a strong sense of serious peril to himself and his comrades. The disturbance did not owe its origin to any act of his, but had already passed beyond the control of gentle measures before he interfered. It will not be extravagant to attribute his violent impulse, in great part, to a belief that the only hope of preventing bloodshed lay in an impressive demonstration of force; while, in the absence of all proof to the contrary, justice forbids us to suppose that he ever contemplated murder. The jury evidently took this view of the case. They returned a verdict of manslaughter. The Judge, in summing up, said that, "on the ground of self-defence, he could see nothing which justified the prisoner in firing," but, whether this be true or no, it is certainly true that LOGAN may have only meant to intimidate the crowd. When a man fires a rifle or a revolver into a mob, he knows that he can hardly fail to kill or maim somebody. Such an act is only possible under the influence of over-powering excitement, whereas it was proved that immediately before firing LOGAN was sufficiently collected to argue with his comrade, and that immediately afterwards the two went to a store and drank some beer. The reasonable inference is that his object was to deter assault, not to inflict injury. Under any circumstances, however, the man's method of using fire-arms was culpably reckless, and he has paid dearly for his fault. Seven years' penal servitude in Hongkong is only better than the extreme penalty of the law in being less disgraceful. The Chinese, with whom the old code of "a life for a life" has lost none of its force, are doubtless dissatisfied; but justice, we believe, is fully satisfied, and that is much more important.

FRENCH COMMERCE.

WHEN France emerged from the cruel ordeal she had to endure as a consequence of the Empire's corruption, the sympathy Englishmen felt with her sufferings was replaced by hearty applause for the eminently practical direction taken by her recuperative energies. Her commercial vigour appeared to have received such an impulse that it became a question whether she had not gained more by her disasters than the Power that inflicted them. But of late her trade statistics have begun to present a less satisfactory aspect, and though foreign attention is, for the moment, chiefly directed to the sudden restlessness

of her national policy, her own economists, as well as those of England, are disposed to regard these monthly returns with some anxiety. A short time ago, indeed, everybody was crying out that French commerce had entered upon a period of rapid decline, but more careful analysis subsequently proved that though the aggregate value of the yearly exports showed a considerable diminution, their bulk had not been similarly effected. Nevertheless it is indisputable that since 1875 the development of the Republic's foreign trade has virtually ceased, or at any rate received a sensible check, and many eminent writers have recently devoted themselves to consider the causes of this change. The conclusions they have formed are full of interest and instruction.

In the first place, it is maintained that many of France's former customers are now her competitors. The system of international exhibitions and the development of technical instruction have enabled the English and the Germans to manufacture many quasi-artistic articles of *demi-luxe*, the monopoly of which had previously been enjoyed by France. In the same context are mentioned the evils of a faulty legislation with regard to property in industrial inventions. French models are copied with impunity, and French marks used without reserve.

Second in the category of causes is placed the gradual increase of wages. These have become excessive in some cases, and the prejudice thus done to industrial enterprise is still further augmented by the extravagant ideas and demands of certain classes of artisans. Mr. JOHN BRIGHT once said, addressing an audience of workmen:—"Just now as I was on my way to this place to speak to you, I watched in the street a magnificent carriage pass me; and in that carriage were two splendidly dressed ladies. Who made that carriage? You did. Who made those splendid dresses? You did. Have your wives any such carriages to drive in? Do your wives ever wear clothes of that sort? I watched that carriage farther, and I saw where it stopped. It stopped before a stately house with an imposing portico. Who built that house? You did. Do you and your wives live in any such houses as that?" Similar democratic phantasies have apparently pushed common sense out of its place in the Parisian workman's mind. An artisan was recently heard to declare that with an annual income of \$700 he could not support himself, his wife, and his son. Better off than his *confrères* in Germany, Belgium, Italy, or England, he still believes

that Republicanism has not done enough for him. Thus his stipend figures for so large an amount in the cost of production, that foreign competition is powerfully assisted; while, at the same time, his peremptory and violent methods of enforcing his exactions diverts capital from channels where it is exposed to all the perils of strikes, interruptions of business, and constantly augmenting impediments to success.

The development of Protectionist ideas throughout a great part of the world is another condition which weighs heavily on France's export trade. Discussing this subject French economists employ an amusingly self-sufficient tone. It was owing, they say, to French initiative that the civilized universe entered the path of Free Trade in 1860. CHEVALIER and COBDEN were the pioneers. France converted the continent of Europe and the nations of the New World, and it only remained for France to keep her disciples in the right path. But the Republic had no sooner grown old enough to render itself intelligible than it began to shout for Protection. From 1870 France became a phrasedist propagandist of this old fashioned creed, and Italy, Austria, Germany, Russia, and the States of the two Americas were not less ready to follow her intellectual lead than they had been ten years previously. The result was that she succeeded in closing many of the most important foreign markets to her commodities.

Another, though admittedly a minor, disadvantage under which French merchants abroad, and therefore France's foreign commerce generally, are said to labour, is the incompetence of her Consular officials. The Consuls are accused of having no commercial education and, in a majority of cases, little if any aptitude for the mercantile duties of their posts. Englishmen will be disposed to smile at this complaint. Their conceptions of the benefits conferred on trade by official assistance are not such as to render the mercantile abilities or disabilities of Consuls a matter of serious moment.

Among all these embarrassments, however, none seems to interfere more seriously with the development of French trade in foreign lands than the law of military service. From this there is no exemption for any Frenchman. The emigrant, if he returns to France is treated as a deserter: though he be at the antipodes, he must rejoin the corps to which he belongs within three months after a declaration of war. A striking illustration of the difficulties thus caused was recently given by a mercantile firm in Havre. The head

of the house wrote to a French journal to the effect that the exhibition at Sidney had shown him the possibility of establishing an agency in Australia, and that he had two young men eminently fitted to undertake the work. Yet he dared not embark capital in such an enterprise, knowing that at any moment his agents might be compelled to quit their posts and leave his affairs absolutely without management. It is difficult to see what France could lose by a little more liberality in this respect. To exempt a few hundred conscripts from military service ought not seriously to inconvenience a nation which numbers its soldiers by millions. The contrast between these inelastic customs and those of Germany and Belgium is very marked. In the former country every young man obtains, without difficulty, exemption from all military service if he undertakes to live for a certain time in some part of Australia or the Orient; the expenses of his passage are repaid to him, and the Consuls give him every possible assistance. Belgium goes still further. There every graduate of the College at Anvers is entitled to exemption from military duties if he emigrates, and if he enters into an engagement to settle somewhere in Japan, Australia, or China, the Government gives him a pension of 6,000 francs per annum during five years. Without venturing to say that such a large measure of assistance is either necessary or wise, one cannot but marvel at the short-sighted harshness of the French system. France may annex Tonquin or the whole of the Cochinchinese peninsula if she pleases, but how are the new provinces to be peopled? Surely not by men who must either abandon their country altogether, or consent to be treated as military deserters if they revisit it.

WAR IN SIGHT.

"WAR IN SIGHT," is the heading of a remarkable article in the *Gazette Diplomatique* of the 31st of August, which we translate as follows:—In its recent sensational article the *Gazette of North Germany* propounds that France is the only State that constantly menaces the peace of Europe. If the moment were not grave the assertion of this sheet would appear puerile. Anyway, the organ of the German Chancellor chaffs pleasantly. You shall see how.

You will remember that in 1879 Europe was threatened with a big war. M. de Bismarck, ever since 1875, "had it in" for Russia, the only continental power then capable of opposing his will. Accordingly, he urged Austria aided by England against her, promising his own concurrence in the form of an armed neutrality. Russia, by the fall of Lord Beaconsfield, then

escaped a grave danger. The English electors poured cold water enough on the head of the great Chancellor to cause him to postpone his intentions until a more propitious occasion.

That occasion now appears to him to have arrived. Eastern affairs have for many years supplied him with an opportunity to create an acute antagonism between Russia and Austria. This latter power, always incited and encouraged by him, has no respect now for her rival's susceptibilities, and seeks openly to grab all the advantages which the Russians paid for so dearly with their blood in the Balkan peninsula. This policy, so long and so cleverly pursued by the Chancellor, is about to bear its fruit. At Vienna it is only M. de Bismarck's counsels that are listened to; and he, although very impatient to see war break out, has consented to have it postponed until next spring. Austria's armaments are far forward: her strategic railways are nearly finished; and at this moment a war-fund is being created at Vienna. The Austrian army is good, well provided with everything; and its staff has for a long time been instructed by Von Moltke. Hence Austrian military men hope to be able to hold their own with the soldiers of the Czar, especially because Bismarck has promised Austria the armed neutrality of Germany—a fact which would compel Russia to mobilise 250,000 men upon her German frontier. For his part, the Chancellor, obliged to consider somewhat the Emperor William, who is ever more or less of a Russophile, only asks for a rectification of the frontier towards Kalisch. He will allow Austria to take what she likes.

Nor is this all. Having promised Austria to prepare diplomatically for this war, Count Bismarck has not lost any time. Italy being capable, by disagreeable digressions and the work of the Irredentists, to impede the movements of Austria, has been, through the decision of the Chancellor, admitted into the Austro-Hungarian alliance. Her rôle is to hold her army on the North-western frontier, in order to oblige France to divide her forces, in case that country should show any disposition to meddle with the trouble. On the side of Spain similar efforts have been made. The Count of Solms, German Minister to Madrid, has worked well. King Alphonso appears well disposed to listen to the seductive proposals of that diplomatist, if, in any way he can find a Minister ready to second this somewhat risky policy—which is not quite certain. In short, from this side, too, Prince Bismarck has hopes.

As for France, the Chancellor deems her isolated, in difficulties with England, held in check by Italy and Spain, condemned to inactivity by her finances and that colonial policy which he himself so heartily encouraged. In these conditions he hopes that France will not dare to make a diversion in favor of Russia; and, if she dared do so, he is convinced that Germany and her allies could crush her, and this time definitely.

So much for the big Powers. Now let us consider the small. Here again Count von

Bismarck is near obtaining comparative success. First of all, Serbia has entered thoroughly into the Austro-Germanic orbit. King Milan takes counsel at Vienna, and will place his army at the disposal of Austria. As regards Roumania matters are not quite so far advanced. King Charles, it is true, should have received some precious advice on the occasion of his trip to Berlin; but his people have few Austrian sympathies. Nevertheless there is a way of arranging matters. The Roumanians hunger for territorial aggrandizement: they will be offered some in Bessarabia or Bulgaria. In these circumstances, the Ministers of King Charles will come to an understanding with Austria on the Danubian question. This is probably how things will go. Since France abandoned Roumania in the question referred to, her influence at Bucharest should be nil; and the Roumanians will doubtless end by following the counsels of Germany, whose diplomacy does not cease in encouragement to them to come to some understanding with Austria.

Roumania has an army of 80,000 men; and, by the accession of that country to the Austro-Serbian alliance, Prince Bismarck hopes to hold in check the Montenegrins, the Bulgarians, and even the Turks, of whom he is a little suspicious. In fact he does not rely upon the Sultan, who would like to await developments. But the co-operation of Roumania and Serbia on this side would suffice.

Thus the diplomatic campaign is almost finished, and, we must admit, the Chancellor, on this occasion, has once more displayed remarkable ability. Notably at Vienna he has managed to overcome all obstacles. Count Kalnoky, who was for a moment irresolute, has been won over to a course which the Austrian soldiers ardently desire. Even the Archdukes, formerly Russophiles, speak of war with the Muscovites as an impending event.

Only one thing is wanting to accomplish the Chancellor's wishes—namely that Russia herself should desire and accept war. Certainly she would be harassed, oppressed, and, so to say, sent to the wall; but her diplomacy is famed for its foresight and vast wisdom. She will well understand the immense danger of a war in the present condition of Europe. For it is useless to indulge in any illusion. If Russia were beaten Germany would be absolutely omnipotent: there would no longer be any limit to her power. One might as well say that Europe would become German for fifty years.

If, on the other hand, these manoeuvres should fail; if Russia knew how, as we hope she will, to avoid the war that threatens her, Prince Bismarck, in such case, would experience a check much more startling than that of 1879. His game was then too thoroughly exposed for him to recommence it, and Europe may yet enjoy the tranquillity she so much requires.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinion of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE ABUSE OF THE FREEDOM OF THE PRESS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In recent issues of your journal, I find a letter from Colonel Gordon to the *New York Herald*, and an extract from a speech made by Mr. Gladstone in the House of Commons. Colonel Gordon asks:—"Who would dare to oppose the European Colony in Egypt or China and remain in those countries?" Mr. Gladstone says he does not remember that political reforms in the Colonies "have ever been received except with opposition, by those who, up to that time, laid claim to be what was called the British party, and represented themselves as having a monopoly of loyalty."

For signal confirmation of the truth of these remarks, it is only necessary to refer to the extraordinary outburst which their publication provoked from the local press. It would appear that to be loyal and to be British in Yokohama, it is necessary to lay aside all respect for truth, generosity, and justice. Yet I venture to think that these are qualities which constitute the staple elements of what we are proud to call "English character."

Nine months ago the Rev. Charles Voysey, speaking at Langham Hall on the subject of "The Abuse of the Freedom of the Press," made use of the following language with reference to certain journals which he described as "infamous publications":—

"I can imagine some people to be rather shocked and almost hurt by my endeavour to reprove them for reading papers of this sort; they may not only resent as an impertinence this attempt at clerical interference, but also deem it a mistake to decry a large portion of the periodicals of the day which have won their place of recognition among people of wealth and rank; they may also quite honestly say that these papers do them no harm, that their minds have not suffered either perversion or corruption from reading them, and, on the whole, they are so clever and sometimes so sparkling that they rather like the 'fun' even when they do not agree with the sentiment. Now what I would fain prove is that the more leniently these papers are regarded, the more evident is the mischief which they have already done to the mind without its being conscious of the injury. There must, as it seems to me, be a moral torpor, a moral paralysis, a moral blindness, in being able to read such articles, etc., as I have seen lately, without horror, without shame, without disgust, or, without seeing the depth into which the writer has fallen, dragging with him his approving readers."

"If these articles be at all typical, then I say that, compared with them, the *Saturday Review*, in its worst days of bitterness and hostility to much that was good and noble (for which it was called the 'Saturday Reviler') was innocence itself. At its worst, I say, it was at least written by gentlemen who never forgot the rules of ordinary courtesy, even if they sometimes preferred slander to accuracy and satire to criticism. But these papers are not only bitter, they are intensely cruel and unspeakably vulgar. The combination of vulgarity and cruelty ought to be enough, without any other fault, to give a painful shock to our moral sensibility, and if we can read them without such disturbance, it only proves how deeply and grossly we have degenerated from even the 'bad old times.'

"The daily Press is generally free from any taint of the kind. As a rule it is marvellously just and often very merciful. I suppose it is contrary to newspaper etiquette for one paper to hold up another to animadversion, otherwise we might wonder at the silent endurance of our respectable

Press under the insolence and immoralities of that class of papers to which I am referring. But some one ought to speak out, some one ought to protest against the extremes of indecency which have been revealed; and therefore, although I know well what a terrible weapon they wield, how cruelly they can take revenge on anyone who has offended them, yet I would not be deterred by the worst they could do, or by the falsehood that they could say, from delivering my soul of its obligation to protest against so glaring and wicked a misuse of the sacred liberties of free speech. If any of my brethren do not share my indignation and shame, it is only because they have been poisoned and corrupted by the atmosphere in which they have so carelessly suffered themselves to live and breathe."

"I spoke this moment of the sacred liberty of free speech. I am, I hope, the last to desire to see that liberty curtailed, or to have the gag put upon any lips, lest the truth lurking behind them should be stifled. But liberty at its highest and best is never unrestrained; whenever not restrained it degenerates into license and lawlessness, and, worst of all, it must in the end beget despotism, by reaction of society in self-defence. Those who misuse their own liberty imperil the liberty of others. In the days of duelling, now gone by, no one would have dared to write such articles and personal attacks as I have recently read. Had such a thing been possible, the writer would have been shot at the next morning, or severely beaten with a horse-whip: and if such was the regard of our forefathers for the proprieties and courtesies of life, what shall we say of ourselves if we can read and possibly laugh over these scurrilous columns, and call them 'very clever?'"

"The holder of high rank is not less a man because he wears a title. His mind is quite as active, his heart is as tender, his sensibilities as keen, and his sympathy for his deeply insulted wife and family none the less for wearing the ermine and living in a palace. I would not ask that he should be screened from insolence and torture because he occupies a post of great dignity, though good taste would justify the appeal, but because he is a man like ourselves, and has feelings which can be lacerated and stung. But here is our shame that for the horse-whip we substitute the laurel-leaves, for just execration laughter, for indignant burning of the papers by the public hangman we give a place on our table and a file at our clubs. Shame, shame upon us for this!"

"I have often dwelt on the subject of popular morality, showing how very little real virtue there is, how our average decencies and proprieties are the result more of unconscious habit and custom than of any earnest struggle with ourselves. I have reminded you, and most of all myself, that we are all bound, each by his own effort, to raise if possible the moral standard of our time, certainly not to be contented with the prevailing dead level, still less to sink below it. And it seems to me that this part of our common life needs prompt and vigorous correction and cleansing. The moment the case is put before us in its true light, we cannot help seeing the facts. We read in a given paper words spoken of or addressed to others which we should be ashamed to say ourselves of or to anyone whom we know. The idea of our being so coarse, so brutal, is shocking to us, and yet because we find it in print, because it is decked out with the false diamonds of sparkling satire, we laugh at it instead of being sad and ashamed. By degrees the mind acquires a taste for this sort of literature and revels in what is racy or spicy or pungent, no matter what slander it covers or what cruel venom lies in its sting. Young men so corrupted begin to emulate what they admire, and cultivate that very element in their nature which for humanity's sake they are most bound to suppress."

"Can it be good for any one of us to see ridicule, scorn, and even coarse abuse made a profession of, made a prolific source of income, and studied as if it were one of the fine arts? And yet I am understanding the facts when I say this is the spectacle afforded us week by week by a large portion of the periodical Press. Now that duelling is put down, as of course it should be, we ought to be more, and not less, tender towards the susceptibilities of other men; and I say that the vulgarity and the cruelty of some of the attacks now made on quite defenceless persons are proofs of a cowardice

which deserves the condemnation and the chastisement of all true men."

"I ask again how would anyone of us like to be assailed in a manner even more painful and humiliating than being pelted in a real pillory? I do not know a single person so hardened and devoid of feeling as not to wince under an attack of this kind—unless it be possibly the person who wrote it."

"By this unvarying test, we see how severely this conduct must be condemned; for I deliberately say that the persons who are assailed have no consolation or compensation for this injury but one—and that is the knowledge of the source of the attack. It is almost a comfort to receive insults from those whose laudations would only soil us."

"I ask you then, my friends, is this the kind of paper that you will continue to patronize? If these papers fully represent the real world and society in which you live and move and bask, surely the world had never sunk so low or more needed prompt elevation and cleansing. Is this to be the tone of thought and feeling in which we desire to see our children grow up to manhood and womanhood? Are these the manners we would wish them to emulate? Is this the respect due, we will not say to office, but to human dignity? Is this the biting cruelty that we—gone half crazy over our dogs and cats—can witness towards our fellow-man without a word of remonstrance or a blush of shame? It is said you may know a man by his friends; quite as truly it has also been said 'you may know a man by his books.' So also it may be said 'you may know a man by his favourite newspaper.'

"Better it were almost to give up our liberty of the Press than to witness and endure its degradation. In common charity for those who cannot chastise their assailants, let us have an *Index expurgatorius* for the suppression of insolence and for the prevention of cruelty."

"No doubt it is most wholesome and necessary for all who occupy a public position that they should be open to the freest criticism, and that they should keep ever before their eyes the fear of deserved disgrace, and so any tendency to carelessness or overbearing be duly checked by the restraints of public opinion: but all this is totally distinct from the personal insults of which I have complained. Unreserved criticism of a public man's actions and words is not only legitimate but useful, not only useful but can only be made good by being kept perfectly free from vulgarity and malice. I do think the time has comewhen the clean and righteous portion of the Press should make its protest against the discredit brought down upon the whole order of editors and writers by the scandalous irregularities of the few. I have no faith in my own feeble powers to contend with this widespread abuse—but I may cherish the hope that what I have said to-day may reach the ears of the men and women who have it so vastly in their power to affect and to lead public opinion."

I do not think that it would be possible to write in more appropriate terms than the above of the journalistic displays of last Saturday.

I remain, &c.,

L. E.

Yokohama, October 15th, 1883.

TRANSLATIONS FROM NATIVE JOURNALS.

MUNICIPAL AGITATION AMONGST FOREIGNERS.

(Translated from the *Mainichi Shimbun*.)

The foreign residents of Yokohama have held two meetings since the 1st instant in order to introduce a great reform into their Settlement. We are informed that in March last they convoked a meeting and drew up a memorial suggesting the reform, which had been forwarded to the Japanese Minister for Foreign Affairs through their Consuls and Ministers. A short time ago, Mr. Oki, Prefect

of Kanagawa, addressed a reply to them. Dissatisfied, however, they held meetings on the 1st and 8th instant. A perusal of the report of the said assembly shows that the memorialists desire to control municipal affairs, police and construction of the roads, independent of the local Government of Kanagawa. The Prefect, however, opposed their demand and exposed its unreasonableness. The first meeting ended in the election of a committee of seven persons. The opinions then expressed were, with some exceptions, entirely valueless. In the second meeting, the following resolutions (our authority is the *Japan Herald*) were passed:—"That a fund be started to be called 'The Yokohama Municipal Fund' which shall be under the control of the Chairman of the Committee. That land-renters be invited to contribute thereto at the rate of 1 cent per *tsubo* for Settlement and half a cent per *tsubo* for Bluff lots held by them, provided always that no land-renter be asked to pay more than \$10 (Ten Dollars) for all the lots registered in his name. That householders not being land-renters, be asked to contribute to the fund \$1 per house."

The agitation of the foreigners demands a rebuke on our part. Before proceeding to point out their errors, it is important to know the history of the municipal management of the Settlement. It is as follows:—

At the opening of Yokohama and the settlement of foreigners in the designated part of the town, the municipal control of the Settlement was undertaken by the foreign residents, the expenses thereof being defrayed out of a fund created by deducting 30 per cent. from the ground-rents payable by the foreign lease-holders to the Japanese Government. The arrangement was as follows:—the lease-holders paid the ground-rents to their respective Consuls, who, after deducting 30 per cent. for municipal expenses, transmitted the remainder to the Governor of Kanagawa. The lease-holders having, however, found that the fund thus raised was insufficient to meet the municipal expenses, and that they were unable any longer to continue the control in their own hands, convened a general meeting, at which it was decided that the practice of retaining 30 per cent. of the ground-rent should be discontinued, and that the Japanese Government (i.e. Governor of Kanagawa), should be requested to assume control of the Settlement. Accordingly on the 15th July, 1867, a memorial embodying these resolutions was submitted by the foreign residents to the Ministers of the Treaty Powers, who after deliberation, forwarded to the Tokugawa Government a draft convention consisting of seven articles, signed by the Ministers for Great Britain, the United States, Prussia, and Holland, and bearing date the 28th October, 1867. This convention having been agreed to by the Minister Ogawara Ikinokami on the 4th November of the same year, it was arranged in accordance with Art. I thereof, to establish a municipal office for the Settlement and to appoint a foreign director subordinate to the Governor of Kanagawa. But as there was at the time no person deemed eligible for the post, Mr. Dohmen, of the British Consular service, was appointed provisionally. Subsequently, on the 11th May, 1868, Mr. Benson, an American citizen, was appointed by the Governor to the post of municipal director with an office on the premises of the Sainbashi. The principal duties of the municipal director were:—the direction of police matters; collection of ground-rents and taxes of houses of entertainment; issuance of title-deeds; determination of the boundaries of lots; repairs and cleaning of roads and streets; registration of Chinese subjects, &c.;—in short, the control of all executive measures affecting the Settlement. These functions were exercised under the orders of the Governor. The necessity for the establishment of such an office at the time, arose from the inexperience of our local authorities in matters of police, engineering works, &c.; but after a time, great improvements having been introduced into all branches of the local government, it was thought that the necessity no longer existed of continuing the special office of municipal director, and in consequence Mr. Benson was released from his duties, and the Municipal Office was closed on the 30th June, 1877. This determination was duly communicated to the foreign Consuls who raised no objections thereto, while the British Consul in his reply dated July 4, 1877, expressed his approval of the arrangement, and since the date named, the business of the office has been conducted directly by the Consuls.

As will be seen from the above foreigners themselves entrusted municipal affairs to the local authorities in 1867, and not by the demand of the local authorities. The foreign residents must be aware of this fact. In former years, they felt a burden in maintaining the Municipal Government

and requested the Japanese authorities to assume municipal control. But to-day, they attempt to regain it under superficial pretexts, and in doing so do not hesitate to formulate various charges against the local authorities. What an incongruity! They do not hesitate to reproach the Japanese authorities, but have not the slightest inclination to reflect upon themselves! Were the police system inefficacious since municipal control was placed in the hands of the local authorities in 1867, the complaints would be just. Were the construction of, and repairs to, the roads inferior to those undertaken by the foreigners themselves, the complaints would be reasonable. However, when we inquire into the actual state of affairs, we find that their complaints are groundless. We are convinced that they are no more than another abuse of extra-territoriality, that bulwark behind which the foreigners indulge in scoffing at the legislative rights of Japan, but nothing else. We will proceed to show that their clamour is groundless. The *Herald* and *Gazette*, both of them mouth-pieces of the foreign community (though the *Mail* often disagrees with us, in this instance its views are worth taking into consideration) publishing the minutes of the meeting held on the 1st instant, remark:—"Yokohama was opened in 1859. Five years later the necessity of local control pressed itself upon the attention of the residents. Meetings were held. On the 7th March, 1865, a scheme was proposed and approved by a meeting; it was subsequently ratified by the authorities; a council was elected, and held its first meeting June 9th, 1865. This council had undertaken a task for the due performance of which it soon discovered its income to be inadequate. The Japanese authorities had consented to permit the council to receive 20 per cent. of the ground rent: this yielded about \$6,000. There were other sources of revenue derived from the taxation of taverns, &c., and the total income of the council was approximately \$10,000. . . . The want of funds and of enforceable regulations, left the council no alternative but to surrender a function it was impossible for it to carry out, and it ceased to exist in November, 1867," &c. This is what the foreigners assert to be the correct version of affairs. Do they know that heretofore the Government expended only *yen* 10,000 to *yen* 20,000 for policing the foreign Settlement? But in the 14th fiscal year of Meiji (1881) the Government set down the sum of *yen* 30,000 for that purpose, and in the 15th fiscal year, increased it by *yen* 15,000 making the total *yen* 45,000. When the foreigners had the municipal control themselves, they expended only \$10,000 for all affairs; whereas the Government expend more than *yen* 40,000 for policing only. For this reason, they ought to thank the authorities. On the contrary, they libel the police officers and make an unwarrantable demand. However anxious the Government may be to treat the aliens with the utmost courtesy it should not listen to such a demand. As regards the complaints about the roads, we may mention that the local authorities spend a large sum of money thereon. For instance, sea shingle is only used for repairing the streets in the native town, but in the settlement small pieces of the flat stone called *warikuri* are used. This costs twice as much as the ordinary shingle. This is one of the proofs that the local Government is paying much attention to the maintenance of good roads in the foreign settlement. As regards the drainage, it is almost unnecessary to mention that last year a large drain was constructed at an enormous expense defrayed out of the

treasury. Its length is one mile and a half, and it is constructed with bricks. The expense was estimated at *yen* 100,000, and though it is expected to be reduced owing to the depreciation of all commodities, it will not be less than *yen* 70,000 or *yen* 80,000. As the foreigners confess, they had great difficulty in collecting the expenses (which amounted to \$10,000) when the municipal management was in their hands and when the Government granted them 20 per cent. of the land rent. In spite of this fact, they formulate groundless charges against the local authorities who expend *yen* 70,000 to *yen* 80,000 for the construction of drains only. We are at a loss to account for their clamour. Even though the total land-tax were appropriated for municipal expenses, the burden would prove too heavy for them. This view is more than confirmed by the statements made in the *Gazette* and *Herald* that 20 per cent. of the land-rent yielded \$6,000 and by the inference that, even though the total land-rent (which, according to the above calculation, amounts to \$30,000) were appropriated, it would be insufficient to defray the expenses of the construction of the drains only. It is not unfair to say that the foreigners are unable to defray the expenses. We are led to the conclusion that the Government treats them with excessive courtesy and that it expends too large a sum for the benefit of the Settlement. If it has sufficient means to expend this large sum, the money might be appropriated to reducing the taxes of the peasantry. The foreign residents ought to feel grateful for the action of the Japanese Government; but they do not. The more courtesy the Government extends to them, the more they demand.

In continuation, on this subject, the above paper says:—"The foreign residents say:—"The Council further urged the adoption of municipal regulations similar to those in force in Kobe and Shanghai." We are unacquainted with the municipal laws prevailing in Shanghai; but we think that the policing and the construction of roads are in the hands of the foreign residents, the system being somewhat similar to that resorted to by foreigners in Kobe some years ago. We will show that the charges against the police force of Yokohama are groundless. Foreigners are complaining that theft and prostitution are not checked. When foreigners in Kobe had the police control in their own hands, it was not successful at all. This is attested by the fact that they entrusted the police affairs to the local Government of Hiogo. Is the Japanese police law inefficacious, and that of foreigners efficacious? Why, if the foreign police system were good, did they surrender it to the Japanese authorities whom they constantly denounce? This will show that their demand is unreasonable. We are informed that, when the supervision of the Kobe settlement was in the hands of foreigners, they engaged Chinamen as police, but soon finding the arrangement inoperative, requested the local authorities of Hiogo to put Japanese police in the Settlement. Thus, at the nearest port foreigners have a conspicuous instance of their inability to manage for themselves. The residents of Yokohama should have learned by this lesson to place confidence in the Japanese police. On the contrary, they are following the same path to failure. This is to be regretted. Suppose they claim, in support of their contention, that the failure in Kobe was due to the fact that spiritless Chinamen were employed in place of European police. This opinion appears sound to a certain extent. European police may be better than Chinamen. The question suggests itself:—Can

foreign residents of Yokohama afford to employ European policemen? The land rent—\$60,000—in question, is not sufficient. The employment of European police in the Settlement can be talked about, but cannot be practically carried out. The only way open for foreigners to get out of this discomfiture is to comply with the wishes or the directions of the local Government of Kanagawa.

Foreigners argue that Japanese police are wanting in energy, and do not bring the thieves to justice and ascribe it to the following cause:—"The wages of the constables range from 7 to 10 yen per month; of the sergeants and inspectors from 15 yen upward. There is abundance of evidence obtainable that no respectable man (and the police are said to be enlisted from a superior class of the people) can maintain himself decently for less than ten yen per month; yet the average wages per capita of the 180 constables is yen 7.40 per month only. Where these men have families and dependents the difficulty is still greater; and in many cases the wives and female relatives of constables are compelled to seek employment in tearing godowns and other similar occupations.

• • • • • No police force can be efficient that does not consist of men adequately paid to place them above temptation," &c. They have not, however, proved that the police connived at robberies; but they speak only from mere presumption that because their wages are low the police participate in the robberies. True, the Japanese police are not paid well as compared with their foreign *confrères*. But it is not reasonable to assert that because their wages are meagre the Japanese police connive at the robberies. We are, however, convinced that the police supervision is not so efficacious in the Settlement as in the Japanese town. Two policemen on duty in the Concession cannot do what one policeman does in the native town. This is not due to the fact that the wages are low or that there exists a difference in the intellect and physique of the two. But it is due to a certain obstacle in the Settlement that prevents the Japanese police from exerting their full energy. What is that obstacle? It is the exterritoriality which we strive to abolish and which foreigners tenaciously cling to. Suppose a policeman chases a thief who runs to the Settlement and hides himself in a foreigner's house. The gate is not closed nor is there an entrenchment that prevents the officer from entering. But the police cannot enter the premises; because there is an invincible bulwark that he cannot demolish. It is exterritoriality. A secret prostitute runs into a foreigner's house and hides herself. The officer cannot catch her, because of the fear of violating the treaty. Hence, the police are obliged to apply to the Consuls for a warrant; and when they come back to the house armed with it, the offender has escaped. What the police then get as reward for their exertion, is the useless warrant and fatigue. Thus, they are prevented from executing their duty in a satisfactory manner. Even though they were endowed with the sharpness of Kiro and with the pedestrian swiftness of Kairen, they would not be as successful as desired by the foreign agitators. How much, then, must this be the case with the Japanese police who are not gifted with either one of the above faculties? Foreigners' anxiety to improve their municipal affairs is good. To attain their end, they should co-operate with us to abolish exterritoriality and to enable Japanese police to make free execution of their duty. After this, they can formulate charges against the police, if the latter are inefficacious. It is only reasonable that

the Prefect of Kanagawa should have rejected their memorial.

We predict that the Municipal Reform Convention will not achieve success and that the members will soon come to grief. They held two meetings, and at the second one, elected a committee of seven persons whose term of office is twelve months. They are taking steps to create a Municipal Fund to which the land renters are asked to subscribe, for the Town, 1 cent per *tsubo*, and for the Bluff, half a cent per *tsubo*. The house-owners not being land-renters have to pay \$1 per house. Can the convention succeed? We will reply that it is an assembly with no authority whatever; and so long as the impost of the dues has no legal sanction, it cannot be enforced. It is merely a private meeting composed of those citizens interested in the movement. Suppose there are upright men who are satisfied with the municipal management of the *Kencho*. They will say that they have not voted for the representatives to the convention; that it being a private meeting of the citizens, the agitators ought to defray the expenses; and that they will not pay the dues which resemble a tax. How then can the convention get over such opposition? Will they bring action against the opponents? No, they cannot. We cannot see why aliens who are credited with being clear-sighted should show such want of foresight. Although the meeting was called a general meeting of the foreign residents, yet that is a misnomer. Chinese residents who equal the Europeans in the amount of property they hold were altogether excluded from it. They are doubtless foreign residents, yet they were not represented at the meeting. There is a great discrepancy between the fact and the name.

Having thus far argued—we are actuated by an anxiety to prevent foreigners from wasting their time—we remind them that we do not contend that all meetings are useless. If a meeting were proposed for discussing the abuses of exterritoriality and reporting views thereon to the Japanese Government and the foreign representatives, we would gladly participate in it. If foreigners, however, importune the Prefect with unreasonable demands, insisting upon the continuance of exterritoriality, which prevents the growth of mutual benefit, and libel the police without ground, we are bound to show that they are wrong.

THE OPENING OF THE HORONAI RAILWAY.

(Condensed from the *Nichi Nichi Shimbun*.)

The ceremony of opening a railway in the Horonai coal mining district, Hokkaido, was at first arranged for the 15th of September, but a postponement was necessitated on account of the death of the two infant Princesses. Finally the ceremony was performed on the 17th of the same month in the presence of His Imperial Highness Komatsu-no-Miya, His Excellency Oyama, Minister of War, and other dignitaries, who proceeded to Otani by a special train on the afternoon of the 16th. The terminus and the other stations were decorated with national flags and triumphal arches. His Highness Komatsu-no-Miya entered the train at the Temiya station, under the guidance of Mr. Matsumoto, an officer in charge of the works of construction. He was immediately followed by the Minister of War, General Soga, Mr. Yasuda, Superintendent of the Hokkaido Bureau, and many other officers and prominent citizens. The start of the train was greeted by a display of fire-

works, and an outburst of music from the Band. At 7 a.m. the train left the station. The tunnel at Suitengu was reached in a moment, and passing a bridge at Irifuncho, about thirty feet higher than the level of the road, the cars arrived at the Sumiyoshi Station. Here a short halt was made, after which progress was resumed, the train taking in passengers who had assembled from neighbouring localities. The train again passed through a tunnel, and by a place known as Shiwomidai, whence after several windings, with the blue sea on the left, and passing by the hills of Kamū and Kotan, it reached Zenibako through two other tunnels. From this place the road goes in an oblique direction. Passing Karukawa and Kotonri, the train arrived in Sapporo at 8.45 a.m. Fireworks were displayed in honour of the occasion.

The number of passengers in the train necessitated its division into two parts, which proceeded up the incline, and, crossing two rivers, reached Noboko, fifty feet above the level of the Shirosishi river, and over streams and mountain defiles until at last Horonai was arrived at. Here, after refreshment, His Highness inspected the pits under the guidance of Mr. Yamanouchi. The Prince and the Minister of War were first clad in Aino robes, made of bark, and called *adushu* or *mejiri*. A joke at the expense of the corpulent Minister and a stanza in honor of the Prince preluded the entrance to the mines. After inspecting the descent of the coal-cars down the Takinosawa incline, the distinguished party returned to Sapporo, arriving at 4.35 p.m. There was a bustling crowd of sight-seers at the concluding ceremonial.

As soon as it was reported to the Prince that preparations were completed, he repaired to the site under the guidance of the Superintendent of the Hokkaido Bureau, who represented the Minister of Agriculture and Commerce. His Highness Prince Akihito Shinno, of the second Imperial rank, having taken his seat, General Soga, His Excellency Inouye, the Vice-Minister of Public Works, and several other dignitaries who were specially invited to participate in the ceremony, were ranged on the right hand, while His Excellency Oyama, Minister of War, a delegate of the Agricultural and Commercial Minister, and the functionaries of the Hokkaido Bureau, were on the left. After the Band had played a few bars, His Highness rose from his chair and delivered an address as follows:—

"With a view to facilitate the transport of coal produced in the Horonai mine, the exploitation of which was recently commenced, a railway has been constructed, and in honour of the completion of the work, the ceremony of opening it for traffic is hereby performed. The difficulties and hardships which those in charge of the work have had to encounter in building a railway through the wilderness may well be imagined. The facilities now afforded for traffic can hardly fail to augment the amount of production as well as to benefit the locality by the development of its industries. The advantages we may expect to enjoy in future, if not at present, are by no means insignificant. I congratulate myself upon having had the honour of presiding at this ceremony."

In reply to the above address, Mr. Yasuda, Superintendent of the Hokkaido Bureau, spoke as follows:—

"The railway in the Horonai coal mine district was completed in November, 1882, and is opened by His Highness Akihito Shinno, of the second Imperial rank, on the 17th of September, 1883. A moment's reflection shows us that it is by virtue of the enlightened rule of Meiji that beneficial enterprises are perfected by the Government in all parts of the Empire, and that industries and the augmentation of productions has been extended even to Hokkaido. Nothing more redounds to

our happiness and honour than the measures thus adopted by the authorities for the promotion of the public weal. Coal abounds in various regions of Hokkaido; and the finest qualities are found in Horonai. The locality offers exceptional facilities for its exploitation. Nevertheless, as the region is surrounded by barren plains and is not intersected by rivers, there are great difficulties in the matter of transport. Simultaneously with the adoption of measures for colonization, and the scientific working of the mine, a suggestion was made as to the advisability of constructing a railway. The scheme had its origin in the brain of His Excellency Kuroda, Minister of Colonization. It is evident that the railway has an intimate connection with the mine, inasmuch as any insufficiency in the output of coal must mean that the working expenses cannot be covered. The recent completion of the railway not only enables us to attain our ends in two ways, but must tend to develop other industries by affording facilities for transit. Well, the scheme was sanctioned by the authorities in 1878. It was first suggested that the railway be constructed between the mine and Horomukiluto, whence the coal should be transported by the river Ishikari to the sea. But it was then remarked that, if the road were extended to Otaru and Temiya, through Sapporo and Zenibako, the obstacles to transport in winter, on account of the freezing of the river, would be surmounted. Facilities would also be afforded for the transport of the productions of the various localities traversed by the line. So a definite proposal was made for the extension, and official sanction was obtained. The railroad between Zenibako and Otaru runs along the sea shore, and might be thought liable to damage from the dangers attendant upon its position; but experience has shown that the careful method of construction has effectually protected it from the surf. Hence the building of the railway along its present course. As regards the mine, the position of the main measure was ascertained in December, 1879, and work was commenced in January of the ensuing year. In 1881 the coal veins were discovered in Motosawa and Takizawa, and eight pits were opened in the Eastern and Western parts of those localities. Special officers were appointed, and steam engines were provided at the main shaft. The first stratum of coal was found at a depth of more than 1,370 feet. Official sanction for the extension of the railway was given in 1879, and work was commenced in January of 1880, in which year the Temiya-Sapporo railway was completed. In November, 1881, the Sapporo-Nohoro line was finished; and in June last year, rails were laid as far as Yebitsu, and in November to the mine. Then the whole work was completed, the main line extending over a distance of 56 miles and 3,450 feet, with branches four miles and 1,000 feet, in extent. The gauge is three feet and a half, and four-fifths of the whole length of the line runs through mountainous or marshy districts, and one-fifth along the sea beach. Nine stations have been established: six tunnels have been bored, the longest being more than 550 feet through. A pier is constructed at Temiya, 1,440 feet long. There are bridges, large and small, to the number of 16. The greatest height of embankment hardly exceeds 50 feet, and that of suspension bridges 150. A railway of 14 feet gauge has been constructed in the main drive for communication with minor pits. In some cases, a self-acting four wheeled wagon is used for the transport of coal over artificial declivities. According to the principles of engineering, utility must be aimed at, and not mere magnificence of structure. For these reasons, unplanned timber of different lengths has been employed as sleepers; and the stations have not been painted, and are constructed merely to protect the passengers from rain and damp, wind and snow. As regards the erection of dykes along the shore, and a breakwater, —as regards the measures necessary for the prevention of inundations as well as for the removal of snow—the newest devices tending to reduce the employment of manual labor have been introduced. From the commencement of the work to its completion, three years elapsed, but if stormy weather be deducted from this period, the whole work did not occupy any considerable time. There are special difficulties in the accomplishment of such work in Hokkaido which is really a desolate island. In these circumstances we may reasonably admit that the success of the work is

mainly due to the assiduity of the officers in charge, and their judicious arrangement in providing material. Concerning the coal produced here, reports have been received from various parts of the Empire guaranteeing its excellence, which has been proved by its practical use in steamships as well as by private experiment. The road for its transport is now perfected, and any amount put out can easily be conveyed to Temiya, where it can be shipped and conveyed to any place where it may be in demand."

In reply to the above address, Mr. Yasuda, Superintendent of the Hokkaido Bureau, spoke as follows:—

"The construction of a railway in Hokkaido was at first commenced by the Colonial Department, and afterwards superintended by the Public Works Department, but finally the undertaking was transferred to the Hokkaido Bureau. But although the railway work has been carried on by the authorities of different Departments, the work has steadily progressed as though it were under the superintendence of a single functionary to its thorough completion. It is worthy of notice that the district between Sapporo and the mine was formerly nothing but a dreary wilderness. The construction of a railway between the two places, however, has had the effect of inducing settlement along the road, immigrants having fully recognised the advantages of the railway. Specially has the establishment of communication between Otaru and Sapporo furnished immense facilities for passengers as well as for the transport of goods. The scheme to establish a regular service on the river Ishikari having been deemed insufficient for purposes of extensive communication, a resolution was made to extend the railway; and this, it is anticipated, will hardly fail to produce beneficial results, whether in the encouragement of industry or in the promotion of local interests. The accomplishment of the present work will doubtless tend in some measure to enrich the whole nation. We have to congratulate ourselves upon the honour bestowed on us by the presence of His Highness Prince Komatsu-no-Miya, who has presided at the ceremony of opening the railway and delivered an address in recognition of the assiduity displayed by the officers in charge of the work."

Having concluded his address, Mr. Yasuda presented the Prince with a plan of the railway and documents showing the relation between the railway and the mine. The proceedings then terminated.

THE PAYMENT OF LAND-TAX IN RICE.

(Translated from the *Hochi Shimbun*.)

In November of the 10th year of Meiji (1877), our Government issued Notification No. 10 permitting farmers to pay half of their land-tax in rice at the average market price. Simultaneously with this Notification, a set of regulations was enforced defining the methods in which the payment of taxes in rice had to be effected. It was only a few years after the Restoration that the above Notification was issued. The authorities were engaged in the adjustment of internal and foreign affairs of the most intricate nature, while the people were not yet accustomed to the new form of administration. Moreover, depreciation in the value of rice in previous years did not fail to produce extreme distress among the agricultural classes, while the rebellion in the South-west, which lasted eight months, threw the whole country into great confusion. Popular suffering has now reached its climax. In January, 1877, the land-tax was reduced to 2.5 per cent. by Notification No. 1 to extricate the people from their extremity of trouble. Moreover, in accordance with their petition, the Government has at last issued a promulgation allowing them to pay their land-tax in rice. Such benevolent proceedings, it must be remembered, had their origin in the earnest desire of His Majesty the Mikado to

remove the evils from which the agricultural classes have suffered grievously. Nevertheless, the price of rice has tended to rise since 1878 on account of the reforms introduced into society. In 1880 and 1881 prices rose extraordinarily, and continued at their height till the middle of 1882. During these three years, the rice market was more than peculiar. Farmers were enabled to enrich themselves unexpectedly. In these circumstances, the notification permitting the payment of land-tax in rice was hardly appreciated. The following table shows the fluctuations in the value of rice between 1876 and 1882, as well as its average price in each year:—

| | Highest Price. Yen. | Lowest Price. Yen. | Average. Yen. |
|------------|------------------------|-----------------------|------------------|
| 1876 | 5.45 | 4.35 | 4.97 |
| 1877 | 5.86 | 4.64 | 5.28 |
| 1878 | 7.10 | 5.43 | 6.07 |
| 1879 | 9.34 | 6.94 | 7.87 |
| 1880 | 11.90 | 8.26 | 10.66 |
| 1881 | 11.55 | 9.55 | 10.57 |
| 1882 | 9.60 | 7.57 | 8.75 |

From the above it is plain that the highest price of rice was reached in 1880 and 1881, and that the farmers reaped large profits in these two years. But extraordinary occurrences are inevitably followed by serious reaction; a bent bow cannot long preserve its elasticity. The value of corn has shown a downward tendency since the middle of last year, and depreciation is at present such as was the case in 1876 and 1877. Distress is universal among the agricultural classes. It is anticipated that the rice crops this year will scarcely fail to cause further depreciation in the value of rice. Moreover, another element may probably contribute to depression, namely the reduction in the amount of rice reserved for brewing purposes. The considerable rise in the value of commodities in 1880 and 1881, and the unexpected gains of agriculturalists led our people to appear active and bustling. The increase in the demand for *saké* was as remarkable as was the case with other commodities. The profits thus obtained by the *saké* brewers induced them to base their estimates for the next season upon the quantity they had previously produced. The result was that they sustained considerable losses on account of the sudden decrease in the demand consequent upon the stagnation of trade since the middle of 1881. Brewers were obliged to store one-tenth of their stocks. Below is a table of the comparative amount of rice and *saké* produced between 1877 and 1881:—

| | RICE —KOKU. | SAKE —KOKU. |
|------------|-------------|-------------|
| 1877 | — | 2,336,714 |
| 1878 | — | 2,731,126 |
| 1879 | — | 3,965,219 |
| 1880 | 4,884,026 | 5,208,107 |
| 1881 | 4,297,700 | 4,947,511 |

Although we are unable to ascertain the exact amount brewed in 1882, yet we may assume, from several facts, that the quantity has gradually decreased as compared with previous years. From the above table, we can see that the manufacture of 1877 and 1878 did not exceed half of the quantity brewed in 1880 and 1881. It is plain that the value of other commodities must have fluctuated in proportion to the amount of *saké* manufactured in these years. The present depreciation in the price of commodities corresponded with the gradual decrease in the quantity of *saké* subsequently manufactured. When business was active and bustling in 1881, there was a brisk demand for *saké* and considerable profits were realized on its sale. The brewers complained of the increase in the tax levied upon them, but practically they did not fail to extend their business, and did not reduce the amount of their output. But a diminution of demand neces-

sitates a decrease of manufacture, inasmuch as the brewers may perhaps become unable on the one hand to sell their goods and thus sustain considerable losses, and on the other the mere fact of storage can scarcely fail to contribute to their distress. Thus, they are compelled to curtail their business; and this again necessitates a decrease in the manufacture of the beverage. About sixty *saké* manufacturers in the three Urban and two Rural Divisions of Osaka have held a meeting to discuss the best method of carrying on their industry. The members have, it is said, unanimously decided to suspend the manufacture of *saké* this year, stating that about seventy or eighty per cent. of the liquor brewed in the 15th year still remains unsold. In the second meeting, however, this decision was opposed by some of the members who expressed different opinions, and the meeting decided that the quantity manufactured should be reduced. A similar meeting was held in the Northern Urban Division which is distinguished by possessing the greatest number of *saké* brewers. A resolution was adopted, after consultation with several manufacturers in other prominent divisions, to decrease by thirty per cent. the usual production. Other *saké* producing districts such as Nada, Nishinomiya, Imatsu, and Kami, have, according to latest reports, all resolved to diminish their production by forty per cent., and Yamato has decided upon a decrease of fifty per cent. From these circumstances we perceive that the manufacture of *saké* this year throughout the Empire must have diminished by thirty per cent., namely, 1,200,000 or 1,300,000 *koku* in rice, as compared with the previous year. And it must be remembered that 1,300,000 *koku* of rice is the total consumption of the capital for two years. The abundant harvest promised this year will flood the market with a considerable surplus. A fall in the price of rice must be the inevitable consequence.

A glance at the present mercantile condition shows that inactivity is the chief characteristic of all markets and the populace have sunk into extreme distress. The rate of interest on money was formerly twenty per cent. a year, but it has now fallen to nine per cent. Silver which was once quoted at *yen* 1.80 is now only *yen* 1.10. The fall in the price of commodities and the decrease in their production has been the chief factor of the present stagnation of trade. Although the depreciation in the value of rice may in some measure be taken into account as one source of stagnation, yet it may be asserted that the fall in the price of commodities must have its origin in the general depression of trade. It is remarkable that, as the mercantile community of our country is inclined to establish the relation between silver and paper on the exchangeable rate of foreign dollars, with the conviction that silver alone represents the actual value of ordinary goods, rice which occupies the most prominent position among necessities, does not fail to rise or fall in value according to the fluctuations of the metallic currency. Such assertions are based on experience acquired during many years. In 1880 and 1881, the value of silver rose exorbitantly, and this did not fail to enhance the price of rice. Since the middle of last year, however, silver has shown a downward tendency, and this necessarily has had the effect of depreciating the value of grain. The present stagnation in the circulation of money may be traced to some other causes, yet it is undeniable that it has arisen from the depreciation in the price of rice, consequent upon the fluctuations of silver. If the money market in Yokohama shows a prosperous condition

in future, and the value of the metallic currency is restored, the price of rice will necessarily rise in spite of the abundance of the harvest this year and the decrease in the manufacture of *saké*. But although the fluctuation of silver does not exceed *yen* 1.10 or *yen* 1.20, it is impossible that rice can maintain its value?

Rice is an agricultural product, not a grain of which is produced without the labour of the farmer, and it is unquestionably by the production of rice that they are enabled to pay their taxes and to maintain their families. Nor is it unreasonable to assert that they derive their incomes, which are necessary both for public and private purposes, from the rice alone, and that the depression in the price of corn does not fail to curtail those incomes. A *koku* of rice was formerly saleable for twelve *yen*, but now two *koku* or two *koku* and a half can be obtained for the same amount. While there are limits to production, the value of grain has fallen more than fifty per cent. The stagnation in the circulation of money in the provinces as well as the distress of farmers may consequently easily be imagined. Moreover, the period of paying the tax is at hand, as the impost on rice fields has to be paid off between the 1st of November and the 15th of December next. According to the financial estimates for the 16th year (1883), the amount of land tax is *yen* 43,029,745. Of this sum, *yen* 30,768,191 are imposed on rice fields alone, and *yen* 7,031,224 on other fields, and the remainder on dwelling grounds in the various villages and rural divisions, mountains, forests, plains, ponds, and marshes. The amount of taxation to be paid in the third term, namely, between the 1st of November and the 15th of December, is *yen* 15,384,445.50, being one-fifth of the whole impost on rice fields. Should we suppose that Notification No. 80 allowing farmers to pay their tax in rice was not issued in 1877, and that therefore they must pay it in money as in the case of all other taxes, it is absolutely necessary for them to sell their rice and fulfil their duty to the Government. Under all circumstances they cannot hesitate to dispose of their grain even at a sacrifice. Suppose that trade is as stagnant as at present, and that the price of rice gradually declines, the abundance of the harvest and the curtailment in the manufacture of *saké* will considerably overstock the market with grain. Should the farmers attempt, notwithstanding such an anomalous condition of affairs, to dispose of their rice to the value of fifteen million *yen*, they must inevitably incur considerable losses, on account of the depression existing. If such be the case, failure in the collection of the tax will follow, and the Government is likely to suffer from pecuniary embarrassment through the diminished revenue which is bound to follow uncollected taxes. The evil can scarcely fail to bring great trouble upon the nation. In these circumstances we may be allowed to say that the issue of Notification No. 80 of 1877 is the outcome of the earnest wish of the Emperor to promote the welfare of his people and extricate them from their distress before they sink into a deplorable condition. We ought to congratulate ourselves upon the goodness of the Mikado.

(To be continued.)

THE LOSS OF THE "SUMIDA MARU."

MARINE COURT OF ENQUIRY.

A Marine Court of Enquiry was held at Tokyo on the 11th instant, into the loss of the Mitsu Bishi Mail Steamship Company's steamer *Sumida Maru*, whilst prosecuting a voyage from Hongkong to Kobe. The vessel went ashore at 3.30 o'clock a.m. on the 15th of June last, on a group of rocks near Futagashima, an island in the Genkai Nada, on the north-west coast of the province of Chikuzen,

The Court was composed of Geo. Ramsay, Esq. (President), Lieut. J. H. James, R.N., J. M. James, Esq., and J. F. Allen, Esq., commanding *Meiji Maru* (Assessors).

Captain H. Hubenet, late in command of the *Sumida Maru*, whose certificate of competency was handed into Court, was first examined:—

Q. What is the number of your certificate?—A. No. 59.

Q. How long have you been in command of the late steamer *Sumida Maru*?—A. 5 years and 7 months.

Q. Did you pass to the North or South of Yebosi Light? at what distance? and time?—A. To the North, a cable off. June 14th, at 10.40 p.m.

Q. After passing Yebosi Light what course did you steer?—A. Steered straight from Yebosi Light to Wilson Island. I do not recollect the course steered.

Q. What time did you pass Wilson Island? and at what distance?—A. I do not know. Passed at about $\frac{1}{2}$ a mile.

Q. Who was officer of the watch?—A. The third officer.

Q. What orders did you give the third officer?—A. To keep a good look out.

Q. Who were at the wheel and on the look out?—A. Quartermaster and a sailor. One quarter-master on forecastle, third officer on the upper bridge.

Q. After passing Wilson Island what course did you steer?—A. I do not know.

Q. By whom was the course altered?—A. By myself. The third officer steadied ship in her course. Course was by standard compass. (Deviation card produced and handed in to the Court.)

Q. Where is the standard compass placed?—A. On top of chart-room and in the centre of it.

Q. When was the ship last swung?—A. Six months prior to loss.

Q. Where swung?—A. Outside of Green Island, after coming out of Aberdeen-Dock.

Q. Who swung her?—A. Myself.

Q. By what method?—A. Distant object.

Q. What distance was the object off?—A. Two miles.

Q. What was the object?—A. A little island.

Q. How swung?—A. Under steam.

Q. Is the compass corrected by magnets?—A. No.

Q. When abreast of Wilson Island what was the weather?—A. Clear starlight night, but hazy horizon.

Q. What distance did you pass off Wilson Island?—A. $\frac{1}{2}$ a mile.

Q. How did you arrive at the distance?—A. Guessed it only.

Q. What course did you steer then?—A. I do not know.

Q. What was the speed of the ship per hour?—A. 10 $\frac{1}{2}$ knots.

Q. How did you arrive at the speed?—A. By distance run between the islands.

Q. Were you in company with any vessel?—A. Yes, the *Kashgar*.

Q. How and when did you pass the *Kashgar*?—A. I passed her by going through the Obree Channel; while she went outside Ikutsuki.

Q. Were you desirous of getting to Kobe before her?—A. No.

Q. What instructions had you given your Chief Engineer in reference to the speed of the ship?—A. I gave no orders.

Q. Produce your night order-book?—A. I have no night order-book.

Q. What orders did you leave with the officer of the watch?—A. I was on the upper bridge with the officer of the watch.

Q. How long had the officer of the watch sailed with you in the steamship *Sumida Maru*?—A. About 12 months.

Q. Had he a certificate?—A. No.

Q. Why did you entrust him with the watch?—A. I had confidence in him, the third officer had no certificate, and is not obliged to have one.

Q. Had you every confidence in him?—A. Yes. I trusted him in the open, but not in pilotage waters.

Q. What time did you pass North Siroshima?—A. At 2.40 a.m. June 15th.

Q. At what distance?—A. 1 $\frac{1}{2}$ miles.

Q. How did you estimate the distance off?—A. By judgment.

Q. Did you see Shirasu Light?—A. No.

Q. What distance can it be seen?—A. I do not know.

Q. What course did you steer from North Sirosima?—A. E. $\frac{1}{2}$ S. by standard compass. Magnetic E. $\frac{1}{2}$ N.

Q. That was the deviation on that course (E. $\frac{1}{2}$ S.)?—A. 11° Westerly.

Q. How long did you continue on that course?—A. As long as possible. I was constantly starboard for the fishing boats. I was on the bridge the whole time.

Q. When was Rockuren Light seen?—A. Could not see it. I was looking out for it.

Q. How do you account for not seeing the Light?—A. By the fishing boats, and the hazy weather.

Q. What distance could you see on the water?—A. About a mile.

Q. Was the ship's speed reduced?—A. The ship's speed was not reduced at all.

Q. How far is Rockuren Light visible?—A. I do not know.

Q. What is its height?—A. I do not know. Should think 150 ft.

Q. How long did you steer E. $\frac{1}{2}$ S.?—A. Until the ship struck.

Q. How was the tide?—A. Flood.

Q. Have you a "China Pilot"?—A. Yes, but never read it regarding the Black Rock.

Q. Was Masuisima seen?—A. Yes.

Q. At what time?—A. I do not know the time.

Q. When the island Masuisima was abeam, what was the distance off?—A. 1 $\frac{1}{2}$ miles.

Q. How did you estimate the distance off?—A. By judgment.

Q. Where did you first see the fishing boats (mentioned in your report)?—A. Met the boats 4 miles after passing North Sirosima.

Q. How often did you starboard?—A. About 4 times.

Q. What was the speed of the ship?—A. 10 knots.

Q. Where the boats under sail?—A. No, they were fishing.

Q. What reasons do you assign for getting on the Black Rock Reef?—A. I thought I was farther off North Sirosima than I really was, strong tide, and starboard helm used so frequently.

Q. How was the tide setting?—A. I do not know how the tide was setting.

Q. Are you certain that the courses shaped were steered?—A. Yes.

Q. Did you make any allowance for the tide?—A. No.

Q. How many passengers embarked at Nagasaki?—A. Four foreigners (two in cabin and two in steerage).

Q. What did your cargo consist of?—A. Sugar. Some machinery from Hongkong.

Q. Where was the iron stowed?—A. Fore hold.

Q. How many feet from the standard compass?—A. 60 feet.

Q. Were any means taken to ascertain the error of the compass on the various courses steered that night after leaving Nagasaki?—A. No.

By Lieutenant James, R.N.

Q. How far from Wilson Island was the ship when it was abeam?—A. Judged the distance from $\frac{1}{2}$ a mile to 1 $\frac{1}{2}$ miles.

Q. How far distant was Sirosima when abeam?—A. Judged distance $\frac{1}{2}$ to 2 miles.

Q. How did you shape your course?—A. By the chart.

Q. How often did you starboard?—A. Several times.

Q. Did you bring ship to the Southward of her course to make up for starboarding so much?—A. No I did not.

Q. Did you ease the engines?—A. No.

Q. Why not?—A. Was waiting to sight Rockuren Light.

This concluded the examination of Captain Hubenet, and the next evidence taken was that of the third officer, E. Axelson, as follows:—

Q. What certificate do you hold?—A. I have no certificate.

Q. How long have you been third officer of the steamship *Sumida Maru*?—A. Ten months.

Q. What was the course given to you when you took charge of the watch?—A. I cannot remember.

Q. What orders did you receive?—To call the Captain, when Wilson Island was sighted.

Q. Whom did you relieve?—The second mate.

Q. Where was the ship?—A. Abeam of Yebosi Light.

Q. Where was the Captain?—A. In the chart room.

Q. When did you call him?—A. When I thought I was three miles off Wilson Island.

Q. What distance did you pass off Wilson Island?—A. I do not know.

Q. What course was steered from Wilson Island?—A. I do not remember.

By Captain J. M. James.

Q. When you sighted Wilson Island on which bow was it?—A. On the starboard bow.

By the Court.

Q. What was the weather when you took charge?—A. It was hazy. Starlight overhead, but deceptive.

Q. In what part did you keep your watch?—A. On the upper bridge.

Q. Where is the standard compass?—A. On the upper bridge, on the top and in centre of chart-room.

Q. How do you know the ship was steered the course given?—A. Through a scuttle that gave a view of the wheel-house compass.

Q. How often did you compare the two compasses?—A. Constantly.

Q. Was the course altered after passing Wilson Island?—A. No. Not until reaching North Sirosima.

Q. Did you see Shirosi Lighthouse?—A. Yes.

Q. Did you report it to the Captain?—A. Yes; he was on the bridge.

Q. At what time did you call the Captain?—A. Before passing Wilson Island.

Q. Where was the Captain when you called him?—A. In the chart-room.

Q. When did you sight the Rockuren Light-house?—A. I could not find it out.

Q. What time was North Sirosima abeam?—A. I do not know.

Q. What distance was it off?—A. About one mile.

Q. How did you estimate the distance off?—A. By judgment.

Q. What course was steered after passing North Sirosima?—A. E. $\frac{1}{2}$ S. standard compass.

Q. What was the error of the compass on that course?—A. I do not know.

Q. Were any bearings taken by you?—A. Not by me.

Q. Did you report North Sirosima abeam?—A. The Captain was on the bridge.

Q. When was the course altered?—A. When North Sirosima was abeam.

Q. By whom was the course altered?—A. By the Captain; he steadied the ship himself by the standard compass.

Q. How long was the ship on that course before meeting the fishing boats?—A. I do not know.

Q. How often did you starboard?—A. Four or five times.

Q. For what length of time was the helm kept a starboard?—A. Not so very long.

Q. Was the ship kept to the Southward of E. $\frac{1}{2}$ S. to counterbalance the influence of starboard helm on the ship's course?—A. I do not remember.

Q. How long was the Captain off the bridge?—A. Only a minute.

Q. Why did he leave the bridge?—A. I do not know. I think to set the course.

Q. When did you see Masuisima?—A. I do not recollect the time.

Q. What distance was it off when abeam?—A. About 2 miles.

Q. Were you looking out for Rockuren Light?—A. Yes; but could not see it.

Q. What prevented your seeing the Light?—A. I could not see the difference between that light and the fishing boats' lights.

Q. What was the speed of the ship?—A. I do not know. The log was not hove.

Q. Had you ever on previous voyages seen the Black Rock?—A. No, never.

Q. How often have you passed Sirosima at night?—A. Several times.

Q. On previous voyages what was the mark for steering for Rockuren Light?—A. Always when sighting the Light.

Q. Had you before had Masuisima abeam before altering the course?—A. I do not remember.

Q. Where was the Captain when the ship struck?—A. On the bridge.

Q. Had he left the bridge before she struck?—A. Yes, when Masuisima was abeam the beam.

Q. Did you call the Captain when you saw the rock?—A. Yes. I saw it directly he went down.

Q. What did you say?—A. I asked the Captain what it was. I took it for a junk at anchor.

Q. How was the ship then steering?—A. E. $\frac{1}{2}$ S.

Q. What time elapsed from the time of sighting the rock and the ship striking?—A. Directly the helm was ported she struck.

Q. At what time did she strike?—A. 3.30 a.m. 15th of June, 1883.

Q. When were the engines stopped?—A. As soon as she struck.

Q. Were the engines reversed?—A. No.

Q. What steamer did pass?—A. The *Kashgar*.

Q. Was the *Sumida* racing?—A. I do not know. By Lieutenant James, R.N.

Q. Was the course altered after passing Wilson island?—A. The course was not altered after passing Wilson island.

By Captain J. T. Allen.

Q. Was any rough log kept?—A. The rough log was written up at each watch.

Q. Could you see Masuisima when North Sirosima was abeam?—A. I think I did.

Q. When you passed North Sirosima, how was the wind and at what force?—A. S.E., a fresh breeze.

Q. Did you expect to sight Rockuren Light after North Sirosima was abeam?—A. I expected to see it.

Q. Have you any idea, when you see Rockuren Light, what danger it clears?—A. I have no idea.

The next witness was Christian Georgsen, Chief Officer, whose certificate having been handed in, gave the following evidence:—

Q. What is the number of your certificate?—A. No. 29.

Q. How long have you been in the *Sumida Maru*?—A. 3 months and a half.

Q. What watches were kept in the *Sumida Maru*?—A. Chief officer 4 to 8 p.m. Second and third officers watch and watch.

Q. How many officers had the steamship *Sumida Maru*?—A. Three.

Q. What watch did you keep?—A. 4 to 8 a.m.

Q. When did you leave the deck on the night of the 14th of June last?—A. About 7 p.m.

Q. Did you come on deck again?—I did not come on deck again.

Q. Did the Captain consult with you at any time in reference to the navigation of ship?—A. Generally.

Q. How often had the ship been swung for the adjustment of her compasses?—Not so long as I have been on board.

Q. Were any azimuths or amplitudes taken during the time you have been Chief Officer of the vessel?—A. Not by myself; and none were taken so far as I know.

Q. What was the state of the weather that night?—A. Fine.

Q. How many passengers embarked at Nagasaki?—A. I do not know.

C. Volke, Chief Engineer, was next examined:—

Q. What certificate do you hold?—A. A chief engineer's certificate of competency.

Q. What is the number?—A. No. 38.

Q. Who was engineer on watch at the time of the disaster?—A. The third engineer.

Q. Is he now present in this office?—A. No. He is now on board the steamship *Kumanoto Maru*.

Q. What are your special duties in reference to the engine-room at sea?—A. To look after the watches being properly kept, the engines, and boilers.

Q. Were you on deck at all that night, or at the time of accident?—A. I was reading in my room.

Q. How far is your room from the engine-room?—A. About 60 feet; it is in the fore part of the ship.

Q. What was the state of the weather?—A. A little hazy, but clear.

Q. Was the ship slowed down at all after leaving Nagasaki.—A. No.

Q. What time elapsed from time of telegraph sounding and ship striking?—A. Both happened at same time.

Q. When ship struck or telegraph sounded, what did you do?—A. Ran to engine-room and stood on the platform; when the engine was reversed.

Q. By whose orders were the engines reversed?—A. By my own, and according to telegraph. I mean that the engines were stopped.

Q. How long did you remain in the engine-room after the ship struck?—A. About 1½ minutes.

Q. Why did you leave the engine-room?—A. Because I had to swim out. I only had time to lift the safety valve, and shut the valves.

Q. Did you at any time have any communication with the Captain about the speed of the ship?—A. No.

By Captain J. M. James.

Q. Where did the water come from?—A. From under the boilers.

By Captain J. F. Allen.

Q. Had you no instructions from the Captain as to the speed of the ship from leaving port?—A. None.

The Court then rose.

The following finding of the Court was delivered on the 15th inst. :—

After examining the Captain, the Third and Chief Officers, and Chief Engineer (the Third Officer being in charge of the watch at the time of the accident), and carefully weighing the evidence, we find that the steamship *Sumida Maru* belonging to the Mitsu Bishi Mail Steamship Co., sailed from Nagasaki on the 14th of June, 1883, and was off Yebosima at 10.40 p.m. on that night, the weather being fine, clear overhead, but hazy and deceptive as to distance. Yebosi was passed a cable to the Northward and a course shaped for Koshima-no-Oosima (Wilson Island) which was passed at 1.10 a.m. on June 15th at a distance according to evidence from ½ a mile to 1½ miles, and from thence to North Sirosima, which was abeam at 2.40 a.m., distance 1 to 2 miles; the course was then shaped E. ½ S. by standard compass (E. ½ N. magnetic course); this course was kept until the ship struck a shoal about 1 cable S.E. of the Black Rock at 3.30 a.m. A speed of 10 or 10½ knots was maintained during the whole voyage; and the vessel was navigated by the Captain, having the Third Officer under his immediate directions.

The ship's Log Book (produced) has been irregularly and carelessly kept, and affords no reliable evidence as to ship's courses steered, or as to her position at any time.

No steps were taken to verify the ship's position by cross bearings or otherwise, when off Wilson Island, or North Sirosima, the distances off which were merely judged by the eye, and courses shaped in accordance.

The speed of the ship was not ascertained either by patent log or hand log.

The deviation card produced has never been verified since the ship was swung at Hongkong six months previously under steam by a bearing of an object 2 miles distant.

It is certainly remarkable that neither the Captain or third officer could remember any course steered before reaching North Sirosima.

The distance from ship's position off North Sirosima to Black Rock is 6 miles; yet the ship had been permitted to run a distance of 8½ miles on a E. ½ N. magnetic course without any steps being taken to ascertain her position, nor had the speed of the ship been reduced in the least from 10½ knots until she struck the shoal off the Black Rock.

We are of opinion that the Captain navigated the steamship *Sumida Maru* from the time of passing North Sirosima (particularly) in a most unseamanlike and irregular manner :—

1st.—In failing to ascertain his exact position when off North Sirosima, or after having passed it.

2nd.—In shaping his course without having made any allowance for the set of the tide.

3rd.—In not hauling at once to the Southward when Masuisima was abeam distant 1½ miles, although Rockuren Light was not in sight; and also after starboarding to clear the fishing boats he

should have kept as much to the Southward in order to make his course good.

Ordinary caution and attention to the rules of navigation would have saved the steamship *Sumida Maru* from the disaster which overtook her. Unfortunately they seem to have been altogether neglected by the Captain.

We deem him to have shown great neglect in the navigation of his vessel, and do herewith suspend his Certificate of Competency No. 59 for a period of 12 months from the date of judgment.

I hereby approve of this decision, and direct that it be carried out accordingly.

(Signed) SHINAGAWA,

Vice Minister of the Agricultural and Commercial Department.

Tokio, October 15th, 1883.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN Esq., Judge.—FRIDAY, OCTOBER 19TH, 1883.

RUTH FARNSWORTH V. C. WHITE AND F. E. WHITE.

This case was tried before a Jury composed as follows :—Messrs. N. McLeod, J. Haddow, J. B. Coulson, E. Powys, and J. Annand.

Mr. Kirkwood appeared for the plaintiff, and Mr. Lowder for the defendants.

Mr. Kirkwood asked that the witnesses be ordered to leave the court. His Honour granted the application.

Mr. Kirkwood stated that this was a claim brought against the defendants for gross slander of character. The plaintiff is Miss Ruth Farnsworth, and she, being a minor, is represented by her nearest of kin, namely, her father. The alleged slander is laid out in the petition and was uttered on the 13th September in a conversation between the defendants and Mr. A. Clark. The slander was uttered by Mrs. White; and her husband who was present said that he could prove it.

Mr. Ford was engaged to marry plaintiff, and in consequence of this slander he broke off the engagement. The damages claimed are \$10,000. Mr. Kirkwood continued that looking through all the cases of slander he could find, there was not one of so gross a nature. If he proved the case, no amount of damages would be sufficient. It was spoken of a young girl, not under the influence of anger, or passion or wine, but deliberately and in cold blood. It was not spoken privately, but in the presence of a third party. The defendant, Mrs. White, in reply to the petition denies having used the words, and also states that the engagement is not broken off. She contradicts this denial when she states further on that she spoke *bona fide*, without malice, and in the form of a privileged communication, and that she at the same time divulged the names of her informants. She likewise says that the actions against herself and her husband ought to have been brought separately. The defendant F. E. White makes a similar reply. Captain Farnsworth arrived here on the 12th of August with the ship *J. V. Troop*. He had his wife, two daughters, and his son on board with him. During his stay in Yokohama his eldest daughter, aged 19 years, became engaged to Mr. Ford. One evening Mr. and Mrs. White called him on one side saying that they had an important communication to make to him respecting Miss Farnsworth. Mr. Ford said he did not want anything said in private; they went back into the room, when Mrs. White opened the conversation and uttered the slander (which is far too foul for publication). Mr. Ford demanded their authority for the statement, and he and Mr. White went down to Honmura Road where they met the carpenter who denied having made any such statement. He had been two years in the ship and said he had never seen or heard any thing wrong about Miss Farnsworth. They then saw the cook and his wife, who spoke of her in high terms and denied having said anything derogatory about her. Mr. Ford then went on board and told her father. The next morning they went again to see the supposed informants, who again denied having said anything. The whole of this conversation is actionable. Where words are actionable you must take into consideration in assessing damages not

only the damage at present sustained, but any future damage that the slander may do. Counsel continued :—"I presume that it will be contended that the communication was a privileged one and made without malice. This is a point for His Honour to decide. But I think it will be impossible to bring in a communication of this character as a privileged one. In law the giving up of the names of informants does not exonerate the defendants: it can only mitigate the amount of damages, and then only if the case be proved that the informants did give the information."

Captain W. R. Farnsworth stated that he was master of the ship *J. V. Troop* and a part owner of that vessel. He had a small farm and private residence and a business at home, and is well known there. He arrived in Yokohama on the 12th August last. It is his first visit. It is also the first time he was in a witness-box. After the arrival of the ship his daughter was engaged to Mr. Ford. He had his wife, two daughters, and his son on board. Before he gave his consent to the engagement he made enquiries as to Mr. Ford's character and standing, which were satisfactorily answered. He enquired of Mr. W. B. Walter, Mr. Whittall, and Mr. R. Robertson. He first heard of this slander on the evening of the 13th September. Mr. Ford and Mr. Clark came off, and told him. It was too late to do anything that night. Next morning he took Mr. Carter with him and called on Mr. Ford. They went to the Star Tavern to see the steward and stewardess. He took every means in his power to find out whether Mr. and Mrs. White had been informed of any part of this slander. (Mr. Lowder objected to the question by Mr. Kirkwood as to what was the result of those enquiries. His Honour did not allow the question). Plaintiff said that in consequence of this conversation he went to Mr. Kirkwood and preferred this suit. He has taken no legal steps against any other party because the alleged informants of Mr. and Mrs. White denied having made the statement. He left Yokohama on the 15th September. He was ready to go to sea on the 13th. His ship was in Hakodate, and he came down to attend to this case as he wanted the matter sifted to the bottom. Before he left Yokohama the engagement of his daughter to Mr. Ford was broken off. There was no arrangement that he knew of between Mr. Ford and his daughter. He is going from Hakodate to San Francisco, and intends to take his daughter with him.

To Mr. Lowder—When Ford and Clark came on board they asked witness to come on deck, which he did; and Clark then told him that they were at Mr. Ford's in the afternoon when Mr. and Mrs. White came in, and Mrs. White called Ford on one side, saying that she had something to tell him. Mr. Ford, when she commenced to tell him, said that what he had to say he wished said in public. They went into the room and there she uttered the slander complained of. Mr. Ford was not present at the conversation on deck. In the evening of that day Ford walked down the street arm in arm with witness's daughter. The marriage was broken off. Mr. Ford said he could not marry witness's daughter. White and his wife were running about after us nearly all the time we were ashore. She would be waiting with a trap when we came ashore, and follow Mrs. Farnsworth even into stores. During the latter part of the stay Mrs. Farnsworth kept on board to avoid her: the reason was that witness thought the Whites not fit associates. At first they picknicked and dined together frequently. Probably a week before the ship sailed Mrs. Farnsworth began to avoid Mrs. White. Witness was at first opposed to Ford's engagement with his daughter; but consented to it a few days before he sailed. He sailed on the 14th. His consent might have been given on the 12th. White and his wife were the first to whom witness announced the engagement, and Mrs. White was consulted as to the purchase of dresses and so forth on the 12th, when witness gave Mrs. White some money for the purchase. On that day White and his wife and Ford came off and spent the evening on board, and were asked to go in the ship to Hakodate to be present at the marriage. Gave instructions that dresses should not be sent to White, but to Ford. That was some time, on the 14th, after the wedding was broken off. Ordered the dresses to be sent to Ford, because he had no reason to break off the

match. Wrote once to Ford from Hakodate, saying that he would be down shortly to attend to this case. On return from Hakodate went to see Mr. Ford and had remained on good terms with him, dining with him and finding the house in good order, with improved furniture. Expected his wife and daughter down daily; but the steamer in which they are coming had been delayed. Ford had offered witness the use of his house, but did not offer to let him remain in it until the marriage. When witness went on shore on the 14th he did not go to White and his wife to ask for an explanation of their conduct in telling the story to Mr. Ford. He thought that, instead of going to Ford, they should have come to him. His notion was not merely to get \$10,000 out of White, he wanted to punish him. He might have said to Mr. Lemon before sailing:—"I'll make that damned fellow, White, sweat for this! I'd rather sink my ship in the harbor than not get \$10,000 out of him!" He was very much excited at the time and did not exactly remember what he might have said. Never, since witness's return, had Ford said he would marry the daughter. When he refused to do so he did not say that he believed what had been said about her.

To Mr. Kirkwood—The reason why Mrs. Farnsworth got Mrs. White to help her to buy silks was because she knew no one else here. When the ship arrived Mr. White came alongside. Witness at first took him to be the Vice-Consul here. Before he went to Hakodate he had not made up his mind whether he would take civil or criminal action, but he finally concluded that he could punish White, who had money, more by making him pay \$10,000 than by subjecting him to a few months' imprisonment. He directed the dresses to be sent to Ford's house, because he had no animosity against him for breaking off the match, which, after the reports he had heard, he was quite justified in doing.

S. Fowler, captain of the steamer *Selebria*, deposed that he had known the plaintiff from boyhood. They both came from Granville, Nova Scotia, where Captain Farnsworth holds a good position, has one of the best houses in the place, is considered an independent man, and with his family moves in the best society of the community in which he resides. Plaintiff would never bring a claim that he did not consider a just one.

At half-past noon the Court adjourned till 2 p.m.

On the Court resuming,

Mr. Kirkwood called George Ford, who deposed that he recollected Mr. and Mrs. White coming to his house on the 13th of September last at about 6 o'clock in the evening. Mr. Alexander Clark was present. Mr. White led witness outside to the south verandah where he said he had heard something about Miss Ruth Farnsworth. Witness said that he did not wish to have anything said privately on the matter, and the two went back to the dining room. Mrs. White then uttered the slander complained of, and White corroborated his wife's statement and said he could bring proof. (The evidence which was then given cannot be reproduced.) Witness said to Mrs. White that he "didn't believe a damned word" of what she said, and asked White for his proof, when Mrs. White interfered in the conversation and said so and so. Witness repeated his expression of disbelief; and he and White went to Lemon's house, when he saw the carpenter in the bar. Mr. White addressed him first. Witness stopped him, because he didn't believe a word of what had been said, and himself asked the carpenter whether he had ever said anything disrespectful of Miss Ruth Farnsworth. White said nothing: he looked "as gloomy and black as a piece of coal." Witness next saw the cook and steward of the vessel, and asked the same question, to which the answer was "No." Left the tavern with Mr. White, and reproved him for telling "a lot of lies," but didn't say a word on his way home, where he told Mrs. White just what he had told her husband, and said that he would go on board the *G. V. Troop* and inform Captain Farnsworth of what had been said. White and his wife both advised him not to go, and tried to get Clark to advise him not to go; but he would and did go—Clark went with him. He told the Captain just what he had told the Court. Before the conversation on the 13th, he was engaged undoubtedly to be married to Miss Farnsworth. Was not engaged to her now. Had arranged to go to Hakodate to marry her, but did not do so on account of the

scandal. Since then had had no correspondence with her. There is no understanding now about marriage. Witness has property in China, which is let for Tls. 2,000 per annum, and has property in Yokohama, and earns something yearly in Yokohama as a general commission-agent.

To Mr. Lowder—Had known White and his wife by sight ever since he arrived in the country, in February two years ago, but had never been on intimate terms with them. He had frequently addressed Mrs. White as "mother," but didn't know why she allowed him that privilege; and called White "old man"—the compliment being returned. He had been in and out of their house, and they in and out of his. Witness refused to admit that Mr. and Mrs. White were welcome in his house, and didn't know whether he was welcome in theirs. He first met Miss Farnsworth in White's house about ten days before the ship sailed. The next Sunday he went for a drive with the family; but had no idea of proposing marriage. To the best of his knowledge he proposed four or five days later, having previously had some conversation with Mrs. White, whom "positively" and "solemnly" he did not consult on the subject. She did not advise him to ask the girl whether she'd have him. She had asked him what he thought of Miss Farnsworth, and said he thought her "modest, pleasant, and ladylike." Mrs. White said she was sure that if he proposed his request would not be refused. Afterwards he did propose, and the young lady was just as "astonished as he was bewildered!" In fact it appears that the witness was at first refused, and then told by Mrs. White that there "were as good fish in the sea as ever came out of it." Subsequently he saw Captain Farnsworth on board, renewed his proposal, and was accepted. The Captain conveyed the acceptance to witness, and it was arranged that, if the young lady remained of the same mind, witness should be telegraphed to from Hakodate, where the pair would be married. The definite engagement was made a few days before the vessel sailed. Mrs. White did not congratulate him upon his approaching marriage. Once, with White and his wife, witness went on board the *G. V. Troop* previous to the engagement and subsequently spent the evening there. White and his wife offered to accompany the party to Hakodate, but their offer was thankfully declined on all sides.

"Solemnly" witness did not ask them to go with him nor say he would not go and be married if they did not go up. On the day before the scandal he had "undoubtedly not" arranged to go with White and his wife on board the *G. V. Troop*. Remembered going down to the hatoba with a view of going on board the ship with them. It was blowing so hard that Mrs. White could not go off; and there was some talk of White and witness going off in the evening if the wind went down. They did not go off, and he had no knowledge of the Whites going to his house the same evening. Witness repeated his evidence given in his examination in chief as to his interview with the Whites when the scandal was related to him. May have gone up to the sideboard to have a drink, and did so whenever he felt disposed. Undoubtedly he did not repeat to Mrs. White in an excited manner his conversation with White. They said that they had their information from Mr. and Mrs. Waitman, nor did he remember either of them saying that, as he was going to marry Miss Farnsworth, they thought it their duty to inform him of what they had heard. Witness admitted being excited when he saw the steward and stewardess, but received no answer to his question from them. Emphatically "No" to the question whether he had arranged with the Whites and Clark after his return to his own house for the whole party to go off and inform Captain Farnsworth of what had been said; but went off with Clark in the evening and spent some time on board; but was not promenading about with the young lady on the poop. Sat down, and stopped as long as he pleased. The marriage was not definitely broken off till 8 o'clock the next morning. Witness admitted being excited and annoyed. No one advised him to break off the engagement. He acted for himself after due consideration, and on account of the accusations against the girl's character. He did not now, and didn't then, believe them. "Comprehensively" the fact of people telling what he believed to be "a lot of damned lies" was the

reason that he broke off his engagement. Carter the pilot, Captain Farnsworth, Lemon and witness—four in all—went to see the Waitmans. Witness did not hear Farnsworth say that "he'd make that fellow White sweat for it, and pay \$10,000." Mrs. and Miss Farnsworth came off at his request the same day and had midday meal and tea with him. Clark was there in the evening. The party went off about nine o'clock. Witness walked down with them to the French hatoba, side by side with the young lady, and went off with her father and mother to the ship. It was evident to the witness that Captain Farnsworth, his wife and daughter, had made up their minds to have the case tested in a court of law. The young lady, when witness announced his intention of breaking off the match, insisted upon her "pa" taking proceedings against the guilty parties. Witness induced the Waitmans to go to Mr. Kirkwood's office under the pretence that he was their landlord. It was not pretence it was reality. He did not tell them that he could show them how to get themselves off and let the Whites in. Directly they got to Mr. Kirkwood's office they knew they were in a lawyer's office.—(Laughter.) Witness had not deceived the Waitmans into going down to Mr. Kirkwood's. He furnished his house when he liked and as he pleased; and had bought furniture since the wedding was broken off. He has not recently told the Waitmans or Mr. and Mrs. White that he still meant to marry the girl, but had told the Waitmans that he had written to Captain Farnsworth at Hakodate offering him and his family the use of the house on their arrival in Yokohama; and that he himself would move to a house on the Bluff. He had not said that Mr. Farnsworth should have the place till the marriage.

To Mr. Kirkwood—Witness brought the Waitmans down to his (counsel's) office on business quite unconnected with this case (about house hiring). Witness did not believe Mrs. White about Miss Farnsworth partly because Mrs. White had once introduced a married woman to him as a single one; and he was sympathized with at Collyer's about the cheat.—(Laughter.)

Mr. Alexander Clark remembered being at Ford's house on the 13th of September, and Mr. and Mrs. White coming there about half-past five o'clock. (Mr. Clark begged the Court to excuse him from repeating the subsequent conversation; but His Honor said it was perhaps as unpleasant to himself and the Jury to hear what had been said as to witness to relate it.) Mr. Clark then stated what Mrs. White had said to Ford in his hearing, being in substance the slander which is the cause of this case. Mrs. White affirmed that she had proof of what she said. The rest of Mr. Clark's evidence was almost identical with that of Mr. Ford. The conversation ended by Ford exclaiming that the whole statement was a parcel of lies: that he would look for proof that very night. Mr. and Mrs. White tried to induce him to postpone his inquiries, but he would not and went away with White. On their return Ford told Mrs. White again that she had told him a parcel of lies; and that the steward and stewardess had positively denied her statements. Mr. and Mrs. White then told Ford that what they had said was for his good; and that if he did not follow their advice he would be a dead man in twelve months. He replied that he didn't care a G—d—, if he was a dead man in two months. He would see Captain Farnsworth that night, but added that he couldn't marry a girl whose character had been so slandered. White counselled him not to go on board that night. Witness knew no more of what followed. He was no more a friend of Mr. and Mrs. White's than he was of Mr. Ford's, and much regretted being called in this case.

To Mr. Lowder—Witness had seen the Waitmans yesterday, but not to induce them to come as witnesses in this case. Waitman told him that he and his wife had been to Mr. and Mrs. White's house, where they had some beer; and Mr. White produced a document which he asked Waitman to sign, saying that, if he would take the responsibility of the case on his shoulders it would only be a matter of two months in jail for him; and that he should be "taken care of" there and that his wife should also be cared for. When he came out their passages should be paid to Hong-kong. Waitman said to witness that "he'd be d—d if he'd do any such thing to save White or any one else." This was at Ford's house; and

it was because on a second occasion there that the Waitmans had said they would "go any where with Mr. Clark" that he had at Mr. Ford's request seen them in connection with this trial. They said they feared that if they went to Mr. Ford's he, too, like White, might ask them to sign some document. Witness recollected when Ford came in on the 13th of September with White from the verandah that he called his boy to get a glass of milk for Mrs. White, who had asked for it. Did not remember Ford's going to the sideboard. Ford was excited. Mrs. White said something about bad news to witness while the other two were outside; but he did not hear the details of the scandal until their return. Witness repeated that he did not recollect hearing Ford call Mrs. White "mother." Had seen the Whites several times at Ford's place, and had seen Ford riding in a trap with them.

This closed the case for the plaintiff.

Mr. Lowder, being unprepared to make his statement, the Court adjourned at 4.30 p.m. until 10 a.m. to-day.

NOTIFICATION NO. 33 OF THE COUNCIL OF STATE.

It is hereby notified that the following Convention has been entered into between the Government of Japan and that of Korea for the treatment of Japanese fishermen committing offences on the Korean Coast.

SANJO SANETOSHI,
Prime Minister.
INOUE KAORU,
Minister for Foreign Affairs.

15th October, 1883.

RULES FOR THE TREATMENT OF JAPANESE FISHERMEN COMMITTING OFFENCES ON THE KOREAN COAST.

Art. 1.—Should Japanese transgress the laws of Korea on the coast of that country, whether ashore or afloat, they shall be dealt with according to the following provisions:—

Art. 2.—Should Korean officers arrest Japanese for violating Korean law, they shall forward the Japanese implicated, together with the testimony available, to the Japanese Consulate in the nearest treaty port, and demand investigation. The Japanese Consul shall immediately comply with the request to examine the matter and deal with the offenders according to law. The Korean authorities shall not treat the Japanese with harshness whilst escorting them to the Consulate.

Art. 3.—Korean officers are at liberty to forward Japanese offenders by sea or land, but must not detain them in the place of their arrest without due cause.

Art. 4.—Korean officers are at liberty, when conveying accused Japanese fishermen by sea, to take them in the offenders' own boat or in any other that the officers may deem more convenient. In the latter case, the boat in custody must be taken in tow by the officers. When the prisoners are conveyed overland their boat must be cared for and protected from damage until such time as it is delivered into the charge of the Japanese Consulate. Adopting this alternative, the Korean officials shall forward to the Consulate a list of such of the vessel's gear, stores, and shipping apparatus as is too weighty for immediate transport.

Art. 5.—In case of offences committed by one or more Japanese, who have gone ashore to buy fuel, water, or provisions, or for the purpose of selling their fish, only the actual offenders shall be forwarded to their Consulate: none of their companions shall be arrested. When an offence is committed, all but the actual offenders must be allowed to go free, provided the remainder are insufficient to man the boat.

Art. 6.—These provisions are subject, with the mutual consent of the contracting parties, to such alteration and addition as may prove necessary hereafter.

These stipulations are agreed to by the undersigned.

TAKEZOYE SHINICHIRO,
Minister Resident for Japan.

BIN YEIKOKU,

Chief Commissioner of Foreign Trade.

27th July, 1883.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, OCTOBER 12TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokujo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 38.8 miles per hour on Saturday at 3 p.m.
The highest reading of the barometer for the week was 30.59 inches on Thursday at 11 p.m., and the lowest was 29.533 inches on Saturday at 3 p.m.
The highest temperature for the week was 76.0 on Saturday, and the lowest was 51.5 on Thursday. The maximum and minimum for the corresponding week of last year were 68.0 and 47.0 respectively.
The total amount of rain for the week was 1.183 inches, against 1.142 inches for the corresponding week of last year.

White to play and mate in 3 moves.

Correct answer received from Tesa to last week's problem.

W.B.M.—Your problem has unfortunately a second solution beginning with Kt. to Q. 3.

LATEST SHIPPING.

FREIGHTS.

The New York berth is now held only by the steamship *Selembrina* which vessel is reported to have already shut out a considerable quantity of cargo; the sailing vessel *Gilead* holds the berth for New York direct. For Havre and London the *Sagitta* has been postponed to the 31st instant, owing to further cargo coming forward. Coastwise, Hongkong is asking for coal tonnage, but nothing else is on offer, if we except about 1,000 piculs of wheat for Amoy at low rates.

LATEST COMMERCIAL.

IMPORTS.

The past week has again been very quiet for staples, business in Yarns and Shirtings being altogether of a retail character. In other Goods, there has been more doing in Turkey Reds. Metals generally are quiet, although there has been some demand for small sizes of nailrod Iron.

COTTON YARNS.

| | PER PICUL. |

KEROSENE.

Sales during the past week consist of 12,000 cases Devoe at \$1.68, and 6,500 cases Comet at \$1.64, per case. Deliveries have amounted to 18,000 cases. We quote:—

| | PER CASE. |
|--------|-----------|
| Devoe | \$1.68 |
| Comet | 1.65 |
| Stella | 1.60 |

SUGAR.

Prices for Brown Formosa have slightly advanced, and transactions during the interval have lessened the Stocks on hand, which are now light. An improvement in White sorts has also to be noted, and the price of No. 1 has advanced to the quotation given below.

| | PER PICUL. |
|---------------|----------------|
| White, No. 1 | \$8.40 to 8.45 |
| White, No. 2 | 7.00 to 7.50 |
| White, No. 3 | 6.75 to 7.00 |
| White, No. 4 | 6.00 to 6.50 |
| White, No. 5 | 5.00 to 5.50 |
| Brown Formosa | 4.55 to 4.65 |

EXPORTS.

SILK.

A good current business in this staple during the week, and Settlements reach a total of 1,250 piculs. In spite of the large business passing, Stocks have again increased, and now stand at 5,500 piculs. Quotations, with but few exceptions, are lower, and the Japanese seem willing to go on selling at or under the prices given below. Export to date is now 10,967 bales, against 9,691 bales to same date last year, and the outgoing American mail has a fair quantity engaged.

Hanks.—There has not been quite so much doing in these, buyers having apparently filled their requirements for the present. Prices are lower for all grades.

Filatures.—Buying for the American market is proceeding on basis of quotations given below. Prices are down, the better grades suffering most.

Re-reels.—Not very much doing in these, some old contracts have been at last settled at a "cut" in the godown.

Kakeda.—These in fair demand, bulk for America, some small lots Good Medium kinds in request for Europe.

Oshu and Taysam Kinds have been taken freely at quotations.

QUOTATIONS.

| | |
|---------------------------------|--------------|
| Hanks—No. 1½ | \$500 to 510 |
| Hanks—No. 2 (Shinshu) | 495 to 500 |
| Hanks—No. 2 (Maibash) | 480 to 490 |
| Hanks—No. 2½ (Shinshu) | 480 to 495 |
| Hanks—No. 2½ (Maibash) | 470 to 475 |
| Hanks—No. 3 | 440 to 450 |
| Hanks—No. 3½ | 430 to 435 |
| Filatures—Extra | 620 to 630 |
| Filatures—No. 1, 10/13 deniers | 610 to 620 |
| Filatures—No. 1, 14/16 deniers | 600 to 610 |
| Filatures—No. 1½, 14/17 deniers | 580 to 590 |
| Filatures—No. 2, 10/15 deniers | 580 to 590 |
| Filatures—No. 2, 14/18 deniers | 565 to 575 |
| Filatures—No. 3, 14/20 deniers | 550 to 560 |
| Re-reels—No. 1, 14/16 deniers | 590 to 600 |

| Sodai—No. 2½ | 440 to 450 |

TEA.

The tone of our Market has shown a decided improvement since the 13th instant. Settlements for the period amount to 2,140 piculs, consisting of the following grades:—Common 130, Good Common 470, Medium 810, Good Medium 340, Fine 270, and Finest 117 piculs. Arrivals have been limited probably not exceeding 920 piculs, and Stocks in Yokohama are estimated about 5,000 piculs. Quotations remain nominally unchanged. No shipments of Tea from Yokohama have been made to the United States or Canada since last issue.

QUOTATIONS.

| | |
|-------------|--------------|
| Common | \$10 & under |
| Good Common | 11 to 14 |
| Medium | 15 to 17 |
| Good Medium | 18 to 20 |
| Fine | 23 to 26 |
| Finest | 29 & up'ds |

EXCHANGE.

There has been considerable tightness in our Money Market the last few days, and rates have advanced fully ½d., the demand for Bank Paper has been small, and more than an average amount of Private Bills here been placed during the week. Rates at the close are firm.

| | |
|-----------------------------------------|-----------|
| Sterling—Bank Bills on demand | 3/8½ |
| Sterling—Bank 4 months' sight | 3/9 |
| Sterling—Private 4 months' sight | 3/9½ |
| Sterling—Private 6 months' sight | 3/9½ |
| On Paris—Bank sight | 4/79 |
| On Paris—Private 6 months' sight | 4/79 |
| On Hongkong—Bank sight | 1/20 dis. |
| On Hongkong—Private 10 days' sight | 1/20 dis. |
| On Shanghai—Bank sight | 72½ |
| On Shanghai—Private 10 days' sight | 73½ |

|-------------------------|------|
| Monday, October 15th | 113½ |
| Tuesday, October 16th | 112½ |
| Wednesday, October 17th | 113 |
| Thursday, October 18th | 113½ |
| Friday, October 19th | 113 |
| Saturday, October 20th | 113½ |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

YOKOHAMA: SATURDAY, OCTOBER 27TH, 1883.

WEEKLY NOTES.

A SINGULAR silence has taken the place of the copious information that used to reach us from the seat of French operations in Tonquin. There is obviously a complete cessation of hostilities, and conjecture is busy discussing the cause of the lull. The *Indépendant de Saigon* dismisses the question very simply. "Operations," it says, "are entirely suspended in Tonquin pending the arrival of reinforcements." In other words, the French find it impossible to accomplish the prime object of the campaign with the force at their disposal. Nobody, except perhaps the French themselves, need be much surprised at this result. It was long ago foretold, and every point of the prediction has been verified. Yet the history of the war up to the present reads almost like a burlesque. Annam has been severely chastised for not annihilating the Black Flags. That part of the programme was simple enough. But France, having undertaken the task of annihilation herself, finds that she had singularly underrated its difficulties. The handful of soldiers who sufficed to overwhelm all Annamite resistance, to capture the

Annamite capital and to dictate their own terms to the Annamite Government, have fruitlessly thrown themselves time after time against the outposts of the Black Flags, until their survivors, wearied and disheartened, are obliged at last to acknowledge their failure by "suspending all operations pending the arrival of reinforcements." Obviously there was a flaw in the original indictment against Annam. Before punishing her for neglecting her duty, it ought to have been ascertained that she was competent to perform it. Her conquerors themselves are not competent, though they have made as little of her resistance as the wind makes of a straw. Meanwhile the Black Flags, the cause of all this trouble, seem to be content with what they have accomplished. Their force is variously stated, but the lowest estimate places it at fifteen thousand men, while the French at Hanoi could scarcely put a tenth part of that number into the field. Can this little garrison, then, hope to hold its own until the much needed reinforcements arrive, or is it exposed to a danger greater than any that has hitherto menaced it? Here we can only speak from conjecture. It is tolerably, nay almost absolutely, certain, that until quite recently the Black Flags were in receipt of substantial assistance from China in the form of both men and material. Now, on the contrary, China has ostensibly disowned them. The Grand Council of the Middle Kingdom has appointed a Special High Commissioner (by name Pêng Yü-lin) of Kwantung, Kwang-si, Fukien, and Chêkiang, with orders to make the necessary arrangements for beating back the Black and Yellow Flags whenever they shall be driven out of Tonquin—arrangements which, according to Imperial decree, include a reconnaissance in force in Tonquin itself, whatever that may mean. "Whenever!" The word begins to have a farcical sound. M. Tricou, however, preserves his confident demeanour. At a recent interview he is said to have asked Li Hung-chang to fix a place in Kwangsi where the Black Flags may settle after they are expelled from their present fastnesses. Li did not appear to consider the matter very pressing. He pleaded the necessity of referring to the Throne, and it is thought that M. Tricou, or his successor, will lose no time in carrying the question to the T'sung-li Yamen. It may be that the Black Flags would be willing enough to lower their arms if they were sure of an asylum somewhere. But as things stand, they have to choose between annihilation and resistance. Doubtless the French thoroughly ap-

preciate these things. Indeed, we are strongly disposed to think that in Mr. Tricou's recent action the key of the whole situation is to be sought. The stories lately circulated with regard to negotiations between M. Harmand and the Chief of the Black Flags, can only mean that if the latter consented to abandon his positions on the Upper Sontai, the French, on their side, would undertake to obtain, from the Chinese Government, pardon and a refuge for his followers. Pending the issue of negotiations in that sense, both the belligerents on the Red River are probably holding their hands. But will China consent to this new proposal of the French? From one point of view it is difficult to see how she can refuse. The Black Flags are her own rebellious subjects. If she has any title at all to a voice in Annamite affairs, then certainly she is answerable for the lawless deeds her people commit there. But, on the other hand, her own interests counsel her not to do anything yet which could help to lessen French embarrassments. Nothing can suit China better than that the Black Flags should hold their ground until the difficulty of driving them out rouses France to a true perception of the task she has undertaken. When the Chamber of Deputies is asked to choose between sending a *corps d'armée* to Tonquin, and accepting China's offer to open the Red River, under certain conditions, there can be little doubt about the result of the vote. Until then we do not expect to hear that the T'sung-li Yamen has played the French game by building a golden bridge for the retreat of the Red River bandits. On the contrary, it would pay China better to abandon the Black Flags altogether to their fate, and thus impart the strength of desperation to their resistance. She will probably continue, however, to aid then secretly, while openly massing her own forces on the frontier, to be used against either the French or their present opponents as circumstances dictate.

In our correspondence columns will be found a letter from a Chinese resident of Nagasaki with reference to the Coroner's inquest recently held at that port. Since commenting upon the contents of the letter, we have obtained information which enables us to supplement our remarks in one important respect. The very noteworthy fact that the evidence of the Japanese police was not taken at the inquest, is attributed by our correspondent, not to any remissness on the part of the Chinese Consul, but to the indifference or obstructiveness of the Japanese

Li did not appear to consider the matter very pressing. He pleaded the necessity of referring to the Throne, and it is thought that M. Tricou, or his successor, will lose no time in carrying the question to the T'sung-li Yamen. It may be that the Black Flags would be willing enough to lower their arms if they were sure of an asylum somewhere. But as things stand, they have to choose between annihilation and resistance. Doubtless the French thoroughly ap-

preciate these things. Indeed, we are strongly disposed to think that in Mr. Tricou's recent action the key of the whole situation is to be sought. The stories lately circulated with regard to negotiations between M. Harmand and the Chief of the Black Flags, can only mean that if the latter consented to abandon his positions on the Upper Sontai, the French, on their side, would undertake to obtain, from the Chinese Government, pardon and a refuge for his followers. Pending the issue of negotiations in that sense, both the belligerents on the Red River are probably holding their hands. But will China consent to this new proposal of the French? From one point of view it is difficult to see how she can refuse. The Black Flags are her own rebellious subjects. If she has any title at all to a voice in Annamite affairs, then certainly she is answerable for the lawless deeds her people commit there. But, on the other hand, her own interests counsel her not to do anything yet which could help to lessen French embarrassments. Nothing can suit China better than that the Black Flags should hold their ground until the difficulty of driving them out rouses France to a true perception of the task she has undertaken. When the Chamber of Deputies is asked to choose between sending a *corps d'armée* to Tonquin, and accepting China's offer to open the Red River, under certain conditions, there can be little doubt about the result of the vote. Until then we do not expect to hear that the T'sung-li Yamen has played the French game by building a golden bridge for the retreat of the Red River bandits. On the contrary, it would pay China better to abandon the Black Flags altogether to their fate, and thus impart the strength of desperation to their resistance. She will probably continue, however, to aid then secretly, while openly massing her own forces on the frontier, to be used against either the French or their present opponents as circumstances dictate.

In our correspondence columns will be found a letter from a Chinese resident of Nagasaki with reference to the Coroner's inquest recently held at that port. Since commenting upon the contents of the letter, we have obtained information which enables us to supplement our remarks in one important respect. The very noteworthy fact that the evidence of the Japanese police was not taken at the inquest, is attributed by our correspondent, not to any remissness on the part of the Chinese Consul, but to the indifference or obstructiveness of the Japanese

authorities, who, though informed of the intention to hold an inquest, and invited to attend, if not to take part in, the proceedings, failed to do either the one or the other. The truth is that no such information or invitation was given at all. Wai Egno died early on the morning of the 16th of September. A few hours afterwards the Japanese authorities received an intimation from the Chinese Consulate to the effect that an examination of the corpse was about to be held. To this intimation response was made by sending two sergeants of police, a constable, and the Japanese physician of the Civil Hospital. These officials, in company with Dr. Renwick and the Chinese representatives, visited the hospital and viewed the body. There the Japanese share in the investigation terminated; for, though an inquest was held next day by the Chinese Consul, no intimation whatsoever of any such intention was conveyed to the Local Authorities. We understand that the evidence of the police—without which it was obviously impossible to arrive at any final conclusion—would have been readily furnished if any notice of the inquest had been given, and it is scarcely necessary to observe that the failure of the Japanese authorities to watch the proceedings, or take part in them according to the right conferred by the treaties, was too palpably unwise to permit an assumption of deliberate intention. We can only conclude that our correspondent omitted to furnish himself with accurate information upon this point—an omission which is the more to be regretted in that it affects the general credibility of his conclusions.

THE cold weather has set in suddenly, and once more—to parody the old song—"through the muddy rice-fields resounds the frequent gun." So far the season does not promise well. The recent unseasonable rain-fall seems to have flooded the paddy so as to keep the snipe away from their usual feeding grounds, and, with one exception, small bags are reported. That exception, however, is noteworthy. A well known resident, who snatched a day from his legal duties, brought home twenty-eight and a half couple of snipe—an achievement which stands high in the best records of the best days of Japanese sport. It is said that a good deal of dissatisfaction was caused by a somewhat peculiar proceeding on the part of the Local Authorities, who refused to issue licenses before the season had actually commenced. Doubtless this reluctance had its origin in some failure on the part of a foreigner to respect the date entered on his license, but to withhold everybody's license because some-one has misbehaved, is not the most logical method of preventing a repetition of similar abuses. The subject, however, is not worth discussion, as nothing of the sort need be apprehended in the future. More important to sportsmen is the much discussed question of game preserving—a question which is not likely to find a satisfactory solution during the lifetime of the present generation, at all events. It is of course

within the competence of the Government to prevent the slaughter of game in the close season, but anything like preserving is hopeless under existing conditions. The Japanese farmer has enjoyed and exercised, from time immemorial, the right of killing whatever bird or wild animal he happens to find upon his land, and certainly the present Government is not in the least degree likely to interfere with this privilege for the sake of the very questionable advantage of providing amusement for a few sportsmen. Good shooting in this country must be procured, as everywhere else, by private effort, and even that cannot be very efficacious so long as the laws of Japan refuse to recognise and enforce the principle obtaining in more civilized countries, namely, that people who cannot afford the luxury of devoting their days to sport have no right of property in the pheasants or deer that live upon their land and feed upon their crops.

BARON ROMAN R. ROSEN, who until recently occupied the post of His Imperial Russian Majesty's Chargé d'Affaires in Japan, sailed for San Francisco last Tuesday. A number of his friends, both foreign and Japanese, assembled at Shinbashi terminus to witness his departure from Tokyo by the last train on Monday night, and a party scarcely less numerous visited the steamer on Tuesday morning to bid him farewell. It has been the rare lot of Baron Rosen to perform the duties of his office in Japan with such tact and sympathy that those with whom he was brought into contact remember him not less as a genial friend than as an able official.

THE Ratepayers of Shanghai, finding that Chinese policemen do not fully come up to the standard of an efficient force, have been discussing the advisability of importing a body of Sikhs. Some of the old residents approved of the notion; others condemned it, and the voice of the latter ultimately prevailed. The principal arguments of the non-contents were that the Sikhs, not understanding the Chinese language, would be placed at a great disadvantage in dealing with Chinamen, and that there might be danger of their treating the people with unnecessary roughness and violence. At the meeting where this question came up for consideration, it did not appear that any of those who took part in the debate could speak from intimate knowledge or experience of the Sikh's propensities and abilities. Everybody could appreciate the linguistic disqualification, but nobody seemed to be quite sure whether the Sikh police at Hongkong had shown themselves gentle and patient in the performance of their duties or exactly the reverse. The fact is that the Sikhs of Hongkong can scarcely be regarded as a fair criterion. The circumstances under which they were first employed there were exceptional—so exceptional that for many years those circumstances exercised a powerful influence on the character of the force, if, indeed, they did not permanently affect it. In 1865-66 Hongkong was a nest of thieves, pirates, and other violent ruffians of the worst class. Burglaries and assassinations were things of daily

occurrence, and crime enjoyed absolute immunity from detection or punishment. The inefficiency of the police was the apparent trouble, but the gambling houses were at the root of the mischief. Their profits were so large that they could afford to bribe the whole police force, and they bribed so thoroughly that their thresholds were never crossed by a constable. Under such circumstances no Chinese employed as police were trustworthy, and the device of importing Sikhs was conceived by the Governor, Sir Richard MacDonnell. The language disqualification was fully appreciated, but at the same time it furnished an additional security against such corruption as that to which the Chinese constables had succumbed. That it might, indeed, become a serious difficulty was soon demonstrated by a Sikh who, seeing a man plant a ladder against a lamp-post and begin to climb up in the early dawn, called out "thief" in his own dialect, and receiving no answer, put a bullet into the leg of the official lamp-lighter. Even this, however, was not thought much of. The time did not admit of gentle measures, and every Sikh went on duty with a rifle in his hand and ten rounds of ball cartridge in his pouch. Of the result of these and other caustic remedies it is unnecessary to speak now. The Sikhs showed themselves trustworthy, courageous, and vigilant; but their first training was less that of guardians of the peace than of soldiers in an enemy's country, and it was remarked afterwards that the habits of those early days survived the conditions which had created them. Even apart from these abnormal conditions, however, it may fairly be doubted whether a band of Sikh policemen either in Hongkong or Shanghai would ever develop a full measure of the unflinching patience and good temper which distinguish an English constable. Such qualities would too unfaithfully reflect the general demeanour of the foreign communities themselves. And from this point of view we cannot but applaud the motives of the gentleman who opposed the project in Shanghai. It is not often that the advocates of gentleness and kindness find themselves strong enough to command a majority in a foreign settlement in China or Japan. Their position was strengthened, indeed, by another consideration which deserved more attention than it seems to have received. The proposal to employ a force of Sikhs was openly connected with a project of drilling and arming them in such a fashion that they would be convertible into a body of soldiers if an occasion arose for employing them in that capacity. Whether the very unusual power of enrolling and maintaining such a force is vested in the Municipality of Shanghai, is a question we will not venture to discuss, but it is easy to see that the measure might involve unpleasant complications. It is certain that no body of foreign troops can be landed, for whatever purpose, in Chinese territory without the consent of the Chinese Government, and the latter might reasonably object to the constant presence of an armed force of foreign mercenaries in Shanghai.

The Colony of Hongkong will probably be a

little startled by the extreme anxiety which the good people of Shanghai display to avoid the imputation of imitating it. At the meeting of rate-payers where the scheme of employing Sikh police was discussed, a leading member of the Shanghai community expressed himself as follows:—

Another objection taken to the scheme is that it is too "Hongkong." That is an objection which we are specially anxious to remove. Certainly in preparing our scheme we avoided as much as possible anything like a servile imitation of the Police Regulations of that Colony. Probably the objection may have occurred because we mention Sikhs. But if any other nationality can be named with its recruiting ground so near, and with a people so familiar with European customs, we will adopt it—to say nothing of the suitability of the men to the work proposed. It may occur to some that our recommendation as regards drilling and arming the police and teaching them the use of arms is an imitation of Hongkong; but if you will allow me to read an extract from the Police Regulations which have been in force in Shanghai for the last twenty years, you will see that we have not borrowed this part of the scheme from Hongkong. (Mr. Holliday here read an extract from the Shanghai Police Regulations.) No one would advocate putting firearms into the hands of men without showing them how to use them. If it is thought that the pensional provisions are taken from Hongkong, I can only say they are common to all the English colonies. If it is thought that the title Captain Superintendent is from Hongkong, here again we are simply adhering to the system throughout the English colonies. But if these titles are objected to, we can substitute those of Chief Constable, Deputy Chief Constable, and Superintendents. It may be that the scheme does somewhat reek of Hongkong; but in taking Hongkong as our guide we have done so to profit by their experience. Where we have gone to a slight extent upon the lines of the Hongkong Police Regulations is in the salaries, to benefit by their experience. In one place we draw a comparison between the cost of clothing here and at Hongkong, and we find that, roughly speaking, we pay here just double what they pay in the South. We have had up complete suits of the clothing issued to the force in the South, and the Superintendent and the storekeeper both say that the workmanship is as good as, and the material is better than, that supplied to the police here. Is it fair to the Rate-payers that we should go on paying on this scale for fear of copying Hongkong? Why let our patriotism interfere with our pockets?

One is slightly puzzled to comprehend why the Municipal Council—in whose name the gentleman we quote seems to have spoken—should be "specially anxious" to avoid the suspicion of being "too Hongkong." Apparently there is a point of "patriotism" involved, but what is it? The leader of the Japanese Liberals did not approve of the British method of administering the affairs of that Colony, yet he involuntarily furnished powerful testimony in their favour when he said that the Chinese who settle there seem to forget that they are Chinese and soon learn to treat their English masters as fellow-countrymen. For our own part, we have always thought that Hongkong is a tolerably fair example of what British energy and British determination can accomplish with comparatively insignificant materials, and were Yokohama presented with a municipal charter to-morrow we should not be at all ashamed to be told that the executive methods of the new municipality were "too Hongkong." Moreover we shrewdly suspect that the gentleman who undertook to conciliate this anti-Hongkong bias in Shanghai did not share it at all himself. But Rate-payers and Land-renters have caprices like all other mortals. They require to be humoured, and "patriotism" is a very happy euphemism for prejudice.

NEWCHWANG appears to be much exercised about a certain want of judicial calm recently detected in the British Consul at that port. A gentleman had the bad taste to die at a friend's house, appointing his host sole executor to his will.

The Consul then stepped in, and declared that all the papers and property of the deceased must be handed over to official keeping. Perhaps the executor thought that this ruling reflected, directly or indirectly, upon his integrity. At all events he declined to comply, and there ensued some proceedings of a more or less arbitrary nature. At this stage, however, Sir Richard Rennie appeared upon the scene, and gave the Consul a hint that his action was a little *ultra vires*. But the Consul had another arrow in his quiver. So soon as Judge Rennie had departed, he ordered the executor to pay a fee of \$2, and on the latter's refusal, summoned him for contempt of Court. The order to pay was not as clear as official documents sometimes are. It measured four inches by three, and bore the words "*Memorandum*—11th September, 1883. To be collected from H. E. Bush forthwith, two dollars, fees for order and service of do. H. J. A." Bush was foolish enough to display his litigious disposition by wanting something in better form than this fragment of foolscap, and in the course of the ensuing argument, the Court rose from its seat, "dashed the bible, which it had in its hand, on the table with terrific violence," uttering, at the same time, some words rendered inarticulate by a sense of the gravity of the situation. Ultimately, however, his honor's judicial cholera subsided so far that he withdrew the charge, and Mr. Bush, we presume, obtained probate without further difficulty. The only material sufferer was—the bible.

NOTES.

THE *New York Herald* is not particularly happy when it ventures into the mysterious depths of Oriental policy. The ineffable self-sufficiency of its recent forecast, in which the United States were indicated as the universally elected arbitrators of national destinies, was worthily capped by its crass ignorance of Chinese and Japanese relations, and may be fitly bracketted with the cargo of Korean corpses, enclosed in coffins of pure gold, which a Japanese transport brought to Japan at the close of the hitherto unheard-of war of 1876. One imagines, however, that the big journal ought to be on firmer ground when it devotes itself to the comparatively simple task of advocating additional protection for American interests in China. The data of the problem are not complicated. On the one hand, we have quite a large number of United States' citizens engaged, directly or indirectly, in Chinese commerce, and exposed to immense loss and danger in the event of a war between France and the Middle Kingdom; on the other, we have five antiquated wooden ships, barely seaworthy and of insignificant power, charged with the duty of guarding the whole Chinese coast. Beyond these facts it does not seem necessary to travel. They are amply sufficient to justify the *Herald's* contention. But they are scarcely sufficient to furnish food for a leading article, and accordingly the *New York* journal proceeds to supplement them by "another and

a broader reason." It is, that "if France goes to war with China she will encounter not only the open and direct hostility of the Chinese, but the indirect and malevolent opposition of the English, whose jealousy of the French advances and pretensions in the East already begins to show itself." This reason is certainly "broad," but it needs explanation, and the *Herald* does not fail to explain that "there will be misunderstandings, disputes, various troubles arising out of English arrogance and jealousy;" and that "the presence on the scene of representatives of a strong Power like the United States, which yet by its traditional policy and by its interests is impartial and leans towards peace, may be of the last importance in preventing a spread of war by providing suitable arbitrators in those petty disputes which so often precipitate war between two proud and powerful nations." Thus after a little abuse of his kinsmen, the English, the American writer gets back to his old hobby—arbitration by the United States. Whether or no that arbitration would be accepted, appears to be a secondary consideration. Parties to a dispute, when they agree to submit their cause to a referee, generally attach some value to his freedom from manifest bias, but the *New York Herald* disdains such pettiness and says frankly:—"If we speak of the United States as impartial, we do not forget that American sympathies are naturally and properly with the sister Republic, France. Americans would be false to themselves did they not heartily wish the French experiment of Republican government prosperity and permanence. Nor are we of the United States blind to the fact that the well wishers of a peaceable and orderly French Republic are very few in Europe. The example and success of France are regarded as a menace to monarchical institutions, and when the Republic blunders, Kings and their Ministers rejoice." The principle having been thus definitely enunciated that the one potent bond of sympathy between two nations is similarity of political institutions, and not consanguinity, community of history and traditions, or identity of laws and language, it follows easily that America is morally bound to countenance and assist that "peaceable and orderly Republic" which is at present the solitary disturber of the world's quiet. Of course after this confession of partiality, America's qualifications for the post of arbitrator, will be thoroughly appreciated both by England and China.

On the very next day after this confession of faith, the *New York Herald* approaches the question from a different direction. "The cablegram from Paris," it writes, "published in the *Herald* yesterday stating that the fanaticism of the Chinese was such that during the Canton *émeute* Americans were classed with other foreigners as *yung yin*, or devils from across the sea, and the editorial comments thereon occasioned wide-spread comment yesterday and attracted public attention to the sensitiveness of our great foreign commerce to disturbances even in such remote regions as China. That any

social or internal trouble in China could affect America or Americans was quite remote from even the suspicions of most people, but the explanation of the real danger and the necessity of some action on the part of the United States government revealed the true state of affairs." It is plain that the good people of America have a rather exaggerated notion of the popularity enjoyed by their nationals in China. They lose sight of a few important points:—First, that the treatment the Chinese receive in the United States is not always of a nature to encourage affection for American courtesy and kindness; secondly, that the anti-immigration law does not appeal to the Chinaman's ideas of justice and liberality; and thirdly, that although Chinese statesmen may, and doubtless do, recognise the superior features of America's Oriental policy, the mass of the Chinese people know nothing and care nothing about political matters, but regard all "foreign devils" with similar aversion. In the event of a war between France and China, we can scarcely doubt that the open ports would become the scenes of riots similar to, but on a very much larger scale than, that which occurred recently at Canton, and on such occasions a Chinese mob would no more distinguish between different nationalities than between blondes and brunettes. American citizens would be pillaged and murdered just as readily as any one else, and the United States fleet would have to turn its attention to something more urgent than its self-imposed rôle of arbitration. The "indiscreet, malevolent opposition of the English" to France's arbitrary advances in the East is not inspired by jealousy—though we do not pretend that jealousy counts for nothing in the matter—but by the apprehension of disasters which would be equally prejudicial to the interests of all China's treaty friends.

This discussion, on the necessity of increasing the United States squadron in Chinese waters, derives additional interest from the publication of opinions expressed by eminent Americans to reporters of the *New York Herald*. Amongst others, Commodore Shufeldt was interviewed. He is said to have explained his views as follows:—

I have to say, first, that in my opinion China has no good cause of war with France. In 1874 France made a treaty with the King of Annam as a sovereign power, and without any protest from the government of China. Any violation of that treaty is a question between Annam and France alone—China, of course, possessing the right of protecting her own boundaries. In 1876 Japan made a treaty with the government of Corea, followed in 1882 by a treaty on the part of the United States with the same country, on the basis of the absolute sovereignty of Corea and irrespective of any rights of sovereignty on the part of the Emperor of China. These treaties were made without any protest on the part of China, although the relations of Corea to China are identical with those of Annam to China. Nations may, however, possibly drift into war, and if a war should arise it will be because China, feeling strengthened by the partial creation of a navy and army, has become desirous of assuming her position as a Power among the nations of the world and not because of any inherent right to interfere in the affairs of Annam. In point of fact, the French have as much right in Annam as the English in India and Burmah, or the Dutch in Java and Sumatra, or the Spanish in the Philippine Islands. It is simply a question of conquest and the right of superiors to rule over inferior races of men. On this question, as the *Herald* very

justly remarks, the sympathy of the people of the Republic of the United States should be with the people of the Republic of France, for, in any event, the conquered races are benefited more or less by contact with civilization, and France, the only Republic in Europe, is strengthened at home. In the meanwhile, however, the prospect of a war between these two nations has undoubtedly created great excitement among the people in China.

Secondly, therefore, I am of the opinion that it is a mistake to suppose that there is any discrimination on the part of the Chinese for or against any foreigner. The dictatorial policy of European Powers has had quite as much, and even much more, effect in creating such an influence as any anti-Chinese legislation by the United States Government. But the truth is that, irrespective of these influences, there is an irreconcilable antagonism between the Chinese people of every grade and the people of every Caucasian nationality. Legislation, indeed, on the part of the United States has been no more unfavorable than that of the English in Australia, the Dutch in Java, or the Spanish in the Philippines. This prospect of a war, therefore, is simply the pretext for an outbreak in all the open ports where foreigners reside. Those only who have resided in China, perhaps, will realize the uncontrollable character of a Chinese mob. On such occasions the authorities are not only ignored, but if need be are crushed. It is this danger which foreigners have to apprehend at the present moment in China. Take, for instance, the city of Shanghai, fronting on a river, with a commerce third or fourth only compared with the great commercial centres of the world. It has a population say, at the outside, of five thousand foreigners, absolutely in a defenceless condition, with a population in its rear in the Chinese town and cities running up into the millions.

Nothing can save the lives of these people or their property in such an outbreak except the presence of men-of-war anchored in the stream immediately opposite the foreign residences. It matters comparatively little whether these ships of war are of modern construction and armed with the longest range guns. It is the knowledge of the officers commanding and the discipline of the men and the pluck of the race which renders them arks of refuge for those who may have to flee from the wrath of a bloodthirsty mob. Besides, the sight of the flag of one's own country gives every citizen in that remote land a sense of security which, without it, he would not and could not feel. To be sure, the interests of Americans in China are not great nor the citizens numerous. If I am correctly informed eighty-six per cent of the foreign trade in China is English, leaving only fourteen per cent to be divided among the other nations of the world, yet if this is not a reason for keeping an American force in these waters, the prestige of the country and its prospective trade are certainly a warrant for so doing.

The Commodore's definition of France's rights in Annam—"a question of conquest and the right of superiors to rule over inferior races of men"—is more candid than convincing, but the rest of his remarks are well worthy of attention.

One of the leading Italian journals comments in the following sensible terms on the brutalities recently published by M. Rochefort in the *Intransigent*:—"One would never suppose, having regard to the excitement into which certain persons have been thrown, that there are published every day, both in France and in Italy, thousands on thousands of newspapers whose articles are as ephemeral as the clouds which the winds waft across the heavens. To imagine, for example, that an article in the *Intransigent* could insult the King of Italy is as naïf as to think that a statue is dishonored because a little dog forgets itself at the base of the pedestal. Our brave citizens who are so much perturbed forget that they are doing M. Rochefort a great pleasure. He would be *désolé* if his articles did not move anyone or make any passers by turn their heads. It is he who triumphs, since there are people sufficiently magnanimous to play his little game. . . . But what we understand still less is the resolution voted by the

Local Committee of Naples to refuse all humiliating aid. Are Paris and France represented by M. Rochefort and the *Intransigent*? True the Committee has couched its resolution in terms which leave a loop-hole, since it is difficult to tell whether the contribution of M. Rochefort alone is referred to or that of all France. This ambiguity is fortunate. . . . But it is a pity that a few lines from the pen of a foreign pamphleteer should suffice to drive Italians to such extremes. We are much too nervous, and therein lies a danger."

The little dog misbehaving itself at the base of the statue's pedestal is a subtle conception. M. Rochefort is well photographed. But even this, bitter as it is, will hurt him less than the discovery made by M. Achille Fazzari and published by *Fanfulla*. Immediately after the appearance of Rochefort's slanders, M. Fazzari sent him a telegram asking how many thousand francs he had subscribed to the sufferers of Ischia in order that he, M. Fazzari, might return them at once. Rochefort was informed that twenty-four hours would be given him to reply, but he never replied at all. For a very good reason. He had not subscribed a sou either in his own name or in that of the *Intransigent*! *Fanfulla*, in announcing this fact, adds, "M. Rochefort may possibly have contributed something through the medium of the *tombola*. That remains to be proved." It would be difficult to conceive a worthier finale to this miserable episode of journalistic brutality.

The Russian schooner *Nemo* left Hakodate on the 23rd inst. for this port. The *Nemo* has been absent two hunting seasons, but whether she has been proportionately successful remains to be seen.

One can scarcely wonder that the possibilities of a rupture between England and France in connection with the latter's Chinese policy have become matter of common talk. Did hostilities break out to-morrow between the Republic and the Middle Kingdom, Great Britain's position as a neutral would be extremely difficult. China might justly require her to close her coaling stations to French transports and vessels of war, and were the demand complied with, the resulting inconvenience to France would go far to accentuate her present feeling of umbrage against her former ally; while its rejection would naturally be regarded with indignation by China. After all, however, what is most difficult to contemplate is an alliance between England and China against France. Nothing appears less consistent with tradition and propriety than such a combination. Yet, having regard to the vast preponderance of English interests at all the open ports of China, and to the immense injury those interests would inevitably suffer in case of war between France and the Middle Kingdom, it is easy to foresee that England might be thrust into a position which she would never voluntarily elect to occupy. On the other side, her hand might equally be forced by some lawless pro-

ceedings on the part of the Chinese inhabitants at the open ports, who would naturally be unable, even if they were disposed, to discriminate between foreign friends and foreign foes, were their country at war with an European Power. The danger from this source becomes still more imminent when we remember that there are in China many secret societies who, to contrive the downfall of the Manchu Dynasty, might even be willing to embroil the latter with three or four Western States at the same time. Thus, from whatever direction the situation be considered, Great Britain's chance of being suffered to remain neutral may well seem slender enough to justify uneasiness.

When a strong man, having been taken at a disadvantage by his neighbour and severely punished, is burning to reassert his strength, it seems questionable whether the best way of pacifying him is to remind him of his impotence and to counsel an attitude of prudent forbearance. This, however, is pretty much the line of argument adopted by the *London Times* in its rôle of peacemaker. Evidently desirous of saying something consolatory to "our natural ally," as Mr. Gladstone calls France, by way of set-off for Prince Bismarck's unpleasant utterances in the columns of the *Nord Deutsche Zeitung*, the *London Journal* charges Germany with employing a "blustering and minatory" tone and with creating "petty scares." The accusation would be pretty enough if it stood alone, but *The Times*, tormented by the necessity of showing no favour, adds a very ungraceful rider, to the effect that Germany has no business thus to offend a Power which behaves with such becoming humility. French statesmen, Prince Bismarck is reminded, "conduct their foreign policy in a spirit of the utmost deference to Germany;" their bearing towards their powerful neighbour is "almost obsequious," and they are for the most part silent when she is concerned, or if they speak at all, do so with "almost bated breath." A clumsy fashion this of pouring oil on the troubled waters. Frenchmen will not feel particularly grateful to a friend who tells them that "they know perfectly well Germany is still immeasurably stronger than their country," and that the attitude which best befits the former is one of "proud confidence in her acknowledged strength and of dignified indifference to the private sentiments of Frenchmen." To a sensitive nation which does not believe, any more than any one else believes, that its title to stand in the very first rank of Military Powers was permanently vitiated by the Treaty of Frankfort, and which looks forward eagerly to the time when it will be in a position to re-establish that title, the *London Journal's* contemptuous method of dismissing any such possibility will seem only a trifle less distasteful than the menacing admonitions of the Bismarckian organ.

The method of enlisting recruits for the band of artists and artisans charged with the manufacture of articles of luxury for use in the palace of the King of Annam is not calculated to de-

velop industrial ability quite so much as the customs that prevail in other countries. These workmen live in a species of barracks in a certain quarter of Hué. So soon as the reputation of an artisan comes to the ears of the King, the latter causes him to be conducted to the barracks, where he is thenceforth obliged to work for a scanty pittance, sure of being dismissed at the first symptom of incapacity whether from old age or sickness. Such, at any rate, is the story told by M. Chaigneau, the only French traveller who has hitherto enjoyed an opportunity of examining the lives of the citizens of Hué in detail. The result naturally is that artists, worthy of the name, do not exist. Yet there was a time, according to Japanese traditions, when Annam contributed some choice specimens of art industry to Oriental collections. There remains a great deal to be investigated with regard to the history of art in Eastern Asia.

It is not a little remarkable that there should be so wide a discrepancy between the Consular estimates of the losses sustained by the European community in the recent Shamien riots. Mr. Seymour's estimate, which even American papers speak of as "very moderate," is less than a quarter of that of the other Consuls, who value the property destroyed at \$1,000,000. We hear from private sources that the larger claim is principally upheld by the German Consul, who has, all along, taken a decisive stand with regard to the indemnity. After the very prompt—not to say forcible—manner in which the Foochow and Swatow claims were brought to the notice of the T'sung-li Yamen by the German Minister in Peking, it is not at all surprising that Baron von Kettler and Dr. von Möllendorff should have been chosen to represent the common cause in settling the Canton question. No secret is made of their intention to force the Chinese authorities to pay an ample indemnity. Yet the relations between Germany and China were never friendlier than at present, —a fact upon which France has of late put special significance. The Swatow affair, it is true, seems rather to have been deprecated by the German Government, but at the same time the claims of Messrs. Dircks & Co. are just as warmly upheld now by the German officials in China as they were from the outset. It has been rumoured, in fact, that Bismarck thoroughly sanctioned the steps taken by Vice-Consul Schaar at the time, even to the landing of German marines on the disputed territory; and the manner in which Minister von Brandt "memorialised" the T'sung-li Yamen certainly points to entire concurrence on the part of the German Foreign Office in the steps taken with regard to the Swatow land question. Germany is palpably unwilling to let China have the advantage in a dispute.

Private letters from Canton and Hongkong confirm the report that the German authorities are actively engaged in obtaining redress for the Canton outrages; and it is a significant fact that, when the native Cantonese officials

paid their first visit to Shamien, after the riots had taken place, they went immediately to the German Consulate and *kow-towed*, or performed the profoundest salutation known to the Chinese,—an unparalleled condescension, which was in this case a sign of sincere regret, mingled doubtless with some justifiable apprehension.

But to return to the indemnity claimed, Mr. Seymour's estimate certainly is curiously small. Take Mr. Holwell's large collection of curios—his house was completely looted by the rioters—as a solitary item, and we have many thousands of dollars worth of property destroyed. It has been since reported that several fine pieces belonging to the collection have been recovered from the pawn-shops in the native city, but these can at best represent only a very small fraction of the total number lost. Then there are several hongks looted and one or two totally destroyed: an average loss of at least \$50,000. The pretty theatre, which was erected only a few years ago at considerable expense, also adds an important item to the deficit list. It cannot be doubted for a moment that the Consuls are perfectly candid and honest in their belief that one million dollars worth of European property was destroyed; nor can any credence be given to the rumour that this large sum not only represents the actual loss of property but includes as well a sort of pecuniary "rider," to the end that the riotous Chinese may grow wiser by having their pockets considerably lightened.

One of the unexpected developments of the Chinese agitation is the opening of recruiting offices, in New York and Philadelphia, for the enlistment of patriots of the Middle Kingdom who desire to resist the threatened invasion of their ancestral soil by the rash and intrusive Frenchman. The first outburst of warlike ardor occurred in a laundry on Mott Street, where an excited Asiatic convocation was discovered waving petticoats and shirts, in lieu of flags, and brandishing crimping irons with a valor which only awaited a proper opportunity to be transferred to more formidable instruments. A demonstration so unusual provoked inquiry as to its origin. This apparently simple question elicited responses of the most divergent character. Some said opium, others whiskey; while a few hinted at a combination of those inspiring influences. But a commanding figure wrapped in a partially ironed dressing gown put an end to all contradictory explanations by proclaiming himself an ex-pirate of the Pearl River, qualified by experience, study, and personal inclination to lead any number of his race to glory and triumph against the banners, bodies, and bullion chests of the French. Fired by his inflammatory eloquence, sixteen Chinamen enrolled their names in a single day, as the advance guard of a body on whose devotion their hundreds of millions of fellow Mongols at home might implicitly rely. On the following day, a similar imposing manifestation took place in Philadelphia, also in a laundry, and, by a peculiar

coincidence, likewise stimulated by an influential retired pirate, named Bang Foo. His exertions resulted in the massing together of no less than twelve volunteers, all prepared to join the cohorts in New York, in defence of the altars and the fires of the entire Celestial Empire. These spirited proceedings in America will not be disregarded by those concerned. The French are a brave race, but there are boundaries which the most desperate and abandoned courage is not expected to overleap.

"MAN yields to custom as he bows to fate," says Crabbe, and it is doubtless because they recognized this truth that the Chinese philosophers placed on record the precept:—"It is better to correct one evil habit than to inaugurate ten virtues." France has room at present for a good many Chinese philosophers, and their first care might be to put a stop to the absurd custom of duelling. There is something utterly repugnant to reason and common sense in the notion that because a man deliberately steps outside the pale of civilized society by grossly insulting his neighbour, the latter is forthwith to offer the barbarian an opportunity of lodging a piece of lead in his brain or boring a hole in him with a rapier. Duelling as practiced by German students is not without merits. Its uses as an educator of nerve and muscle are exceptional, and the danger it offers to life and limb is reduced to a minimum. But the duel as it is fought in France by journalists, statesmen, and private citizens, has no redeeming features of any sort. It is simply a parody on the habits of wild beasts. Whatever benefits the Republic has conferred on France, its influence in fostering this savage and illogical disposition contrasts ill with the wholesome checks imposed under the Imperial régime. It is to be hoped that Japan will have the discrimination to reject so repulsive a feature of Western civilization. There does not seem to be much danger of her adopting it, indeed; yet the following item of news which appears in a recent number of the *Alla California* shows that Japanese in France do as they do in France:—

Paris, September 25th.

Baron Beaufort and Viscount Armand have fought a duel. The latter was seriously wounded. Two Japanese residents also engaged in a duel. One was slightly wounded.

Possibly, when these truculent Japanese return to their country, they will bring back with them a notion that it is fine thing for grown men to perpetuate the habits of school-boys, and that a gentleman's honour can only be vindicated by an assault upon the flesh and bones of its insulter.

No case, perhaps, has ever illustrated the absurdity of duelling more forcibly than the story of M. Rochefort's slanderous attack on the King of Italy. Rochefort, who if not insane is too thoroughly brutalized to be treated as a responsible being, wrote a leading article in his journal accusing King Humbert of "pocketing French money subscribed in aid of the sufferers in Ischia, while at the same time he and the repiles in his pay were urging Germany to anni-

hilate France." Such a wild and foul accusation certainly did not merit anything but contempt, unless indeed a public whipping could have been inflicted on M. Rochefort with the consent of the Society for the Prevention of Cruelty to Animals. Nevertheless an officer in the Italian army, Lieutenant Bettini, did Rochefort the honour of calling on him and demanding satisfaction; in other words, offered a blackguard the privilege of stabbing or shooting at a gentleman! If Rochefort had not elected to evade the consequences of his slander by a cowardly subterfuge, he might have gone out and perhaps killed or maimed Lieutenant Bettini, in which event, it would have been established, we presume, to the satisfaction of all duelling Frenchmen, that King Humbert had really pocketed money intended to relieve the people of Ischia. Rochefort, however, stupidly declined this chance of escaping from the dilemma. He said that if he consented to fight an officer of the Italian army on such grounds, he must equally consent to fight any Italian official who chose to take up the quarrel; and he made his refusal the occasion for offering fresh insults to the King. We doubt whether such a vile abuse of the privilege of free speech could happen in any country where the functions properly devolving upon public opinion had not been usurped in part by the savage custom of bullet-and-blade ordeals.

The pity of the thing is that the unfortunate sufferers whom all the world was anxious to help, have allowed themselves to be carried away by a vertigo which, though very respectable, is also eminently ridiculous. The *London Times* tells us that in consequence of Rochefort's ruffianism the Local Permanent Committee of the survivors in Ischia unanimously voted the following resolution:—

However great may be the misfortune which has been suffered, still Italian blood flows in the veins of the survivors. When charity is offered to them, in order that it may serve as a pretext for insulting their King, they proudly feel it their duty to refuse, at such a price, charity, not only from M. Rochefort and the whole of France, but from all the world. For these reasons they have unanimously decided to refuse all such humiliating offers that may be sent them; and they request the Relief Committee of the Sufferers in Ischia to make this resolution fully known.

Everybody can sympathise with the spirit of honest indignation that prompted these words, but surely it is a little childish on the part of the Ischia folks to deny all the world the privilege of helping them because there happens to be a blackguard among French journalists.

Among the latest extracts from judicial chronicles is to be found a story of real life stranger than any fiction. The hero of it is now known by the name of '*l'homme au verrou*,' for reasons which will be understood from the following letter received at the Prefectural Offices of the Seine towards the end of August:—

"*Monsieur le procureur général:*—

"You did not occupy your present post in 1872, but perhaps you will nevertheless remember a crime committed at that time and much talked of in the public journals under the title of '*Affaire du passage Saint Pierre*.' At all events you have only to consult the archives of the period. On the 10th of April, towards

midday, the waiting maid of Madame Marguerite Postelet, entering her mistress's room, found her strangled. Her husband had left the house at 9 o'clock in the morning, after dressing himself as leisurely as usual. Suspicion consequently did not fall on him at first, more especially since he had always seemed to live on good terms with his wife. But when he failed to return in the evening, the truth was at once divined. It was he who had strangled his wife. But they searched for him in vain. I—for it is I, Joseph Postelet, who write to you—had had time to conceal myself effectually. To-day I am resolved to confess my crime, for I am weary of being pursued by the remorse which has never left me for an instant during the last eleven years. So soon as I have posted this letter I am going to commit suicide at Liège, and I shall adopt precautions to prevent the discovery of my body. I pray you to believe, however strange may seem the motives of my crime, that I speak only the truth. About six months before the day when I killed my wife, I became the victim of a cruel disease. Every day I had in my head neuralgic pains which lasted for hours and made it impossible for me to sleep during the greater part of the night. My poor wife nursed me with the greatest devotion, but no remedy gave me any relief. At the end of a few weeks my attacks acquired a horrible regularity, and came upon me always at the same hour. I suffered unceasingly from 2 o'clock till 9 every morning. My servant had orders to come into my room every day at 7.30 a.m. to get my clothes ready. It was the hour when I was at the height of my suffering, but he never made any noise and I was scarcely conscious of his presence, so that he gave me no annoyance. One day, unfortunately, burglars got into the house, and my wife, terrified, had a lock put to the door of our room. The next morning I was of course obliged to get up to open the door, and in my state of pain the effort was exceedingly disagreeable. It was the same on subsequent days, and soon it came to this—that no sooner did my sufferings awake me at 2 o'clock in the morning than I began to think with horror of the moment when I should be obliged to get out of bed to unlock the door. The idea oppressed me, haunted me, and strangely tormented my sick mind. I would have given at that moment I know not what to be rid of that forced labour. Finally I used to wake my wife and entreat her to have the lock taken off. She always answered me, between two yawns, that I tormented her, and that she was afraid of thieves. Then I was seized with a furious anger against her. I hated her for sleeping so tranquilly and having no pain. Each day my ideas became blacker. Every night I thought of suicide. At half-past seven, when my servant knocked, I shook my wife rudely and bade her open the door. She gave me an angry answer and said I hurt her. I declare that it was not my will but my nerves which then threw me upon her. In an instant, before she could even sigh, I strangled her. Then I covered her up and went to let my servant in. I was overwhelmed by what I had done, but I recollected that to save my life I must seem calm. As for my pain, it had suddenly disappeared. I dressed as usual; took what money and valuables I had by me, and before anyone thought of looking for me I was here at Liège, where I have lived ever since under the name of Maralcher. I send by this same post a letter to my notary, in order that he may be in a position to transmit what property remains of mine to my heirs."

(Signed) JOSEPH POSTELET.

Subsequent enquiries have shown that the statements contained in this letter are probably true.

By a private letter from a prominent member of the Corps Legislatif, we are informed that notwithstanding the growing excitement over the Tonquin question, there is in France no clearer general understanding of the situation than at the first outbreak of the difficulty; that ninety-nine out of every hundred persons who declaim, in the cafés and on the boulevards, about the vindication of French honor and the atonement for French blood, have not the faintest idea of what has been done, or who are engaged in the quarrel, or even where the scene of action really is; and that the majority of the people's representatives,—so far as they can be heard from at the moment,—appear equally ignorant with the noisy multitude. As to the Ministry, who are compelled to bestow a certain amount

of intelligent investigation, their inquiries are directed solely to the question of self-preservation. If they could hold their own by pushing forward with energy, they would do so; if they could be assured of safety by dropping the whole business without ceremony, they would do that. But they cannot see their way clear in any direction, and there is no consistent public opinion for them to rely upon. These are the criticisms of a member of the Opposition, but we apprehend that the judgment of impartial observers would go far to sustain them. From other late sources we learn that the dissensions at Tonquin have caused much disquietude in Paris, and that the union of all authority, civil and military, in one person, is strongly advocated in the highest quarters. M. Waddington's share in the diplomatic negotiations continually increases, and there is said to be a prospect of his assuming control of the French part in all discussions concerning China. Rumour whispers, indeed, that his expected withdrawal from the office of Ambassador to England may be followed by his appointment as Minister of Foreign Affairs. This would be hard upon M. Waddington, all things considered, but the most fortunate event that could happen, for France,—provided that he has the resolution and the force to carry the Government with him in the course which he knows to be necessary for French prosperity.

On the 18th of September the Korean Envoys to the United States, with their suite, were formally received by President Arthur, not in Washington, but in New York, where, at the Fifth Avenue Hotel, the Chief Magistrate was temporarily sojourning, on his way from the Yellowstone Park to the seat of government. The ceremonies were brief and not especially interesting, consisting chiefly of the delivery of credentials and an autograph letter of greeting from the King of Korea, on one side, and the acceptance thereof, on the other. Speeches appropriate to the occasion were made, in the reports of which nothing noticeable appears. The newspapers, naturally, make the most of this interview. But for the well known assumption of omniscience, by virtue of which reporters are accustomed to evolve from their internal consciousness a full set of impromptu explanations for every new or unfamiliar incident, we might congratulate ourselves upon obtaining some valuable information as to Eastern usages; but we fear that in this instance, as in others, the pretended exposition is the merest ebullition of journalistic imagination. For example, we are instructed that the Envoys, on approaching the President, "made a salaam according to the fashion of Oriental Princes,—that is, bowing to one side, instead of directly to the person saluted." We also learn the important fact that, while Mr. Arthur was responding to the courteous address of the principal Envoy, the latter was observed to "lift his hand twice to his forehead,—a Korean gesture implying respectful attention." On the whole, the descriptions of the meeting are more amusing than we presume the event itself to have been.

We observe that the confusion as to proper names, which under similar circumstances is usually confined to the unknown strangers and their titles, appears in this case to be transferred to the European or American Secretary of the Legation; for, though frequently spoken of, he always appears under a different designation. By one journal he is called Mr. Percival Lowell; by another, Mr. Lowell Osborne; by another, Mr. J. Perceval, and still again, Mr. Parton Jordan. If called upon to explain, the subtle reporter of New York would probably remark that it is a Korean tradition for Foreign Secretaries of Legation to change their names five times a day. On the whole, the *New York Herald's* account seems most credible. It is as follows:—

"We pray that the people of both our lands may live forever without change in peace and happiness."

Such was the salutation which the Ambassadors from the Hermit Land of Tah Chosun or Corea uttered yesterday to the people of the United States represented in the person of their Chief Magistrate. With all due form and ceremony, with many bows and much fair speech, the presentation of the envoys to the President took place. Behind the diplomatic forms and phrases there appeared genuine friendly sentiments—on the one hand, the reaching out of the hitherto secluded Oriental people for aid and comfort in their first plunge into the whirlpool of "civilized" life; on the other, a cordial welcome of the shy sister to the great community of nations.

The scene of the presentation was a parlor in the Fifth Avenue Hotel on the Twenty-third street side. President Arthur entered it about eleven o'clock and it was at once announced to the Ambassadors in their apartments that he awaited them. As they approached the President stood near the middle of the room facing the door. He was dressed in ordinary morning costume, and looked as if he were impressed with the dignity of the occasion. On his right stood Secretary of State Frelinghuysen, on his left Assistant Secretary Davis, Mr. Chew, of the State Department, and Lieutenant T. B. M. Mason and Ensign Foulk, United States Navy, and several other gentlemen stood a little behind.

THE AMBASSADORS' APPROACH.

The Korean magnates issued from their apartments in single file, and in single file proceeded along the corridors towards the room where the President waited for them. First in order came the first in dignity, Min Yong Ik, a relative of the Queen, a noble of the highest order and Minister Plenipotentiary of the King of Tah Chosun. He was dressed—as were all his companions—in his richest robes of State. A loose garment of flowered plum colored silk showed through its openings a snow white tunic, also silken. The whole was belted in with a broad band covered with curiously wrought plates of gold. Upon the Ambassadors' breast hung an apron with two storks embroidered in white upon a purple ground, and bordered with many brilliant colors. On his head he wore his hat of ceremony, a singular structure of silk, bamboo, and horsehair, which, according to Korean custom, it is indispensable to wear upon all official occasions.

Second in the procession came the Vice-Minister, Hong Yong Sik, a son of the Prime Minister of the Korean Kingdom. His dress in the main resembled that of Min Yong Ik, his lower rank being denoted by the fact that only one stork was embroidered upon the apron covering his breast. He was succeeded by Lo Kwang Pom, the Secretary of the Embassy. He wore simply the tunics of white and plum-colored silk and the official hat. Mr. Percival Lowell, a relative of Minister James Russell Lowell, and Foreign Secretary to the Korean Embassy, followed. He was in evening dress. Yu Kil Chum, who was dressed in a green pelisse; Pyon Su, who wore black; and Ko Young Chol, in blue, brought up the rear.

Standing in the broad hall, just outside the open door of the reception room, the Ambassadors and their suite formed a single line facing the President. At a signal from the Minister they dropped together on their knees. Then, raising their hands above their heads, they bent their bodies forward with a slow, steady sweep until their foreheads touched the ground. Remaining in this attitude a few moments, they arose and advanced into the room, President Arthur and the gentlemen with him bowing deeply as they entered. Then Frelinghuysen, coming forward, led Min Yong up to the President and introduced him. The President and Minister joined hands, looked earnestly in each other's faces for a moment, and through the interpreter exchanged some words of compliment. Then Hong Yong Sik, and after him the other members of the Embassy, were presented to the President, and all the American gentlemen present were introduced to the Koreans.

Then Minister Min Yong Ik pronounced his formal address to the President, speaking in his native tongue in a solemn and rather pleasant voice:—

TO HIS EXCELLENCY THE PRESIDENT OF THE UNITED STATES OF AMERICA:—

We, Min Yong Ik and Hong Yong Sik, are present in person to address Your Excellency the President of the

United States of America. Together we have come to Your Excellency as the representatives of the government of Tah Chosun. We desire to convey to Your Excellency from our hearts our sincere wishes for the health and welfare of Your Excellency and the people of the United States. The people of our countries having entered into friendly intercourse with each other, and having both on our side and yours bound themselves mutually to continue these happy relations, we pray that the people of both our lands may live forever without change in peace and happiness. We beg to offer to Your Excellency two official papers from our government. The first is a reply to Your Excellency from His Majesty the King of Tah Chosun. The second is our letter of credentials, which we herewith ask leave to present.

The following is a translation of the credentials:—
His Majesty the KING OF TAH CHOSUN to His Excellency
CHESTER A. ARTHUR, President of the United States of America:—

The ratifications of the treaty concluded between our countries having now been exchanged and friendly relations established, I now send to the United States of America as Minister Plenipotentiary and Envoy Extraordinary, Min Yong Ik, and a Vice Minister, Hong Yong Sik, in order to convey to Your Excellency the assurance of My gratification.

Being in My confidence and instructed so as fully to express My ideas, they will no doubt satisfactorily perform their duties, and I hope that full faith and credence will be given to them, in order that the friendship of our countries may increase and that perfect harmony may be attained.

I have no doubt that Your Excellency will fully share My views.

Done under My own hand and seal in the four hundred and ninety-second year of My House, sixth moon, eleventh day (14th July, 1883).

[Seal.] THE KING OF TAH CHOSUN.
By order. MIN YONG IK,
[Seal.] President of the Foreign Office.

The words of the Ambassador having been translated to him, President Arthur received the documents alluded to, and spoke in reply, his words being duly repeated to Min Yong Ik in Korean. The President's remarks were these:—

MR. MINISTER AND MR. VICE PRESIDENT.—It gives me much pleasure to receive you as the representatives of the King and government of Tah Chosun. I bid you a cordial welcome. We are not ignorant of your beautiful peninsular country, with its surrounding islands, or of their productions, or of the industries of your people, who in population number more than twice that of the United States when they became an independent nation. The ocean, which intervenes between our respective domains has, by means of the introduction and perfection of steam navigation, become a highway of convenient and safe intercourse—you are our neighbors.

The United States, from their geographical position, are, of all others, the nation with which the Orientals should cultivate friendship and a commerce which will prove to them and to us alike beneficial and profitable, and which must constantly increase.

This Republic, while conscious of its power, of its wealth and of its resources, seeks, as our history shows, no dominion or control over other nationalities and no acquisition of their territory, but does seek to give and receive the benefits of friendly relations and of a reciprocal and honest commerce.

We know you can be a benefit to us, and we think that when you become familiar with the improvement we have made in agricultural implements and processes and in the mechanical arts generally, you will be satisfied that we can give you fair return for the benefit you may confer on us, and it may be that in our system of education and in our laws you will discover something that you will be glad to adopt.

It was fit and becoming that you should have made with us your first treaty of intercourse, amity and commerce. You will be so good as to present to your King my respectful regards and to express to him my gratification and that of our people that he should have seen proper to honor us by the visit of the Embassy. I trust that while you are in our country you will have health and enjoyment.

It will be the purpose of our government and people so to receive you that you shall carry home with you pleasant recollections of the American Republic.

After the speeches the President and the Ambassadors again shook hands, and the latter retired, accompanied to their rooms by Secretary Frelinghuysen, Lieutenant Mason and Ensign Foulk. Outside the door of the parlor they stopped, and, turning, repeated the obeisance they had made at entering. This salute is the highest honor that a Korean can pay. It is never used except in approaching kings or other rulers of independent States.

The party will be taken to Boston this evening on the United States steamship *Despatch*. They will be accompanied by Lieutenant Mason and Ensign Foulk, who have been assigned to travel with them and care for their comfort during their stay in this country. In Boston the Ambassadors will be received by Governor Butler. They will be taken to the Exposition and all other points of interest.

"The Korean language," said Mr. Percival Lowell, Secretary to the Embassy, to a *Herald* reporter, "is very different from the Japanese or Chinese; so different, in fact, that one of the three reading aloud would not be in any degree understood by the other two. The Koreans, however, have the advantage of possessing an alphabet, while the Chinese use syllables as their linguistic unit, using one character to denote an idea or group of ideas. Korean

has, however, an analogy to Japanese, and, like most Oriental languages, it reads from right to left and from the top down."

"What will be the value of this treaty to American commerce?" asked the reporter.

"Very great," answered Mr. Lowell. "We have a great opportunity opened to us in this country, such as we had twenty years ago in China. The Americans to-day command the confidence of the Koreans, and if any foreigners are in a position to enter into profitable mercantile relations with this new country it is the United States. The country has great wealth stored up, which foreigners must exploit. It is rich in gold and silver. The people lack machinery for developing the natural resources of their land, it is natural to suppose that much of what they need in this line will come from here. Then, again, like the Japanese, they will doubtless develop a strong taste for all the social comforts and fashions of Europeans. This, again, will be an opportunity for advantageous commerce."

"But how will their extreme exclusiveness affect our relations with them?"

"In respect to that point," said Mr. Lowell, "they may be compared to some men who, while ordinarily of a retiring disposition, yet when approached in the proper manner, exhibit unexpected cordiality in their behavior. There can be no doubt but that at present the feeling is strongly in favor of what comes from America and that any advances we may make at present, in a commercial way will be well received."

"In other respects, besides her mines also the country is rich. Her rice, cotton, tobacco, hemp, and silk are all largely exported and are of excellent quality. Her trade hitherto has been almost entirely with China and Japan, but if we follow up the advantage offered by this treaty the benefits of her commerce will be shared also with ourselves."

A navigator in Korean waters has practically made his own charts. A gentleman who visited China and Japan in 1876 was in the harbor of Simonsaiki, of the Inland Sea, toward the close of the Japanese war against Korea. He said to a *Herald* reporter yesterday:—"Simonsaiki was not a treaty port, but by special arrangement with the Custom House officials I was permitted to land and visit the town and the outlying fortifications that had been badly battered by the guns of the combined fleet a few years before. A mass of Mongolian population that to me seemed millions followed me about as though they had paid admission to a rare show. I was beginning to feel that so white face had ever before been seen in that neighborhood when, to my surprise and pleasure, I heard a down East nasal accent, and discovered a Salem skipper, who took me off to see his steamer. Over a bottle of sake, which is a native drink made of fermented rice, I learned from my Yankee companion that I was on a Japanese government transport and that he was a Japanese naval officer. If he told me that his craft was a Philadelphia coal steamer it would have seemed more natural. The freight of this mysterious man-of-war consisted, not of lead and iron, but of Korean corpses, enclosed in coffins of solid gold."

"The coast of Korea at that time was one that made the boldest adventurer hesitate in approaching it. Rocks were numerous and not indicated on any chart. My new found skipper friend showed me a chart of his own, which indicated the tedious soundings he had made as he approached the coast first. The fact that Japan in 1875 saw fit to ask as a concession that Japanese seamen in distress might seek a Korean port shows the complete isolation of this strange nation, even from a neighbor as near as Japan. The fact that even Japan sought the privilege of making surveys of the Korean coast after the war may serve to show the dense ignorance which the maritime nations are in regarding even its outlines."

President Arthur's address to the Ambassadors is singularly frank. Hitherto it has been the habit to tell Oriental nations chiefly, if not entirely, about the benefits they derive from admission to the comity of nations. The President begins at the other end, and speaks first of the benefits Korea can confer on American commerce, confining his statement of the reciprocal advantage to a modest thought that in America's agricultural and mechanical contrivances her new acquaintance will be able to find a fair return. To people at this end of the world the President's words smack of sarcasm. Not many will be found to believe in the advantages likely to accrue to the United States from intercourse with a squalidly impecunious country like Korea. But the fact is that—if we may be permitted to apply a somewhat common-place expression to a very exalted personage—somebody had been pulling the President's leg, and we strongly suspect that somebody to be Mr. Percival Lowell. He is evidently a secretary of very vivid imagination, out of which it has not been difficult for

him to evolve the "great wealth stored up, which foreigners must exploit;" the "richness in gold and silver;" "the mines; the rice, cotton, tobacco, hemp, and silk, which are of excellent quality and which are all largely exported." What mere matter of fact persons see in Korea is a country where, if gold and silver exist at all, they have never been used either as money or in the arts; a country with "a population of eight or possibly ten millions, who have long been secluded from the world, who have had no incentives to industry and no means of developing it, and who have therefore been content to produce only the necessities of life and the few luxuries required in the present inert condition of the upper classes of society."* We do not know where Mr. Lowell obtained his information about Korea's large exports of rice, cotton, tobacco, hemp, and silk. Her export of these and other articles to Japan—her sole customer besides China—amounted, during the five years ending June 30th, 1882, to less than five million dollars, and her total trade with Japan, during these five years, averaged less than two million dollars. Whether such a country offers "a great opportunity," or any opportunity at all, to American commerce, there ought not to be much difficulty in determining. Up to the present Korea has evinced her appreciation of the benefits of foreign intercourse by borrowing money from her treaty friends, and we shall not be surprised to learn ere long that she has taken solid advantage of the United States's rosy mood.

• • •

But Mr. Percival Lowell's enthusiasm is as nothing compared with the romances of the "gentleman who visited Japan in 1876 towards the close of the Japanese war against Korea," and who fell in with the Salem skipper at Shimonsaiki. How easy it is to imagine the things that befel this gentleman: how he went ashore to find himself pursued by "a mass of Mongolian population" whom his heated imagination magnified into millions; how, when he was just beginning to be nervous and perturbed, he met the lanky skipper with the nasal accent, and betrayed so much relief and joy at the encounter that the Salem man took his measure at once and proceeded to fill him up, telling him, as he carried him on board ship, about the Japanese war with Korea, which had never taken place at all, and, as he primed him with Japanese *sake*, whispering mysteriously about the man-of-war's cargo of Korean corpses enclosed in coffins of solid gold! It would be fortunate for the Koreans Ambassador, if he could come across a few American gentlemen of the same lymphatic temperament as this traveller. Mr. Min Yong Ik might then achieve a unique *coup* by borrowing a few million dollars on the security of Korean cemeteries.

In Paris there is a dog for every ten citizens—two million of the latter in all and two hundred thousand of the former. A census of the

* Sir Harry Parkes' remarks at the meeting of the Asiatic Society on June 1st, 1883.

quadrupeds has just been taken, not as a simple matter of curiosity, but because the great city's insatiable need of money has compelled its Government to tax even the dogs. Every one of them pays the municipality ten francs per annum, watch-dogs, however, escaping for half that sum. The yearly income from this source ought to be two million francs, but it is only half that amount. The other half is saved by a little trickery. Therefore it is that a census has been taken, and an order issued requiring that every dog shall carry a collar bearing the name and address of his proprietor, as well as a mark stamped on it by the police agents. Animals not thus distinguished will be liable to immediate destruction. Unless we are mistaken, there used to be a similar regulation in force in Tokijo, though of late it appears to have fallen completely into abeyance, much to the discomfort of quiet-loving citizens. In this respect, at all events, the advantage is with the municipality of Yokohama.

MANY instances have been related in which pouring oil upon the troubled waters, literally, has had the effect of lessening the force of a heavy, broken sea, and in some cases with which we are acquainted—notably in two of steamers disabled—the oil has doubtless been the means of saving the ship and consequently the lives of the crew. It is as well to place such instances, when well authenticated, on record. A vessel arrived here a few days ago in which the experiment was attended with marked success. The British bark *Sallara* was in the gale of the 8th inst., that swept a large portion of the Coast of Japan, and on that day she had her two lower topsails blown clean out of the bolt-ropes, and a new mizen-staysail, afterwards hoisted, was immediately split. At this time the vessel made very bad weather, heavy seas in rapid succession sweeping the deck and flooding the cabin. Captain Jenkins then determined to try the oil experiment, and three canvas bags full of oil were got over the weather side, a few prods of a sail-needle having been given to allow the oil to escape. The rapidity with which the oil spread out to windward was astonishing, and was only equalled by the way in which the big seas one after the other, rising high and apparently about to break on the ship, were met by the oil and suddenly seemed to collapse by the contact.

THE Chinese residents of New York have recently been gratified by the appointment of a Consul, to watch over their interests; and in announcing his assumption of office, he has issued a notification which can hardly fail to render him an object of contumely and derision on the part of a spirited section of the foreign community in this settlement. He entertains ideas of the powers and privileges enjoyed by the police, in the city where he resides, totally at variance with the opinions let loose in Yokohama, from time to time, respecting the duties of those humble functionaries, not only in this neighbourhood, but all

the world over. He impresses upon his fellow countrymen the importance of orderly habits and peaceful pursuits, and reminds them of their liability to arrest and punishment if they violate the law. He does not inform them that, if they turn their shops into gambling resorts, or include the entrancing opium pipe in their list of tea-house refreshments, thereby creating disturbance and disorder, they may scoff at the blue-coated guardians of public tranquillity and resist their interference, unless evidence is given that they come duly accredited with warrants signed by a magistrate. He does not encourage the theory that Chinese dwellings may be converted into places of refuge for criminals, and that the occupants,—with or without sympathy for the malefactors—may close their doors upon the legitimate pursuers, requiring the latter to abandon their purpose, until they shall have made their way to some distant fountain of authority, and supplied themselves with documents empowering them to enter premises in which the law is violated or evaded. He might do this, if he were a diligent student of a certain class of periodical literature peculiar to the Far East, but as he probably draws his conceptions of justice and morality from other sources, he does nothing of the kind. He reminds his people that it is their duty to coöperate with the police, and not to obstruct them, in the preservation of order; and especially to conform to the municipal regulations under which they are living. It never occurs to him to state that the application of these regulations would mean the submission of the private houses of all Chinese to "a species of police espionage which must inevitably bring the law into direct conflict with the people." Even if it did occur to him, he would not risk the ridicule which such a declaration would provoke from the better part of his own race, as well as from the citizens of New York. Nor does he venture the remotest suggestion that practices founded upon the established law of Western nations are "arbitrary and barbarous." Still less does he intimate that it is "impossible to conceive a civilized people" who would tolerate them. He is doubtless aware that by doing so he might render himself liable to the charge of inviting his countrymen to defy and trample on the local authority;—perhaps of stimulating them to breaches of the peace, if not offering a direct incentive to riot. He confines himself to a series of admonitions, by observing which the Chinese residents may not only secure for themselves immunity from reproach, but may also contribute to the general welfare of society. It is not, he shows them, by breaking laws themselves, nor helping others to do so, nor impeding the actions of the police, nor facilitating—with or without evil intent—the escape from justice of rogues and jail-birds, that they can creditably distinguish themselves, but by pursuing a directly contrary course. Altogether, it is evident that this consul takes a thoroughly sensible view of his position and its responsibilities. It would be a matter for congratulation if his Government were served by an official of the same stamp in Nagasaki; and far

from disadvantageous if many similar men, of various nationalities, were to be found among the foreign population of the larger Japanese ports.

THE Municipality of Shanghai has just adopted the following resolution:—

No person shall open or keep a house of public entertainment, music hall, theatre, circus, billiard, bowling, or dancing saloon, or shop or store for the sale of wines, spirits, beer, intoxicating drugs, butcher's meat, poultry or game, slaughter-house, or livery stable, or sell or vend any wines, spirits, beer, intoxicating drugs, butcher's meat, poultry or game, or ply, let or use any boat for loading or unloading on or alongside of the Municipal jetties or pontoons, any cargo or merchandise or ply, let or use for hire any boat, horse, or public vehicle, within such limits, without a license first obtained from the Council, and in the case of foreigners countersigned by the Consul of the nationality to which such person belongs. In respect of such licenses, the Council may impose such conditions and exact such security, or dispense with any license conditions or security, as the nature of the particular case may require, and charge such fees in respect thereof as may be authorized at any meeting of Land Renters or Ratepayers, or others entitled to vote, in any public meeting duly assembled, under and in accordance with the said Land Regulations. And any person offending against or infringing the provisions of this By-law shall be liable for every offence to a fine not exceeding one hundred dollars.

Imagine an attempt to impose such a regulation in Yokohama!

As an example of the extraordinary bias sometimes imported into arguments affecting Oriental matters viewed from an Occidental standpoint, the following, which we extract from a leading article recently published in the *China Mail*, is almost unique:—

It is true that in England official communications passing between officers of Government and what are classed as state secrets, are privileged from disclosure in a court of justice. But this is done on the general ground of public policy, the same ground that makes communications between attorney and client or husband and wife privileged, namely that greater evils would follow to the public from their compulsory disclosure than from their being withheld. And we have never heard that the rule applied to any foreign government. It could be rarely detrimental to the British public that the communications or state secrets of foreign nations should be made public if the necessity arose, indeed it might be of the greatest possible advantage. How this rule can therefore be imported into China has yet to be shown.

The question under examination by our Colonial contemporary is whether an Englishman in the employment of the Chinese Customs Service can be required, without reference to his employers, to give evidence, before British tribunals in China, regarding facts which have come to his knowledge in the pursuit of his duty. The *China Mail* admits that in the case of officers of the English Government the plea of privilege would be valid in certain contingencies as against the ordinary obligations of a witness, and thinks that a refusal to furnish evidence might often be dictated by considerations of public welfare. "But," continues our contemporary, "we have never heard that the rule applied to any foreign government." English convenience is one thing; foreign convenience, another. The former must be consulted on all occasions, but as for the latter—well, we have never heard that there is any particular rule about it. And lest there should be any doubt about the import of its sentiments, the *China Mail* proceeds to explain that the disclosure of foreign state secrets

"could rarely be detrimental, and might even be of the greater possible advantage, to the British public." True, but what about the Chinese public? Does it count for nothing where its own officials are concerned? Does our Colonial contemporary really mean to assert that England's just course in this matter is to deny to Chinese officials in Chinese territory the same privilege which she accords to her own officials in her own territory, and to deny it on the grounds that she cannot herself suffer, and may possibly benefit, by the distinction? If Englishmen in the service of the Chinese Government are liable to be summoned before any English local tribunal in China, and then and there, on pain of imprisonment for contempt of court, required to disclose everything that may have come to their knowledge in consequence of their official position, it is plain that the employment of Englishmen by the Chinese Government is not unlikely to be permanently interrupted.

THE Tientsin correspondent of the *Shanghai Mercury*, writing on the 3rd inst., says:—On the 2nd instant, H.I.H. Prince Kung received H.E. M. Tricou and Sir Harry Parkes at the Tsung-li Yamen, where they had very lengthy interviews and discussed the Canton and Annam affairs, both of which are to have a very speedy and satisfactory solution. Sir George Bowen has left for the Great Wall. Baron von Wrangel left for Kalgan to meet H.E. Mr. Popoff and suite. The Chinese have been very insulting to foreigners of late; since the glorious victory of the Black Flags over the French. The Archers selected a German gentleman and his pony for a target; one of the arrows fixed itself in the pony. This called for a protest from the German Consul to Li Hung-chang. It is surprising to note that some few days ago they assumed a quieter tone, not from any proclamations from H.E. Li, but from the telegrams from Hong-kong, which must have reached them earlier, of the desertion of the Phuhoi entrenchments; also the more yielding and peaceful disposition of the members of the Grand Council at Peking, finding, as you say, that neither the ironclad nor the Krupp guns are to come forward.

ACCORDING to the *Official Gazette*, when the *Kworio Maru* was wrecked at Kamodono-mura, Kishu, she had 57 bags of mail matter on board, including the foreign mail from Tokio and Yokohama to Kobe, Nagasaki, and Shimonoseki. The whole of the bags were lost with the ship, but two days afterwards 18 bags were recovered, and subsequently through strenuous efforts 34 more bags have been fished up. There are only 5 bags now missing, but the correspondence in those recovered is so damaged that the addresses in many instances are almost illegible.

WE (*Shanghai Mercury*) hear from native sources that Mr. Chên, Magistrate of the Mixed Court, has resigned his post, which he has held for upwards of ten years. Mr. Oung, the Chinese official of the Mixed Court in the French Settlement, will succeed him, and another official by the name of Wang will take the latter's place.

THE NAGASAKI AFFAIR.

THE question of the recent affray at Nagasaki between the police and certain Chinese residents is, we believe, undergoing, or has just undergone, judicial investigation. Meanwhile our attention is again called to it by a letter—which we publish elsewhere—from Mr. POU LIN SING. Our correspondent takes exception to several of the comments which have appeared in this journal. In the first place, he thinks that the impression our remarks conveyed is calculated to prejudice the reputation of the Chinese Consul by whom the inquest on the body of WAI EGNO was held. Without pausing to consider whether to be credited with holding an inquest after the forms of Western procedure is likely to injure a Chinese Consul in Western eyes, we may at once endorse Mr. POU's statement that "the duties of Coroners, whether Chinese or European, are mainly and essentially the same," but that forms of procedure must be in accordance with "the various usages of different nations." It is precisely, however, because these forms did not appear to be in accordance with Chinese usages in the case under consideration that we drew attention to them, not with any captious intention, but merely for the sake of noting a curious and interesting incident. Mr. POU now tells us that the so-called "Jury" at Nagasaki consisted, in reality, of four leading Chinese, substitutes for the aldermen whose attendance is always necessary at a Chinese Coroner's inquest. We are obliged to him for the information, but he would have removed our doubts more effectually had he explained in what respect the functions of these aldermen resemble the functions of a jury, and whether the resemblance is sufficiently marked to justify the use of the latter term. Our correspondent must remember that we had only the published proceedings of the inquest to guide us. Finding there that a Chinese Acting-Consul and Coroner assembled a "jury" of his countrymen, examined witnesses, charged the jury, and based his own verdict on their finding; and finding further, from a letter signed "Vermillion Pencil" and published in a Nagasaki journal, that "the Acting Chinese Consul, having taken the advice of several of his English friends, held an inquest," we had valid grounds for our observation that a precedent for these proceedings does not exist in Chinese judicial annals.

This, however, is a point of small moment, and the same may be said with regard to the form of oath or declaration administered

to the witnesses. Mr. POU says they were duly warned to speak the truth, but if so, the fact is entirely unnoticed in the published version of the proceedings.

With regard to the Acting Consul's address to the "Jury," we must be allowed to differ *in toto* from our correspondent. The Consul's words may have lost something of their polish by translation, but their substance cannot have been materially altered. Mr. POU, at all events, does not take the trouble to tell us what they really were, and in default of his corrections, we are left to suppose that the Coroner did appeal to the "loyalty and patriotism" of the four jurors; that he did describe the death of WAI EGNO as a "murder," and that he did make use of language signifying, "I am not surprised at the strong feeling of our people in Nagasaki over the unfortunate young man's most cruel death." Such expressions as these can only be described as "intemperate and inflammatory." We shall be glad to describe them differently when our correspondent supplies the necessary modifications.

The fact that the evidence of the Japanese police was not taken at the inquest is referred, by Mr. POU, to the supineness of the Japanese authorities themselves, who though officially invited to attend, took no notice of the proceedings. Accepting our correspondent's explanation, we can only say that he shifts the blame of what must be considered a most unwise and unwarrantable omission from Chinese to Japanese shoulders. The treaty between Japan and China provides that "any offender who shall resist capture by making use of a murderous weapon, may be slain in the act without further consequences; but the circumstances of his death shall be investigated by the Consul and the local authorities conjointly." The only exception to this rule is that "when the case occurs in the interior and the Consul cannot arrive in time for the investigation, it shall be held by the local authorities alone, who communicate a report of the facts to the Consul." With this clause in the treaty we fail to see that a mere intimation to the local authorities was sufficient to warrant the Consul in holding an investigation without their attendance. But whether Japanese or Chinese perfunctoriness be to blame, we repeat our statement that "without the testimony of the police it was impossible for the Jury to arrive at an intelligent understanding of the case," and that the failure to obtain, or the refusal to supply, that testimony rendered the result of the inquest practically worthless.

Our correspondent's next charge is of a

graver nature. "What is worse still," he says, "the editor takes upon himself the responsibility of saying that 'there was absolutely no evidence,' &c. Undoubtedly he must have overlooked WOO HWA and CHUN DIE'S testimonies." Well, even in the face of this rebuke, we reiterate our assertion (quoting it, however, in full) that "as regards the origin of the 'murder' there was absolutely no evidence except that of a Chinese who said that 'whatever may have been the primary cause of the attack, he truly believed deceased was innocent and free from blame.'" The Chinese here alluded to is Mr. WOO MOA. Undoubtedly we did not overlook his evidence. He was the only man who professed to have actually witnessed the stabbing, and the value of his testimony is not enhanced by the fact that nine-tenths of it was either hearsay or pure conjecture. As for the other Chinaman, CHUN DIE, whose testimony also we are charged with "overlooking," he could tell nothing whatsoever about the origin of the stabbing, seeing that, according to his own statement, he was "thrust down upon the floor with his face touching the ground" at the time of the occurrence. The plain fact is that there was not one tittle of evidence adduced to show why WAI EGNO was killed. CHUN DIE said that the lad "resisted because his money was being taken away." But CHUN DIE could not see what happened, unless indeed, it was reflected in the floor against which his face was thrust. WOO MOA repeated this statement, but WOO MOA only witnessed the stabbing. He saw nothing of what preceded it. This sort of testimony may satisfy those who wish to credit it. But it cannot satisfy any tolerably impartial mind. We find it impossible to believe that six Japanese policemen, of whom four were armed with swords, finding themselves in a room occupied by a man and a lad of 17, arrested the man, whom alone they wanted to arrest, meeting his acknowledged resistance without recourse to their weapons, and having mastered him, proceeded to draw their swords and kill the lad, whom they did not want to arrest, and whose resistance was confined to guarding his own property which they had no right to seize. This is incredible. "Mr. KOH" and the four Chinese gentlemen" doubtless arrived at what they considered "a clear understanding of the origin of the murder," but it is not given to all men to be equally perspicuous, and, in the total absence of evidence, singular improbabilities do not command credence.

Our correspondent's explanation with

regard to the place where Dr. RENWICK found WAI EGNO seems, at first sight, satisfactory. But it conflicts somewhat with the evidence given at the inquest. Mr. POU says that, after being stabbed, WAI was "immediately brought to the Chinese Consulate." Now the evidence of WAI'S uncle, WAI BANG-CHING was:—"About 8 p.m. on the night of the 15th, I heard a disturbance in the street, but did not know the cause of it. Mr. SHIN WOO MAO shortly afterwards informed me that my nephew had been killed by Japanese policemen, in the house No. 24, Shinchii. I ran to the scene of the disturbance, and found that my nephew had been stabbed in two places, and that he was suffering severely from his wound." Further, of the three men who declared that they were in the house No. 24 at the time of the occurrence, one said that he found "the deceased lying on the floor insensible;" another that "he found the deceased in a dying state," and the third that he "saw deceased was dying." It appears somewhat strange that a man in such a condition should have been carried off to the Consulate, more especially when his uncle, with whom he lived, was present to take care of him. Further, Dr. RENWICK'S statement is that he "found WAI EGNO in one of the streets of Shinchii, and seeing he was very ill, directed that he should be removed immediately to the hospital." Is this language compatible with the notion that the man was in a jinrikisha and already on his way to the hospital? Doubtless our correspondent's information bears out his version of the occurrence, but the investigations just concluded by a Japanese Judge at Nagasaki go to show conclusively that the fracas took place, not in a house, but in the street, and that what Mr. POU LIN SING calls "a pretty good piece of Japanese fabrication" is a substantially correct account of the occurrence.

THE STATUS OF CHINESE IN JAPAN.

IN connection with the recent affray between the Japanese police and some Chinese residents of Nagasaki, it has been openly stated, indeed the public generally appears to be persuaded, that the status of Chinese subjects living in Japan is exactly the same as that of all other foreigners. The treaty between China and Japan does not justify any such hypothesis. It is there provided, *inter alia*, that "in mixed cases of disputes between merchants of both countries, a plaint in the form of an application shall be made to the Consul,

who will first endeavour by friendly counsel to prevent litigation as much as possible. If this fails, he will communicate the matter to the local authorities, and in conjunction with them will impartially try the case and decide it." Again, it is elsewhere laid down, that "when arrested and brought up for trial, an offender, if at a port, shall be tried by the local authorities and the Consul conjointly: if in the interior, he shall be tried by the local authorities alone, who will officially communicate the facts of the case to the Consul." Finally, there is a clause providing that in the absence of a regularly appointed Consul—with regard to whose qualifications certain restrictions are laid down—jurisdiction over Chinese residents shall be exercised by the Japanese authorities. Plainly this treaty places the Chinese in a position very different from that occupied by other nationals in Japan. The jurisdiction of the high contracting parties is concurrent, and in certain contingencies that of Japan alone is competent. The latter was the case for many years in Nagasaki, and during those years the Japanese local authorities adopted stringent measures to prevent opium smoking. Finally, when a Chinese Consul was appointed, it was considered essential that the same course should still be pursued with regard to opium, and although the Chinese Government did not formally acknowledge Japan's interpretation of the treaty as conferring the power to pursue such a course, she not only left that interpretation uncontradicted, but even admitted the local authorities' right to summarily arrest all persons found with opium in their possession. This admission obviously included the still graver offence of smoking opium, and it is said that subsequent to the correspondence on this subject, two Chinese opium smokers were actually arrested by the Japanese police in Nagasaki, and handed over for punishment to the Chinese Consul. It would appear, therefore, that the latter's protest in the case of the recent stabbing affair came rather late in the day. To be late is, however, a Chinese official idiosyncrasy. It was displayed in the case of the original French treaty with Annam: it was displayed in Korea's case, and it is, in fact, displayed whenever the occasion offers. The essence of Celestial diplomacy is to leave a question unsettled until some fresh, and, it may be, irrelevant, complication crops up to facilitate its solution in a sense favorable to China. Thus at Nagasaki the Japanese police might have gone on for ten or twenty years arresting Chinese opium smokers and handing them over to their

Consul without evoking any protest from the latter, or in the smallest degree disturbing public equanimity; but so soon as a Chinese life is sacrificed in the operation, the Chinese authorities seize the opportunity to enlist sentiment and sympathy on behalf of a contention which their own passiveness had long deprived of all validity. We strongly suspect that but for the agitation originated and fomented a short time ago by an English local journal in Nagasaki, the idea of resenting a perfectly legitimate and necessary exercise of Japanese municipal authority would never have occurred to the Chinese residents. It would have seemed to them not only natural, but essential to the maintenance of order, that when the police witnessed a crime in the very act of commission, they should then and there arrest the perpetrators, whether in a street or in a house. No rational man will pretend that the hearth of a civilized citizen in the nineteenth century offers to malefactors those privileges of sanctuary which belonged to heathen temples of old. Judging, indeed, from the rodomontade written by irresponsible foreign journalists in Japan on the subject of police espionage and the arbitrary exercise of official authority, one is disposed to imagine that the proper function of journalism is to impede the assertion of the laws and to weaken the hands of their guardians. Imagine a metropolitan constable in some Western city who having detected two men in the act of committing a crime inside a house, should run off to obtain a warrant before arresting them! Fortunately such dotards do not disgrace any police force in the universe, except that of Japan, where Westerners, in the wake of their boasted civilization, have imported the privilege of paralysing the arm of the law. It is well known that throughout this country there exists a most accurate system of registration, by which the whereabouts of every Japanese and his occupation are periodically recorded by the authorities. It is a system which entails no inconveniences and does not interfere with the privacy of every-day life, but which nevertheless renders large aid to those charged with the maintenance of law and order. The only Japanese exempted from it are those employed at the open ports, and the consequence is that the compounds of foreign residents offer a secure asylum for bad characters of every description. This result may be an admirable assertion of rights based upon distorted treaties, but what are its advantages? Does there exist any respectable foreign resident in Japan who thinks that

his Lares and Penates would be more dishonoured by an occasional visit from the police than by the possibly constant presence of thieves and panders? Here, however, steps in the same unreasoning prejudice which renders every apparent assertion of Japanese authority intolerable. The European out of Europe is a species of petty divinity independent of all foreign laws. He comes to Japan; establishes himself in a corner of Japanese territory; "calls upon the Japanese" to assume municipal control of the corner; tells them that it must be a control without regulations, since he is altogether too lofty a personage to be subservient to Japanese regulations, though possessing, unfortunately, no power to enforce any regulations of his own; and finally takes a number of Japanese into his employ whom he expects the Japanese authorities to govern, declining, however, to let them be brought within the reach of Japanese governmental machinery. Such an attitude is eminently creditable to our intelligence, and the fact that the Chinese residents at Nagasaki are disposed to follow it, will doubtless be regarded with much complaisance by some agitators. But it happens that we have read very recently of Chinese subjects in Peking whose houses were visited and searched by officials armed with no warrant beyond information that opium smoking went on there. On what grounds can Chinese residents in Japan claim a license so much larger than they enjoy in their own country; and on what grounds can Japanese police be restrained from exercising the power vested in police all over the world—the power of arresting a malefactor whenever and wherever they discover him *in flagrante delicto*? BURKE once said that "liberty is folly, vice, and madness without tuition or restraint." He might have found a remarkable illustration of his thesis had he lived to study the conditions of foreign residence in Japan to-day.

THE REAL CONDITION OF KOREA.

THE long isolation Korea was suffered to preserve has sometimes been adduced as an evidence that even Western aggressiveness is not without limits. Little by little, however, as our knowledge of the peninsula, its people, and its resources grows fuller, it becomes plain that if Korea lived alone until 1882, it was not because her seclusion was respected, but because her acquaintance was not worth cultivating. Any lingering doubts upon this subject that may have survived in sanguine minds or been kept alive by interested journalists,

must be finally dispelled by a perusal of the last number of the Asiatic Society's proceedings. There will be found there three papers from the pens of members* of Her Majesty's Consular Service, the contents of which are calculated finally to dispel all delusions. It is true that recent American travellers accredited the country with immense wealth of minerals, and as yet we are without practical proof that among the beautiful hill-regions of the north there do not exist deposits rich enough to attract enterprise. But should any such resources be found easily accessible, Korea will be distinguished from all other countries by the possession of riches which she has never utilized in any form. It is the fashion now-a-days with a certain class of writers to assert that Japan did not formerly possess any respectable store of the precious metals, and that what she has now come to her chiefly through her foreign commerce. But it is at least certain that gold and silver were always used with profusion in her art industries. There was not a well-to-do household in the kingdom that did not possess among its furniture or utensils some ornament or vessel into the manufacture of which gold or silver entered largely. Of Korea, however, the very opposite is true. Vessels or ornaments of the precious metals have nowhere been observed, either by Japanese or European travellers. Yet the people are by no means insensible to the pleasures of wealth. Any evidence of riches is certain to entail official squeezing, and we have seen that the very first advantage the Koreans have taken of their admission to the comity of nations is to borrow money from their new friends. In short, we can discover no valid grounds for assuming that the future of the peninsula will fulfil any of the golden prophecies still credited by hopeful writers.

The system of Government appears to be about as bad as possible. The present resources of the country are essentially agricultural, yet the agricultural classes occupy the position of serfs to whom no prospect of rising in the social scale is visible. All the lucrative official posts are monopolized by the nobles, while those of minor value fall to the middle class, nominally by competitive examination but in reality by patronage. Deprived thus of the stimulus of ambition, the lower orders also lack incentives to industry. For the ownership of the soil is divided nearly equally between the nobles and the royal family, and as neither of these set any limit to their exactions, there remains

to the cultivators, in many instances, a pittance barely sufficient to keep body and soul together. To such an extent are these exactions carried that the people do not care to make any profits over and above what they can spend on food and clothes. Probably even that humble ambition is seldom gratified, for although the denizens of the capital are generally well, if not handsomely, dressed, a Japanese traveller, who made his way into the interior eight years ago, and whose diary Mr. W. J. KENNY has translated, found that the most characteristic feature of the viands set before him was putridity. They were cheap enough, to be sure, seeing that he was furnished with more rice than he could possibly consume and a number of decayed condiments for a sum of less than 3 *sen* (about a penny); but, after all, the first desideratum in food is that it should be eatable. The result of the suicidal policy which has reduced the national scale of living to this miserable level is that the whole revenue of the State is less than one million dollars, and that large tracts of land, every foot of which would be cultivated in Japan, lie waste, or serve only as sites for the innumerable graves which appear to constitute a salient feature of Korean landscapes.

In all parts of the world dirt is the companion of thriftlessness, and this is eminently true of Korea. The Japanese traveller referred to above, says that the people "make no particular change in their garments for inside and outside wear. Their bodies and limbs are impregnated with filth; their clothing is a nest of vermin. As they usually lie down and get up without washing their feet, their houses are in a complete litter, the stench of which offends the nose in a well nigh unendurable manner." To this testimony Mr. HALL adds a statement that the "Koreans never tub," and Mr. BONNAR thus describes the capital:—"Along the middle of the street there often runs a small stream of thick black mud, and on each side are continuous pools into which the latrines of the houses open. Dung-heaps, in many instances, occupy more than half the street: other gutters run across the road, and are perhaps covered over with rotten boards or large uneven stones, or not at all. The sight of many of these streets is most disgusting: not the slightest attempt at drainage or sewage is made, and the air is poisonous with the offensive smells. Add to this a long row of blackened, wretchedly built houses, and a number of dogs, horses' and bullocks' skulls lying about, and one may have an idea of

* Messrs. J. C. Hall, H. A. C. Bonnar, and W. J. Kenny.

some of the streets of the capital of Korea. We were told that for a month or more the streets had been cleaned somewhat: it is difficult to conceive what existed before this attempt was made. A small stream runs through the city from west to east, but the little water in it is stagnant, and is hardly to be seen among the heaps of rubbish thrown into it." The houses are one-storied buildings, eight or nine feet high, many of them in the last stage of decay, and since the smoke from the cooking hearth is conducted under the sleeping chamber, it finally emerges through an opening some three or four feet above the ground. Thus the streets are constantly brooded over by a cloud of smoke. Fuel and water seem to be equally scarce. There are but few wells in the city, and the water in them is of bad quality. It is generally stored in earthenware utensils in the houses for daily use. Both from the southern coast, and from the inland regions to the north of the capital, the chief staple of the cityward trade seems to be fire-wood. Junks and pack-horses laden with it were remarked in considerable numbers by Mr. HALL on his journey from Nam-Yang to Söul, and by Mr. BONNAR on the road from the latter place to the Chinese frontier. The wares sold in the shops are evidently of a very common-place description, as, for example, books, fans, foot-rules, oiled paper hat-covers, men's and women's caps, bamboo screens of delicate workmanship, leopard skins, pipes, tobacco, saddles, cabinets, paper screens, women's hair-pins, pottery of rude manufacture, horse hair cuffs and skull caps, hats, iron utensils," &c. The only tolerably respectable stores in the capital are "a row of warehouses, two stories high, the lower portions of which are divided off into little shops, opening into a small central court-yard, instead of facing the street." The trade in silks and cottons appears to be confined to these stores, though other goods, such as boots, paper, and brass-ware, are also sold. Mr. HALL tells us that "these wares are stowed away in shelves and closets inside," so that the customer is considerably puzzled to discover where he may find what he wants, and is, moreover, obliged to conduct his business in the court-yard as "the shop itself is too small for a man to stand upright or turn about in."

In this very sombre picture of Korean civilization there is only one redeeming feature: the nation is so little priest-ridden that an ordinary traveller sees neither cassock nor tonsured head anywhere. Mr. HALL indeed, is disposed to attribute the

backward condition of the people, in some degree, to this absence of Buddhist influence, and his idea certainly consists with the totally opposite conditions which exist in Japan. But we suspect that Buddhism would have established itself firmly enough in Korea had the temporal prospects of the effort been more enticing. A country whose capital remains to this day without barber's shops, public bath-houses, theatres, gardens, or places of entertainment, and a people whose only pleasures in life are revelling in dirt and tobacco, were not likely to attract the propagandists of a religion which depends so much upon the attractiveness of its material aspects.

Modern Korea being such a squalid, impecunious place, and its people so incapable apparently of any industrial achievement, one cannot but marvel at the well authenticated fact that less than three centuries ago one of Japan's most important art industries received its first appreciable development from an importation of Korean workmen, and that in centuries three times as far back Japanese civilization drew largely from the same source. Yet evidences are not entirely wanting that the country was once capable of better things. Thus we read that the city residence of the former regent is "surrounded by a strong stone wall," "some of the stones of the main gate-way being of immense size;" and Mr. BONNAR, speaking of one of the four city gates, says:—"The solid stone-work of large granite blocks smoothly finished off and about twenty-five feet high is surmounted by a heavy two-storied wooden structure, painted red and green and rising another thirty feet above the masonry. The slightly curved roof is tiled and ornamented with small stone figures, giving the whole gate a very finished appearance." The same traveller saw, on the north of the capital, a "handsome monumental arch supported on two columns of granite," and "stone foundations where formerly large houses must have stood." Among the Japanese it is a common tradition that Korea has never shown any sign of recovery from the disasters she suffered both at the end of the sixteenth century, and, fifty years later, at the time of the fall of the Ming dynasty. Certain it is that she has long ceased to produce any of those noble works of art, specimens of which reached Japan among the *spolia opima* of KIYOMASA's army. She presents to-day the spectacle of a nation which the sufferings of war followed by long years of official oppression and spoliation have reduced to a condition of abject poverty and almost unparalleled squalor.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinion of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE NAGASAKI AFFAIR.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—Your issue of the 29th ult., commenting upon the Coroner's inquest held at the Chinese Consulate, contains allusions which will undoubtedly turn the public mind against our new Acting Consul, if we are not permitted to say a word about them. I beg that you will be kind enough to allow me to encroach upon your esteemed and most valuable columns, to offer a few explanations.

The inquest was held purely "*à la Chinoise*." There was neither "conception" nor desire to hold it after the fashions of a European Coroner. If our proceedings appeared to you in that light, then it must have been an accidental coincidence. I suppose the duties of Coroners, whether Chinese or European, are mainly and essentially the same, but customs and forms, however, must be necessarily different according to the various usages of different nations. It is only right for all Coroners to follow the principles of their own country. Mr. Koh did, on that occasion, what other Chinese official would have done under the same circumstances.

As in regard to the formation of the jury, there was nothing strange about it. The Acting-Consul had neither "empaneled" a jury, nor did to the four Chinese gentlemen, what a European Coroner would have done; but strictly speaking, he was only holding a Chinese inquest, and Mr. Koh invited the four Chinese (presidents of the various Chinese societies in Nagasaki) in order to substitute for the want of "Tipaos"—or aldermen—whose attendances are always necessary in a Chinese Coroner's inquest. Therefore, Mr. Koh did not, and had never wished to hold the inquest "*exactly as an European Coroner would have done*."

In regard to the administering of an oath, we have a way of our own; it was so simple and contains so little of ceremony, which undoubtedly was the direct cause of its omission in the report. Europeans mostly embrace the Christian religion, consequently the "process of swearing" by kissing the Holy Bible is necessary, but all Chinese Mandarins are professed to follow the doctrines of Confucius, with the same process for obtaining evidence would be most detestable in the eyes of all Chinese. We do not consider the Bible alone can effect the necessary consequences of a perjuror; so our Acting Consul Koh did what was most appropriate for the occasion by warning each witness to speak the truth ere he may not be attended with punishment for any misstatement or wilful falsehood. When all the witnesses had testified, they were ordered by the Acting Consul to sign their names under their respective evidence which were taken on paper.

It is a pity that the Editor of the *Weekly Mail* was not aware before, that Mr. Koh is a Chinese official, and as a necessity, the inquest *should be conducted* entirely in the Chinese fashion. If the Editor chooses to take the trouble of looking into the 'Chinese Judicial Records', he may be astonished to find that his statement—"inasmuch as Chinese judicial annals contain nothing that could have been taken as a precedent"—is a gross mistake. It shows that the Editor was, however learned, not at all acquainted with the knowledge of Chinese Judicial formalities.

As regards the statement that no testimony was taken from the Japanese police,—well! Who was to be blamed for that? The Japanese authorities were notified by our Acting Consul of the inquest, and at the same time formal invitations were sent to the Governor and the police authorities requesting their attendances, but the Japanese had utterly disregarded that and declined to attend. Will this justify the Editor to insinuate that no Japanese police were permitted to give testimony? What is worse still, for the Editor to take upon himself the responsibility of saying that—"there was absolutely no evidence," &c. Undoubtedly he must have overlooked Woo Moa and Chun Die Chie's testimonies. I am sure, Mr. Koh and the four Chinese gentlemen had heard sufficient evidences to present them a clear understanding "of the origin of the murder." It is true, the report published in the press was not so minute in details as it might have been, but the whole proceeding of the inquest was conducted entirely in the Chinese language—(Dr. Renwick's testimony excepted), a full report of it would be next to impossible. On the whole, we all thought that Mr. Koh, although in the height of indignation, controlled his temper most calmly, had not the slightest "display of" mental "intemperance." His address was spoken in Chinese and he delivered it in a most quiet style. The words translated into English may seem a little irritating, but we can conceive nothing there to be "inflammatory."

It is but just for us to applaud Mr. Koh for the zeal and energy he has shown in trying to quell down the popular indignation among the Chinese Community of Nagasaki. Mr. Koh has been doing his duties well, and he will continue to do so by urging the Japanese authorities to perform speedy execution of the law and to grant reasonable compensations for deceased's family.

Now turning our attention to page 529, in the same issue, we were made to understand that Wai Egno was testified to have been slain in the house, and afterwards was found in the street by Dr. Renwick. Well, the fact was this; Wai Egno was stabbed in the house about 8 p.m. and was immediately brought to the Chinese Consulate. The Acting Consul saw the man was dying then, immediately ordered him to be sent to the hospital, and at the same time Dr. Renwick was summoned to attend him. While Wai Egno was carried by a jinrickshaw, slow moving towards the hospital, he was found by Dr. Renwick in Sinchi-street about 8.30 or 8.45 p.m.

This, I hope, is sufficiently clear to remove the discrepancy which as you say "may involve important points."

Glancing upon the next column I am surprised to find the statement that "two Japanese policemen were severely hurt!" Were they so badly injured that they had not the strength even to utter a word of complaint to our Acting Consul? No one in Nagasaki was ever aware that any Japanese was injured, and more astonishing still, that the three or four policemen were mobbed by thirty or forty Chinese! A pretty good piece of Japanese fabrication!

Whatever may be the substance of the Japanese story, we aliens in Japan await most anxiously for the result of the trial and the settlement of the case between the two powers. I beg herewith to enclose my cards and remain,

Yours most faithfully,

POU LIN SING,
Chinese Resident, No. 3, Bund,
Mugasaki Settlement,
Nagasaki.

Nagasaki, October 12th, 1883.

A CRY OF THANKFULNESS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—By the universal law of compensation, there are few sorrows, hardships, or calamities to individuals, in which some germ of comfort or advantage to others may not be found. In every human experience, the truth of the homely adage, "It is an ill wind that blows nobody good," is at some time realized, and in the fulness of a sudden and deep sense of relief which has come over me, albeit the result of an event fraught with inconvenience to many, I am impelled to narrate a possible, and I must say (though with an admixture of doubt), a happy, consequence, to me and mine, of a recent occurrence in a neighboring country. I shall mention no names, but the facts of my recital will be recognized by many, in Europe, who are acquainted with the circumstances of a strange family history, which has for generations darkened one of the most respected escutcheons in my native land.

The fatalities of lineage are inscrutable. The origin of the terrible burden which rests upon the house of which I am a humble member is lost in the distant past. It is sufficient to say that, from our earliest records, we have known it to be the doom of the second-born male of each successive marriage to be cursed with an insatiable thirst for human blood. This awful propensity is accompanied by no indication of ferocity, and it has been noted that the victim, in most cases, has been singularly free from the defects of nature which should naturally attend so dreadful a characteristic. Gentleness, amiability, refinement of taste and feeling, have distinguished the youth of almost every one of these second sons, who at the age of twenty-five, have abruptly developed the unconquerable appetite to which I have referred. Up to that age, no sign or token of taint in the blood has appeared. In numerous instances, as may be supposed, the effort has been made to conceal the wretched secret from the sufferer, and to keep him in ignorance until the critical period shall have passed. But always in vain. Excepting where he has been held in strict captivity throughout his life, the dire impulse has asserted itself, and he has been hurried by destiny into the commission of what, under other conditions, would be deemed the crime of murder.

In earlier centuries when our house was powerful, amid a horde of vassals it was our custom to select a thrall who was willing to be sacrificed for the welfare and honour of the chieftains's son,—(and such were never wanting in the staunch old feudal days)—and submit him to the temporary frenzy of the young master. With this single act, all slaughterous desire was satisfied, and the instrument of a stern fate passed on through happy and contented years to an honored age and a lamented death. But with the growth of modern ideas, it has been found requisite to dispense with that traditional formality, the prejudices of the majority regarding our expedient with disapproval. For more generations than I care to say, we have therefore been forced to the unspeakably humiliating necessity of confining our second born through the term of his mournful existence. Such exceptions as have occurred, were marked by circumstances which it would be inexpedient for me to reveal.

For the past two or three years, the family has been plunged in more than common grief, owing to the arrival at manhood of a second son whose gifts and attainments have caused him to be beloved in an unusual degree. Young, noble in aspect as in name, rarely accomplished, and to crown

all, the recipient of a princely fortune by the bequest of a relative who was unaware of the doom which hangs over him, the sad crisis of his life has been looked forward to with an anguish beyond the power of words to depict. To avert the catastrophe, we *know*, is impossible. How to carry him through the miserable ordeal has been our eager study, ever since his accession to the vast fortune I have spoken of. It was, indeed, upon this anxious yet well-nigh hopeless quest that I started upon the journey which has brought me to this remote region. Whether my half formed expectations tended, I need not, or rather must not, disclose. Happily they may now be laid aside. Imagine the desert-stranded Bedouin, parched and agonized with the beating rays of the sun, and blistered with the scorching sands, who suddenly descries a laughing stream in a green oasis. Picture the desperate, soul-harrowed felon awaiting capital sentence on the rack, who hears at the last moment that a flaw in the proceedings sends him forth a free man,—and you many gather some conception of the emotions with which I have discerned the certain means of escape for my cherished relation, in this the last year of the margin which destiny allows him.

I say, "the certain means of escape!" True, and I fervently rejoice, although the escape is not without harsh penalties,—from which I cannot but feel that one so richly endowed by nature and by splendid inheritance should be exempt,—and is attainable only under conditions peculiarly oppressive and irksome to a haughty spirit finely tempered by high breeding, and constitutionally accustomed to look upon birth and wealth as releasing him from some of the severities rightly applicable to the masses of the lower social scale. My meaning will be understood when I state that the clouds have been lifted from my mind by a perusal of the reports connected with the late unpleasant incident at Honam, and the consequences thereof. Every intelligent mind will follow, without an effort, my train of reasoning. My unhappy relative—but I need no longer say unhappy, in the worst sense,—shall visit the East, his journey being so timed as to bring him within Chinese territory at the beginning of his twenty-fifth year. Then we shall do—nothing. Yet I am wrong to say nothing. It will be in better taste for us to provide him with gentlemanly weapons, the day before we leave him;—as we must leave him, since it would be a painful reminiscence through his life, if he were compelled to abbreviate the existence of one of his own lineage, or even his own race. Among Mongols, then, we shall leave him, with proper weapons, I say, lest the fit should seize him with nothing at command but his hands and his teeth, as has sometimes happened in former paroxysms, to our inexpressible chagrin. And then, the deplorable requirement of his momentarily perverted nature being fulfilled, we shall await the consequent affliction with fortitude. Seven years are not an eternity. He will be only thirty-two when he returns to his proud position in society, again the recipient of its smiles, its caresses, and its honours. His fortune will be accumulating in the meantime, which will prove some consolation during his gloomy term of probation. But on that grievous feature of the proceedings,—his incarceration,—I will not dwell. It is not without bitter pangs that I think of what he must undergo, but we shall strive to discover means of alleviating his misfortune,—a misfortune which all must feel to be undeserved, since the spell of fate compels him to an act foreign to his disposition. Perhaps we

may, with our influence at home, and the resources—but I dare not look too confidently into the future. The present happiness may well suffice.

And now, sir, I ask you it is not natural that the overflow of my joyous feeling should seek expression, even in this unusual channel. So strange and sudden is the lightness of my heart, that I ask myself if that organ is not wanting within me. I am alone, and have no one with whom I can exchange congratulations, and as I turn my face Westward, with far different emotions from those which weighed me down as I set forth, I believe I may carry with me the soul-felt sympathy of every father who has a son to love and to lose; every mother of an adored offspring; every brother and sister who cherish one of their home circle perhaps above the others, hoping that, as the years roll on, he, their idol, may escape the woes and perils which environ mankind. And I trust this sympathy will not be lessened by the knowledge that the object of my solicitude is not of the common herd, but one who stands as much above the general level as, for example, the vagrant Mongol falls below it;—a type of true nobility; an ornament, apart from his rank and his possessions, to the best society of his native land,—as would at once, I think, be admitted by all, if I ventured to disclose his name or that of the country to which he belongs.

Enclosing, for your satisfaction, my card (which I beg may be destroyed),

I am, Sir, Yours,

LIGHT IN DARKNESS.

Yokohama, October 20th, 1883.

THE RECENT STORMS.

NOTES ON THE STORMS OF OCTOBER 7TH TO 9TH, AND 12TH TO 13TH, 1883.

The geographical position of Japan between the continent of Asia on one side and the Pacific Ocean on the other makes its climate dependent on these two great expanses of land and water, which in their influence on the distribution of pressure in summer and winter show the greatest contrasts.

In winter a wide area of high pressure, or anti-cyclone, lies over Central Asia while a deep depression occupies the Northern Pacific near the Aleut Islands, causing a constant air current over Japan from the North and West. In summer the positions of the highest and lowest pressure are nearly reversed, the lowest being then in Asia, the highest over the Eastern part of the North Pacific. At this time of the year South to East winds are prevalent in Japan.

Whenever these two commanding areas of high and low pressure are well established in the middle of winter and summer the weather in Japan shows the greatest constancy, but as soon as they commence shifting in the spring and fall the weather becomes unsettled and changeable.

The autumn changes of this year began on September 1st and brought a number of smaller and 3 large depressions. The first of the large ones passed September 11th to 14th (see *Japan Mail* of September 24th), the second October 7th to 9th, the third October 12th to 13th, the two last ones being similar in many respects.

The storm of October 7th to 9th traversed the whole country from South-West to North-East with great rapidity and fury. It passed probably through or near the Riukiu Islands, crossed 30° North latitude in about 130° East longitude or

more, was off Kii Channel on the 8th at 6 a.m., passed East of Wakayama and Osaka (noon), Kioto (1 p.m.) to Kanazawa in Echizen (2 p.m.), thence via Niigata (5 p.m.) to near Aomori (10 p.m.) and through Tsugaru strait into Hokkaido, passing Sapporo earlier than 6 a.m. on the 9th.

In these 24 hours the centre thus travelled more than 25 n.m.p.h. on an average, the distance Wakayama-Sapporo being 605 n.m., but from noon to 5 p.m. on the 8th its rate of progress was 55 n.m.p.h.

The weather map for Sunday October 7th 2 p.m. shows first the approach of this depression. The barometer had fallen at Kagoshima 3 mm. since the morning, while pressure was banking up over the Inland Sea and in Eastern Nippon by 2 mm. As these changes were not known at the time in Tokiyo, the first intimation of a storm approaching the Southern coast was received by special telegram from Kagoshima and Nagasaki, heavy gales blowing at both stations at 9 and 10 p.m. respectively so that the warning issued immediately to the South-West coast was late for these two stations.

On Monday morning the 8th the depression had made rapid progress advancing towards the North-East. The centre was then off Kii Channel, with very steep gradients* over Central Japan from 5 upwards to 9; North to East gales from Kochi to Hamamatsu, little wind yet in North-Eastern Japan and also in the extreme West, heavy rain all over Southern Nippon.

At noon the centre was abreast of Wakayama and Osaka; at 2 p.m. near Kanazawa, the barometer having fallen there 17 mm. in 8 hours, the heaviest fall recorded at any station since the publication of the weather maps in March. In Eastern Nippon gradients ranged about 6, and the rain extended further Northward to Hakodate.

From 2 to 10 p.m. the fluctuations in pressure were greatest, a fall of 17 mm. being recorded at Aomori, a rise of 20 mm. at Kanazawa. The former station had a calm at 10 p.m., the centre of the storm being near the station, while Hakodate had an Easterly gale, all Eastern Nippon, South to West gales.

On the 9th at 6 a.m. the centre was beyond Sapporo. In the whole South the wind had gone down and Sapporo near the centre had light wind, but in Tsugaru Strait and in Northern Nippon strong South-Westerly gales were blowing, changing afterwards to West and at Sapporo with increasing force to North-West. At night the last gales were recorded in the North.

At both Hokkaido stations the wind reached force 6†, at 13 others force 5, at 3 more force 4, leaving 4 out of the 22 stations with force 3 or less.

The lowest pressure recorded was at Wakayama 738 mm., Osaka and Kioto 737, Kanazawa and Niigata 738, Aomori and Sapporo 743 mm., the centre travelling with the greatest speed at the time when the pressure near the centre was lowest.

At two stations the change of wind near the centre lagged considerably behind the passage of the minimum of pressure, namely at Osaka, where the lowest barometer was noted at noon, North

* Greatest barometric slope in mm. for 60 naut. miles.
† At stations provided with anemometers for registering the velocity of the wind, the following table is used:—

| Scale 0-6 | |
|------------------------------|---------|
| Up to 1.5 metres per second | force 0 |
| Up to 3.5 metres per second | force 1 |
| Up to 5.5 metres per second | force 2 |
| Up to 7.5 metres per second | force 3 |
| Up to 9.5 metres per second | force 4 |
| Up to 11.5 metres per second | force 5 |
| Above 11.5 metres per second | force 6 |

Not provided with anemometers are—Kagoshima, Miyazaki, Shimonoeki, Sakai, Hamamatsu, Numadzu, Akita; at these stations the force is guessed.

wind at 1 p.m., West wind at 2 p.m.; and at Niigata with lowest reading at 5 p.m., South-East wind at 6 p.m., South-West wind at 7 p.m. In slowly moving cyclonic storms the greatest change of wind takes place usually about the time when the barometer is lowest.

The amount of rain for 2 successive days was—

| | | | |
|-------------|---------|------------|-----------------|
| At Wakayama | 139 mm. | Kanazawa | 63 mm. |
| Osaka | 90 mm. | Hiroshima | 59 mm. |
| Sapporo | 93 mm. | Gifu | 58 mm. |
| Kioto | 89 mm. | Numadzu | 40 mm. |
| Sakai | 82 mm. | Tokiyo | 39 mm. |
| Miyazaki | 66 mm. | Hakodate | 34 mm. |
| Miyako | 64 mm. | All others | 10 mm. or less. |
| Kochi | 63 mm. | | |

Not two days after the disappearance of this storm in the North, on the 11th, the aspect in the South grew threatening again, another depression advancing with the same symptoms and in the same quarter as the one which had just passed.

Saturday, the 13th Oct., at 6 a.m., its centre was near Wakayama with the pressure then at 746 mm., exactly the same as five days earlier and also with very steep gradients in Central Japan, ranging from 4 to 11. After passing Wakayama, however, the centre did not cross to the Sea of Japan, but went straight ahead, being about midway between Niigata and Tokiyo at 2 p.m., entering the Pacific near Nobiru at 4 p.m.

The rainfall in this storm was also heavy, the following amounts being recorded:—

| | | | |
|----------|--------------------|------------|-------------------|
| Gifu | 150 mm. in 3 days. | Numadzu | 50 mm. in 3 days. |
| Wakayama | 113 mm. in 3 days. | Himatsutsu | 44 mm. in 3 days. |
| Osaka | 74 mm. in 3 days. | Akita | 37 mm. in 1 day. |
| Tokiyo | 74 mm. in 3 days. | Miyazaki | 37 mm. in 1 day. |
| Miyako | 60 mm. in 1 day. | Niigata | 35 mm. in 1 day. |
| Kioto | 60 mm. in 1 day. | Aomori | 24 mm. in 1 day. |
| Kanazawa | 60 mm. in 3 days. | Hakodate | 18 mm. in 1 day. |
| Nobiru | 45 mm. in 3 days. | Sakai | 18 mm. in 1 day. |
| Kochi | 50 mm. in 1 day. | | |

None at Nagasaki, Kagoshima, Hiroshima, Shimonoeki, or Sapporo.

Both storms travelled in general about North-East, the first a little more Northerly.

| First Second Storm. | |
|-------------------------------------------|----------------|
| The greatest velocity of the centre was | 55 38 n.m.p.h. |
| The lowest barometer | 737 746 mm. |
| The greatest fall of bar. in 8 hours | 17 15 mm. |
| The greatest rise of bar. in 8 hours | 20 8 mm. |
| The steepest gradient | 9 11 |
| Number of stations with gales (out of 22) | 18 8 |

In both storms due warnings were given to the coast, late at some Western stations in the first one owing to want of telegrams. In 16 hours the interval during which the coast may at present be considered as not properly guarded, a storm travelling at the rate of 25 n.m.p.h. may be at 2 p.m. on one day South of Okinawa, at 6 a.m. the next morning at Kagoshima.

Twin depressions following each other in short intervals and similar in many respects do not seem to be quite rare, as 2 instances were noted in July, one pair crossing Nippon with an interval of 2 days, another pair going over Southern Hokkaido within 6 days. In July as well as in October the first of the pair was always the principal one.

E. KNIPPING.

Tokio, October 17th, 1883.

THE PAYMENT OF LAND-TAX IN RICE.

(Translated from the *Hochi Shinbun*.)

[CONCLUDED.]

It is certain under the circumstances that if a man succeeds in attaining one end, he naturally endeavours to accomplish another. Nor is it possible for him to acquire profits to the point of satiety. Notwithstanding the benevolent Notification of the Government, our people, it appears, complain from time to time of the difficulty of paying their taxes, and have frequently petitioned the authorities for the decrease of their rates. It must

be noticed, however, that their petition is grounded on the text of Notification No. 272, issued in the sixth year of Meiji (1873), which provides that a distinction should strictly be made between taxes on commodities and those on dwellings, which were formerly collected under the head of local taxes; that, although the revised local taxes ought to be fixed at one per cent., arrangements should be made to collect three per cent. of the value of land, as the tariff of commodities had not yet been enforced; that in case the duties were to be imposed upon tea, tobacco, timber, and other articles, so that the revenue might be increased by two million yen, the amount of new taxes would be levied exclusively upon the land, the duties on which had already been revised; and that the land-tax would thus at last be decreased to one per cent. In January of 1877, the land-tax was reduced to 2.5 per cent.; but simultaneously with this reduction, there was remarkable increase in the impost upon commodities. The sake tax alone amounts at present to more than ten million yen; and if this be added to taxes on other articles, the total will not be less than twenty million yen.

The Government had at first declared that it would reduce the tax to one per cent. should it succeed in increasing its revenue by more than two million yen. The taxes on commodities have now reached almost ten times the prescribed amount. In these circumstances we may be justified in saying that, in consideration of the present distress among farmers, the authorities ought to adopt measures for the reduction of the land-tax. The petition forwarded to the Government by the agricultural classes, is in some measure reasonable. We ought to take pity on their present condition. Yet we may be allowed to assert that their memorial in question is based on the desire to promote their own interests, and may be looked upon as the outcome of their ignorance of the general condition of the administration. The earnest desire to extricate oneself from immediate distress leads to a disregard in most cases of the necessity of extending consideration to the general state of affairs. Such is even the case with intelligent men, and much more, then, with unenlightened agriculturists. An impartial survey at the financial condition of our country, shows that farmers ought never to attempt to petition the authorities for the reduction of their taxes. As for us, we believe that they should consider it their duty to assist the Government in adjusting its financial affairs and refrain from giving it any trouble for the sake of an unattainable object.

The Government and people are distinguished by their position, and bear the different relations of the governor and the governed. Thus there is a difference in nomenclature, but substantially they may be regarded as one body. Evils existing in society ought to be equally shared by the Government and people, just as is the case with the human body, which, though it consists of different organs performing different functions, transmits throughout its whole frame any pain caused in any part of it. An abundant harvest and social prosperity not only tend to promote the happiness of the people, but also secure the welfare of the whole Empire. In other words, such happiness must be regarded as the happiness of the whole community. This being the case, it is plain that the Government and people must, on the other hand, have an equal share in suffering. This principle may be specially applied to our Government, which is managed by an intelligent Emperor, assisted by wise councillors who appear

to devote their energies to the furtherance of popular happiness. What the people complain of at present is likewise complained of by the Government. Both are bound to suffer from evils, if there are any, to the same extent. Agriculturists must refrain from attempting to promote their own interests as well as from giving any trouble to the Government. According to the financial estimates for the 16th year of Meiji (1883), the revenue amounts to yen 75,606,059, which shows an increase of yen 8,791,637 as compared with the previous year. This augmentation is due to the enforcement of new taxation as well as to the increase in the rates of old taxes, with a view to the extension of the Army and Navy, simultaneously with the improvement of the internal administration. The most prominent measures taken toward this end may be traced to Notification No. 51 of 1882, for the levy of taxes upon patent medicines; to Notification No. 65, for the import of duties upon Rice and Stock Exchanges as well as brokers; Notification No. 61, for taxing sake; and lastly, Notification No. 63, defining taxes upon tobacco. A glance at the social condition shows that all sorts of trades have sunk into melancholy depression as we have already stated in the foregoing lines. Commerce and industry threaten to become gradually extinct. Reports have lately been received from various parts of the Empire announcing that some of the tobaccoists, as well as *sakk* and medicine dealers, have given up their callings, while others have suspended the purchase of goods for their stock. Nor is it an exaggeration to state that the Rice and Stock Exchanges have sunk into utter decline. While such anomalies exist in the Empire, how is it possible for the Government to collect the new tax to the value of yen 8,430,000, although it has mentioned that amount in the report of its financial estimates with remarks showing the necessity of increasing the revenue? Moreover, a lethargic condition is also noticeable in foreign trade. There is hardly any business doing in the import and export market. The following table shows the comparative value of exports and imports in 1882 and 1883:—

| | JANUARY, 1882. | JANUARY, 1883. | DECREASE IN 1883. |
|-----------------------|-----------------|-----------------|----------------------|
| | YEN. | YEN. | YEN. |
| Taxable imports | 8,342,713.83 | 1,519,771.34 | 7,223,942.49 |
| Taxable exports | 1,865,444.51 | 1,672,583.97 | 192,860.54 |
| | FEBRUARY, 1882. | FEBRUARY, 1883. | DECREASE IN 1883. |
| | YEN. | YEN. | YEN. |
| Taxable imports | 8,506,190.45 | 1,480,477.77 | 7,025,712.68 |
| Taxable exports | 1,865,444.51 | 1,672,583.97 | 192,860.54 |

We are informed that there was more or less increase in the exports and imports in March this year as compared with the previous year. Owing to the want of reports to ascertain the condition of foreign commerce from March this year to the present date, we are unable to make precise statements concerning the amount of exports and imports. Yet it is undeniable that transactions have considerably decreased this year as compared with the previous years. From the above table alone, we perceive that the decrease in the exports and imports in January this year amounted in value to yen 1,694,346.69, and in February to yen 1,218,773.23. Although these figures may not be taken as the standard for measuring the average decrease or increase of exports and imports, yet they serve to show that a considerable diminution occurred during the past few months. If the market does not resume its bustling aspect by the restoration of social activity, the foreign trade can scarcely fail to sink into a state of further depression. The prosperity of foreign commerce corresponds with success in domestic transactions. Neither can by any means prosper independently of the

other. The present stagnation of trade may be ascribed to the decrease in exports and imports, and in other words it may be asserted that the lethargic condition of foreign commerce has been the legitimate cause of the stagnation of internal trade. Therefore, the restoration of social activity will not fail to promote foreign transactions. Nevertheless, in so far as the present state of affairs is concerned, the restoration of prosperity is beyond all hope. The further depression of trade must be the inevitable result. Can the authorities succeed in increasing the customs dues to the amount of yen 2,600,330, which they have mentioned in their estimates of revenue? Nor is it unlikely that they will fail in some measure to collect the taxes on vessels, vehicles, and mercantile companies. We may be allowed to predict that the Government will inevitably have to suffer from pecuniary embarrassment through unexpected decrease in its revenue.

Notwithstanding these circumstances, there are serious difficulties in the collection of land-tax in rice. According to the estimates for this year, the amount of tax on rice-fields is yen 30,768,891, half of which—yen 15,384,445.50—will be received for the third term of collection. Should the people apply to the authorities for permission to pay their tax in rice according to Notification No. 80 of 1877, it will be necessary to receive half of the above amount in rice, namely, yen 7,692,222.75. The value of rice must be determined by the average market price between the 1st of October and the 30th of December, in the localities where the applicants reside. Such is the text of Notification No. 80, but as the old regulations were adopted for defining the period of collecting the land-tax, another set of regulations were issued showing the methods in which the collection of taxes on rice had to be effected. In February of 1881, the period of collecting taxes was entirely changed, and it becomes necessary that the farmers should not resort to the old methods of determining the value of rice. The Government has not revised the regulations for the collection of taxes in rice, and we are therefore unable to conjecture how it will be possible to settle the price of rice. Nor do we pretend to know that there are standards for determining the value of grain, or legitimate methods of calculation. At all events, we believe that the Government will never adopt the value of rice last year as the standard for what it has to receive after November this year. Nor is it unreasonable to suppose that it will ever be so stupid as to accept the rice at the high price of previous years, while the value has considerably fallen. From these circumstances we may infer that the value of grain to be received by the Government as land-tax will no doubt be settled by the average of prices that prevailed during one or two months prior to the collection. According to the second item in the regulations for payment of the land tax in rice, promulgated by Notification, No. 85 in the 10th year of Meiji (1874), the officials of the provincial Governments were required to make out the average price of rice from the 1st of October till the 30th of November and send the report to the Finance Department before the 15th of December. At that time, the old system was in force, that is, the farmers had to pay the tax on and after the 1st of December. Thus, the Government formerly spent two months in ascertaining the market price of rice. In February of the 14th year of Meiji (1881), however, the period for payment of the tax was altered; but no change whatever

took place in the method itself. We are at loss to account for this. But it is apparent that the old and new rules do not work in concert. Now the question arises: what measures shall the Government take to ascertain the market value of rice in case the dues are paid in it? We cannot solve the question, but are justified in thinking that the authorities will spend at least two months in learning the average price. Supposing this to be correct, let us make out the average price for two months prior to the first period for the payment of the tax, 1st of November. It is as follows:—

| MONTH. | TOKYO. | OSAKA. | HIYOGO. | KUWANA. | AVERAGE. |
|--------------------|--------|--------|---------|---------|----------|
| | Yen. | Yen. | Yen. | Yen. | Yen. |
| September 1st ... | 5.04 | 5.00 | 5.03 | 5.29 | 5.09 |
| September 5th ... | 5.06 | 5.05 | 5.09 | 5.34 | 5.09 |
| September 10th ... | 5.06 | 5.05 | 5.09 | 5.34 | 5.09 |
| September 15th ... | 5.10 | 5.09 | 5.12 | 5.19 | 5.11 |
| September 20th ... | 5.26 | 5.29 | 5.05 | 4.97 | 5.10 |
| September 25th ... | 5.25 | 5.25 | 5.14 | 4.95 | 5.15 |
| September 30th ... | 5.21 | 5.18 | 5.10 | 4.90 | 5.12 |

The above are the average prices for the month of September taken every other five days. The average on the whole average price is yen 5.648. Now let us take the average price for October:—

| MONTH. | TOKYO. | OSAKA. | HIYOGO. | KUWANA. | AVERAGE. |
|------------------|--------|--------|---------|---------|----------|
| | Yen. | Yen. | Yen. | Yen. | Yen. |
| October 1st ... | 5.07 | 5.08 | 5.45 | 4.75 | 5.13 |
| October 5th ... | 5.01 | 5.10 | 5.31 | 4.90 | 5.09 |
| October 10th ... | 4.96 | 4.95 | 5.00 | 5.33 | 4.73 |
| October 15th ... | 4.79 | 5.02 | 5.09 | 4.48 | 4.83 |
| October 20th ... | 4.81 | 4.98 | 4.98 | 4.43 | 4.79 |
| October 25th ... | 4.97 | 4.81 | 4.77 | 4.34 | 4.50 |

The total average for September and October is yen 5.149. Although the above tables, being taken from the rate in the Exchanges in various provinces, do not show the real market price, yet they enable us to form some idea about the rice market. Supposing rice costs yen 5 per *lots* and the farmers pay the tax half in rice and half in money, then according to Notification No. 80 of the 10th year of Meiji, the amount of rice the Government will receive for four months from the 1st of November till the end of February next would be 3,076,891 koku and 1 to, which, according to the above price, is worth yen 15,384,460. The tax payers have of course to defray the expenses incurred for transport, stowage, etc. But the Government will incur a considerable expense after the rice is handed over to it for further conveyance to Tokiyo and the like. It will sell rice where it is received to save the trouble and expense of transport. But considering the present stagnant condition of trade and the eager efforts of farmers to sell what is left to them to pay the other half of the tax, we are convinced that the Government cannot sell its rice in the provinces. It must be finally sent to Tokiyo at considerable expense and trouble. In such case, the grain will diminish in quantity from various causes. In Tokiyo, the Government cannot store it away till the market improves, since it is financially embarrassed. It must, therefore, sell it at all events to replenish the Treasury. But the market is already flooded with rice. The only way open that we can see is to have recourse to export. But in foreign markets we cannot find a demand for such a large amount of rice. Subjoined is a table showing the amount of the export for the last few years:—

| YEAR. | QUANTITY. Kin. | VALUE. Yen. |
|------------|-------------------|----------------|
| 1878 | 199,042,276 | 4,644,280 |
| 1879 | 13,597,233 | 416,879 |
| 1880 | 6,827,076 | 210,863 |
| 1881 | 10,656,096 | 261,737 |

From the above, it will be seen that, as regards both quantity and value the export is not very encouraging, being about one-tenth of what the Government is about to receive. Even though the Government could export four or five times as much as the above, the larger quantity remains hand. Unless some extraordinary events have taken place in foreign markets, the export of such a large quantity of rice must be attended with loss,

because of the want of demand. Ah! What a serious embarrassment to the Government! To statesmen of ordinary capacity, even a slight decrease in the customs revenue and internal taxes would be a source of great anxiety. How much more would this be the case when there is such an immense quantity of rice for which there is no demand. Fortunately for the welfare of the people, our ministers are endowed with great intelligence, and seeing that they succeed where our ability falls short, we trust that they will successfully get out of this difficulty. But financial perplexity may not be entirely unfelt. In face of such a difficulty, the Government do not shrink from re-adopting Notification No. 80 of the 10th year of Meiji. We must express our sympathy with the Government, and remember the considerate manner in which it executes its duty toward us. We must, also, remember our duties as tax-payers by paying the dues and trying to mitigate the difficulties in which the Government is now involved.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN, Esq., Judge.—SATURDAY, OCTOBER 20TH, 1883.

RUTH FARNSWORTH V. G. WHITE AND F. E. WHITE.

This was a claim for \$10,000 for defamation of character. The case was tried before a Jury composed as follows:—Messrs. N. McLeod, J. Haddow, J. B. Coulson, E. Powys, and J. Annand.

Mr. Kirkwood appeared for the plaintiff, and Mr. Lowder for the defendants.

On the opening of the Court on Saturday morning, Mr. Lowder asked that the case against the defendant, F. E. White, be dismissed on three grounds:—(1) that he had only repeated a statement which he had heard (2); that he is improperly included with his wife in the complaint; and (3) that the allegation against him had not been proved by the other side.

The morning was occupied by argument on these points of law, Mr. Kirkwood being allowed to amend the petition in its second paragraph, so as to include White in the prosecution according to the precedent of recent decisions under the Married Woman's Property Act, and the Judicature Act of 1882. Shortly before noon the Court adjourned until half past one o'clock, in order to allow Mr. Lowder time to consider how he might reply to this amendment. The Court having ruled against Mr. Lowder on the first and second points, took from him for consideration a long list of cases in support of his second contention, and adjourned until half-past one p.m.

On resuming, His Honor referred to the causes cited by Mr. Lowder and ruled that the case should proceed as against Mr. White conjointly with his wife on the amended petition. On Mr. Lowder's earnest request for an adjournment on the ground that he had not had time, between noon and half-past one, to prepare his answer to the amendment in the petition, His Honor adjourned the case until to a.m. on Monday.

MONDAY, OCTOBER 22ND, 1883.

On the opening of the Court Mr. Lowder was allowed to amend paragraphs 3 and 4 of his answer to the petition to the following effect:—Paragraph 3.—“The said cause of action against him is for *bona fide*, and without malice, corroborating the words alleged to have been spoken by Catherine White, his wife. He denies that Catherine White spoke the words in the petition, or that he corroborated them, and he alleges that what was said by him was said *bona fide* and without malice and under circumstances which constituted a privileged communication.” Paragraph 4.—“He alleges that George Ford in the petition mentioned, on the occasion and at the time of the petition mentioned, repeated in the presence of Alexander Clark, of Catherine White,

and of himself, the defendant, certain statements that he, the defendant, had communicated to the said George Ford in confidence, *bona fide* and without malice, on a private occasion and as having been communicated to him, the defendant, by a person whose name had been divulged; and on being requested by the said George Ford to take him to the person who had made the said statement he complied with the said request.” Mr. Lowder then addressed the Court for the defence, apologizing to the Jury for the length to which the case had extended, but reminding them of his own imperative duty to his clients, which had compelled him to ask for delay in order to amend his answer as above, and their duty to both sides in the case. He then proceeded to outline the course that his defence would take, laying stress on the points that there had been no “expressed malice” on the part of the defendants; that any communication they had made was privileged; that the relations between the defendants and Ford had been so uniformly friendly as to prove that there could not have been any malicious intent on their part. He alluded to the fact of White, directly he heard the story, going to Ford's house and calling him out on the verandah, and laid weight on the fact that, though Mrs. and Miss Farnsworth had arrived on Friday from Hakodate, as Captain Farnsworth had said “to attend to this case,” they had not been called at all. Another point that Counsel wished the Jury to consider was whether the marriage had really been broken off at all. Mr. Ford's conduct tended to show that it was not, as he had embellished his house, and helped Mr. Farnsworth to get up this case. Perhaps the marriage was held in abeyance: it did not appear that it was broken off altogether. Indeed, Mr. Ford had said, since the alleged rupture, that he “would marry the girl if he died in three days,” and as lately as Saturday night last had told Waightman that he didn't know “if he would marry the girl now as old Farnsworth had been trying to dictate to him and he was not used to be dictated to.” This statement was said to have been made during the visit paid by Mr. Ford to Waightman on Saturday night, when the former said that if White “got off” he (Waightman) “would get in,” and added that though Captain Farnsworth would not be here to prosecute the case, he (Ford) would do so himself.

In the course of Mr. Lowder's address the quiet of the Court was interrupted by the tipsy eccentricities of one Brady, who is, apparently, an ex-seaman of the *F. V. Troop*. He was reprimanded and left the premises, but made another interruption in the course of the afternoon and was ejected.

Mr. Lowder then called George Waightman, who deposed that he had been steward on board the *F. V. Troop*. He had been discharged, and was now living at No. 102. He knew Mr. White and his wife, and remembered speaking to them in Honmura Road on the 13th of September last, when he asked White whether his discharges were made out yet, and was told “yes.” Mrs. White asked him where his wife was. He said “in this store,” and Mr. White went in. Witness said to White that he “was damned glad he'd left that ship.” The conversation turned on the approaching marriage, and witness said “it was a damned shame that Mrs. Farnsworth did not let Ford know about the daughter being sickly.” . . . Witness added that, as Mrs. White had been the means of making the match, it was her duty to let Mr. Ford know the facts or he might blame her afterwards. He had told them the slander which is the prominent ground of the present action. Remembered Ford coming round to his place on the 13th of September, and asking him excitedly and abruptly a question about Miss Farnsworth, to which witness replied that, if he were addressed rationally, he would reply, and offered to go to Ford's house the next morning. Ford said “We are all at sixes and sevens!” Next day Captain Farnsworth came to his place with Ford, and asked whether witness knew that the slanders stated were correct. To each of three questions asked about the young lady he answered “No.” Then the captain said:—“By God, White's the man and not the steward. White's got money, and he shall pay for this, and nothing less than \$10,000 shall satisfy me.” Since then witness has seen Ford a number of times. One night he and his wife were at Ford's, when that person said he

"would marry Miss Farnsworth if he was dead in three days: he had bought a piano and furniture for her; he was going to give Captain Farnsworth and his family possession of his house when they came back from Hakodate. For himself he had engaged a place on the Bluff to stop in until such time as this case had come off, when he'd get married." On Saturday last about two o'clock Ford came to witness and asked him if he was always of the same opinion; to which witness replied that he was, and that he'd tell the truth no matter who lost the case, and asked whether Captain Farnsworth was at Ford's house. Witness's wife wished to see the captain on other business. About 8 or 9 o'clock Ford came again, and witness accompanied him to the house which they entered by the front door, and saw Captain Farnsworth, to whom witness spoke on business, and objected to answer any question connected with this case. He said, when Ford insisted, that "that was the way he (Ford) was going on, hollering all over the street," and he, witness, could do nothing with him. Ford said—"For God's sake, if you have children of our own, don't slander a poor, innocent girl!" Witness replied that he had told Ford a dozen times that he had said nothing against Miss Ruth Farnsworth. Ford said—"If you tell a lie to screen White, woe be to you in Yokohama!" Witness answered that he wouldn't tell any lie for either Ford or White, and Ford continued that "White wanted to get out of the case and let witness into it. Captain Farnsworth would not have time to remain in Yokohama to prosecute the case; but he (Ford) would go on with it against witness, if White got off." Witness had read the reports of the case in the newspapers, and told Mr. Ford that a statement in Mr. Clark's evidence wasn't right, referring to the offer alleged to have been made by White to witness (as to taking care of him and his wife if he went to prison, and paying their passage to Hongkong). Ford denied having said he would let the Farnsworths have his house or that he was going to be married. At a quarter past twelve on Saturday Ford again went to witness's house, and said he wasn't going to marry Miss Farnsworth, "as old Farnsworth had been dictating to him, and he had never been used to be dictated to." Ford went off saying, "Good night, Waightman!"

To Mr. Kirkwood—Know nothing against Miss Ruth Farnsworth's character: he had never said anything about her being immoral: no idea ever entered his head to say anything about her being immoral. Had only told the Whites that she was "sickly," by which he meant that she was delicate. Never knew of Miss Ruth Farnsworth being in the lazarette with the cabin-boy. Generally spoke of the younger daughter as "Minnie," and it was to her he referred. He made the statement probably because he was a little bit put out at the time: would think Minnie was now about twelve or thirteen. The event referred to was two or three years ago. It was the carpenter told him. These conversations are "as near as he could make it out." Did not know whether his wife was going to be called as a witness; but thought not, and did not know why. She would not come unless she was called. She was discharged from the ship at her own request and for no other reason. He was angry with her once since her arrival in Yokohama because she had stopped ashore all night; but the circumstances had subsequently been explained to his satisfaction. (The Judge here stopped Mr. Kirkwood in an attempt in this cross-examination to throw discredit upon witness's wife.) Witness supposed he had as much affection as any other man for his wife. She was suspended during forty-one days on the voyage. Witness saw White about nine o'clock yesterday, and went with him to Mr. Lowder's. White arrived at the house in a jinrikisha, and Brady sung out for witness. Lemon was in the house frequently during the day: he last left it about half-past twelve at night. The last drink he and witness had together was champagne, at about twenty minutes to twelve. Witness and his wife went to Ford's house one evening and made a statement to the effect that he had never said a word against Miss Farnsworth. He had some time previously been to White's house. White had not asked him to sign a document; he had read one to him, and witness had answered that he could not say that the things contained in it were true. Mrs. Waightman had always maintained that she could say

nothing against Miss Farnsworth's character. She would always say that Miss Farnsworth was a well-behaved and virtuous young lady.

To Mr. Lowder—When he spoke of the incident in the lazarette to the Whites he did not say anything to lead them to believe that he alluded to Minnie. He had not known, himself, what White had said about Miss Ruth. He had meant to say (to Mr. Kirkwood in cross-examination) that if the Whites had said what Clark and Ford said they said, they (the Whites) would have told a "pack of lies."

The case was adjourned from noon till 1.30 p.m. On the Court resuming,

Mr. Lowder called the defendant, F. F. White, who was sworn and said that he is a constable in the English Consular service. He first made Mr. Ford's acquaintance about two years ago, and has known him ever since, becoming on very intimate terms with him. Ford used to address witness as "old man" and Mrs. White as "mother." Remembers the arrival of the *J. V. Troop* about the middle of August, and first knew Captain Farnsworth at the Consulate when he entered his vessel. At the same time there was in harbor a barque, the *Stillwater*, belonging to the same owners, commanded by a Captain Gowry. In consequence of a conversation with Gowry witness and his wife went off to see the Farnsworths, who returned the call in the afternoon a day or two later, and remained during the evening, when it was arranged that on the following Sunday, after church, the whole party would drive to Totsuka. Sunday morning, returning from church, witness called on Ford and asked him to join the party which he did. The party consisted of the Farnsworths, another captain and his wife, and the White family. Subsequently had daily intercourse with the Farnsworths. Two or three days only elapsed before witness learned that Ford wished to marry Miss Farnsworth, and was present when Ford talked to Mrs. White on the subject. Mrs. White was anxious to see Ford married; and both she and witness were anxious to bring the matter about. Mrs. White asked Miss Farnsworth to tiffin, so that Ford might meet her and have an opportunity to propose. At 4 p.m. on his return from office, witness heard that the proposal had been made and accepted subject to the consent of the young lady's parents. Farnsworth consulted him as to the character and position of Mr. Ford. Witness said that financially Ford was well off, and in answer to a suggestion that he drank, replied that the worst he had ever seen him was the night the captain met him at witness's house when he was only a little talkative: His feelings towards Mr. Ford were very friendly at that time, and he said the best he could about him to Farnsworth. Heard of the engagement from Ford himself. Remembers the 12th of September. At 4 p.m. left the office, and on his way home met Farnsworth coming from the house, and stopped and spoke to him, he saying that the affair was settled and that he had been to Mrs. White, and given her some money asking her to assist Mrs. and Miss Farnsworth in shopping. Witness congratulated the captain, and said he thought Ford would make a good husband. Went home and remained till between 7 and 8 o'clock, when Mrs. White, and Mrs. and Miss Farnsworth returned from shopping. Meanwhile Farnsworth and Ford had arrived. The Farnsworths would not remain to tea. Farnsworth handed Mrs. White ¥58 to pay the dress maker, and it was understood that if anything more was required witness should advance it. The things were to be sent to Hakodate where the marriage would take place. Then the whole party went on board and stayed to tea. Mr. Ford provisionally, and then, objected to go to Hakodate, on account of the trip interfering with his business. Witness and his wife had said that he must think very little of the young lady if he didn't care about going to Hakodate. Mrs. White and witness that evening promised to go to Hakodate with Ford. The following day Ford asked White to go off with him and see Miss Farnsworth as the ship had not got away. Witness said he had better ask Mrs. White too. At 4 o'clock found Ford and his wife at the Consulate gate and went with them to the Hatoba. It was blowing hard: the vessel was a long way off, and the water was rough. Witness decided that the weather was too bad to go off, and suggested waiting till after tea. Ford declined to go to tea,

and witness and his wife went home and thence to the Honmura Road, where, while waiting outside a store for his wife, he was accosted by Waightman, who asked if his discharge was ready, and was told "Yes." Waightman then asked if it was true that Miss Ruth Farnsworth was to be married to Mr. Ford. Witness replied that he was glad to say it was true, and they were going to Hakodate to the wedding. Waightman said it was a damned shame that Ford should have been deceived by Farnsworth, who had said what was false about his property and so forth. He had been compelled to bring his wife and family away from home, because his partner had robbed him, and he had thereby become bankrupt, and if witness and his wife (who had then come up) had any interest in Mr. Ford and he was their friend, he thought it would be their duty to tell him that Miss Ruth Farnsworth was suffering from an incurable disease. . . . that she would be a continual expense in doctors' bills, and would probably die within twelve months. Witness and his wife were grieved and astonished and started to go away. Waightman stopped them and said that he might add a great deal more; but didn't wish to do so because they might think it mere spite on his part; but did add something that shocked and disgusted witness. They walked straight to Ford's house, as they thought it their duty to acquaint him, as friends, with what they had heard, and Captain Farnsworth as well. Arriving saw that Mr. Clark was in the house. Mrs. White went in; and witness called Ford out saying that he wished to speak to him privately as he had bad news for him. They went together to the end of the verandah, where witness quietly and feelingly repeated the conversation that had just passed with Waightman. Mr. Ford got very excited and went into the dining room, to the sideboard, took a drink of whisky, inviting witness to have some, and then said aloud what had been said, and called Farnsworth all the names he could think of. Witness tried to pacify him without success. Ford asked Mrs. White if she had heard the conversation. She said "Yes," but did not repeat it. Ford asked witness to go down with him to see the steward and stewardess. He went to Lemon's and met in the bar the carpenter who had been discharged from the *J. V. Troop*. Ford asked the carpenter if he knew anything wrong or immoral about Miss Ruth Farnsworth; and the carpenter replied, "No!" Witness asked, "what is this story about the lazarette?" and the carpenter said, "Oh, that's not Miss Ruth: it's Minnie!" and with Ford went into the inner room where there was some very loud conversation. Ford came out and with witness went back to the house, where when he arrived Ford said, "There you are, Clark! just as I said. A pack of lies!" Witness suggested going off to see Captain Farnsworth, but Ford wouldn't go off before he had eaten his meal. It was then about seven o'clock, and the Whites went away with the understanding that Ford would come later and the three would go off together. As Ford didn't come in an hour, witness and his wife went round to his house, and found Ford and Clark had gone out. Followed them to the hatoba, and found that they had gone off to the ship, so witness and Mrs. White returned to their house. Witness denied the whole of the statement of Mr. Waightman alluded to in Mr. Clark's evidence (about the provision to be made by witness for Waightman and Mrs. Waightman) except inasmuch as that he (White) did produce a document, destroyed because Waightman objected to a certain clause. It was witness's duty to look after the arrival of vessels. The *Kosuge Maru* arrived from Hakodate on Friday bringing Mrs. and Miss Farnsworth.

To Mr. Kirkwood—The term "old man" is a familiar one. Witness would not use it or "mother" except with people with whom he is very familiar. Did not advise Farnsworth not to leave his daughter with Ford, as he was a fickle man; but did at first coincide with Mr. Farnsworth that the engagement was a short one. The reason he did not go direct to Farnsworth when he had had the conversation with the steward and stewardess, was because he went to his nearest friend first, intending to go with him afterwards to Captain Farnsworth. Did at that time believe that the statement was true. Would therefore have gone

to Captain Farnsworth because he was interested in the matter. Did not make any enquiries about what he had heard from the steward; but went direct to Ford whose first business, not witness's, the matter was. Witness was grieved and ashamed when he heard the story, and did not give himself time to think any further than that, as he said to his wife, it was his duty to tell Ford at once. He does not remember that the stewardess said anything. It would not be true to say that his only object in telling Ford was to have those people punished. (Extract from letter to Captain Farnsworth by witness read.) A letter of apology had been written at Mr. Kirkwood's and Mr. Robertson's suggestion to Captain Farnsworth. Knew at the time of the conversation that the stewardess had been discharged from the ship: when the vessel arrived he had seen the official log book with a complaint made by the captain at this consulate against her. Knew that she had been suspended for forty and odd days on board for a trivial offence. When he found that Ford and Clark had gone off to the ship, it was still blowing rather hard. Mrs. White was not very well, and they were sure of seeing Captain Farnsworth, "the old man" in the morning. (A letter from Mr. Kirkwood threatening this action was read.) Witness had been much shocked at reading the letter which he described as disgusting. He does not think he answered that letter in writing: but he consulted Mr. Robertson, who went and saw Mr. Kirkwood to explain that White had acted honestly in the matter. Ford was angry at the time when witness left his house. Witness never thought that the matter was serious until the following morning at nine o'clock, when he heard at the Consulate what the captain had said of him, and then he knew that it would be no use to see the explain. Further knew that Ford was taking Farnsworth to Mr. Kirkwood for consultation. Did not explain to himself why the captain was so excited: did not think that he would be excited against him. Witness had sympathized with him, and could understand that he should be excited against the originators of the slander. Did not take any measures to find out whether the captain had heard any more than he had stated to Ford. He had heard of the threatened action, and thought it dangerous to go near him. On witness Sunday saw Mr. and Mrs. Waightman, and to-day in court. (Seeing is not speaking to him.) Went on Sunday in jinrikisha with a gentleman to Waightman's house and asked a man standing outside to call him out as he (witness) could not enter his house. Afterwards went with him to Mr. Lowder's house on the Bluff. With reference to being "shocked" at Mr. Kirkwood's letter, witness admitted letting a house on No. 88 to a fast woman. The terms were arranged in Mr. Ford's house, at his request, and discussed in the presence of Mrs. White, who happened to be present. The premises on No. 187 are his property, and he had once let a house there to a woman of the same class, also through Mr. Ford. (His Honor here had occasion to rebuke levity in the Court, and Mr. Kirkwood for leading a laugh.) Mr. Lowder called for the letter from which Mr. Kirkwood had read an extract. It explained that the defendant had acted without malice, and concluded with a full apology.

Catherine White, wife of the last witness, was called. She had known Mr. Ford for a long time. He generally called her "mother." If she had no affection for him she would not let him do so. She remembered the arrival of the *F. V. Troop* and making acquaintance with the Farnsworths. The day after the drive to Totsuka Ford first spoke of his admiration for Miss Farnsworth: about eight days later he spoke of proposing for her. No third person was present. He asked witness to invite Miss Farnsworth ashore, which she promised to do and did at the first opportunity, Ford dining at noon in witness's house with her. After dinner the pair were walking in the garden for about twenty minutes, when Ford came to the bed-room door and said he was going to take Ruth for a walk, the young lady then speaking and saying, "I am going to Mr. Ford's house, Mrs. White." They were absent for about two hours. On their return, Ford announced their engagement subject to the consent of the parent-, and witness congratulated the young lady, saying she was sure Ford would make a good husband. Ford came frequently to the house after. Once he was very

excited, and said the father had refused him. Recollected once seeing Mr. Clark at Mr. Ford's house. Ford was lamenting that he could not obtain the parents' consent, and Mr. Clark said that, in his case, he would have a carriage and take her away somewhere where the father would never see her. Witness deprecated any such proceeding. Later Captain Farnsworth himself announced his daughter's engagement and asked witness to go with Mr. and Mrs. Farnsworth to a silk store. At the same time he handed witness a roll of Japanese notes. She helped the ladies to make purchases, and give orders; and when the shopping was over returned with them to the house, where she saw her husband; and soon after Mr. Ford and Captain Farnsworth came in. The whole party went on board, and Miss Farnsworth begged witness to go to Hakodate to be present at the marriage. Mr. Ford made the same request, and the defendant promised to go. Witness ordered a new dress for the occasion, and put herself to a great deal of expense. (Mrs. White corroborated her husband's evidence about meeting Mr. Ford, going down with him to the hatoba, the arrangement made about going off to the *F. V. Troop* after tea and the meeting in Honmura with Waightman, part of whose conversation she related. Her narrative corresponds with Mr. White's.) Witness begged Waightman to say no more. She was very much hurt, and went direct with her husband to Ford's house which she entered, and her husband called Ford out. On their return to the room Ford walked to the cupboard and had a drink, and then walked up and down the room in a very excited manner telling Mr. Clark all the conversation that had taken place. He then turned to witness and asked if she had heard the steward make the statement, which she admitted, expressing her sorrow. White and Ford went away together and on their return an arrangement was made for all to go off together to the ship. As Ford did not come round she and White went to his house and found he had left. Remembers Ford after the ship had left for Hakodate calling to see her about some pine trees that White had promised him for his garden. He said he would like to have the place finished as he was going to get married very soon to Miss Ruth Farnsworth.

To Mr. Kirkwood—Did not ask the steward what disease Miss Farnsworth suffered from. Was not curious but shocked at what she had heard. Did not think it shocking to hear that the young girl was likely to die in twelve months. Mr. Ford's and Mr. Clark's evidence was false. Clark was never a friend of hers, and she'd only once invited him. Witness's family is coming from England but not shortly. Her niece is coming. Does not remember anything said by Ford about a gold chain for her, and does not know that she has property in Yokohama. Went with her husband for a walk on Saturday evening, and in French hatoba street, but did not stop there an hour nor a moment even.

To Mr. Lowder—Went to Mr. Helm's on Saturday evening and remained there while her husband went away. She once invited Mr. Clark to her house at Mr. Ford's request, in order that he might play the violin. Mr. Ford had seen the photograph of witness's niece; but there was no chaff about it.

Mr. Kirkwood asked leave to call Mrs. Waightman, which, after some discussion, was allowed.

Mrs. Waightman remembered meeting Mr. and Mrs. White on the 13th of September in the Honmura Road. She was in a store and didn't know what they said to her husband. Mrs. White came into the shop, and mentioned that Ruth and Ford were going to get married, and she answered that she had heard so. Mrs. White left the store and a moment later witness did so, and went to where her husband and Mrs. White were talking. Reference was made to the approaching marriage, and her husband said that the girl was sickly and delicate. Mrs. White remarked that "you could see that by her face." Witness repeated a remark that she had made on what Mrs. Farnsworth had said about her daughter's sickness. She could not be cured. Witness's husband mentioned the lazarette incident; but said it happened two years ago. Mrs. White said she would go and tell Mr. Ford. The statement now made is the same that was made to Captain Farnsworth on Saturday night. Mr. Kirkwood asked to be allowed to recall Mr.

Ford in reference to the conversation of the 19th of September between the Waightmans and Mr. Clark in Ford's house. Mr. Lowder objected but the objection was overruled.

Mr. Ford recollected Mr. and Mrs. Waightman calling at his house on the 19th of September. It is untrue that he said he "would marry Ruth Farnsworth if he was dead in three days," nor did he remark that he had "bought a piano," &c. The piano he bought this month (October). A memorandum of the conversation was made next morning. (Memo. produced and admitted). A. Clark made it. Mr. Waightman said he had been to White's who asked him to sign a document. He had asked what the signature would amount to? (Witness repeated the substance of the allegation that White said that Waightman and his wife would taken be care of if he got two of three months' imprisonment and so on.) Waightman added that he would not sign the paper as its contents were untrue.

To Mr. Lowder—Knew that the Waightmans came on the 19th from his own memory. On the 18th "several" people came to his house: on the 20th "several" people came. That was his answer.

This closed the case as far as evidence is concerned; and the Court adjourned until 10 a.m. next day.

TUESDAY, OCTOBER 23RD, 1883.

The Court sat at 10 a.m. when Mr. Lowder addressed the Jury for his clients. He said that the points for the Jury's consideration would be:—

(1) Was the occasion on which the remark alleged to have been made by defendants a privileged one? (2) Assuming the occasion to have been a privileged one did the plaintiff show express malice on defendants' part in making the communication? (3) Had the plaintiff's marriage been broken off in consequence of such communication? (4) In that case what is the value of the damage sustained? They had heard from Mr. and Mrs. Waightman, and from the defendants White and his wife, the story of the meeting in Honmura Road, the nature of the first communication as to the sickness, Waightman's addition about the lazarette incident, and the manner in which it had been received by defendants. These four witnesses had made substantially the same statement. Counsel called the attention of the Jury to the petition, wherein the order of the allegations had been reversed, the lazarette being first mentioned: the sickness second. Moreover, the statements alleged to have been made had been much exaggerated. If they had been made, no matter by whomsoever, as they were attributed to White and his wife they were gross, vile, and wicked. Whoever had perverted the allegations said to have come from Waightman must have been guilty of great depravity. If the Jury found that the defendants had so perverted Waightman's statements the Jury would have to admit express malice. He stated the case thus frankly and fairly; but he would ask the Jury to believe that there had been no such exaggeration, both according to the probability of the circumstances and the credibility of the evidence. It must be seen that White and his wife had proved themselves of a kindly and generous disposition, and that they had certainly been animated by no animosity against either Ford or the Farnsworths. In the case before the Jury they had been accused by the steward in Honmura Road, and were so distressed by what they had heard that they thought it their immediate duty to communicate it to their friend, whose house was not far off, and thither they went at once. It had been suggested that their story had been concocted between them. There were here two questions to consider. (1) What could be their motive in concocting such a story? and (2) had they the time in a two minutes walk to do so. It was admitted that when they arrived at Ford's house Mr. White called Ford into the verandah to speak to him privately, and that Mrs. White had gone into the dining-room and sat down in the presence of Mr. Clark, to whom she did not address a word. If the allegation were true she would, it was to be supposed, then have communicated the slander to Mr. Clark. On the verandah White and Ford had a conversation privately when something was stated which Mr. Ford said had been repeated by the defendants in the room. White's allegation is that the statement

was repeated by Ford himself, in great excitement, walking up and down the room, to Mr. Clark while White endeavored to pacify him. Which statement was the more likely? Was it likely that Mrs. White seeing Ford and White come into the room would have said the words complained of? The probabilities of the case were all in favor of defendants; and it must not be forgotten that the onus of proof rests on the plaintiff, and that the defendants must be assumed to be innocent until that proof is established. Mr. Lowder then read his notes of White's account of the interview in the dining-room and referred in eulogistic terms to the demeanor of Mr. and Mrs. White under examination and the honest straightforward way in which their evidence had been tendered under cross-examination. Another point to be considered was that of the credibility of the witnesses. On one side there were Mr. and Mrs. White; on the other Mr. Ford and Mr. Clark—two and two. The jury had seen Mr. Ford's pyrotechnic display under cross-examination. His answers were given not to him (Counsel), but to the audience. Ford's demeanor was painful to him in the circumstances; but there are some witnesses who do not understand the responsibility of their oath, and behave as if all they need do under cross-examination was their best to baffle the questioning Counsel. Had not it been proved that Ford was on intimate terms with the defendants? In affirmative answer to this question Mr. Lowder cited a familiarity of address between Ford and the Whites, and the fact of his having first met Miss Farnsworth at the house of the latter, and went on to ask, if the witness would mislead the jury in a small matter like this, he would not mislead them on the more momentous question of the interview of the 13th of September. The learned Counsel reviewed Mr. Clark's evidence also disparagingly. With reference to the next question, was Miss Farnsworth's marriage broken? Waightman had repeated Ford's assertion that he intended to let the Farnsworths have the use of his house until the trial was over. Ford had gone to Mrs. White, subsequent to the *J. V. Troop* sailing for Hakodate, for trees to beautify his grounds, and had told Waightman, no later than half-past twelve o'clock last Saturday, that then "he would not marry the girl because old Farnsworth had dictated to him, and he was not used to be dictated to." Mrs. and Miss Farnsworth had arrived on Friday from Hakodate. Why were they here? They had not been called in evidence. Why then the expense of bringing them hither. But supposing that the marriage had been broken off? Had that happened or was it not only held in abeyance in consequence of this scandal? Here there arose three points for the jury to decide. The only remaining question was that of damages. That and other points referred to, His Honor would develop far better than the learned Counsel thought he had been able to do; and he was now quite content to leave the matter in their hands.

Mr. Kirkwood complimented his learned friend upon the ability of his address in which not a single point that could help his case was untouched. Every particle of evidence that could tell in his favor had been brought out. But when he (Mr. Kirkwood) undertook the case he thought it would be much more complicated than it now appears. There is only one grand issue upon which all the others hang. Do or do not the jury believe the story of the plaintiffs as to the interview in Ford's house on the 13th of September? If they do believe it they must give a verdict for the plaintiffs; but if they do not so believe they must find for the defendants. The two versions are utterly inconsistent, and which was true and which false the jury would have to decide. He agreed with his learned friend that no punishment would be too severe for anyone who had maliciously started a story so "vile, gross, and wicked," and had committed the perjury that must be evident on one side or other. The story was too awful to have been concocted by the witnesses that he had brought. By Ford? Why against persons with whom he had long been in friendly relations—the Whites? Against the girl he was engaged to marry? It was preposterous to suppose any such thing, as his action immediately after the report was retailed to him amply proved. It must

be remembered, in this connection, that Mr. Ford was a man of means, deriving an income of 2,000 taels from his property in China, having property here, and earning money in business. What gain then had he in conspiring against the happiness of the young lady to whom he was engaged? Then, as for Mr. Clark, who on the defence's theory must be a conspirator with him: what gain had he in the concoction of this story? He was a friend of both parties—of Ford and the Whites; and he knew the Farnsworths a little. What gain had he in perjuring himself in such circumstances? No. Mr. Ford and he had acted immediately and before this charge was brought, but the defendants had been able to make up their plausible story while the case against them was being conducted. On this point counsel went on to argue that the defendants had their pecuniary interests and their characters at stake, and proceeded to review the evidence of his witnesses and the conduct of the case in support of his contention that the defence had been made up since the inception of the trial. The evidence of Farnsworth and Ford and Clark had been taken separately. None had heard what the others had said. Each had been kept absent from the Court-room while the others were being examined; and yet no contradiction was observable in their evidence or in their cross-examination. As for the defendants, they, Mr. and Mrs. White, were both in Court the whole time, and hearing the evidence against them were able to take the precaution of putting their witness, the steward, in the box before themselves so that they could know what to say after his evidence had been given. Such a course is one well understood by lawyers; and implies a weak case on the part of a defence such as the present. After reviewing the evidence of the interview in Ford's house, which took place about 6 o'clock, and the subsequent proceedings, Mr. Kirkwood asked whether there could be any idea of conspiracy between Ford and Clark, who had gone on board the ship by eight o'clock and had no time, apart from the impossibility or inclination on their part, to concoct any such scheme as that implied. There was Captain Farnsworth's evidence. The story that he related was identical with that which they said they had related to him, and in support of that again was Farnsworth's testimony as to his visit to the steward and the latter's emphatic "No" to the three question then addressed to him. And in further corroboration was the fact of Farnsworth's immediately afterward going to Counsel (Mr. Kirkwood himself) and placing his daughter's case in his hands. Another point was Ford's great excitement on his return from his visit to the steward, and his saying, "There, Mrs. White, I told you it was a parcel of lies!" and his anxiety to go off to the ship at once. Why didn't White go? "It was too rough." The state of the weather, Counsel contended, might affect the case as it concerned Mrs. White, but not her husband, who admitted that his business for the Consulate constantly took him afloat, and when he knew that Clark and Ford had gone off in a sampan. Mr. Kirkwood next animadverted on Mr. White's conduct in holding aloof from the Captain on the following day, his neglect in not answering his official letter of the 15th, and his general neglect to furnish any explanation to Captain Farnsworth until he addressed him a letter of apology on the 19th of September, his failing to make inquiry into the circumstances of the lazarette incident when it was related by the steward, and avoidance during the evidence of any question about the steward's alleged statements that the girl would die within a certain time. Next the delays in the conduct of the case were commented on by Mr. Kirkwood with the inference that they had been brought about to enable the defence to build up the case. His own amendment to the petition, for instance, had been made to comply with legal technicalities and involved no change in the line of his argument; but it was apparent that the contrary was the case with the amendments of his learned friend to the answer. On the mere pleadings he asked the jury to find that the case had been concocted and that within a very few days. With reference to the application to withdraw the case from the jury, he asked whether such a request was compatible with the innocence of the defendants, and whether an innocent person would not rather have had the case, once instituted, con-

tinue at all risks. Again, in the letter of apology written on the 19th, there were no denials of the charges brought. One point he had so far forgotten in his address. Mr. Farnsworth's position, as testified to by Captain Fowler, should have great weight with the jury in connection with the evidence of Mr. Clark and Mr. Ford. Insisting on the fact that the marriage had been broken off, Mr. Kirkwood cited his own letter instituting the suit and the direct evidence. It was perfectly true that Mrs. and Miss Farnsworth were now in Yokohama. They arrived during the first day of the case, and Miss Farnsworth would have been produced if her evidence had been necessary in rebuttal of any statements in evidence to her discredit, as, for instance, if the steward had said other than he did say. He had emphatically declared that Miss Farnsworth was a well-behaved and virtuous young lady. If she had been put in the witness-box she could only have said the same thing herself.

The question of costs and that of privilege were here alluded to.

The question of costs was not considered; but His Honor said he should rule that the communication was privileged. Mr. Kirkwood asked that, in case of appeal, his contention as to the privilege be noted, which was done.

Mr. Kirkwood concluded his address by saying that, then, the question of malice remained only for the jury to decide, and malice in this case would be malice in law and in fact. In only one of two ways could they find; and he was confident that their verdict would not be to the effect to convict Ford and Clark of conspiracy. As regards the damages, no damages would be too much in such a case. A recent cause had been decided in London, and reported in the newspapers, in which a sculptor had recovered £5,000 from one who slandered him in writing—the heaviest verdict of the kind, Counsel believed, on record. There had been numerous less important cases, wherein £4,000, £3,000, and so on, had been recovered; but no case could to a woman be so important as this. Nothing was of more vital importance to a woman than her honor and her virtue.

His Honor, summing up, after alluding to the long time that the case had occupied, and complimenting the jury upon their attention to a painful case in which he fully shared their anxiety, said that, whatever the finding of the jury might be, it could not fail to be terrible to one of the two parties. Before proceeding to the consideration of the general case he alluded to the side issues. The Counsel for the defence had attached some importance to Captain Farnsworth's words on the occasion of his visit to the steward, the day after hearing of what had been said about his daughter. He then exclaimed, "Damn that fellow, White!" and so on. His Honor asked the jury to imagine what would be the feelings of "anger and despair" of any father hearing such an accusation. Despair, because such an accusation spreads, permeates the air, and can never really be retracted. What expressions might not be excused in such a case; and not only so what sympathy must not be felt for the father? But that consideration must not blind them to the possibility that grievous, or perhaps graver, injury may be sustained by the other side. Of the allegations in this case that of sickness was not much; but that about the lazarette incident was such as to throw a serious responsibility upon White in his duty to his friend. It might be reasonably supposed by one in White's position that it was his duty to communicate what he had heard to his friend. There are duties in law and duties of society; and others might interpret as White did their duty in such case to a young man whom they had known for two years. So far for the sympathy that might be felt for both sides—the father and the Whites. It had been said for the plaintiffs that the defendants had perverted a statement made to the latter in the Honmura Road into a filthy scandal. Whether that were so would be for the jury to decide; but as for the statement of the defendants, of itself, he had ruled that it was a privileged communication; and it remained for the jury to judge whether it had been made with actual malice; and the onus of affirmative proof of this rested with defendants. His Honor then expounded from decisions of Justice Bradford and Chief Justice Brett the laws defining "privilege" and "malice" respectively;

and applying them to the present case, reviewed the evidence as it bore upon the question of actual malice. With respect to Farnsworth's evidence there was nothing astonishing in an angry father, in such circumstances as those of Captain Farnsworth, using any expression concerning those whom he deemed his daughter's traducers. The Judge then reviewed the evidence of Messrs. Ford and Clark and read extracts therefrom as well as from that of Mr. White. Referring to the imputation against the latter that he had taken no steps to see Mr. Farnsworth, he warned the Jury that in such cases imputations had to be credited with due caution. In this case probably no inference should be drawn; unless perhaps it was better that in the circumstances the two parties should not have met. After a brief exposition of Mrs. White's and Mrs. Waightman's evidence, His Honor instructed the Jury that it was frequently the case with counsel, believing that their own clients' cause was just, to attribute perjury and concoction to the witnesses of the other side. Here it was evident that grave moral blame attached somewhere. Few men come into a Court of Law prepared to perjure themselves; but many come with a determination to tell the truth; and yet, from misapprehension of circumstances or notions of what is due to themselves, will not go back on their original statements, whether made in Court or previously to their Counsel. What was said here applied equally to both sides. He did not think that in this case there was any ground for the accusation of either perjury or concoction. An indelicate mind had been at work somewhere; but that did not imply either perjury or concoction of a story. In reference to the contention of Mr. Kirkwood that the change of the line of defence had been altered since the amendment of the petition, His Honor referred the Jury to the cross-examinations of Ford and Clark, and remarked that the pleas of "not guilty" entered by the defendants were answers to the petition. On the other hand the tenor of White's letter of apology was in a sense a denial but not so complete a denial as to be fully compatible with the understanding that he had never used the words. One result of this trial, whatever would be the finding of the Jury, would be most important. It entirely cleared the character of Miss Ruth Farnsworth, who had been triumphantly freed not merely from any accusation; but from the faintest breath of slander. In finally directing the jury to consider their verdict, His Honor propounded to them the following questions:—

1.—Assuming that the occasion was privileged, did defendants, or either, and which, make the statement? In this is included the question whether the statement was made by White and confirmed by Mrs. White, or was it made by Mrs. White and confirmed by Mr. White. The Jury will do well to say which of these accounts they think is true.

2.—Were the statements made with express malice?

3.—Was the marriage broken off?

4.—Was it on account of the words spoken by the defendants?

5.—What damages?

The Jury retired at half-past noon and returned into Court at 3.45 p.m., when their foreman said that they could not agree upon any of the questions put to them.

His Honour observed that he did not see any other course open for him but to discharge the Jury. They had been deliberating for three and a half hours; and he did not deem that any advantage would be gained in sending them back. Before discharging them His Honor again reminded them of their responsibility. The Jury repeated that there was no prospect of their coming to an agreement on any of the questions, and His Honour then dismissed them.

SUNDAY CHURCH SERVICES.

Christ Church: 11 a.m. and 5.30 p.m.
Union Church: 11 a.m. and 8 p.m.
Roman Catholic Church: 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo: 11 a.m.

METEOROLOGICAL REPORT.

For Week Beginning Friday, October 19th, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongo, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

° Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 22.1 miles per hour on Thursday at 1 p.m.

The highest reading of the barometer for the week was 30.363 inches on Thursday at 11 p.m., and the lowest was 29.863 inches on Tuesday at 6 p.m.

The highest temperature for the week was 77.03 on Sunday, and the lowest was 48.0 on Thursday. The maximum and minimum for the corresponding week of last year were 75.0 and 48.0 respectively.

The total amount of rain for the week was 0.614 inches, against 0.023 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 6.45, 8.00, 8.50, 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

The Trains LEAVE TOKIO (Shinbashi) at 6.45, 8.00, 9.15, 9.45, and 11.00 a.m., and 12.15, 1.30, 2.45, 4.00, 4.45, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and HONJO at 6.30 and 11 a.m. and 3.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.35; First-class, yen 1.40; Third-class, sen 70.

London, October 25th.

OPENING OF THE FRENCH PARLIAMENT.
The French Chambers were opened yesterday.

CHINA'S DEMANDS.

A Yellow Book has been published, which states that China requires France to abandon her treaties and evacuate Tonquin.

OPINION IN PARIS.

It is generally considered in Paris that the French reinforcements will accomplish great things when they arrive at the scene of action, and that the results when obtained will induce China to take a very different view of the situation.

London, 13th October.

FRENCH REINFORCEMENTS FOR TONQUIN.
A French transport has sailed for Tonquin with 540 men and a quantity of war material.

A NEW KNIGHT OF THE GARTER.

The Duke of Argyll has been created a Knight of the Garter.

London, 16th October.

SPAIN AND FRANCE.

The Spanish Ambassador to France has resigned.

THE BRITISH TROOPS IN EGYPT.

Sir Evelyn Wood favours the withdrawal of the bulk of the British troops from Egypt.

London, 15th October.

SPAIN AND FRANCE.

A new Minister has been formed by Senor Herrera at Madrid and the dispute with France has been dropped.

FRANCE AND CHINA.

The Marquis Tseng, replying to an address at Folkestone, said that he still hoped that mutual concessions would lead to a peaceful settlement of present difficulties between France and China.

LATEST SHIPPING.

FREIGHTS.

The steamship *Selebria* sailed for New York, via Japan and China ports on the 25th instant, and that berth is now held by the steamship *Cairnsmuir* only; for New York direct the *Gilead* is loading at Kobe, and possibly another sailing vessel will be on the berth in this port before long. For Havre and London, the British bark *Sagitta* is loading, very much hindered by the delay of dealers in fulfilling their contracts, she sails, however, on the 31st instant. The British bark *Bride* sailed on the 24th for Amoy with a full cargo of wheat, for which destination the *Selebria* took about 1,400 tons; in other directions coastwise, nothing is offering.

ARRIVALS.

Haddon Hall, British ship, 1,416, W. R. Leighton, 20th October, — Middlesboro' 19th April, General.—C. Illies & Co.
Ise Maru, Japanese steamer, 748, J. Efford, 20th October, — Cardiff via Singapore 6th October, Coals.—Kiyodo Unyu Kwaisha.
Sooloo, British bark, 350, Baikie, 20th October, — Nagasaki, Coals.—Mitsu Bishi M. S. S. Co.
Chitose Maru, Japanese steamer, 293, T. Kasuga, 21st October, — Put back.—Mitsu Bishi M. S. S. Co.
Niigata Maru, Japanese steamer, 1,096, John C. Hubbard, 22nd October, — Hakodate, General.—Mitsu Bishi M. S. S. Co.
Taganoura Maru, Japanese steamer, 448, Matsumoto, 20th October, — Yokkaichi, General.—Mitsu Bishi M. S. S. Co.
Kworio Maru, Japanese steamer, 370, Amano, 20th October, — Yokkaichi, General.—Seiriusha.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Onoura Maru*, from Fukuda:—11 Japanese in steerage.
 Per Japanese steamer *Ise Maru*, from Kobe:—Mrs. Smith in cabin.
 Per Japanese steamer *Niigata Maru*, from Hakodate:—Mr. and Mrs. Boegel and 2 children,

Messrs. F. Krebs, Molt, MacMillan, Werner, and 9 Japanese in cabin; and 139 Japanese in steerage.
 Per Japanese steamer *Seirio Maru*, from Yokkaichi:—113 Japanese.

Per Japanese steamer *Wakanoura Maru*, from Kobe:—Mr. A. De Ath and 5 Japanese in cabin; and 163 Japanese in steerage.

Per British steamer *Flintshire*, from London via Hongkong:—Mr. Mason in cabin.

Per Russian steamer *Kamtchatka*, from Nagasaki:—Baron and Baroness Rudolph and servant, and 2 Japanese in cabin.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Messrs. E. C. Kirby, F. H. Tiegfeld, H. Melbye and servant, Kaufmann, H. Kern, Hojo, Namura, Kiyooka, Hirohashi, Hiyama, and Honjo in cabin; and 1 European, 3 Chinese, and 236 Japanese in steerage.

Per Japanese steamer *Yechigo Maru*, from Kobe:—30 Japanese.

Per British steamer *Zambesi*, from Hongkong via Nagasaki and Kobe:—6 Europeans and 30 Chinese and Japanese.

Per Japanese steamer *Kumamoto Maru*, from Hongkong via Kobe:—Messrs. G. C. Campbell and J. Driscoll in cabin; and 18 Japanese in steerage.

DEPARTED.

Per British steamer *Oceanic*, for Hongkong:—Captain and Mrs. Young and 2 children in cabin.

Per American steamer *City of Peking*, for San Francisco:—Mrs. Tatsuta and 3 children, and Miss Birdsall in cabin; and 304 Chinese in steerage. For New York: Rev. and Mrs. Wm. Imbrie and 2 children, Mrs. M. K. True, Mrs. D. H. Mahan, Commander C. S. Cotton, U.S.N., Messrs. E. Willach, and Mass Henry in cabin. For London: Baron Rosen, and Lieutenant A. J. W. Allen in cabin. For Liverpool: Mr. J. Goodair in cabin.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Rev. and Mrs. Blogett, Rev. and Mrs. H. P. Beach, Mr. and Mrs. Uriu, Mrs. and Miss Lowrie, Mrs. G. A. Appleton and infant, Mrs. Estrand and 2 children, Mrs. J. C. Hepburn, Mrs. Crosby, Mrs. F. T. Alexander, Mrs. O'Neil, Mrs. Hunker, Mrs. Potter, Mrs. Carey, Mrs. Alexander, Miss Dudley, Miss Searle, Miss Porter, Miss Cummings, Miss B. Raymond, Miss Addie Tyler, Rev. J. B. Porter, Rev. J. W. Lowrie, Captain Hubert, Messrs. A. B. Glover, J. S. Casey, Colvin, Hargreaves, Greenburg, J. Ananger, Libbey, J. Wincler, F. Naudin, O. Reimers, H. P. Buckley, J. R. Elliott, Otsuka, Betsuhio, Hirayama, Hoshiyama, Nagaya, Sakimoto, and Nishikawa in cabin.

CARGOES.

Per American steamer *City of Peking*, for San Francisco:—

| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.60 to 4.65 |

EXPORTS.

SILK.

A good daily business in Silk during the week, Settlements reaching fully 1,000 piculs. Arrivals have again been in excess of the demand, and Stocks are increased to 6,000 piculs. Quotations cannot be much changed, but the tendency is in favor of buyers; Japanese seem willing to go on at late rates, but the stringency in the Sats Market makes them chary of reducing prices. On the other hand the spurt in Foreign Exchange has hampered shippers considerably. Export to date is now 13,220 bales, against 10,852 bales to the 28th October, 1882.

Hanks.—These have been in fair demand at something under late rates. We note a good parcel of *Shinshu* at \$505, with some fair Silk at \$490, *Onama* \$480, *Maibash* \$460, and *Hachoji* \$430 down.

Filatures.—A few bales *Nihonmatsu* brought the large price of \$640, but it is doubtful if the sale could be repeated. Some few lots ordinary *Shinshu* done at \$590. *Tokosha* \$600.

Re-reels.—A good quantity were shipped by Japanese direct per *City of Peking*. Since her departure sales reported to foreigners at \$590 for Five Girl *Maibash*. Fan chop *Shinshu* quote \$595.

Kakeda still enquired for at late rates. A parcel of *Sano-musume* changed hands at \$610, \$575, and \$535 for first, second, and third choice respectively. *Oshu* and *Tayssam* kinds freely taken at quotations. Some fairly large parcels *Sendai* finding buyers at from \$480 to \$495 according to quality. *Hamatsuki* current at \$450 for Medium.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1½ - | \$500 to 510 |
| Hanks—No. 2 (Shinshu) - | 495 to 500 |
| Hanks—No. 2 (Maibash) - | 480 to 490 |
| Hanks—No. 2½ (Shinshu) - | 480 to 485 |
| Hanks—No. 2½ (Maibash) - | 470 to 475 |
| Hanks—No. 3 - | 440 to 450 |
| Hanks—No. 3½ - | 420 to 430 |
| Filatures—Extra. - | 630 to 640 |
| Filatures—No. 1, 10/13 deniers - | 610 to 620 |
| Filatures—No. 1, 14/16 deniers - | 600 to 610 |
| Filatures—No. 1½, 14/17 deniers - | 590 to 590 |
| Filatures—No. 2, 10/15 deniers - | 580 to 590 |
| Filatures—No. 2, 14/18 deniers - | 565 to 575 |

| Kakedas—Extra. - | 610 |
| Kakedas—No. 1. - | 575 to 585 |
| Kakedas—No. 2. - | 535 to 545 |
| Kakedas—No. 3. - | 500 to 510 |
| Oshu <i>Sendai</i> —No. 2½ - | 490 to 500 |
| Hamatsuki—No. 1, 2 - | 480 to 490 |
| Hamatsuki—No. 3, 4 - | 410 to 460 |
| Sendai—No. 2½ - | 440 to 450 |

TEA.

We have no change to report in the course of our Tea Market. A small but steady demand has ruled throughout the week; daily Settlements aggregating about 215 piculs at prices on the whole, perhaps a shade lower than those quoted below. Producers appear to show more anxiety to sell, and might accept lower prices. Receipts are daily something less than the demand, and Stocks are gradually becoming reduced. Total Settlements for the week are 1,505 piculs, against 850 piculs settled at the corresponding date last year. The cargo of the Pacific Mail steamship *City of Peking*, despatched on the 23rd instant, consisting 330,564 lbs. Tea from this port as follows:—For New York, 33,850 lbs.; for Chicago, 69,171 lbs.; for Portland (Oregon), 6,400 lbs.; for California, 140,709 lbs.; and for Canada, 80,434 lbs. The O. & O. steamer *Arabic* and *Oceanic* are advertised to leave here for San Francisco, the former on the 6th proximo, and the latter on the 27th of the same month, both taking Tea at 2½ cents per lb. gross to the Eastern States and Canada, and \$12 per ton of 40 cubic feet for San Francisco.

QUOTATIONS.

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,
23c, Forston Street, London, N.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton.
London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.
South African Exhibition, 1877, Gold Medal.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 3RD, 1883.

WEEKLY NOTES.

EXCEPT as illustrating the shameful abuses that flourish in this country under systems of lawlessness resulting from false and arbitrary interpretations put upon the treaties by certain Representatives of European Powers, it would be little better than waste of time to allude to the articles and notes that have been published by a section of the local press in connection with the police case at Nagasaki. We have no inclination whatsoever to discuss the motives by which the editors of these sheets are actuated. Our duty being to believe that they are honest, we are compelled to adopt the alternative conclusion and to attribute the intemperance and inaccuracy of their writings to carelessness and incapacity of a very exceptional nature. Thus the *Echo du Japon*, speaking of the Prefect of Kanagawa's proposal to be endowed with the powers exercised by every police magistrate in the universe outside Japan, wrote:—"The moment was badly chosen for making this request. The Consular body of Nagasaki had considered it necessary to grant such an authorization, but has just been obliged to withdraw it, in consequence of a murder committed by the agents of police, in the house of a Chinaman, where they had

entered on the pretext of searching for opium. This short paragraph contains two wholly false statements, and two others which the commonest principles of justice and fair-play ought to have prevented. The two errors are:—first, that the Consular body of Nagasaki was obliged to withdraw the general warrant granted to the police in consequence of the opium affair. The facts are that the opium affair happened on the 15th of September whereas the warrant was withdrawn on the 3rd of August. The connection between the two events exists only in the imagination of the editor of the *Echo du Japon*. The second error is that the police entered the house of a Chinaman "on the pretext of searching opium." The police entered Chün Die's shop for the purpose of arresting two Chinese who were then and there smoking opium, and whose deliberate violation of the laws was visible from the street. This is shown by the evidence of the Chinese themselves. The two unjust and unwarrantable assertions are:—first, that the agents of police committed a murder; and second, that they committed it in the house of a Chinaman. The police may have committed a murder, and they may have committed it in the house of a Chinaman, but until these things are proved—and as yet they are at least doubtful—their public assertion is a disgraceful violation of justice and fair-play. The same recklessness carried into the affairs of private life would inevitably expose its author to a criminal prosecution.

• • •

But even this discreditable specimen of journalism is wholly eclipsed by a recent editorial in the *Rising Sun and Nagasaki Express*. In its issue of the 27th ultimo, that journal informs its readers that "the Chinese Consul has been notified by the Judge of the Criminal Court that the trial of the police implicated in the Chinese murder case will be opened at the Saibansho at 8 a.m. on Monday next. Whether the trial will be a genuine one, or only a *ruse*, remains to be seen; our own opinion inclines to the latter." This was written on Saturday. The paragraph containing the statement is appended, in the form of a note, to a leading article in which occur such comments as the following:—"The prospects of the Japanese policemen and detectives being brought to justice and adequately punished for the murder of Wai Egno, and for variously wounding three other Chinese subjects, on the night of the 15th ult., in a Chinese private house, in the Chinese quarter of the Foreign Settlement of this port, seems to be growing more and more remote as time

passes on. A month-and-a-half has already elapsed, and no trial has yet been held." • • • If the police were acting under orders from their Superintendent, and the Superintendent under orders from the Governor, and the Governor under instructions from the Minister for Foreign Affairs at Tokio, the Chinese community of Nagasaki, and all others in any way interested, may rest perfectly satisfied that, as on all previous occasions of a similar nature, not a particle of justice or satisfaction will be obtained from the Japanese Government, unless the Chinese Government is fully prepared to take the only means that ever has been, or ever will be, available with Japan, viz:—*force*. And there the matter rests, and, so far as we can see, there it seems likely to end. The Minister for Foreign Affairs gives instructions to the Governor, which are in direct contradiction to the Treaty, the Governor hands them down to the Superintendent of Police, who carries them out, with the result that an innocent man is murdered in his friend's house, and three other friends are wounded. A demand is made for satisfaction, and the police throw the blame upon the Superintendent, the Superintendent upon the Governor, the Governor upon the Minister for Foreign Affairs, and that is the last of it, unless the injured nationality is prepared to declare war. Thus two days before a trial announced in its own itself, this English journal declares that the men who are to be tried have murdered an innocent man, that there is no prospect of obtaining redress unless the injured nationality is prepared to declare war and that, in its opinion, the Japanese Criminal Court is about to conduct a trial which will be "only a *ruse*." If anything resembling these assertions were published by a journal in any European country on the eve of a judicial investigation, the editor would be lodged in jail in a few hours. But in Japan he escapes without a word, being protected by that beautiful piece of civilized mechanism, exterritoriality. The Japanese authorities are doubtless right, under existing circumstances, to give themselves no concern about such exhibitions of foreign fairness and friendship, but these reckless journalists are not more unjust than it would be to judge foreign sentiment in general by their utterances.

On Thursday morning the Fourth Exhibition of Japanese Antiquities was opened at Hibiya, Daijingu, Tokiyo. Year by year the inability or reluctance of amateurs to furnish articles for these exhibitions seems to increase. The first

attempt, in 1880, was eminently the most successful. Many of the nobles and other private collectors sent heir-looms of much beauty and rarity, and it was then generally understood that still greater liberality might be expected in the future if the general conduct of the affair gave satisfaction. Unfortunately this essential condition was not fulfilled. Exhibitions held under the auspices of bric-a-brac dealers can never be anything but commercial speculations, and it is inevitable that the exhibits for which a sale is sought should command the best places. So conspicuously was this the case in 1880 that, with very rare exceptions, the exhibitors were finally disgusted, and the finest collections became thenceforth inaccessible. Nobody will be surprised to learn, therefore, that the antiquities now on view at Hibiya are the reverse of numerous. In fact they consist almost exclusively of pictures. Three Departments of the Government are represented—the Household, Educational, and Industrial, but among their exhibits there is only one of exceptional merit, namely, a pair of screens painted by Taniu, the designs being children at play, executed in the very best style of this celebrated artist. There is, however, one room, the contents of which alone will amply repay a visit. Its walls are entirely covered with pictures by the old Chinese masters. Two of the gems, from an antiquarian standpoint, hang inside a case which stands at the entrance. They are both by painters of the Sung period—Baian and Riushomen—and apart from their merits as works of art, one of them establishes the curious fact that reels were used by Chinese anglers in the eleventh century! What is there that Chinese civilization did not possess? More interesting than either of these, to our thinking, is a landscape by Kakei—also a Chinese artist of the Sung period—which shows, beyond all question, the source of the inspiration of the Japanese master, Motonobu, and of the Kano School. On the northerly side of the same room there hang five pictures of rare merit. Four of them are *en suite*—landscapes and birds by Joki of the Ming period—and one is a figure subject by Kinyei, also a painter of the fifteenth century. These are works which must be seen to be appreciated.

Whether a barrister who instructs a client to exhibit a resolute demeanour in the assertion of his rights may be punished for assault, is a subtle question which the Acting Assistant Judge of H.B.M. Court in Japan was in some danger of being called on to answer a few days ago. A certain Mr. Bohm, who has recently been engaged in establishing for himself a variegated reputation, desired to obtain, or retain, possession of a quantity of lumber which had been hypothecated by him to the Chartered Mercantile Bank. The lumber was in the form of two rafts, and on the 29th of September the representative of the Bank and his legal adviser came down to the creek where the rafts were lying and took them in charge. Bohm retreated to the German Consulate and, having procured the as-

sistance of the Constable, attempted to recapture the timber that did not belong to him. Discerning a prospect, however, of having to step into the creek if he persisted, he prudently abandoned his design. Renewing it, four days later, quite a lively controversy seems to have taken place. The proceedings were opened by a gentleman called Ford, who, according to Bohm's account, devoted sixty minutes to the delivery of a disjointed address intended to intimidate the occupants of the rafts and provoke them to a violent assertion of their supposed rights. The address was followed by some throwing of stones which took trifling effect on the heads of the occupants. After this the details of the affair are enveloped in some obscurity, the only ascertained facts being that there was a mutual exhibition of revolvers, and that Bohm again adopted the discreet expedient of retiring. His next step was to sue the Bank for the recovery of the papers which would have legalized his claim to the timber—a step which might well have preceded his manoeuvres at the creek. The law was against him, however, and he then had recourse to an action for assault, not only against Ford and his followers, but also against the agent of the Bank, whom he accused of inspiring this natural resistance to an unlawful trespass, and a barrister whom he suspected of advising the inspiration. Want of evidence enabled the Court to abstain from pronouncing judgment upon these vicarious misdemeanours, but Mr. Bohm had the double satisfaction of entertaining the public and of being revenged upon his enemies to the extent of wasting a great deal of their time, and arraigning them upon a criminal charge which had its sole basis in his own seemingly confused notions of right and wrong. It is only just that the law should confer upon gentlemen in difficulties these benevolent facilities for getting even with people who have the bad taste to assert inconvenient rights.

THROUGH the kindness of the Agent of the Union Steam Navigation Company (*Kiyodo Unyu Kaisha*), we are enabled to place before our readers the following list of steamers which have been built, or are now in process of construction, for the company, on the Clyde and Tyne, by Messrs. Napier, Shanks and Bell, Sir William Armstrong, Mitchell & Co., and other eminent firms:—

| NAME. | DEAD WEIGHT CARRYING CAPACITY. TONS. | DESCRIPTION. |
|----------------------|--------------------------------------------|-------------------|
| Ise Maru | 1,250 | Iron awning deck. |
| Owari Maru | 1,150 | Iron spar deck. |
| Totomi Maru | 2,500 | Iron spar deck. |
| Suruga Maru | 700 | Iron awning deck. |
| Satsuma Maru | 1,970 | Steel spar deck. |
| Nagato Maru | 1,970 | Steel spar deck. |
| Sagami Maru | 2,300 | Iron spar deck. |
| Higo Maru | 1,400 | Steel spar deck. |
| Kii Maru | 1,300 | Iron spar deck. |
| Mutsu Maru | 800 | Iron awning deck. |
| Mino Maru | 800 | Iron awning deck. |
| Idzumi Maru | 700 | Iron awning deck. |
| Harima Maru | 700 | Iron awning deck. |
| Yamashiro Maru | 1,800 | Iron three decks. |
| Omi Maru | 1,800 | Iron three decks. |
| Yetchiu Maru | 1,400 | Iron. |
| 22,540 | | |

The above vessels are all specially adapted

for the coasting trade of Japan, and are intended to carry passengers as well as cargo, except the *Yetchiu Maru* which is for cargo only. They are built under Lloyd's special survey and classed 100 A1. Their cost, laid down in Japan, with very full and complete specifications, spare shafts and other gear, will be £450,000, or something less than £20 per ton. The *Yamashiro Maru* and *Omi Maru* will have a speed of 13 knots, when laden, and will each carry two large Krupp guns, with magazine, &c. The speed of the *Satsuma Maru* and *Nagato Maru* will be twelve knots, laden, and that of the other steamers is guaranteed 10 knots. The contracts for the construction of the ships were concluded in Great Britain by Admiral Ito, assisted by Mr. R. Irwin and Captain A. R. Brown. In addition to the above sixteen vessels, the company has purchased in Japan the following passenger and cargo steamers of a dead-weight carrying capacity of tons 4,150 at a cost of about £82,000:—

| | |
|--------------------|--------------------|
| Kosuge Maru | 1,300 tons wooden. |
| Sukune Maru | 800 tons iron. |
| Yechigo Maru | 1,500 tons iron. |
| Shima Maru | 350 tons wooden. |
| Iki Maru | 200 tons wooden. |

Total..... 4,150 tons.

These five steamers, together with the *Ise Maru*, *Totomi Maru*, and *Yetchiu Maru*, are now running on the coast of Japan. The *Omi Maru* sailed from Glasgow on October 23rd. Further, the Government has chartered to the Company the steamers

| | |
|---------------------|-----------|
| Gembu Maru | 650 tons. |
| Hakodate Maru | 350 tons. |
| Kiyoriyo Maru | 375 tons. |

Total 1,375 tons.

We have thus a grand total of 24 steamers of a dead-weight capacity of 28,065 tons, eleven of which are now running on the coast and the remainder will all arrive before October, 1884. We learn also that the whole capital of the Company has been subscribed: viz., \$2,600,000 by Government and \$3,400,000 by over five thousand merchants and others. The Charter of the Company, while prohibiting the acquisition of any steamers not new, sanctioned the taking over of 22 sailing vessels (about 7,000 tons) belonging to the Fuhansen Kwaisha and others. When this fine fleet is fairly at work we ought not to hear many more complaints about the insufficiency of the coastwise carrying facilities.

A NEW factor seems to have made itself felt in the Tonquin embroglio, at least if we may trust the Saigon *Independent*, endorsed, to some extent, by the Hongkong journals. That the Black Flags were assisted, and very largely assisted, by Chinese regulars, is a fact about which the public long ago agreed to entertain no doubt. China, shrewdly enough, was keeping France at bay by this indirect process, until either the Government of the Seine grew weary of an arduous and profitless undertaking, or foreign intervention had time to be effective. But the Black Flags seem to be losing their Chinese allies with inconvenient rapidity. The contingent of Celestial

braves is meeting away, and according to latest reports, there is a probability that the so called "Pirates of the Red River" will soon be reduced to their original number—something between two and three thousand. The trouble is that the sinews of war have been cut by the rigorous action of the French at Hué. The Chinese soldiers were content to fight side by side with the Black Flags so long as a substantial recognition of their services came from the treasury of Annam every month. But after the treaty of Hué the supplies ceased, and the braves are not sufficiently enamoured of warfare to fight for fighting's sake. It is said that if things go on in their present route a little longer, the French will be able to occupy Sontai without firing a shot, and after that they will have nine tenths of the law on their side. Even assuming that this news is trustworthy, there remains the reflection that if a handful of Chinese troops were able to give the French so much trouble, the favorable estimates (published by some of the London journals) of China's competence to offer a stout resistance were not greatly exaggerated. She may have been ultimately defeated in her attempts to sustain an indirect opposition to French advances, but she has at all events shown that her troops are more formidable in the field than is generally admitted by Europeans in the East.

THE last American Mail brought news of the death of Mr. John Robertson, who expired at Stuttgart on September the 12th. Mr. Robertson's name is intimately associated with the early history, both social and commercial, of this Settlement. He took a leading part in the financial questions that presented themselves for solution in those remote days, and in most cases the soundness of his views was demonstrated by the event. We had hoped to hear that the troublesome malady which shortened his visit to this country last year, had yielded to skilful treatment and a more congenial climate. But this was not to be. Little by little his health gave way; and in recording a loss which will be felt very keenly by all the old residents of Yokohama, we have only the consolation of knowing that his end was eminently composed and peaceful.

NOTES.

A DISPATCH from London to a New York newspaper,—which appears hitherto to have escaped notice in this locality,—states that immediately after an interview at Walmer Castle, on September 14th, between Earl Granville and the French Ambassador, a long communication was telegraphed from the Foreign Office to Sir Harry Parkes, instructing the Envoy to inform the Chinese authorities that the English Government strongly advised the acceptance of the French terms, as set forth by Mr. Waddington. It was distinctly announced, according to the dispatch in question, that France "was willing to admit the claim of China to suzerainty over Annam, with right of veto over the succession

to the throne;" and would "discuss favorably the Chinese views with respect to a neutral zone," etc. Sir Harry Parkes was directed to "press for an early settlement," on this basis, "to prevent further demonstrations against Europeans." On the evening of September 14th, after Mr. Waddington had left Walmer Castle, the Marquis Tseng arrived, having been summoned from Folkestone, near at hand, and was made acquainted with the latest French proposals. He is said to have heard them with much satisfaction, but professed himself unable to give a decisive response until further advices from Peking. This, perhaps, was the origin of the extensive employment of the telegraph by the Chinese Government, as recently reported. Among the numerous conflicting stories on the subject, sent hither and thither on no assured responsibility, the above has at least a reasonable appearance. The circumstance that the Chinese banks and business houses in London continue their transactions on unaltered terms is referred to as evidence of the general confidence of a peaceful issue. The markets are said to be entirely unaffected, although the supply of tea in London is sufficient for only three months.

THE "right of superiors to rule our inferior races of men" is receiving practical demonstration in Africa. A telegram from Madeira, dated September the 17th, says:—"Lieutenant Vandeveldt, who was lately with Stanley, but who is now at Madeira, says that the village of Loango was burned by Captain Cordier, of the French steamer *Sagittaire*, because the natives refused to sell territory." There is a story told in a book with a tolerably wide circulation about a wicked King who coveted his neighbour's vineyard, and had its owner killed because he declined to trade away his land. Posterity has been very unjust to the memory of that monarch, for while holding him up to the execration of all the ages, the people of the most refined nation in the universe at the end of the nineteenth century imitate his example on a wholesale scale.

EVERYBODY who has studied the domestic habits of the Japanese is acquainted with the curious Law of Aspects (*Ishô*), in accordance with which each point of the compass gets the credit of exercising a certain influence upon the welfare of human beings. Most of us will be disposed to regard this faith as a mere idle superstition, but who is rash enough to assert that one day or other science may not demonstrate the existence of some subtle electrical affinities between our bodies and the complicated motions of our planet or of the system to which it belongs. There died at Paris, the other day, a medical man more than a century old. Many enquiries had been addressed to him with the object of ascertaining the recipe—the elixir of life—which preserved him, sound in body and mind, to such a great age. His invariable reply was, "it is a secret which I will not reveal till after my death." He was as good as his word. After his decease, his heirs found among his papers the following directions:—"To attain

the result I have attained, it is necessary to dispose one's bed from north to south in the direction of the great magnetic currents of the globe. It has been demonstrated that the flow of the electric current is more intense in the direction of the north during the night than during the day. By considering the favorable effects of the current, so often made the subject of experiments, it is evident that one is placed in the position most favorable to enjoying perfect repose when one sleeps with one's head to the north, or rather, slightly turned towards the east, in the very stream of the magnetic river." Unfortunately the theory in Japan is exactly the opposite of this. Here dead bodies only are placed with their heads to the north. Believers in the Parisian doctors recipe would probably say that this fact explains the shortness of life in Japan.

IN the course of a bitter lamentation over the modern system of travelling against time, and converting the sensible pleasure journey into a mad scramble across oceans and continents, the *New York Times* not only hurls denunciation upon the objectionable lightning-tourist, but insists that the forces of outraged Nature have at last been stirred to revolt, and have combined to render the practice of purposeless voyaging dangerous, if not impossible. Thus:—"The recent so-called calamities which have fallen upon Egypt, Java, and China are but the protest of indignant nature against the globe-trotter. The cholera in Egypt was an effort to bar him out from the East. The desolation of Java and the virtual blockade of the Straits of Sunda by volcanic convulsions are designed to warn the globe-trotter that he must not insult Java with his visits; and the war between China and the French, involving as it does the danger of a massacre of all foreigners by the Chinese, is expected to keep him out of China. If these severe but necessary measures do not accomplish the desired purpose, a succession of tidal waves in Japan and a few good volcanic reefs thrown up in the track of the San Francisco and Yokohama steamers will, it is believed, keep the globe-trotter at home."

THE ceremony of the presentation of diplomas to the graduates the Tokiyo Daigaku took place on Saturday last in the presence of a large number of the Professors of the University and foreign as well as natives guests. Sixty-six diplomas were conferred, the larger part of the graduates being students of medicine. Addresses were delivered by Mr. Kato, Sori of the Daigaku, Mr. Kurizaka Kôshi, and Professor Scriba, while Vice-Minister Kuki spoke a few words in behalf of H.E. Fukuoka, who was unavoidably absent. Professor Scriba's remarks, delivered in German, were loudly applauded by the students, although what he said was rather of an admonitory than of a congratulatory nature. He mentioned in particular the inefficiency of the Chinese language, both written and spoken, for the purpose of scientific instruction, and urged the graduates to exert their influence in

abolishing the Chinese tongue from the domain of modern science. Latin was equally useless, he remarked, for the purposes of scientific education in Japan; Japanese should be the sole literary and classical language. The importance of gymnastic exercise was also dwelt upon to some extent. The University Hall was tastefully decorated, as well as the main buildings, where refreshments were served after the ceremony was over.

One of the conditions which chiefly handicap Westerns in any competition with Easterns is the difference between Occidental and Oriental scales of living. The unreasoning truculent Irishman in California had nothing stronger to urge against his Chinese rival, than that the latter was unfairly frugal. Patrick in his own country is easily satisfied. The only thing he cannot do without is dirt. He will share his bed with a pig and wash himself in peat smoke at home, but the moment he plants his foot upon American soil, he gets a proud stomach and a lofty idea of his rights as an immigrant. He has come a ten days' journey to seek employment, and he finds a Chinaman who has travelled four times the distance with the same object. The latter lives on a bowl of rice and a handful of vegetables or salted fish, while the former wants his bacon and eggs, his bread and beef—his whiskey. Therefore the one can afford to work at much cheaper rates than the other. But when it comes to a question of their respective titles to be employed, the right is, of course, on Patrick's side. He is a white man—when he washes himself—and is moreover a quiet, law-abiding citizen, who never drinks too much or molests his neighbour. The Chinaman, on the contrary has a yellow skin, and lacks Patrick's excellent social endowments. Consequently it is proper that the Chinaman should be driven out by the aid of legislation which does honour to the principles of modern civilization. Yet if the Irishman could live on as little and be as well contented with it as the Chinaman, he might have been able to hold his own in fair competition with his Mongolian rival—might have avoided the necessity of appealing to the aid of official tyranny. Wherever the Chinese go, they carry with them this advantage. We see its effects here in Yokohama. Little by little they have established themselves in branches of trade which were formerly monopolized by foreigners, and many of them, from humble insignificant beginnings, have built up substantial and prosperous businesses, persevering, all the while, in their frugal and unostentatious fashions of life. Yet here they have had to compete with the Japanese, who, in his own country, is not less economical and industrious than they, though, strange to say, he certainly does not appear to carry the former quality abroad in its entirety. Among our Japanese and Chinese employés, again, there are many who draw respectable salaries—salaries which, from the mere standpoint of pounds, shillings, and pence, ought to satisfy Westerns, but which command, among Orientals, a higher class of education

and ability than they could possibly command among Occidentals, for the simple reason that the latter spend so much more than the former on the so-called necessities of life. It has been laid down as an axiom by political economists that an improved scale of living is a synonym for increased civilization, and the disciples of this doctrine will be impatient of any argument which seems to prefer Eastern to Western domestic habits. But the question does not involve any such preference. What we desire to emphasize is that, without lowering our scale of living, the time is not far distant when we shall be obliged to model it on sounder economical principles. Not to deprive ourselves of this or that luxury. Luxuries when they are not abused may be a thoroughly productive investment. But to contrive that we shall be able to enjoy our luxuries at a smaller cost. Coöperative associations have indicated the route which must be followed eventually. They have done something, but the principle underlying them fails to obtain larger adherence because, though civilization has formed societies, it has not yet effected any really intimate fusion of their units. Men still love to live apart from one another; to have their separate establishments; to waste their time over special entertainments; to make mischief by abusing each other's hospitality, and to contrive that an unnecessarily large number of their fellow creatures shall be employed in menial capacities. Perhaps it is still utopian to discuss the possibility of any change in this respect, but the subject has been vividly illustrated by an incident which occurred at a recent meeting of Shanghai rate-payers. The question under discussion was the cost of living in Shanghai, with special reference to the pay of foreign constables. It was explained that, if the men consented to mess together, two trustworthy and experienced caterers had offered to supply them with food at \$12 a head per mensem. The viands which the constables would have for this payment were thus stated:—"for breakfast, tea, coffee, bread and butter, bacon and eggs or ham, cold meat, and porridge for those that wanted it. Tiffin, to be somewhat similar with slight additions. Dinner, to consist of soup, fish, two hot dishes, joint, pudding and cheese. In addition, the caterer was to provide two mess-boys to look after the crockery." With good and cleanly cooking, such food as that ought to satisfy anybody. Yet which of us is there who does not consider himself fortunate if his table costs him less than three times as much each month? Certainly the difficulty of making ends meet need not be considered insuperable so long as the expedients suggested by this Shanghai story remain to be employed.

We have heard so much lately about the intolerable idea of police espionage, and the "arbitrary barbarism" of allowing a Japanese Prefect to sign search-warrants—a barbarism which "no civilized people would endure"—that a story illustrating what actually happens to-day among the detectives of Paris, the centre of civilization and refinement, may not

be without interest and instruction. M. Clovis Hugues, Deputy for Marseilles, had just completed his preparations for a visit to his electors when he received a letter signed "Le Normand." It contained the following passages:—"I married, to my misfortune, on February 6th, 1875, a widow, Madame Osmont du Jillet, who lived in Paris at No. 145, rue de la Pompe. After I had exhibited a boundless devotion for her, after I had nursed her through two long illnesses, Madame Osmont du Jillet, to-day my wife, without reason or motive demanded to be separated from me. She drove me away from our conjugal home two years ago, in the hope that by causing me to be incessantly pursued by the whole tribe of Tricoches and Cacolets she would finally succeed in discovering some grounds for a separation. Deceived in her hope, but determined, nevertheless, to accomplish her purpose, she commissioned the director of a detective agency to procure for her false witnesses, by the help of gold. Further, she associated with him in the horrible business a despicable creature, who had been twice driven out of Paris, and by this creature, in conjunction with the director of secret police, an accusation has just been preferred against that purest and most honest of women, Mademoiselle Royannez, now your wife." On receipt of this strange epistle, M. Clovis Hugues telegraphed to his wife, who had already set out for Marseilles, to come back at once, and in the meanwhile, he seems to have devoted himself to prosecuting enquiries among those who had known her in her maiden days. From every one he received the same answer—the highest possible eulogy of Mademoiselle Royannez' virtue and modesty. The injured lady, on her return, horrified as she was by what she read in M. Le Normand's letter, preserved her sangfroid sufficiently to find out all about her accusers. A few days afterwards, September the 1st, she left her house, on pretence of paying a visit to her children at Montreuil. In reality she proceeded, with a loaded revolver in her pocket, to call on Madame Le Normand, firmly resolved to obtain from her a full retraction or to kill her then and there. Her husband, meanwhile, went out to take the steps which seemed most advisable. When he came back he found a letter from his wife, explaining that after various enquiries, more or less satisfactory, she had visited Madame Le Normand, and received her assurances that she had nothing to do with the scandal, but that as she alone could silence the witnesses, she recommended Madame Hugues to keep quiet. "Well," the letter went on, "this scandal which Madame Normand counsels me to avoid, I am going to do everything I can to provoke. I have nothing to conceal either about my maiden or my married life, and I am resolved that this infamous plot shall be exposed. . . . I cannot live in this situation. I am determined to shoot the Agent C. who is in Madame Le Normand's pay. In this way the truth will be known, for the authorities will be forced to hold a public enquiry at which all the events of my life must come out. I thought at first of

attacking the slanderer Morin, but people might have thought that I desired to suppress his evidence. Pardon me, dear friend, the grief I am going to cause you, but it is necessary for our sakes as well as for our children's. I do not choose that you should be dishonored through stories about my maiden life. Whatever happens assure yourself that what I have done is indispensable. I have passed five days which seem like five centuries, and I feel that I should lose my reason if I had to live any longer in presence of the idea that my name is connected with an infamous accusation in the archives of a police office." The brave lady was prevented from executing her design against Madame Le Normand by the latter's illness, and fortunately when she called on the Detective Agent, she was accompanied by two friends, who, suspecting her intentions, persuaded her to give up her weapon before entering. The agent, in presence of these friends, declared that all the evidence was false, but in spite of his apologies and entreaties Madame Clovis Hugues immediately lodged a complaint with the authorities, and it is expected that the forthcoming investigation will reveal some strange facts about the famous Detective Agencies of Paris.

Discussing the advisability of adopting a metric system of weights and measures, the *New York Herald* gives the following interesting facts and figures:—

There is a grander view to take of this topic. It is from the standpoint of all Anglo-Saxondom compared with the rest of the world at large. The world has increased in population in the decade from 1870 to 1880 about 98 per cent. In the meantime Great Britain increased 101, the United States 31, Australia 564, Canada 141, and South Africa (Anglo-Saxon) 734 per cent. No other nation, save Belgium, has increased over 11 per cent., and France but 1.67 per cent. Even Turkey (2.01 per cent.) has increased at a higher rate than the mother of the metric system. At such a rate of increase all other nations must in time be smothered out, and France among the very first, before the Anglo-Saxon race. But further, the tabulated statement of the port entries of all nations for the ten years under consideration shows that of tons burden that of the world was 50,000,000, while of this total that of the United Kingdom, British colonies, and the United States was 28,000,000, or more than half.

One-half of the whole industry of the world is already in Anglo-Saxon hands. In millions sterling the increase for the ten years was, for all the earth, 1,866, while it was for Great Britain, 337; United States, 525; Australia, 57; Canada, 28, and South Africa, 14, making a total of 961 millions of pounds sterling increase. To this increase can also fairly be added that of South American industry, 24 millions, almost all of which is represented by British capital. In 1880 the industry of the earth, expressed in millions of pounds sterling, was 2,024 for Great Britain and 2,004 for the United States. These two nations headed the list, being followed by France at 1,325 and Germany at 1,269, and by other nations at a greater distance.

The increased consumption of cotton, wool, flax, jute, &c., in the decade has been 1,666,000,000 pounds, of which 922,000,000 pounds—much more than half—has been in Anglo-Saxondom. The increase for the world in manufacturing has been £558,000,000, of which £334,000,000 has been among those using pints, and pounds, and inches. That for all Europe (non-Anglo-Saxon) was but £212,000,000.

Out of 118,000,000 increase in production of coal, Anglo-Saxon weights have measured 78,000,000. Out of 7,233 increase in thousand tons of iron they have measured 5,250, and of steel out of 3,068 they have measured 2,255—i.e., in every case far more than half of all the earth. Anglo-Saxondom produces and measures out by the pound and yard more than fifty per cent. of all the wool, and the United States alone seventy-five per cent. of all the cotton raised upon the earth, and other nations are glad to purchase it in pounds and yards. In general terms, the study of the

commerce of the world for the past twenty years (1861 to 1880) shows that out of £40,000,000,000 (giving the value of the export and imports in round numbers) Anglo-Saxon metrology has measured and remeasured far more than half of it.

The shipping of the earth has increased £40,000,000 in the decade, £26,000,000 of which was in Anglo-Saxon bottoms; that of all the metric nations put together was only £13,000,000, the remaining £1,000,000 being scattering. Thus two-thirds of the carrying trade is already Anglo-Saxon and but one-third, "metric." Which, therefore, it may well be asked, is the de facto international system? Does it not rather appear that France, leading the opposition in "the Napoleonic day," when all her interests are known to have clashed with those of England, strove for the mastery in commerce by this politic though vain attempt at banding subjected Europe in a new metrology? And does not the irresistible march of industry prove that her dying system is international only in its self-assumed, high sounding name.

Since 1870 (and to 1880) the mines of the earth have produced £360,000,000, of which £215,800,000 were from Anglo-Saxon mines. And Anglo-Saxon mints have coined in the same decade £224,430,000 out of £526,781,000 coined over all the earth. Furthermore, out of £905,000,000 in coined specie current in the decade ending 1880, £524,000,000 were used in Anglo-Saxon import business, against £367,000,000 on the European Continent, and £514,000,000 in export business, against £339,000,000 upon the Continent.

In accumulated wealth, in 1880, Great Britain and the United States led all the earth, followed next by France and Germany. The accumulated wealth of the whole European Continent was £28,000,000,000, that of the Anglo-Saxon nations £18,000,000,000, while that of the world was only £47,000,000,000. Considered from another standpoint, the world had £113 per inhabitant; Europe, including Great Britain, £111; Great Britain, alone, £269 (more than any other nation except Holland, £283, and more than double that of the world); the United States, £158; Australia, £172, and Canada, £148. Thus the Anglo-Saxons, as individuals, are worth per inhabitant some £184, the world average being £113, and that of the whole Continent of Europe being but £91.

But a consideration of the public debt of nations is even more significant. In the decade 1870 to 1880, that of all Europe increased £52,000,000 and that of the world £44,000,000. But three nations of the earth effected any reduction of their national debts—these were the United States, by £86,000,000; Great Britain, by £24,000,000, and Denmark (a former "resting place" of the Anglo-Saxon), by £3,000,000. The public debt of the world in 1880 was £5,207,000,000, that of the Continent of Europe alone being £4,513,000,000, while that of all Anglo-Saxondom together was but £1,276,000,000. Now, it is also noticeable in this connection that while the debt of Anglo-Saxondom is almost entirely held in native hands, that of the rest of the world is in foreign hands, and that more than one-half of it is actually held by Anglo-Saxons. The race, in fact, has bonds and mortgages on all the world.

In earnings the United States leads all other nations—their earnings for 1880 being £1,406,000,000. They were followed by Great Britain and her colonies at £1,381,000,000, and far behind by France at £927,000,000; by Germany, £851,000,000, and by other nations at continually lower figures. The earnings of the Continent were £3,797,000,000; of the world, £6,773,000,000—those of Anglo-Saxondom being £2,787,000,000, or more than two-thirds that of the Continental nations, and far more than one-third of all the earth.

As to the food supply of all nations, Europe in 1880 had a deficit of 380,000,000 bushels of grain, while the United States alone had a surplus of 370,000,000 bushels. In tons of meat Europe had a deficit of 853,000, while Australia alone had as surplus of 838,000, the United States of 1,076,000, and Canada of 170,000. Of the grain surplus of the world (22,000,000 bushels) in 1880 17,000,000 were held by Anglo-Saxons, and of the 2,144,000 tons of meat—then surplus—1,931,000 were also owned by Americans, Australians and Canadians. The balance was held in South America and Algeria, and almost entirely controlled, as in fact is almost all South American industry, by English capital.

The truly international system of metrology, then, is in fact our own Anglo-Saxon one. In changing Anglo-Saxon weights and measures for the metric system we would not only disastrously, and to no purpose, disturb our own affairs, but inconvenience those of all mankind.

In H.B.M. Court for Japan, on Monday, James Mercer, a boiler-maker of the P. & O. steamer *Zambesi* was charged before T. R. H. Mac-

Clatchie Esq., Acting Assistant Judge, with being drunk and assaulting one Koide Rinzo, a Japanese, who further claimed yen 17 for medical treatment incurred in consequence of the assault and three weeks estimated loss of his time. The prisoner denied the assault. The complainant is a udon seller and says that the prisoner assaulted him, breaking his sign and lamp and knocking him down by a blow from a stick on the side of his head. The assault was committed at half-past ten on Saturday night. Prisoner asserted that he was first struck in the head by a stone hurled by complainant. A jinrikisha-drawer corroborated the statement of Koide. The Japanese policeman who arrested Mercer deposed that he was very drunk at the time and throwing stones at the passers by. Sergeant James testified that the prisoner was brought toward the Police Station, and that he was called to help to arrest him and found him very drunk and abusive, with a slight cut on his head, and that he had to be taken by force. The accused, in his defence, stated that he had been followed and insulted by a jinrikishaman, and struck in the head with stones. He then used his stick pretty freely till it was taken from him. The police who arrested him treated him very roughly, as did the European policeman. Sentenced to be imprisoned for seven days, or until the departure of the *Zambesi* if before the expiry of that period; and to pay sen 30, the value of the damage sustained by the udon seller and yen 5 compensation to the same complainant.

W. Patterson pleaded guilty to being drunk and incapable, and was sent to jail for ten days.

Thomas Jenkins, master of the British barque *Sallara*, was charged with assaulting, early in October, one Georgius Carlos, by striking him on the chest with his fist. Complainant said that the assault was committed off Rock Island, on the occasion of his going aft and making a complaint of being sick. Saying, "For God's sake go away!" the captain pushed him in the chest. He went away. He had since been refused his discharge by the Captain, who called him a nuisance, and declined to let him see the Consul. Captain Jenkins denied the charge, which, on the complainant's own evidence, was so frivolous that it was summarily dismissed.

THE race for the Toland Cup, single sculls, which had to be postponed on Saturday last, on account of the condition of the water, was brought off on the 29th ult. Of the five entries, only three, Till, Pors, and Hamilton, stripped for the fray, Melhuish and Playfair having retired. The three competitors paddled down to the starting post at five o'clock, where they were marshalled and despatched by Mr. Litchfield, but to a very indifferent start, Pors outside, Till in the centre, and Hamilton with the inside berth. Pors showed a good two lengths in front of Till, and the latter one length ahead of Hamilton, immediately on starting, and the outside man continued to increase his lead till he had

made it 8 or 10 lengths. This was about the position of the boats off Dare's, Till and Hamilton being level. Till at this point had settled down to a strong and very steady stroke, and began to leave Hamilton, and gain upon the leading boat. Shortly after, Pors rowed wide, steering too far inshore, and Till continued to gain, getting about level at the Wharf, and from this point had Pors safe, and, pulling home a straight course and a pretty stroke, won by about a length and a half, Hamilton a long way behind.

THE following pertinent remarks appear in a recent issue of the *N. C. Daily News*:—"The Hongkong newspapers are not acting generously towards Sir Pope Hennessy. When the late Governor of Hongkong was appointed to Mauritius, there was at first a chorus of delight, and then a chorus of sympathy with the Mauritians, who were regarded as a colony of innocents about to be given over to the tender mercies of a Herod. Predictions were not wanting that the Mauritians would protest, and that the advent of Sir Pope would be the signal for tumults, for disputes, for quarrels, and for ineffectual struggles against his tyranny. But nothing of all this has been fulfilled. Sir Pope and his new subjects continue to be on the best of terms with each other, and all accounts that reach us from the island tell of harmony and the best of feeling. It is on this subject that the tone of the Hongkong papers is so much to be deprecated. Instead of expressing pleasure at the friendly relations between the Governor and the Mauritians, and a hope that they will continue, the *Daily Press* unpleasantly remarks that 'Sir John Pope Hennessy appears to have secured the *claque* in Mauritius,' and doubts whether at the end of five or six years he will be looked upon as the sincere friend he now appears to be. We have no means of knowing whether he will or not, nor are we partisans of the late Governor of Hongkong in any sense of the word; but the colonial newspapers seem thoroughly vexed and disappointed at the popularity of Sir Pope in Mauritius, and, what is worse, they have not the sense to hide it."

L'Italie, reviewing the causes that may lead to a war between France and China, gives a prominent place to the fact that the Marquis Tseng is charged with the conduct of the negotiations in Paris. "This Chinese," says the Italian journal, "besides being a marquis, which is a droll title for a Celestial, is moreover a perfect imbecile. This was proved by the interviews which he granted a few months ago to the reporters of various journals. Yet, perhaps, he would not do so badly did he not find himself in the hands of English and American intermediaries, who, under pretext of acting as interpreters—for the Marquis does not understand any European language—try to fish in troubled waters by exaggerating his ideas and intentions. It has been demonstrated, indeed, by the French Foreign Office, that these translators coloured the terms of the Ambassador's communications

to such an extent as to render them insulting; and this discovery is assigned as the reason which induced M. Challemeil-Lacour, and before him his predecessor, to discontinue all discussions with the Marquis and treat directly with the T'sung-li Yamen at Peking. Tseng was to have been recalled by his Government when the recent events occurred. Now, it is possible that things are somewhat changed." This is a revelation. Those who have the honor of the Marquis Tseng's personal acquaintance will be startled to learn that he is "an imbecile." They had formed a very different conception of his mental calibre. Moreover, French newspapers have been telling another story about the relations between the Marquis and M. Challemeil-Lacour—a story in which the latter's discourteous treatment of the astute Oriental entailed the discomfiture it deserved.

It would appear that some uneasiness is beginning to manifest itself in Italy as mature reflection throws fuller light on the contingencies of the celebrated Triple Alliance. The interviews at Salzburg brought the subject upon the tapis. The people of the peninsula, who are not without sensitiveness, asked one another why their country was not represented on that occasion, and whether there really existed an intention to treat her with less consideration than her position as a confederate demanded. Thereupon the *Perseveranza* published a statement that, although the five years' alliance, concluded by Italy, Germany, and Austria, does not oblige either of the latter Powers to take part in a war provoked by Italy, it does oblige Italy to participate in any war provoked by, or declared against, either of her associates. This announcement naturally created a commotion. "Is it possible," asked the Italians, "that our Government has bound us by such a one-sided contract?" Another journal, the *Opinione*, now came forward to deny the correctness of the *Perseveranza's* interpretation. The obligations of the alliance, it explained, are mutually binding only in the event of an attack from without upon any of the high contracting parties. In case of an offensive war undertaken by any one of them, the other two are free to act as they please. Thus, if Austria attacked Russia, or Germany, France, it would be for Italy to draw the sword or keep it sheathed; while the same freedom of election would belong to Austria and Germany if Italy engaged in a foreign campaign. But if any outsider provoked or defied one of the allied Powers, then the other two must render every possible aid to their associate. This was certainly a more satisfactory hypothesis than that of the *Perseveranza*, but after all it looked just as ugly when submitted to the test of careful examination. For while Germany might be attacked by Russia or France, and Austria by Russia, Italy, according to Italian ideas, had nothing to apprehend from any quarter except France. Thus there were three eventualities in which Italy might be obliged to draw the sword on behalf of her allies, and only one in which their good offices could be exercised on her behalf. Looking

mathematically correct, this conclusion seriously perturbs a great many Italian patriots. They fail to see that, according to their own data, Austria is just as badly off as Italy, and Germany alone twice as fortunate as either of her associates, if indeed greater vulnerability can be called fortune. Apart from these arithmetical considerations, however, the question naturally arises—what are the relative probabilities of a Russian or French attack upon Germany or Austria, and a French attack upon Italy? As twenty to one is the Italian answer. For before France can assail Italy, a King must reign in Paris; a King, too, whose programme includes the restoration of the Pope's temporal power. But the chances of a monarchical restoration are confined to Prince Napoleon and the Comte de Paris, of whom the former is known to be incapable of such a programme, and the latter, if he ever reigns at all, will reign as a constitutional monarch. Thus, at the end of the chapter, there appear to be absolutely no prospects of an issue which would render the Triple Alliance profitable to Italy. Under the circumstances it is not unnatural that she should be uneasy. To outsiders, however, her position seems simple enough. The same reason that would prevent the Comte de Paris, as King of France, from waging war against Italy with the object of recovering for the Pope his estates and their appanages, will also prevent Italy from fulfilling the terms of a profitless contract. Possibly this reflection, patent as it must be to Prince Bismarck, had something to do with the details of the Salzburg interview.

THE St. Petersburg correspondent of the *Soliel* sends to his journal two stories of judicial proceedings in Russia—stories which, he says, throw a new light on Russian manners and customs. The cases described were tried by the tribunals of St. Petersburg and Simferopol respectively. The first was very simple. A young man named Solowieff was taken in the act of stealing books from a stall. His only defence was that he was passionately fond of reading and that, being too poor to buy or hire books, he could but borrow them. He declared however, that he never meant to steal, but had always intended to return the volumes and borrow others in their place. He was acquitted, the Court deciding that his motives were honorable. Probably in countries where the barbarity of Muscovite codes is a byword, steps would have been taken to convert him into what he certainly was not—a criminal.

The second case was that of a certain Colonel Gratchow, who accused one Madame Arendt, the wife of a doctor, of entertaining revolutionary ideas and of having affixed to the wall of a church a portrait of the regicide Sophie Pérowsky, who was executed at St. Petersburg for participation in the murder of Alexander the Second. It turned out that the picture was that of a sick girl, whose mother thought that her malady might be healed by putting her portrait in the church. Madame Arendt brought an action

against the Colonel, for defamation of character, and he was sentenced to two months' imprisonment.

A WRITER in the *China Mail* informs us that the members of the Hongkong Club are being called upon to decide whether the Club shall continue to be carried on for the profit of one or two individuals, or whether it shall be purchased by, and become the property of, the 217 resident members. The lease terminates at the end of this year, and the Club buildings and furniture can be purchased for \$140,000. He does not think the members will have any hesitation in coming to a decision, and says, "Let the members acquire the ownership of the Club by all means." He explains how this should be done. Two methods are proposed—one to raise \$150,000 by the issue of debentures to the public, and the other to make it an absolute condition of membership that each member shall take one debenture, value \$100, on which 5 per cent. interest only shall be paid, which would raise \$21,700, and that debentures should be issued to the public for the remaining \$128,300 or \$130,000. Each member would have to hold his individual debenture as long as his membership lasted, and when that ceased the trustees would take it up at par, and issue it to a new member. The latter method in a prosperous place like Hongkong should be perfectly practicable.

THE number of species of silk-producing insects is very large, probably more than two hundred, very few of which are of any practical value to mankind; on the contrary, that portion of the caterpillar family which unite their silken tissues to form a family tent, have not only defied the ingenuity of man to unravel their handiwork, but have made his industry contribute to their support by foraging upon fruit-bearing and ornamental trees. The spider family, notwithstanding many attempts to reel their beautiful threads, still monopolize their products for purposes of locomotion and snares for unlucky insects.

OF the Spanish peasantry, an American writer says that they are rude and vulgar in the cars, in the diligence, and in other public places. They hustle the women about in the cars and even occupy their seats if the owner is absent for a moment, and refuse to give them up on their return. He saw one of these fellows steal a woman's seat and compel her to stand up during an entire journey of some two hours' duration. The peasants are as inhospitable as they are rude, and as greedy and dishonest as they are inhospitable. These base qualities are not so noticeable in the upper classes; nevertheless, they exist to some extent. "Invitations and promises are common things in Leon, but hospitality is rare. A man will invite you to his house and promise you all sorts of services; but when you go he will point you out the *posada* and charge you for any service you may require. At Prisananza, on the Duerwa, the wages of farm laborers were 15 to 20 cents a

day, women 7½ to 10 cents and maintenance; the latter costs 10 cents a day. Men who find their own maintenance charge 40 cents a day. They work from sunrise to sunset, except two hours for meals and a *siesta* in the fields. The age at which field work is begun is from 12 to 14 for boys and 13 to 15 for girls. Most of the latter become mothers before they attain the age of 16 or 17. At 20 they look old and worn out; at 25 to 30 they become repulsive. The men are better looking than the women, but this is not saying much."

INTELLIGENCE from Korea announces that a serious quarrel occurred on the 10th ultimo between the crew of a Chinese war vessel and the men of the Japanese corvette *Iwaki Kan*, both then lying at anchor in the port of Inchhōn. Officers were dispatched from the Japanese Consulate to quell the disturbance, but the Chinese were already defeated and many of them had been severely wounded. The cause of the dispute is said to have been an attempt made by a Chinese boat's crew to effect a landing ahead of some Japanese who had reached the pier before them.

ACCORDING to the almanac of the Stock Exchange the summer season ends at noon sharp on the 15th of September. On and after that date there seems to be something in the sight of a straw hat, a cassimere beaver, a pearl Derby or a summer coat which infuriates a Wall-street bull, even as a red rag does his four-footed prototype. His natural enemy, the bear, seems to be affected in the same way, and for once they unite to do battle against any man bold enough to venture upon the floor of the Exchange wearing either one or other of these objectionable articles. Yesterday, says a recent issue of the *New York Herald*, the time-honored custom of smashing the white hats was enjoyed by the festive members of the Stock Exchange, but not with as much spirit or enthusiasm as in former years. It has not been a prosperous time for the brokers for several months past, with the exception of a few very brief intervals of activity. They have not as much money to spend as of old, and as the skylarking incidental to the ceremonies or the 15th of September always leads to the swelling of the coffers of the Stock Exchange by the infliction of fines for breach of the rules in the most remorseless way by a cold-blooded and impartial chairman, the poverty stricken brokers were less ready to indulge in the boisterous sport. It was about half-past twelve yesterday when the signal was given on the floor of the Board-room, and a pre-arranged rush was made by a dozen or more young men toward the absent-minded man who had thoughtlessly ventured into the room with a light colored cassimere hat. Before the owner knew what was coming his hat was sent spinning up into the air for a distance of thirty feet. When it came down it was used for a brief, but exciting, game of football. Just as it had been reduced to a section of rim another victim was discovered wearing a straw hat. This was very

quickly disposed of, and then a man in an office coat of light alpaca was the recipient of the attentions of the crowd. He managed to escape into the Long Room before the objectionable garment had been torn into very small pieces. At intervals all the rest of the day the sport was kept up, but it was not urged with the old-time spirit. It was left to the Mining Exchange to observe the day in a becoming manner. A pronunciamiento had been issued on Friday and hung upon the rostrum, reading as follows:—

PROCLAMATION.

"Have You Heard the Gun?"
All Straw Hats, Derby Hats, Cassimeres or other Hats of a light color must COME OFF on the 15th.
By order of

THE REGULATORS.

A relentless and unceasing war was begun upon these articles and summer coats at twelve o'clock precisely. It was particularly pleasing to the Regulators to find a man with his office coat on. The favorite way of disposing of it was for three or four men to take hold of one tail, as many more on the other side, and then each party would walk away very quickly in opposite directions. The coat would be torn completely in half and the coatless victim, before he knew what was the matter, would be fined \$5 by the punctilious chairman for being on the floor without his coat. Several brokers were caught in this way, but everybody took his dose good-naturedly.

THE King of Spain's visit to Paris seems to have been in every sense an unfortunate event. On his way thither he accepted the honorary colonelcy of the Schleswig-Holstein Uhlans who happened to be quartered at Strasburg. This was bad enough, as a prelude to meeting the people of France, but what made matters much worse was the unlucky coincidence that Alfonso's state entry into Paris was fixed for September 29th, the thirteenth anniversary of the triumphal entry of the German army into Strasburg. On that day it is customary for the Alsations who reside in Paris, together with the pupils of the Polytechnic Schools, to lay crowns and immortelles, tied with tricoloured ribbons veiled in crape, at the foot of the statue of Strasburg in the Place de la Concorde—a ceremony not exactly calculated to prepare people for welcoming a monarch whose friendliness to France's old foe had just been evinced in such an unequivocal manner. Six Parisian journals appear to have made themselves conspicuous by publishing articles more or less violent, and of a nature seriously to prejudice the minds of the people against the Castilian monarch. The *Rappel* went so far as to remind its readers that, in visiting Berlin, Alfonso "wished to congratulate the man who had just shaken his fist at France," and who in toasting the German army, had "drunk a toast to French disaster." It was also asserted that the king is not in unison with the spirit of the Spanish people, and the question was asked whether "by acts of politeness to him, by fêtes and compliments, by disturbing the President of the Republic, by deranging Paris with reviews, the French would not be disquieting and offending Spain, where

everyone not in office is friendly to France." The consequence of all this agitation was that Alfonso was very heartily hooted and hissed as he passed through the streets of Paris, some of the people going so far as to shake their fists at the windows of his carriage, if not in his face. The King seems to have taken the affair very quietly, giving it as his opinion that the conduct of these roughs was not to be regarded as representing French opinion. On the following day he was visited by President Grévy, who in the name of the French people tendered an apology for the behaviour of the mob, and begged the Royal visitor to give France a fresh proof of sympathy by accepting an invitation to a banquet at the Palace of Elysée that evening. The King wisely acceded to this request, and the banquet, which was attended by all the Ministers except General Thibaudin, passed off very pleasantly. Alfonso nevertheless determined to abridge by one half the period originally fixed for his stay in Paris, his object being to diminish the difficulties that had arisen from his visit. It is said, however, that in announcing this intention to President Grévy, he declared that although the latter's apology might make him forget the bitterness of his entry into Paris, "Spain would long remember the hisses of the populace who hissed the nation behind the King." These words were verified by the reception given to the King two days later in Madrid. Great masses of people assembled at the railway station and followed their monarch thence to the palace amid enthusiastic plaudits. That afternoon the palace was thrown open for a reception to which every one was admitted, and it is estimated that thirty thousand persons attended. Meanwhile the leading French journals were roundly condemning the rude conduct of the Parisian mob, and as those of Spain united in advising moderation, the unfortunate business doubtless passed off without any immediately mischievous consequences. But its memory will not be so easily effaced. The German press regards the insults offered to King Alfonso as a moral defeat of France, with whom no Power would now wish for an alliance, and further declares that the insults were really levelled against Germany, who considers them a sign of weakness. Latest advices from Paris show that the affair has accentuated the dissensions in the Cabinet. M. Wilson, the President's son-in-law, is said to be connected with the promoters of the disturbance, and it is expected that the Chamber of Deputies will have to judge between the President and M. Ferry. Altogether a more untoward event could scarcely have occurred.

Looking carefully at the newspaper reports of the recent proceedings in the Farnsworth libel case, we are almost disposed to think that it was not the Jury alone who disagreed, but the judge as well—with himself. Such, at least, is the impression conveyed by the two following extracts from his Honor's charge:—"His Honor asked the Jury to imagine what would be the feeling of 'anger and despair' of any father hearing of such an accusation. Despair, be-

cause such an accusation spreads, permeates the air, and *can never really be retracted.*" And again:—"One result of this trial, whatever might be the finding of the Jury, would be most important. *It entirely cleared the character of Miss Ruth Farnsworth, who had been triumphantly freed not merely from any accusation, but from the faintest breath of slander.*" The italics here are our own. We employ them to emphasize those portions of his Honor's charge which appear incapable of being reconciled. In one place he says the "accusation can never really be retracted;" in another, he declares that the lady is "triumphantly freed from the faintest breath of slander" whatever may be the result of the suit. We should like to know which of the jury would be satisfied with a similar process of purgation were the reputation of his own wife or daughter at stake. A young lady's father sues a man for uttering a foul slander against his daughter, and after a full, careful and conscientious hearing, the Jury disagree. About what?

A COMPLETE description and catalogue of the fauna of Macao has been, we understand, recently compiled by Mr. F. W. Eastlake, in accordance with the request of the ex-Governor of Macao, Senhor J. J. da Graça. This *Fauna Macaensis* comprises lists of the mammals, birds, reptiles, molluscs, etc., which have been collected within a radius of ten miles about Macao during the last fifteen or twenty years. Special attention has been given to the results of the researches of naturalists who have recently visited South China. The work is the first of the kind ever compiled; for, although passing scientific expeditions have devoted occasional chapters to the description of various branches of the Macao fauna, no catalogues or lists have heretofore been published. Mr. Eastlake's work is dedicated to His Majesty Dom Luiz, I., and will certainly be of especial interest to the Government of Portugal and probably to naturalists generally.

REUTER announces another dreadful seismic catastrophe in which a thousand persons have been killed and twenty thousand rendered homeless. This occurred at Anatolia, which is described as in the peninsular-shaped western extremity of Asia, identical with Asia Minor. It comprehends the Turkish pashalics of Anatolia, Ithili, Karamania, Mavash, Sivas or Room, and Trebizond. Anatolia is between the 26th and 42nd North parallels, and between the 26th and 41st East meridians; being bounded, N. by the Black Sea, Sea of Marmora, and the Dardanells; W. by the Grecian Archipelago and the Mediterranean, while its E. boundary is usually defined by the line connecting the Almadagh, near the Bay of Iskeroon, with the Euphrates and thence up to its source. Its greatest length is a little over 700 miles and its greatest breadth about 420 miles; the supposed area is 270,000 square miles. The population in 1877 numbered about 11,000,000, composed chiefly of Turks of pure race, and mixed Greeks and

Turks, Armenians, Jews, gipsies, etc. Anatolia was the seat of the "Seven Churches" which are in Asia—Ephesus, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia, and Laodicea.

THE *Fiji Shimpō* publishes the following correspondence from Korea:—On the 23rd of September last, the King left the Southern Gate and proceeded to Suigemfu. A pontoon bridge was constructed across the Hangang river, the boats being decorated with various standards and spears. The scene was charming and imposing. Japanese residents in Sōul who wished to see the royal procession, were prevented by the Chinese troops. On the 2nd of October, the king again paid a visit to Yanchang when his horse fell, somewhat bruising the royal rider and breaking its own fore-legs. The grooms in charge of the steed were discharged.—A Japanese servant of the Japanese Legation has committed suicide: the cause is unknown.—Major Isobayashi, of the Japanese army, is travelling in the interior. An absurd rumour is current among the natives concerning the departure of Mr. Takezoze, the Japanese representative. It is rumored that he will be succeeded by Mr. Hanabusa, who will wreak vengeance upon Korea for the Sōul outrages of last year.

THE trial of silver-brokers, who were arrested some time since on a charge of illegal speculation in Yokohama, was concluded in the Saibansho of that town on the 31st ultimo. Seven of the accused were discharged for lack of evidence against them: three were absolved inasmuch as they had confessed their culpability prior to their arrest. Mr. Midzutani Takejima was fined yen 350; and some of his colleagues were mulcted in sums varying from yen 200 to yen 80.

THE *Fiji Shimpō* was suspended by order of the Metropolitan Police Board on the 31st ultimo. The cause of the suspension is probably an article headed, "Japan ignored by foreign countries, with the causes, Foreign and Domestic," published on Wednesday last. The writer laments that Japan's foreign commerce is insignificant and that the revival of old customs obstructs her progress. He concluded by expressing a hope that the necessary steps would be taken to avoid impending calamities.

THE Hongkong Race Meeting of 1884 is fixed for Wednesday, Thursday, and Friday, the 20th, 21st, and 22nd February.

WE note the arrival, by the last French mail steamer, of Count Zaluzki, the Austrian Minister.

THE *Athenæum* states that Mr. Egmont Hake has been for some time engaged on a life of Major-General C. G. Gordon. The work is to be called "The Story of Chinese Gordon," and will deal with the incidents of General Gordon's career from the early days when he was a subaltern in the Crimea up to the present date.

TRADE REGULATIONS WITH
KOREA.

THE Tradal Regulations and Tariff recently concluded between this country and Korea were published, some time ago, but we have delayed placing them before our readers until we could procure an officially authenticated version.

The Tariff may be said to have been arranged on an eight per cent. basis, for though the import duties vary from five to thirty per cent. *ad valorem*, the more important staples come under the eight per cent. classification. Tobacco and all foreign alcoholic beverages—Japanese and Chinese *saké* excepted—pay from twenty to thirty per cent., while the consumption of beer is encouraged by admitting it at half the former rate. Kerosene, too, has been exceptionally favoured. It is only subjected to an impost of five per cent.—a provision which deserves to be heartily applauded, for no policy could be more suicidal than one which deliberately deprives a people of the services of the best and cheapest illuminant in the universe. It will be seen that no attempt has been made to discriminate in favour of Japanese manufactures, and, on the whole, the compilers appear to have been guided by sound and fair principles. Whether the rates generally are lower than those to which Japan's own demands in connection with treaty revision have been levelled, we are not in a position to say, but comparisons of this nature are at once useless and unjust. There is no hard and fast rule applicable to questions of tariff. Like everything else Customs' dues must vary with circumstances, and assuredly Western countries could not claim from Eastern an obedience to precedent of which they themselves are conspicuously careless.

An interesting topic for conjecture in connection with this new tariff is China's probable action. Will she adhere to the five per cent. basis which is believed to govern her trade with the peninsula at present, or will she consent to a modification on the lines of the Japanese Convention? She was generally accredited with ulterior motives in furthering the SHUFELDT treaty. Men said that her main object was to place foreign nations in the dilemma of having to refuse to the suzerain the same terms which they had granted to the tributary. Yet it was after the public had learned to credit this plausible conjecture that the Viceroy of CHILI posed as the equal of the Korean King, and dictated to the Government of Sôul a tariff which would have satisfied anything short of a

free trade standard. As things stand at present, China may be said to have the monopoly of Korea's foreign trade, and but for the insignificance of the results, she might be tempted to cling to the privilege. We have very little doubt, however, that her consent to a modification had been conditionally obtained before any arrangements were concluded with Japan.

Turning to the Tradal Regulations we observe two or three points of interest. The first is the provision with reference to the employment of Japanese vessels in the coastwise trade. Article XXII. says:—
